NEW YORK, THURSDAY, JANUARY 4, 1883.

The Week.

ALL accounts of the way in which Monday was "observed" show how great a change has come over New Year's Day. It has become different from itself and from any other holiday in the year. Its monotony is gone. The war declared by society against receptions has reached that point at which every family practically decides for itself what it will do with the day. The ladies may receive, but there is no obligation upon their friends to call upon them, as there once was; men may call, but there is no obligation upon any one to receive them. The duty of hanging out a basket, even, is not obligatory, for how could it be, when the corresponding duty of leaving a card in it is not recognized as binding? If you stay at home, you may give your guests wine, or you may strike a blow for the cause of temperance, and gain the good will of the "Boys' Loyal Legion," by giving only tea and coffee, or you may give nothing at all. You may lock your door and go into the country. You may dine with your family, your wife's family, or any other family that will invite you, or you may dine alone at a restaurant, and, if you are of a saturnine disposition, reflect how disagreeable family parties are. When you meet any of your friends you may wish them a "happy New Year," or you can pass by on the other side of the street without wishing them anything at all. In fact, you can do exactly what you please, and nobody has the least right to find fault with you. There is absolutely nothing any longer obligatory in the customs of the day. Were the excellent Dr. Lieber still alive, he would, to his surprise, find himself surrounded by a state of things in which his great social maxim, "No right without its duty, no duty without its right," could not possibly apply. The day is one of rights without any duties. In short, it has become and will undoubtedly always remain a real holiday, one of the few real holidays in the year —for there are duties, often onerous duties, connected with the others. Christmas involves extensive present-giving, if not a Christmas-tree, Thanksgiving Day a family reunion; and, excellent as these customs are, they do involve the idea and fact of duty, which is foreign to the notion of a perfect holiday. New Year's Day as it now exists ought, therefore, to be regarded as a distinct addition to the meagre list of days in the year during which we are relieved from the strain of toil which is always pressing on modern commercial communities.

The death of Gambetta can but have a very unfavorable influence on the fortunes of the Republic, which just now are not brilliant. This is true in spite of the fact that he had ceased to play the part of the coming man, as during the early days of the present régime. The present Legislature used him up, as the saying is, just as rapidly and remorselessly as it used up his predecessors, but it could not deprive him of his place in the public mind as a man who had shown great capacity and pluck in very trying crises. For Gambetta had much more behind him than his somewhat frantic resistance to the Germans as the leading spirit of the Government of National Defence. It was undoubtedly due to him more than to any other man, except Thiers, that the Republic was established instead of a monarchical restoration. He led the opposition to the Legitimists between 1871 and 1877 more impressively in the popular eye than Thiers himself. After Thiers's death, too, the burden of overturning the clique who, under cover of Marshal MacMahon's authority, were trying to establish a military despotism, fell upon Gambetta, and he bore it splendidly. He did not flinch in the least, and came out of the contest unquestionably the strongest man in France. So that although his somewhat mortifying failure to hold a majority in the Assembly when he took office discredited him as a possible Minister, and deprived him wholly of the character of a necessary man, it did not deprive him of the character of a man whose counsel and support were highly useful to the Republic, and whom it was well for the Republic to have at hand.

There is probably no one in France who wishes well to the Republic, and who doubts whether it is yet fairly out of the woods, who did not think of Gambetta as in some sense its protector, as the man who might be relied on to save it (if there came a convulsion of any sort) if any one could save it. President Grévy is a strong man, but he is old and tired. He will be seventy next August, and is a good deal broken physically. There is no other really able or influential friend of republican institutions now in the political arena, who is for the Republic "first, last, and all the time," as our politicians say, and who could not be induced to negotiate it out of existence, except Clémenceau, the leader of the Extreme Left; but Clémenceau's republic, it is safe to say, would, even if it could be set up, not last a month. It would alarm every interest in France, and above all that one interest whose alarm no Government can survive—property. In fact, it is very questionable whether the present fickle, unsteady Government of the Assembly would have been able to indulge in its taste for making and unmaking ministries but for the popular ease of mind which came of the knowledge that Gambetta was there and looking on. Who will push to the front now as his successor it is useless to speculate. It is quite certain, however, that he could hardly have died at a more unfortunate period for the Republic. The finances are in a condition which is causing much anxiety. The Nihilists are very active, and, owing to an apparent feebleness on the part of the Government in dealing with them, are creating an uneasiness wholly out of proportion to their numbers or influence or powers of mischief. The problem of military organization is still unsolved, and the country is groping about in a somewhat aimless way in search of the rôle which France is to play, now that that of a European arbiter or conqueror seems denied to her, before her people have learned how to be happy and to respect themselves without military glory.

The German press seems generally to treat Gambetta's death as a guarantee of peace, and it will probably wear that appearance both in Germany and Russia. He represented more than any other man in France the policy of revenge, and probably believed more thoroughly than any other in the possibility of getting back the lost provinces. But it has to be borne in mind that since he made the last of his warlike or threatening speeches the Tunisian expedition has occurred, the serious defects in the organization of the new French army have been revealed, and the nation has indicated unmistakably its dislike for military enterprises of every kind. It is, indeed, hardly possible that he can have held at the time of his death the views of the fighting power of France which he held three or even two years ago. All accounts of the condition of feeling in the French provinces agree in describing the terror inspired by the German invasion as still undiminished, and Gambetta must have become aware that the time was still distant when a politician could make capital by proposing another tussle with Bismarck. We, therefore, doubt very much whether his death has made peace in any degree more certain. The guarantees of peace which now exist in France are far more powerful than any one man's influence. They are to be found in the social condition of the country, and in the condition of the army and the finances. The increase of the debt is one of the guarantees which people forget when they talk of France as a warlike country. She has never had any such burden before, and the French people bear the bulk of it not simply as taxpayers, but as bondholders. In their fighting days they had no such trammel. Before they began the war of the Revolution they made almost a clean sweep of their debts, and Napoleon made the wars of the Empire pay for themselves.

It is reported that the Civil-Service Reform Bill will have an even stronger Democratic opposition to meet in the House of Representatives than in the Senate. The ground from which this partisan opposition springs has been openly avowed. It is that the Democrats expect to get possession of the National Government in 1884, and then want to be free to distribute the spoils as they have been distributed heretofore; or, at least, that, as the Republicans are now in possession of the offices, no law should be passed preventing the Democrats from getting their "fair share." Not satisfied with the fact that the system of competitive examinations will, as vacancies occur, open to them the way to obtain their share if they furnish the best men, they want in some way to expedite the process of transfer. To this end various amend-

ments to the original bill were brought forward in the Senate, and will undoubtedly come up also in the House of Representatives. One of these amendments provides that all places affected by the Pendleton bill shall—one-third at a time—be declared vacant, to be filled again by competitive examination, so that everybody, of whatever party, may have a chance at them without delay. A moment's reflection will convince every man of common sense that the execution of this scheme, fathered in the Senate by Mr. Pugh, would, from its magnitude, be simply impossible. Whoever considers just what a competitive examination is—how much preparation it requires on the part of those who conduct it, how much labor the reviewing of the examination papers and the making of the awards impose upon them, how heavy a draft upon the laboring force of a department the formation of several commissions at the same time is, and how great a disturbance of the regular course of business the constant going on of such a process for three years would be—will come to the conclusion that this scheme was formed by one who had but very shadowy ideas on the subject. As soon as the departments are relieved from political pressure their chiefs can, without all this circumstance, be best relied upon to remove incompetent persons.

The Assistant Postmaster-General, Mr. Hatton, is owner and manager—wholly or in large part—of the Washington *National Republican*, a paper which has steadily sneered at civil-service reform, and continues sneering at the bill which has just passed the Senate. It has now ventured on the prediction, as a last resource, that the Civil-Service Commissioners to be appointed under the bill will sell the offices at $200 apiece to candidates at the examinations, in order to increase their salaries. "The business will be done," it says, "without a word passed between the giver and the taker." It must be remembered, in the first place, that the man who inspires, or permits, or is responsible for this disgraceful imputation on the character of American public men, is a high officer of the Administration, who will to a certain extent have to work the new system; and, in the second place, that no charge so scandalous as this has been brought against the officeholding class by the most fanatical or reckless reformer. President Arthur would, we think, in view of all the facts, and under the rule he adopted in the recent removals of official sympathizers with the Star-route thieves, be fully justified in removing Mr. Hatton, and allowing him to give his entire time to the duties of Stalwart editorship, for which he seems to have special qualifications. It is highly improper to keep in high office a man holding and uttering such opinions. We need hardly say that the corruption he predicts and gloats over would be impossible under the competitive system. The examination papers would be the same for all, and the answers would be open to inspection, so that the cheating would have to be so barefaced that it would be instantly detected, and land the perpetrator in the penitentiary. For a Commissioner capable of such conduct, "bance-steering" would be a far safer and more lucrative business. No imputation of this kind has been or can be cast on the examinations already in use at the Post-office and Custom-house in this city.

Judge Park's decision, that the Democratic "black" ballots used in the recent city and State elections in Connecticut are illegal, seems to have been unavoidable. The case presented to him was that of the New Haven Auditor and City Clerk, recently declared elected by a large majority. The laws of Connecticut provide that ballots must be printed on plain white paper, and the object of the provision is, of course, to preserve the secrecy of the ballot. The Democratic ballots were, on the contrary, printed on black paper, leaving the names of the candidates white. This seems a plain violation both of the letter and the spirit of the law. The effect of the decision, if applied to the State offices, would be to elect the Republican State ticket, and it is now said that the Republicans will insist on the Legislature, when it counts the vote, declaring General Bulkeley elected Governor, instead of Mr. Waller. The *Sun*, in discussing the Connecticut Election Law, says that, in the absence of a "clearly expressed intention" of the law that the "black ballots" should be void, Judge Park went too far in deciding that they could not be counted. If our learned contemporary will look at the Connecticut Election Laws of 1877 (chapter 146, section 31), it will find the following provision: "All ballots shall be on plain white paper, with the name and office written or printed thereon, *and no other ballots shall be received.*" Nothing can be clearer than the intention of this. They should have been refused at the polls, but they were not. A legal question, therefore, arises as to whether the ballots, having been received and counted, an inquiry at a later stage into their legality can be made, and the Supreme Court as well as the Legislature would hesitate a long time before reversing the result of a general election on the strength of such a statute. The announcement, however, by the Republican candidate for Governor, that he will not contest Mr. Waller's election, ought to prevent the discussion of the point from becoming acrimonious.

The decision of Judge Arnoux, that no dividends can be paid on the $15,000,000 stock dividend of the Western Union, was the inevitable result of the decision of the Superior Court General Term that the stock was illegal. Anticipating the injunction, the company had already paid the January dividend, and Judge Arnoux has since modified his injunction so as to permit the payment of dividends on stock where the company cannot distinguish between the old stock and that issued under the consolidation agreement. Under these circumstances it is hard to see how the decision can have much effect. The officers of the corporation are the only persons who have the means of distinguishing between the two kinds, and they appear to be perfectly satisfied with the injunction as it now stands. Judge Arnoux has also decided not to enjoin the company from replacing the new stock by bonds, on the ground that there is no evidence that they contemplate doing so. There seems to have been no way of avoiding this decision, although, as was urged on the argument, the managers might change their mind about the bonds over night.

The position of this $15,000,000 of stock strongly illustrates the difficulty of correcting the evils of corporate mismanagement by litigation. One Judge of the Superior Court renders a decision that the stock is legal. The stock, on the strength of this decision, is bought and sold in the market, and passes into the hands of holders who have no connection with the original issue. The Court, at General Term, reverses this decision, and pronounces the issue illegal. But this leaves a very important point unsettled—"whether this is legal stock illegally issued or void stock"; that is, so much waste paper. This, Judge Arnoux admits, is still to be decided, and to reach a final decision on this will take a very long time. Every purchaser and holder of the stock will of course fight for the legality of his own stock, and attempt to save it from the taint attaching to the original issue. Special facts will be shown in every case, and the courts will have their hands full for years. Such cases show the extreme difficulty of preventing the practice known as "watering stock" by legislation.

Governor Thompson, of South Carolina, has set an excellent example by refusing to make any changes among the five or six hundred State officials, in spite of the pressure exerted on him by friends and party workers. This is an illustration on a small scale of what the appointing power can do to make stability of tenure one of the customs of American politics, instead of instability of tenure, which is now one of its customs. One of the greatest obstacles with which civil-service reformers have had to contend is the theory that because the law does not prohibit removals without cause, Presidents and Governors are in some mysterious manner bound to make removals without cause, and cannot stop making them unless the Legislature interferes to tie their hands. Of course, this is pure hallucination. The pressure, too, which Presidents and Governors say they yield to when they make removals, is the result, not the cause, of their yielding. They are pressed because it is known that if pressed hard enough they will surrender. There is no man in the community in any place of trust who would not be terribly pressed if it were well known that pressure would make him betray his trust. If, for instance, it were known that very great importunity would cause bank presidents to discount notes without inquiry into the solvency of the drawers or endorsers, the crowd round all the banks every day would be larger and more troublesome than that which assails the President or the Governor at the beginning of their Administration. Bank presidents are beset by no such crowds, however. The reason is not that there is a law forbidding them to discount the paper of the insolvent, but that the insolvent know perfectly well that no pres-

sure or importunity would enable them to raise money in that way. In other words, the insolvent know so well that the presidents will not give way, that they attempt no "pressure."

The decline in the price of silver to fifty pence per ounce has caused much solicitude in England and on the Continent of Europe, but has not led to any new suggestions for arresting the downward movement by international conventions or joint resolutions. On the contrary, the determination of all responsible parties—governments, banks, and individuals—appears to be to let silver find its own level. It is noted among the causes of the recent decline that the export trade of India has fallen off, leaving her a diminished purchasing power for silver, and that simultaneously with this China has sent to India considerable sums of silver, and that Austria has lately sent to the same market £2,000,000 of her stock. The heavy decline in the London quotation is attributed to these agencies. It is believed that Austria intends to get herself upon the gold basis, and is prepared to make considerable sacrifices to that end. The only large markets for silver now are India and the United States Mint—the latter being a purely artificial market, and one not to be relied upon as a constant quantity or permanent factor in establishing the price. It is to be hoped that the new aspect which the situation assumes when the silver dollar falls in value to eighty-one cents, will arrest the attention of Congress sufficiently at least to bring the matter up for a general debate.

Some Southern papers continue to cite accounts of Northern homicides committed by burglars, thieves, drunkards, and desperadoes, in bar-rooms and brothels, as proofs that the South is no worse than the North in the homicidal matter, in answer to the charges of the *Nation*. We have, therefore, again to remind them that in talking of Southern homicide we have confined ourselves to social and business homicides, committed by persons occupying respectable positions in society, and pursuing lawful and regular callings. Not one of our illustrations has been taken from the doings of the criminal, disorderly, or disreputable class. The only real recent parallel to our illustrations, in fact, they have yet been able to adduce is the Dukes-Nutt homicide in Pennsylvania, which appears to be but a slender parallel after all, for the tragedy seems to have arisen out of an altercation about a daughter's seduction, and it will not be complete till we see the result of the murderer's trial. The Northern homicides, numerous enough, no doubt, nearly always occur in low company. A decent man, therefore, runs no risk from them.

The following is a specimen of the silly messages which reach us from Southerners on receipt of the news of one homicide by persons in a respectable position at the North—namely, the Dukes-Nutt murder in Uniontown, Pa.:

> "To which the attention of the *Nation* is respectfully called, as furnishing a suitable text for some articles on Northern civilization, such as would be found in it for the next month if this thing had occurred at the South: apprehension that Ohio and Pennsylvania civilization is fast relapsing into Southern barbarism; disgust that even in the South so cowardly a murder would not have been possible. Fit theme for many proper reflections on the civilization of a State where such assassination was possible on Sunday.
> "A READER."

The writers of such stuff as this evidently suppose that the whole affair is a little play of words, and that they can trick the public into believing that homicide is rare at the South, and is always, or nearly always, punished.

Mr. Wilde sailed on Wednesday for Liverpool, but the fact was not generally known, and he got away with very little interviewing. He says that he has enjoyed his visit to this country very much, and that he hopes to return before a great while and see how Art is getting along. It is pleasant to know that in his opinion it is "progressing" with us, and that there is reason to hope for the future. As to his impression of the people in general, he thinks that we had "a type" fifty years ago, but that we have now lost it. "Fifty years hence," he added, "they may regain it. But I like the Americans." There have undoubtedly been some changes in the American type in the last thirty years, and we doubt whether Mr. Wilde would really have liked it—in 1852, say—nearly as well as he does now. Thirty years ago he would not have been nearly as well understood as he is now, and in some parts of the country he would have found "types" of a very disagreeable sort. There was a "type" in New York at that time, known as the "b'hoy," that would probably have given him trouble, and made the future of Art in America seem very doubtful to him. The fact that Mr. Wilde has been able to pass several months in this country lecturing and talking about Art, and has altogether escaped physical violence, is one of the most gratifying proofs that could have been given of the softening of manners in the United States within the last generation.

The little programme with which Herr Most furnished the Chicago Socialists on Friday was for its size of a very sweeping nature, but he was positive that the time has come for carrying it out. It was, in brief, that everybody was to be killed except "the people," and everything was to be destroyed except what the people needed for their personal use while doing the killing. He said great inconvenience had hitherto been experienced in the killing business by the want of food for the killers. This must be provided against this time by laying in stores, and "establishing butcher shops and bakeries," in which the capitalists and bankers are to be employed as slaves. As soon as the killing is over, everything is to "be divided up," after which happiness will reign. There is, however, some reason to fear that the killing would not stop in time for the division. In fact, the dividing up and the killing would probably continue as long as there was anybody left to kill. In the meantime, however, is it not the duty of the Chicago authorities to institute against Herr Most proceedings *de lunatico inquirendo?*

In the Belt-Lawes libel suit in London on Thursday, the jury returned a verdict of $25,000 damages for the plaintiff. The libel complained of was a report set afloat by Mr. Lawes that Mr. Belt, who is a fashionable sculptor, did not do his own work, but secretly employed others to do it. To show that he was a real sculptor, and not an impostor, the Court allowed Mr. Belt during the trial to make a bust of a Mr. Pagliati, and a large part of the evidence in the case consisted of testimony by artists as to the comparative merits of this bust and another bust of the same gentleman said to have been made by Mr. Belt in 1879. A number of distinguished artists and sculptors swore positively that the two busts could not be the work of the same man, while Mr. Belt and his witnesses swore positively that they were. The jury had to believe that there was perjury on the one side, or a mistaken opinion on the other, and the Judge summed up strongly for the plaintiff. The permission given to the plaintiff to model a bust in court occasioned some discussion as to the admissibility of such evidence; but the main interest in the case was social, Mr. Belt being a fashionable sculptor and most of the witnesses men eminent in art.

The trials which the Government has set on foot in Ireland for "high treason" and seditious speaking are rather remarkable for the inability of every Ministry, no matter how liberal its tendencies, to profit by experience in Irish matters, than for anything else. There is no reason to suppose that any prosecution for violent oratory in Ireland ever has any better effect on the popular mind than to make heroes and martyrs of the orators. Juries can hardly ever be got to convict in such cases, except by packing such as public opinion will now not submit to; and when convictions are obtained public opinion does not permit the treatment of political prisoners to be harsh enough to make any sentence a deterrent. So the general result is apt to be an enormous waste of time, great expense, and proceedings in court which for Irishmen have all the entertainment of a first-class play, with a powerful cast. If there be one thing more plainly inferrible from recent Irish history than another, it is that prosecutions for seditious language make in Ireland what economists call an effective market demand for seditious oratory, and produce a steady supply of the article. Any young Irishman with a gift of the gab can through one of these prosecutions achieve great fame and much popularity, and the result is that there is always a swarm of candidates for prosecution. The melancholy feature of the affair is that Mr. Gladstone, and Mr. Trevelyan, and Lord Spencer probably know all this very well, but have to start the prosecutions to satisfy Englishmen who know and care nothing about the state of Ireland, but get angry and swear when they read of the way in which Healy and Biggar and the like talk about the Queen's Government.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 27, 1882, to TUESDAY, January 2, 1883, inclusive.]

DOMESTIC.

THE Pendleton Civil-Service Reform Bill passed the Senate on Wednesday by a vote of 39 to 5, Messrs. Brown, Call, Jonas, McPherson, and Morgan—all Democrats—voting against it. Mr. Vest's amendment, prohibiting officers and employees of the Government from giving as well as receiving money for political purposes, was rejected by a vote of 18 to 27, all the affirmative votes being Democratic, including that of Mr. Pendleton. An amendment offered by Mr. Plumb, to prevent the employment of whole families in the civil service, was adopted unanimously, but the proposition by the same Senator to fix a tenure of office of six years, and to make employees who should serve for six years eligible for a second term of six years, was rejected. Mr. Brown's scheme for making an equal division of places in the Government between all parties was rejected—17 to 27, Mr. Pendleton voting for it.

Mr. Dorman B. Eaton, who has been watching the debate on the Pendleton bill in the Senate, said on Wednesday that the bill had not been amended to its serious injury, while, on the other hand, it contained the political-assessment prohibition, which was a strong and valuable addition.

On Wednesday the Senate adopted a resolution, offered by Mr. Hoar, instructing the Postmaster-General to send to the Senate a statement showing how much money had been paid to steamship companies for the transportation of the mails of the United States in each year since 1840, and to what companies and in what amounts the money had been paid; and also a resolution, offered by Mr. Call, calling upon the Secretary of the Interior for information in regard to contested homestead entries. On Thursday the Senate passed the Political Assessment Bill—which is similar in its provisions to the Hawley amendment to the Pendleton bill—by a unanimous vote. The Fitz-John Porter Bill was then taken up, and Senator Sewell spoke in favor of it. A memorial signed by 1,280 firms and individuals of New York city, representing all the principal branches of business, protesting against the passage of a United States bankrupt law, on the ground that the operation of such a law has proved to be an injury to the business interests of the whole country, was presented by Mr. Lapham. On Friday Mr. Logan made a long speech against the Fitz-John Porter Bill, which is said to have made a strong impression. The Presidential Succession Bill was then taken up, Messrs. Hoar, Garland, and Morgan speaking in favor of the bill, and Mr. Edmunds against it. Mr. Logan continued his speech on the Fitz-John Porter Bill on Tuesday.

On Wednesday the House, after accomplishing practically nothing, adjourned until Saturday. On Saturday the Senate bills to reform the civil service and to prevent official assessments were taken from the table and referred to the Committee on Civil-Service Reform, with leave to report them back at any time. The Senate bill appropriating $70,000 to reimburse the State of Oregon for monies expended in the suppression of Indian hostilities in the Modoc war was passed, and the House adjourned till Tuesday.

The New Year reception at the White House, which promised to be one of the most brilliant ever held there, was brought to an untimely end a little after 12 o'clock by the sudden death of Elisha H. Allen, Minister from the Sandwich Islands to the United States, and Dean of the Diplomatic Corps. After paying his respects to the President, he returned to the anteroom to get his hat and coat, when he was suddenly seized with a severe affection of the heart, and died instantly. The event was announced to the President, and the reception was immediately stopped. Mr. Allen was born at Greenfield, Mass., in 1804. In 1852 he was appointed United States Consul to Honolulu, and soon after became Minister of Finance and afterward Chief-Justice of the Hawaiian Kingdom. When the reciprocity treaty went into effect, he was sent to this country as Minister-resident, and has ever since held that position.

The reduction of the public debt for the month of December amounted to almost $15,500,000, making the decrease for the first half of the fiscal year more than $81,000,000. The large decrease in the past month is accounted for by a remarkable decrease in the ordinary expenditures. The Secretary of the Treasury estimates the surplus for the year at $120,000,000.

A statement made out at the Treasury Department on Thursday shows a great decrease in the receipts from tobacco since the agitation of the question of tax reduction began. It was thought that the aggregate of the tobacco-tax receipts for the preceding sixty days would show a falling off of nearly $2,500,000 as compared with the corresponding period of last year.

The proceeds of the recent sale of articles accumulated in the Dead Letter Office, after deducting expenses, amount to $4,497 67, which sum has been deposited in the Treasury to the credit of the Post-office Department. The amount realized from the sale of any parcel can be recovered by either the sender or the person to whom it was addressed, at any time within four years from the date of its registry at the Dead Letter Office.

The Belgian Minister and the Postmaster-General on Friday formally exchanged ratifications of the convention recently concluded between the United States and Belgium for the exchange of money orders, to take effect on the 1st of January, 1883.

A man named Morrissey, arrested for violating the Postal Law in regard to lotteries, was recently released with the consent of District-Attorney Woodford. The Post-office Department made complaint to the Department of Justice, and on November 17 Attorney-General Brewster wrote to Mr. Woodford, asking for an explanation. Mr. Woodford replied, on November 23, to the effect that the prisoner had been discharged by what he regarded as a wise exercise of discretionary power. Mr. Woodford further said he had received from the Attorney-General a reply to an invitation to attend the New England dinner, and the reply had been forwarded in a "penalty envelope," the use of which, except on official business, is punishable by a fine of $300. Mr. Woodford did not assume that Mr. Brewster had intentionally violated the law, but he used the incident as an illustration of what a wise discretion would allow him to overlook. This letter called out a reply from Mr. Brewster, in which the latter said that although much that Mr. Woodford had said in regard to the release of Morrissey was reasonable, there were irregularities connected with his release, and that this case should admonish Mr. Woodford's assistants to be cautious in the exercise of the discretionary power which is intrusted to them. In regard to the matter of the New England dinner, Mr. Brewster rebuked Mr. Woodford for the allusion to it; and after explaining that his clerk took his reply to be an official letter, and therefore sent it in a "penalty envelope," Mr. Brewster concludes: "Besides, I am not on trial, nor is there any complaint made against me, and I again suggest that such an allusion was not deferential and proper."

A meeting was held in Boston on Thursday evening to consider what means might be adopted to facilitate the mail service between New York and Boston, and indirectly the service between the East and West, and South and Southwest. A resolution was adopted declaring that a fast mail-train leaving Boston at about 9 o'clock P. M. daily, and reaching New York between 3 and 4 o'clock A. M., and a corresponding train in return, were indispensable to the convenience and prosperity of the business interests of Boston and New England, and calling upon the Senators and Representatives in Congress from Massachusetts to take steps to secure the concurrence of the Postmaster-General in this view, and thereby bring about some immediate action in the matter.

The Spanish-American Claims Commission, which was established in 1871, under an agreement between the Governments of Spain and the United States, to decide claims of American citizens for injuries to person or property alleged to have been committed by the Spanish authorities during the Cuban insurrection, ended its existence on Wednesday, leaving eight cases in the hands of the umpire for decision. The total amount of the claims submitted to the Commission was almost $27,000,000.

The inauguration of Mr. Cleveland as Governor of New York took place in the Senate chamber at Albany on Monday. The ceremonies were simple. After the oath of office had been administered Governor Cornell delivered an address of welcome, to which Governor Cleveland replied. At a caucus of the Democratic Assemblymen in the evening Alfred C. Chapin, of Brooklyn, was nominated for Speaker on the second ballot. Theodore Roosevelt, of New York, was nominated by the Republican caucus.

Chief-Justice Park, of Connecticut, has declared certain ballots used by the Democrats in the New Haven city election illegal. This throws the city government into the hands of the Republicans, and as it necessitates the throwing out of 7,000 ballots in the State election, it would, if all the other ballots were legal, give the State election to the Republicans. Mr. Cole, Chairman of the Republican State Committee, having signified his intention to petition the Legislature, when it met, for an investigation of the matter, and to ask for such action as might be lawful and proper under the circumstances, on Monday a letter from Mr. Bulkeley, Republican candidate for Governor, to Mr. Cole was published, in which he refuses under any circumstances to accept the Governorship in case the Democratic ballots of New Haven should be rejected. This action on the part of Mr. Bulkeley will probably prevent any controversy in the Legislature.

The State Treasurer of Tennessee has announced his intention of refusing to pay the January interest on the State bonds. This action has excited considerable feeling on the part of the creditors, as well as of the debt-paying wing of the Democratic party of the State, to which the Treasurer has been always supposed to belong. It is understood that the Legislature will support the Treasurer in his action, as the Readjusters have control of both its branches.

In the two months during which Governor Stephens, of Georgia, has occupied the Executive chair, he has pardoned and commuted the sentences of forty-nine convicts in the State Penitentiary sentenced to death or servitude under the regular proceedings of the courts. Of this number twelve were murderers

Herr Most, the German Socialist, addressed a meeting in Chicago on Thursday night. He said that the entire world was conducted on false doctrines and in detriment to the interests of the great mass of the people. Therefore everything now in governmental existence must be destroyed, and all institutions obliterated from the face of the earth. The people must kill every one now ruling over the people in this country as well as in Europe. He also recommended the gutting of every bank in the United States and Europe, and the wholesale use of petroleum and dynamite.

The annual report of the Treasurer of Yale College for the year ended July 31, 1882, has just been published. The university funds amount to $448,491 68, an increase of about $22,000. The income from these funds was $53,448 44. The total amount of the academic funds is $795,848 05, yielding an income of $177,536 70, out of which several thousand dollars in annuities was paid. The expenses of the department were $166,799 76, of which $84,330 was paid in salaries to instructors and $6,000 for scholarships. The aggregate of all the funds was $1,826,532 69. The needs of the university are in excess of its income, especially in the academic, scientific, medical, and law departments.

FOREIGN.

Léon Gambetta, the foremost of French statesmen, died at Ville d'Avray, near Paris, on Sunday night, after great suffering. The indirect cause of his death was a wound caused by a shot from a revolver fired, it is said, by his mistress. The wound resulted in internal complications, which terminated fatally. He was born in October, 1838, at Cahors, the capital of the department of Lot, in the south of France. His father was an Italian.

The French Cabinet has decided that Gambetta's funeral shall be similar to the funerals of Thiers and Crémieux, as members of the Government of National Defence. The Parisians will close their shops on the day of the funeral, and all of the troops in Paris and Marseilles have been ordered to attend the funeral. The German press, in commenting on Gambetta's death, expresses the opinion that the event has delivered France and the peace of Europe from great danger. The *North-German Gazette* says that in German eyes he has ever appeared the personification of revenge. The general verdict throughout Europe is that France has suffered a great loss.

The report of the Committee of the French Chamber of Deputies on M. de Brazza's mission states that he considers it possible to complete the exploration of the Upper Congo in two years. M. de Brazza's object is to maintain the position already achieved by founding eight chief and twelve minor stations, forming a chain to Brazzaville from Gaboon and from the sea. The French Chamber of Deputies on Wednesday rejected, by a vote of 352 to 110, the amendment of M. Camille Pelletan, member for Aix, reducing the Tunisian credit. General Billot, Minister of War, said the army of occupation would be reduced to 20,000 men, but the credit was necessary in order to show that the army of occupation was definitive. The vote of credit was adopted by a vote of 424 to 52.

On Thursday the Chamber almost unanimously adopted the vote of credit for M. de Brazza's expedition. On the same day the Senate adopted the ordinary and extraordinary budgets, and voted a grant of 25,000,000 francs to meet the cost of the occupation of Tunis. On Friday both houses were prorogued.

Mlle. Croizette, the celebrated French actress, has retired from the Théâtre-Français on a pension.

Count von Wimpffen, the Austro-Hungarian Ambassador at Paris, committed suicide on Saturday morning, probably on account of financial difficulties connected with the collapse of the Union Générale. The news created consternation at Vienna.

The six-hundredth anniversary of the founding of the House of Hapsburg was celebrated with enthusiasm throughout the Austrian Empire on Wednesday. The royal family received numerous deputations and addresses from prominent Austrian corporations.

Herr Tisza, President of the Hungarian Council, in replying to the New Year's congratulations of the Liberals on Monday, said he could not see any ground for apprehension of disturbance of the peace. The Government, he said, would seek allies, not for war, but for the preservation of peace.

The river Rhine and its tributaries, from the Lake of Constance to Cologne, have been rising rapidly, and many bridges and dams have been destroyed. On Thursday the Government of Baden announced that the floods had reached a higher point than in November, and the river Neckar was on Thursday at the highest point known in this century. Travel was interrupted between Paris and Vienna, and great damage done in many parts of Germany, Austria, and Switzerland. On Friday the Rhine began to subside, but the bursting of a dyke at Worms resulted in the flooding of the lower part of the town. A despatch from Worms on Saturday announced that the dykes on both sides of the Rhine had burst, and that the low-lying districts were flooded. On Tuesday a despatch from Wiesbaden said the Rhine floods had destroyed five villages, and that two hundred and fifty houses had fallen.

In the Italian Senate, on Friday, the Parliamentary Oath Bill was passed by a vote of 105 to 12. The Senate then adjourned until January 17th.

King Alfonso, replying to the Christmas congratulations of the Spanish Chamber of Deputies, on Wednesday, said: "The movement for the concentration of important public forces around my throne increases my hope of seeing the whole of Spain animated by a feeling of attachment to our traditional monarchy."

A despatch from St. Petersburg to the London *Standard* says that Russia and the Vatican have made an arrangement, one of the results of which will be that the Pope will reappoint Catholic Bishops in Poland. It is stated that the Pope has acquiesced in England's proposition to accredit a diplomatic resident at the Vatican on the same footing as that of the representative of Prussia.

It is also reported from St. Petersburg that complaints in regard to the treatment of the Jews are again appearing in the newspapers. It is stated that the railway companies have ordered the discharge of their Jewish employees. The Prefect of St. Petersburg has ordered that no indulgence shall be shown to Jews living in the capital without official leave. The Senate has decided that no court can authorize the transfer of land to a Jew.

The Russian Chief of Ordnance has ordered of Herr von Krupp, of Essen, all the guns required by the artillery reserves, and the German Government has raised no objection to the execution of the order.

A despatch from Berlin says that on the reassembling of the Reichstag the German War Office will submit supplementary demands to meet the increased military expenditure.

Sir Charles Dilke, in an address to the electors of Chelsea, on Friday, concluded by expressing the hope that he should hear no more talk about the retirement of Mr. Gladstone. The London *Times*, referring to the fact that Lord Derby, Colonial Secretary, consented to receive the High Commissioner of Canada and other colonial agents in general upon his accession to office, considers it wise to recognize more formally than has hitherto been done the official status of gentlemen whose value in conveying directly to the Home Government the wants and aspirations of the colonies is not to be underrated.

In the libel case of Belt against Lawes, in the Queen's Bench division—a suit growing out of a charge by the defendant that a work which the plaintiff claimed as his own production was really that of another hand, and which has created great interest in England—a verdict for the plaintiff was rendered on Thursday, with £5,000 damages. The jury deliberated forty minutes. The Judge had summed up strongly in favor of Mr Belt. After the verdict the Judge refused a stay of execution The diary of Verheyden, the principal witness against Mr. Belt, was impounded by order of the Court. The plaintiff claimed that the diary had been concocted for the purposes of the case. The lawyers of Mr. Lawes intend to apply for a new trial.

Mr. Davitt, on Thursday night, addressed a meeting at Limehouse, London, on the social and political condition of Ireland. A resolution was carried declaring that self-government, with a resumption of the land for the benefit of the people, was the only means of restoring peace and contentment in Ireland. The *United Ireland* was on Thursday issued in Dublin for the first time since its seizure. Mr. O'Brien, Nationalist, and editor of the *United Ireland*, will contest the seat for Mallow, County Cork, vacated by the acceptance of a seat in the Queen's Bench Division by William Johnson, the Attorney-General for Ireland.

A meeting of the National League was held at Bray, Ireland, on Sunday, at which Mr. Corbett, M. P., presided. He said that no one need hesitate to join the League, as Mr. Trevelyan had admitted that it was a legal organization. Messrs. Lalor and Harrington addressed the meeting. The former made an incendiary speech, in which he said he was glad to observe that the assembly was composed of fighting men. He said he was certain they knew the day might come when they would have to use that force by which every other country had obtained its freedom. On Monday Mr. O'Brien, editor of the *United Ireland*, was arraigned in Dublin on a charge of seditious libel, based on an article which was printed in his newspaper.

A telegram received on Saturday at the Admiralty Office, in London, from Suez, stated that nine of the principal culprits, out of twenty-one Bedouins implicated in the murder of Professor Palmer's party, have been captured, together with the wives and other relatives of the remaining important criminals, who will be held as hostages. The murderers of Professor Palmer and Captain Gill are among the prisoners. Sufficient evidence has been collected for a trial of the prisoners.

Mr. Dillon has issued an address to the electors of Tipperary, announcing that, in deference to the wishes of his friends, he had agreed to postpone his resignation as member of Parliament until the first week of the session. Consequently there will be a vacancy about the end of February. He energetically denies that he retires because he is disgusted with the Parliamentary agitation. He says he believes more firmly than ever in the necessity of providing that the Irish representatives in Parliament shall be an independent body of Nationalists, who will oppose and harass every government which denies rights to Ireland. He believes, above all, in organization in the "Ireland in America," and wherever the Irish remain faithful to their nationality. He resigns, he says, solely because his health is broken down, and labor will be impossible to him for a considerable time. He believes the National cause was never since the Union in a stronger position.

A despatch from Cairo says that the Egyptian Ministry will accept General Sir Evelyn Wood's army scheme, which provides a force of 6,000 troops, with twenty-five English officers.

Despatches from the Sandwich Islands say that active preparations are being made for the coronation of King Kalakaua, which is to take place on February 12. The King's Ministers recently made a tour of the island of Oahu, and were very enthusiastically received by the people. There are over 300 telephone wires now in use in Honolulu, and some of the planters are cutting their sugar cane at night with the aid of electric lights. The sugar crop for 1883 is coming in rapidly and promises exceedingly well.

The acting Governor of Iceland has sent a communication to the London *Times* to say that, notwithstanding the large donations which have been received, there will be great distress in the island from the want of food during the present winter.

THE PASSAGE OF THE PENDLETON BILL IN THE SENATE.

One of the stock jokes of the friends of the spoils system has long been that the reformers expected to introduce the Millennium by substituting appointment by competitive examination for appointment by favoritism. The jokers will, now that the Pendleton bill has passed the Senate and will probably pass the House, perhaps comfort themselves by showing that it will not establish the Millennium, and will still leave many evils in the civil service. The truth is, however, that none have been more emphatic than the reformers themselves in guarding against extravagant expectations as the result of any bill, however carefully drawn. All that can possibly be expected from the working of any law is an improvement in the condition of human society. The man who expects perfection from any piece of legislation is usually a lunatic. The man who alleges as a serious objection to a law that it will not produce perfection, ought also to be regarded as mentally unsound, and some day will be. One of the express objects of the United States Constitution was "to establish justice." That it has not established justice is, however, no argument against its value. The object of the Pendleton bill is, in like manner, to make the civil service a perfect machine, but all that is to be expected from it is improvement in the machine. If it does this in any degree, it will not only silence those who have been maintaining that, "in the existing state of human nature," the United States civil service could not be improved, but will prepare the public mind for steady progress in the direction of improvement. It will, in short, make it easy to cure such defects as the actual working of the law may reveal in the law itself, by showing the public how much law can do to build up the now greatest need of the Republic—an administrative organization suited to its enormous size, its rapid growth, and its rapidly increasing revenues.

We shall now briefly touch on the features of the bill which need most attention from the people. In the first place, it "authorizes" the President to appoint a commission to set the new machinery of appointment in motion. It does not and cannot direct him to do so. He can, if he pleases, make the law a dead letter by taking no action under it. If he does take action under it, and appoints the Commission of three, they are to "aid him" in the preparation of civil-service rules and regulations in case he "requests" them to do so. He need not, however, request them to do so. He can, if he pleases, give the Commission no work to do, and leave it a laughing-stock, as President Grant did that which was appointed in his first term. The public will do well to bear these things in mind, because in the past many of the evils in the civil service have been due not to any defects in the law, but to the abuse by the President of the discretion lodged in him by the Constitution—that is, to his making appointments and removals which he ought not to have made, and need not—in any proper sense of the term—have made. The bill, therefore, will not, and it is not desirable that it should, do away with the necessity for steady pressure on the Executive in support of it, and close supervision of his manner of carrying it out. In saying this, however, we do not mean to be understood as doubting President Arthur's intention to give the law a full and fair start, or doubting that if once started, it will never be repealed. We mean simply that nothing will prevent its being nullified, or evaded in some degree or other, but public vigilance. The sinister interests which it assails are numerous and powerful, and will continue to be so.

The rules and regulations to be drawn up under the bill by the Commission provide for admission to the service by competitive examination, but apparently, as the wording of it now stands, vacancies in any grade can be filled in this way from outsiders, and not vacancies in the lowest grade only, as originally intended. The section relating to promotion does not conflict with this view, because it simply provides that promotion, when made, "shall be on the basis of merit and competition." There is a want of clearness on this point which is to be regretted. It seems desirable that officers should know beforehand just what they may expect and what they must not count on in the way of promotion.

The provision that appointments in the departments in Washington shall be apportioned among the several States and Territories on the basis of population, is a concession to the spoils view of the offices, and may in practical working have some ludicrous as well as embarrassing results. It may, for instance, compel the selection of an expert of great rarity, such as an examiner in the Patent-office, from Arkansas, or New Mexico, or Florida. Some modification of this provision to provide against accidents of this sort seems absolutely necessary.

It is to be observed that the successful candidate at a competitive examination does not thereby secure definitively a place in the United States service. He simply obtains the right to six months' probation, in which his moral and mental qualifications for the place which examination cannot reach will be fully tested. If it turns out that these are wanting, he will have to give way to some one else. The law, in other words, simply makes the competitive examination, instead of the recommendations of Congressmen, the means of selecting the persons whose capacity for office shall be tried. It does not impose on the public service any officer or employee simply because he has been able to answer certain questions in the elementary branches of knowledge, or even questions relating to the duties of the office to be filled. It only says that if a candidate shows that he knows certain things, he shall have an opportunity of showing whether he can do certain things.

The bill is intended to apply for the present, besides the departments at Washington, to custom-houses and post-offices whose officers amount to fifty all told. But it is not to touch the preference now given by law to soldiers or sailors, nor to apply to laborers or workmen. It contains stringent provisions against "Hubbellism" in all its forms—*i. e.*, the levying of assessments by United States officers; but it does not protect the clerks against levies by politicians not in the United States service.

THE TARIFF ON LUMBER.

The representatives of the Chicago lumber manufacturers who appeared last autumn before the Tariff Commission and advocated the retention of the tariff on lumber, were endowed, it is to be hoped, with a fair sense of humor, else they must lose much of the enjoyment to which they are entitled in contemplating the readiness with which their bait was swallowed by the Commission. The joke is excellent, even if the public at large cannot quite appreciate it. The lumbermen think that the present duty of $2 per 1,000 feet imposed upon lumber entering the United States from the Dominion of Canada is reasonable, and the Tariff Commission concurs with them in this view. What are the facts in the case which the Tariff Commission should have taken into consideration in discussing this duty upon Canadian lumber? We are now, since the publication of the Forestry Bulletins of the Census, for the first time in a position to examine the subject really intelligently.

The duty was placed upon Canadian lumber in the interest of the Northwestern lumbermen. It benefited no other class, and was desired in no other section. The lumbermen of the Northwest argued that their pine forests were inexhaustible—able to supply indefinitely all the demands the country could ever make upon them; and that beyond the Boundary these forests extended indefinitely, containing such a body of timber that the human mind could not even grasp its immensity. They could manufacture all the lumber the country could ever need. But if the Canadians, with their greater facilities for manufacturing, their lower wages and better timber, should be admitted to competition, the home manufactories must perish. By exaggerating the extent of the pine forests of the United States, they were able to purchase pine lands at a nominal price. By maintaining the duty upon Canadian lumber, they were enabled to manufacture lumber at a large profit. The plan was well conceived and successful; but unfortunately the Census brought some disagreeable facts to light. It showed that in 1880, even, the pine forests of the country had already severely suffered, and that they were not only not inexhaustible, but in reality almost exhausted. It showed that the production of white-pine lumber had increased and was increasing with dangerous rapidity, and that the complete extinction of Chicago as a great lumber-distributing point could be foretold with entire certainty. The publication of these facts was followed by the natural results: the price of pine land doubled in a few months, and in some cases even quadrupled. But the lumbermen still preserved a bold front. They denounced the Census, and set to work to discover undiscoverable pine.

Their first venture was in Tennessee; and on the western slopes of the Allegheny Mountains and the Cumberland Plateau, where the broad-leaved forest of the Mississippi basin culminates in all its richness and beauty, their organs discovered a great body of white pine,

which contained more lumber than Michigan could boast upon the day of its discovery. The choice of locality had been badly made; East Tennessee was too well known, and had to be abandoned. Their next attempt was made in the North. A traveller and woodsman of tremendous experience and intelligence rushed into Chicago, breathless with excitement. He had discovered, on a little stream flowing from the north into the Georgian Bay, a body of the most magnificent white pine the eye of man had ever beheld. It contained hundreds or thousands of billion feet of lumber—enough to supply the United States and Canada for at least a century. Unhappily, it was shown that the stream in question was only about thirty miles in length, that the valley which it watered was situated near the extreme northern edge of the pine forest, and that the few pine trees which grew along its banks among the hardier denseness of the great sub-arctic forests of the north, were scattered, small, and utterly worthless for commercial purposes.

All this had occurred before the meeting of the Tariff Commission in Chicago. The lumbermen, finding that they could no longer secure the raw material at a nominal price, were more anxious than ever to maintain the duty on Canadian lumber, and so keep up the price of the manufactured article. The vast resources of the Canadian forests, and the dangers which threatened the lumber manufactories of the United States from Canadian competition, were still held up as sufficient reasons for maintaining the duty. It is still impossible to speak with great precision of the Canadian forests. Their extent, but not their productive capacity, is known. They are composed, east of the Rocky Mountains, of pine and fir, and west of the Rocky Mountains largely of fir. The number of broad-leaved trees which extend north of the boundary of the United States is comparatively small, and none of them attain either the size or quality of the same species further south. The competition, then, which we have to fear from Canadian lumber is in pine and spruce; that is, in comparatively cheap woods, which enter into the general construction of all buildings, and which are among the prime necessities of civilized life. But if the productive capacity of Canadian pine forests is less known than that of our own, reliable information is not entirely wanting in regard to them. Intelligent estimates of the amount of pine standing in Canada have been made, and, although differing considerably in amount, they are not without value, as it appears that the last estimates made differ from the earlier ones principally because they include small trees, which a few years ago were entirely disregarded. It is safe to assume, in any case, that the existing Canadian pine forests will not yield more than 40 to 50,000,000,000 feet of merchantable pine. The production of white-pine lumber in the United States is now not far from 10,000,000,000 feet annually; so that, in order to protect the Chicago lumbermen from competition with a body of pine which does not exceed four or five years' supply for this country, we impose a tax of $2 upon every 1,000 feet of white pine, spruce, or Oregon fir used in the United States. The manufacturers of lumber grow rich; the consumers and the forests suffer.

The country is not without words of warning in regard to the dangers which threaten the forests; they have been spoken far and wide. In the meantime we continue to take $2 from the pocket of every man using a thousand feet of pine or spruce lumber, and hand it over to the manufacturers as a bounty to induce them to destroy the forests more rapidly. It is natural, then, that the manufacturers resist any attempt to have this duty removed. They will make a still more determined fight to prevent it. They are bold, rich, and united. They are actuated by a single purpose—to convert the greatest amount of forest into the largest amount of money in the shortest possible time. Their organization is perfect. They control Legislatures and elect members of Congress; they own Governors and Senators. They know what they want and they mean to have it at any cost, and without regard to the future prosperity of the country. It will take something stronger than the Tariff Commission to make them let go their grip upon the people. We repeat, the tariff duty on lumber is a premium on the devastation of the country, and should be repealed without delay.

CO-OPERATIVE STORES.

The failure of the Coöperative Dress Association has been ascribed to various causes, such as want of sufficient capital, incompetency of the foreign buyer, bad choice in the selection of a name, improvident management, disagreements of officers, etc. It is fortunate that defalcation is not found in the list of assignable causes of the disaster. The only thing quite certain is that a paid-up capital of $250,000 has been lost, and lost honestly, in the space of about eighteen months.

The Association—we speak without disrespect for its founders and promoters—was a foredoomed failure from its beginning. It was not based upon the principles of co-operation, but upon those of competition. It was a joint-stock, competitive dry-goods and millinery store, differing in no wise from other dry-goods and millinery stores, except as its ownership was scattered among some hundreds of persons who gave no attention to its affairs, and its management was in the hands of either hired persons or inexperienced persons, and was a shifting management at that. There is no trade so largely dependent upon acquired skill and individual responsibility as the trade in ladies' dress goods. There is none so beset with the vicissitudes of fashion and caprice, and none, therefore, which requires such quickness of vision and firmness of nerve to meet exigencies. The grocer knows that sugar and tea and coffee and butter and eggs will always be in demand at prices something above the cost of production. The dry-goods merchant never knows whether the articles on his shelves to-day will bring as much six months hence as they have cost him. Some will bring more and some less, and his success or failure depends upon his ability to get rid of the whole lot at an average profit, and keep his stock so full all the time that his customers shall have little or no occasion to go elsewhere to find what they want. The most eminent professor of this art in the United States was the late A. T. Stewart, but Mr. Stewart's skill was an acquirement, a growth, an accretion of forty years' development, and in no sense a divination. The successful dry-goods merchant is made, not born. It is not every one whom practice and experience can make successful in dry goods; but the chances of success among those who have had no experience, and who must rely therefore upon hired experience, are so small that they are not worth mentioning, especially in a city where competition is so keen-scented and all-devouring as it is in New York.

For these reasons the Dress Association was destined to certain failure, and it is matter for congratulation rather than regret that the capital was only $250,000. If it had been twice as large, it might have lasted twice as long, but would have ended in the same way. It may be added that if want of capital was the cause of the failure, it is another and signal commentary on the badness of the management, since more capital was offered in the beginning than was accepted, and a large sum was returned to subscribers after it had been actually paid in. This error, if it be one, is ascribed to the London expert in joint-stock storekeeping who was brought here to set the machinery going, and who of course brought with him only London experience, which is a very different thing from New York experience. If Mr. Pulbrook was wrong, those who brought him here were still more so.

It is important that coöperation as a principle should not be discredited by the failure of the Dress Association, which, as we have already remarked, was not coöperative at all. The name was evidently taken from the London coöperative stores, which are themselves not coöperative, but competitive, as Mr. George Jacob Holyoake takes pains to show in his 'History of Coöperation.' A coöperative store is one in which the profits, if any, are divided among the purchasers and not among the shareholders. The pioneer society of Rochdale commenced in 1844, when twenty-eight workingmen contributed £1 each for the purchase of a small stock of provisions for their joint use. These provisions were to be sold not at cost but at market price to the members of the society. The difference between wholesale and retail price was relied upon to pay the expenses of the store and a fixed interest on the capital contributed. Any profit beyond this was to be divided among the purchasers in proportion to their purchases. If, after the declaration of a dividend, the persons entitled to it preferred to leave the amount belonging to them undrawn, it was counted as additional capital and credited with interest the same as the original capital. The Rochdale store grew by the addition of members and the accumulation of capital, until in the year 1876 it had 8,892 members and $1,250,000 capital, and yielded $250,000 profits per annum.

The example of the Rochdale pioneers found a multitude of imitators in the manufacturing districts of England, which have yielded a vast amount of good results to the

working classes, not merely by saving to them middlemen's profits, but by encouraging habits of thrift, by establishing reading-rooms, and bringing light and knowledge to the members and their families in a thousand ways. In short, it was real coöperation applied to the satisfying of human wants. The principle of competition did not enter into it at all, or only to a slight degree. The success of the experiment among the working classes was so great that eventually the middle and upper classes became impressed by it, and sought to turn it to account for their own advantage. The conditions of retail trade in London, where aristocratic custom had brought about a system of long credits and correspondingly high prices, were very favorable for an innovation based upon cash payments and correspondingly low prices. The retail dealer in London was in the habit of collecting his dues from regular customers once a year, or once in two years, or at the customer's convenience. Interest and bad debts were always gnawing at his profits, and these required to be offset by higher prices for his goods. The conditions of retail trade in New York, where monthly payments are expected from regular customers and cash from all others, are as different as possible from those existing in London before the advent of the so-called co-operative stores.

Coöperative storekeeping in London began with the Civil-Service Supply Association, in the year 1864. The Association was composed at first of a few post-office clerks, and was gradually enlarged by the admission of other members of the civil service. It was based upon different principles from those of the Rochdale pioneers. Its main object was cheapness, not savings. It furnished goods to members at wholesale price, plus expenses and a small advance to cover contingencies. In the course of ten years this small advance had resulted in the accumulation of a fund of $400,000 over and above current requirements. The question then came up how this fund should be divided—whether among the purchasers, according to the Rochdale coöperative plan, or among the shareholders, according to the joint-stock competitive plan. As only shareholders were entitled to vote upon the question, the latter plan was adopted. The Civil-Service Supply Association became the model of the other London coöperative stores; that is, they all became joint-stock business undertakings, and exposed themselves to the perils of all business undertakings under the law of competition.

The stores were vastly popular in the beginning. They became the fashion. It was no uncommon thing, says Mr. Holyoake, to see a Marchioness elbowing her way in the Haymarket—an unfragrant locality—to make her purchases at "the store." The stores, buying and selling only for cash, made no bad debts, lost no interest, and could always command the lowest prices in the wholesale markets; consequently they could, and did, undersell the ordinary retailer. They really revolutionized London trade. They imposed upon the retailers the alternative of either following their example by cutting off long credits and selling at low rates for cash, or perishing. The retailers first bewailed, then threatened, then petitioned Parliament, but finally adopted the business methods of the new stores. They are now gradually but surely regaining their former hold upon the community of buyers, by the exercise of superior business qualifications—the same which have given the New York retailers their marked advantage over the Coöperative Dress Association. There is still room for real coöperative storekeeping in New York, but it is not likely to be either popular or useful among the classes who subscribed the capital for Miss Kate Field's enterprise.

CONGRESS AND THE NATIONAL LIBRARY.

"Observe, my son," said the minister of a monarch, "with how little wisdom the people are governed." It is not much better when the people govern themselves. Five or six years ago, when our national debt was larger and the income smaller, the Joint Committee on the Library of Congress proposed most magnificent plans for a new building, to cost ten or twelve millions. Now, when the Treasury is overflowing, the Committee feel obliged by the Congressional apprehension of popular blame for extravagance to ask for a building costing only half as much, and Congress rejects even this demand. If the objection made to the plans had been that they were bad—as they were—one would not have found fault; but no one but the Committee knew, or could be expected to know, anything about the plans. The questions brought up were, whether it is worth while to have a national library at all, where it is best to put its house, and how much it is worth while to pay for the building.

To the first question, it was answered that by the operation of the copyright law we already have a national library, an evil state of things which Mr. McLane, of Maryland, proposed to do away with by destroying half of the books as being useless. His drastic remedy found no advocate in words, though the House has always been doing what indifference could to carry it into effect, letting 480,000 volumes be crowded into space designed for 180,000. As to the place, the project of buying land for the site, which has always been supposed to cover a job (with some show of reason, since the price usually talked of is about three times the assessed value), was summarily disposed of. The enlargement of the Capitol, which could only be a temporary makeshift, has also dropped out of sight. Judiciary Square, by far the best site in the city, has been appropriated by some commission for the construction of a building for the Pension Office, in the planning of which (observe again, my son) it is said that no member of the Office has been consulted. The Botanical Garden on Pennsylvania Avenue, which is now most in favor, is not inconveniently situated, and perhaps, after the channel of the river is improved, it may not be exposed to the Potomac floods. The third question was the cost. As we said, it started at ten or twelve millions for the building, exclusive of the land. At that time the idea was to construct a magnificent palace, with art galleries and vast halls for the public to promenade in, and some small storage for books, put in, as it were, parenthetically. The exterior was to be Gothic; and, as often happens with our public buildings, there were persons who did not think it beautiful. At the present session the Committee did not dare to present so extravagant a plan, and substituted one with exactly the same interior, but in the Renaissance style, to cost three or four millions, showing that they had proposed to expend five or six purely for an outside casing, and not an attractive one at that. Until we have a design of undoubted and extraordinary excellence it is well to reserve our millions. Of the Renaissance design we can only say that if it is the one exhibited two or three years ago, it is little improvement on the Gothic. But the House will have neither. The House limits the expense to $2,000,000. Congress is willing to store its books, but does not care in doing so to attempt to beautify the city of Washington. If there had been any chance of its succeeding, one might regret its parsimony.

It has been confidently asserted that, by adopting a certain plan, books can be stored in a thoroughly fire-proof and not disagreeably plain building at the rate of three for a dollar. A library is always inconveniently full before it is closely packed, but the two million dollars will certainly provide for five million volumes, twice as many as are in the largest library in the world, three times as many as are in the next largest library, double the number provided for in the ten-million-dollar plan. If Congress should double its rate of growth and acquire 50,000 additional volumes every year, the building would be good for ninety years; then it could be enlarged. No plan for a library building is good that does not provide for enlargement.

One of the most sensible suggestions shows curiously how little knowledge Congress has of libraries. It was proposed that the matter be referred to a commission of experts composed, among other persons, of the librarians of the public libraries of Boston, New York, Philadelphia, Baltimore, Cincinnati, Chicago, Milwaukee, and St. Louis. Now, if by this was meant, as it probably was, the free public libraries owned by these cities and supported at public expense, the cities of New York and Philadelphia have none; St. Louis has only a Public School Library; and the Public Library of Baltimore has not yet any librarian. If by public libraries was meant, as in the tariff, all that are not private in those cities—mercantile, society, proprietary, university—then the body would be somewhat unwieldy. However, it makes little difference which interpretation is the true one, as the amendment was not adopted, and the whole matter remains in the hands of the Joint Library Committee, who do not consult librarians, and whose favorite plan was disapproved of by the librarians in convention at Washington and formally condemned by the librarians in convention at Cincinnati. The result so far, though not creditable to Congress, is not greatly to be lamented. With the original plans we should have had an ugly, unsuitable, and costly building. With the new plans we shall probably have an ugly, unsuitable, but cheaper building. The saving of six or seven millions is something, and there is the further advantage that the Library of Congress plainly housed will not be the chief show place of the city, and will escape that army of sight-seers who in the costlier edifice would have made any proper use of the books impossible.

THE OPENING OF THE ROYAL COURTS OF JUSTICE.

London, December 9, 1882.

England does not shine in ceremonies; both the reserve and the solidity of the national character are averse to occasions of pomp and display. The climate does not lend itself to open-air processions nor to rich combinations of color, and the comparative simplicity of worship has lessened the taste, surely natural to all mankind, for solemn and dignified public ceremonial. Although people are, in their hearts, just as well pleased in England as elsewhere to show them-

selves in some gorgeous dress and be admired by the beholders, they have a great fear of appearing ridiculous; for everything is turned into ridicule nowadays, and the antique show on Lord Mayor's Day, for instance, excites more amusement than respect. No really imposing ceremony in which all orders of the nation are represented now takes place, except a coronation or the burial of a national hero like the Duke of Wellington; and such occasions are of course rare. Hence the interest which even those who knew nothing about the law, and cared little about the lawyers, took in the scene of December 4, when the Queen solemnly opened the new courts in which justice is henceforth to be dispensed by the highest tribunals of the country.

For a century and a half after the Norman Conquest the King's Court, in which his justices sat, followed the King himself from place to place. Magna Charta provided that that branch of this court which entertained actions between one subject and another should thenceforth remain fixed in one place. That place was Westminster, then a mile and a half from London, where the King had a palace close to the Abbey Church of St. Peter. Here the other two branches of the old court (for it was now divided into Queen's Bench, Exchequer, and Common Pleas) also came to sit, and here they have done so ever since—first under the ample roof of Westminster Hall, latterly in buildings erected for the purpose along its western side. When the Court of Chancery grew up, the Lord Chancellor used at first also to sit in this hall, but of late years both he and the other Chancery judges have had accommodation provided for them at Lincoln's Inn, close to Chancery Lane, and just outside the limits of the ancient city of London. This local separation of the two sets of courts caused less inconvenience than might have been expected, because the counsel who practised in the Common-Law courts did not usually take Chancery business, nor the Chancery men Common-Law business—each keeping to their own courts, and those courts being totally distinct and independent of one another. There were, however, some grave disadvantages in this dual system. Attorneys had business in both sets of courts, and had to run hither and thither between them. The Common-Law practitioners have for many centuries had their chambers—or "law offices," as you would call them—in the Temple, a large mass of buildings lying between the Thames and Fleet Street, opposite the foot of Chancery Lane, and therefore near the Lincoln's Inn courts, but a mile and a half from the courts at Westminster. Moreover, these Westminster courts were themselves small, ill-ventilated, every way inadequate to the vastly increased business which had to be discharged in them, and destitute of the requisite provision of rooms for the various officials, or for the judges themselves, when sitting informally "at Chambers." Thus it was at last resolved to bring all the courts under one roof, and, as there was no vacant space at Westminster to which the Chancery courts could be transferred, the only solution was to carry the Common-Law courts up to the neighborhood of the Temple and Lincoln's Inn. Seventeen years ago a site was chosen immediately north of the Strand, at the point where Temple Bar separates it from Fleet Street, and thus close both to the Common-Law practitioners in the Temple and to the Chancery practitioners in Lincoln's Inn. This site, then covered by a labyrinth of lanes inhabited by the poorest class, was gradually cleared, but not till 1871 did the work of building actually begin. Meantime an event happened which gave a new significance to the undertaking: in 1873 the Judicature Act was passed—a statute which destroyed the ancient distinction between courts of Common Law and courts of Equity (Chancery), fusing all the superior tribunals of the land into one new Supreme Court of Judicature, subdivided into a court of original jurisdiction (the High Court of Justice) and one of appellate jurisdiction (the Court of Appeal). It thus became more than ever necessary for all the judges to have courts provided for them in the same place, in order that the unity of system and procedure which the statute was meant to bring about might be attained, and that counsel and attorneys might be able to practise more easily in every court, having only to walk from one judge to another across a passage, instead of driving down to, or up from, Westminster to Lincoln's Inn. If the erection of one building for all the tribunals had not been already begun, it must have been begun after the passing of this act; nor can the full effect of the act be obtained until this local juxtaposition of authorities hitherto unconnected has had time to tell.

These explanations seem required in order to convey an idea of the various aspects of the event of December 4. It is interesting in three ways: Firstly, it is an important stage in the history of our law, marking the fusion of the old Common-Law courts with the more recent, yet also ancient, Equity courts, and rendering that fusion more practically complete. Secondly, it is a unique occurrence in the history of our judicial administration. Since first there were central courts in England, since William Rufus built that great hall at Westminster which is being now forsaken, there has never been any assemblage of the lawyers for a common purpose, any recognition of them by the state as a great profession, on half so great a scale. Such a huge pile as this is would never have been thought of till in this century England has grown so vastly in wealth and population; nor is it likely that for many centuries to come the need of any other such central building will be felt. Thirdly, the occasion was one of those rare ones which gather all that is eminent in English society together—eminent whether by rank, or by office, or by intellectual gift. A great number of our most distinguished men were required to be present, being connected either with the Executive Government or with some branch of the law. Everybody else desired to be present, in order to see the sight; and the pressure for tickets was terrible during the last few days, particularly, of course, from the wives and daughters of those to whom tickets had already been given. Tickets were, in fact, distributed to persons who could claim any kind of distinction, even though it was neither official nor legal. One saw in the vast crowd almost every face which any one could have desired to see—men of science, authors, journalists, painters, musicians, even actors, remote as their vocation might have seemed from the purposes of the day. Nearly everybody whom an American visitor to England would ask about as famous in any walk of life was to be seen there that day.

In one respect, this desire to make the assemblage truly representative of modern England spoiled its historical significance. There was little attempt to distribute people according to their place and order in the state. The Queen's counsel, the title given to the highest rank among barristers, were indeed all seated in one spot, and looked imposing in their full-bottomed wigs, silk gowns, and black coats of last century cut. But the junior members of the bar were scattered here and there wherever they found room. The Privy Councillors, although the highest official order in the realm, and specially connected, on the theory of our Constitution, with the Crown's administration of justice, had no special place set apart for them. Neither had the Peers, nor the Bishops, nor the House of Commons; nor did either Peers or Bishops appear in their official robes. In fact, any one who wished to moralize on the demoralization of our institutions, and the steady effacement of their ancient lines, might have found here a suitable opportunity; for although the occasion was one which might have been thought to specially suggest the observance of old rules and distinctions, the substantial equality of those who were present, and the neglect of all artificial classifications, was what most struck an observer who asked himself how things would have been arranged in the fourteenth century, or the seventeenth, when Privy Councillors and Peers were so much more important than they are now, and when no one would have dreamed of admitting representatives of mere literature, or science, or art to share in any public ceremonial.

Historically, therefore, the display lacked something, for it neglected associations that would have been suggestive; and pictorially it suffered by the want of brilliant colors. Though there was great variety of official costume, the black of the lawyers largely predominated; and as the ladies came in morning dress, with cloaks or mantles on their shoulders—for the day was cold—they added less brightness than is usually expected from them. Still the *coup d'œil* was impressive as the great procession passed up the long hall between thick rows of spectators; for it spoke of the antiquity, the permanence, the solidity, even now in democratic days, of the Constitution and Government of England. Although the Queen is now no more than a figure-head, every one treated her as if she were still as much the ruler of the country as was Henry II. when he organized these courts which still dispense justice in the sovereign's name. The monarchy of France has gone, the monarchies of Spain, Russia, Prussia, Austria are recent growths compared with the English, yet the English is, to all appearances, safer than any one of these. The Lord Chancellor, who addressed the Queen on behalf of the judges; the Archbishop, who offered a prayer; the Attorney-General, who, as spokesman of the bar, asked the Queen to direct that the day's proceedings might be entered on the records of the Supreme Court; the Lord Chief-Justice (Lord Coleridge), whose tall and dignified form, rich with scarlet and ermine, was one of the more prominent in the procession; the Chancellor of the Exchequer (Mr. Gladstone), whose face, worn and grave and grim, but instinct with quenchless fire and passion, was scanned more closely than any other—all these are the holders of offices which have lasted for many centuries, and been filled by persons famous in the history not of England only, but of the world. No occasion could have more forcibly impressed on an observer's mind that singular continuity of development which England, almost alone among European states, exhibits, and which, so far as one can see, may go on, for generations to come, unbroken by any revolution, yet constantly changing the realities which lie under these old forms, and making them more and more forms only.

As a piece of architecture, the building may be pronounced better than most of our recent performances, yet scarcely worthy of its importance or its magnitude. If there is little in it to object to, there is also little to admire—little which strikes the imagination or detains the eye by beauty of detail. There never was an age in England which had half so many great buildings to erect, yet withal we have not thus far produced a single really great architect. Nearly every town has been erecting a town-hall or an exchange; immense numbers of new churches have risen in populous districts; in both Uni-

versities several new colleges have been erected; London herself has had new Houses of Parliament, new public offices, a new Natural History Museum, a new Royal Academy—all buildings of great size and cost. Yet nothing has been created by which this age can desire to be remembered. Mr. Street, the architect of these courts, did not live to see them finished. He was a man of great taste and knowledge, as his book on the Gothic architecture of Spain sufficiently proves, and in practical skill he was certainly inferior to none of his contemporaries; yet, in examining his work, we are more struck by his knowledge of thirteenth and fourteenth-century Gothic than impressed by any grandeur or charm of the work itself. I speak chiefly of the exterior, and of the great central hall, which no doubt suffers by the inevitable comparison one makes between it and that at Westminster. The convenience of the courts has still to be tested by use, for the judges will not migrate thither till January. But those who have gone through the whole interior of the building say that it too much resembles the legal procedure of England in its complexity, its intricacy, its darkness, and the difficulty of finding one's way out when one has once got in. Yet, whatever its defects, it cannot fail to be better than the rooms in which our judges have hitherto had to sit, in which there was neither air nor proper space for the counsel and the attorneys. It remains to be seen whether the old separation of the bar into those who practise Common Law and those who practise "Equity"—a separation which has survived the technical fusion of the courts in 1873—will survive their local juxtaposition. There is still enough difference in the business allotted to the "Chancery Division"—that which represents the ancient Court of Chancery—to produce a difference in the methods of pleading and procedure from those of the other divisions; but the tendency to employ the leading advocates in every court alike will no doubt increase till what is still called the Chancery Bar will at last disappear, and with it the last vestige of the ancient twofold division of English courts and English law. Y.

ENGLISH FICTION: THE DEATH OF ANTHONY TROLLOPE.

LONDON, December 11, 1882.

THE death of Mr. Anthony Trollope, which took place three or four days ago after a short illness, makes a considerable void in the list of our writers of fiction. He was not, indeed, in the first rank of imaginative writers: we have had none since the departure of Thackeray and Dickens to whom that place could be assigned, except the remarkable genius, lost to us two years ago, who was best known under the title of George Eliot. But in the second rank Mr. Trollope stood very high; and though other novelists may have had as many readers as he, there was none who was in so many ways representative of English fiction both by his books and by his living personality. He had established his reputation nearly thirty years ago, when Thackeray, Dickens, and George Eliot were all still in the fulness of their fame; and from that time till now his readers had come from the best educated classes as well as from those who have no taste or capacity for anything heavier than romance. In this respect he stood conspicuously above Miss Braddon, Mrs. Henry Wood, Ouida, and other heroines of the circulating libraries, and also above such more temperate writers as William Black, James Payn, or Whyte Melville. None of these have, like Mr. Trollope, succeeded in making their creations a part of the common thought of cultivated Englishmen; none have, like him, given us characters which we treat as typical men and women, and discuss at a dinner-table as though they were real people. Mrs. Proudie, for instance, the Bishop of Barchester's wife, to take the most obvious though not the most favorable instance, is as familiar a name to English men and women between sixty and thirty years of age as Sam Weller, or the Marquis of Steyne, or Rosamond Lydgate. There is no surviving novelist of whose personages this could be said.

Anthony Trollope was a genial, hearty, vigorous man, a typical Englishman in his face, his talk, his ideas, his tastes. His large eyes, which looked larger behind his large spectacles, were full of good-humored life and force; and though he was not witty nor brilliant in conversation, he was what is called very good company, having travelled widely, known all sorts of people, and formed positive views on nearly every subject, which he was always ready to promulgate and maintain. There was not much novelty in them—you were disappointed not to find so clever a writer somewhat more original in his talk—but they were worth listening to for their solid sense, and you enjoyed the ardor with which he threw himself into a discussion. There was nothing about him of that erratic turn which we often attribute to literary men. He was a steady and regular worker, who could and did turn out a certain quantity of copy for the printer every day, composing a novel just as other people might compose tables of statistics. These methodical habits were to some extent due to his early training as a clerk in the Post-office, where he spent the earlier half of his life, having finally quitted it about fifteen years ago, when he became, for a short time only, editor of a monthly magazine. He turned his civil-service experiences to good account in some of his stories, giving very faithful and characteristic sketches, in the 'Three Clerks' and 'The Small House at Allington,' of different types of Government officials, a class which is much more of a class in England than it is in America. His favorite amusement was hunting, as readers of his novels know, and until the last few years he might have been seen once or twice a week following the hounds in Essex. Like most of our literary men, he was a politician, and a pretty keen one too. He once contested, in the Liberal interest, the borough of Beverley in Yorkshire, a corrupt little place, which has since been disfranchised as a punishment for its corruption; and his experiences there doubtless suggested the clever electioneering sketches in the story of 'Ralph the Heir.' He appeared on the platform at the great meeting in St. James's Hall in December, 1876, which was the beginning of that vehement party struggle over the Eastern question that only ended at the general election of 1880. But he had no practical experience of politics either in the House of Commons or in one of those great cities where party warfare is waged almost as hotly as at Westminster, and therefore those pictures of political life which are so frequent in his later tales have not been thought successful. They are all taken from the outside—they do not suggest the reality. He knew a good deal about our colonies, having visited and written books describing the West Indies, Australia and New Zealand, and South Africa; probably he would have been most useful in these matters in Parliament had he succeeded in entering it. Thackeray also once tried, and was also unsuccessful.

The most conspicuous merit of Trollope's novels, in the eyes of his own countrymen, is as pictures of contemporary manners. In this respect they are unrivalled. Dickens, with all his great and splendid gifts, did not describe the society he lived in: his personages were too startling to speak and act and think like the men and women of the nineteenth century. Some of his novels are menageries of oddities, from which a foreigner would learn little or nothing about England. Thackeray, again, though he described certain sections of the upper class with far more power and delicacy than Trollope ever reached, did not go beyond those sections, and has little to tell us about the middle class generally. Trollope was thoroughly at home both in our middle class and also (though less perfectly) in our upper class; and his pictures are all the more true to life because there is not that vein of stern and often cynical reflection which runs through Thackeray, and makes us think less of the story than of the moral. Trollope usually has a moral, but it is so obvious, so coolly and quietly put, that it does not draw our attention off from the smaller incidents of the story, the little touches of every-day life which make the people life-like. One may almost say that it is because even his characters are commonplace that they so well represent the current habits and notions of our time. They are only the same people we meet in the streets or at a party; and they are mostly seen under no more exciting conditions than those of a hunting meet, or a lawn-tennis match, or an afternoon tea. They are flirting, or talking for effect, or scheming for some petty temporary end; they are not under the influence of strong passions, or forced into striking situations, like the leading characters in Charlotte Brontë's or George Eliot's novels; and for this reason again they represent faithfully the ordinary surface of English upper and upper-middle class society: its prejudices, its little hypocrisies, its snobbishness, its respect for conventionalities, but also its public spirit, its self-helpfulness, its neighborliness, its respect for honesty and straightforwardness, not to speak of those transient tastes and fashions which are, so to speak, the trimmings of the dress, and always happily attacked by so acute an observer of little things. That Trollope will be read at all fifty years hence one may well hesitate to predict, considering how few of the present generation have read Richardson, or Fielding, or Miss Edgeworth, or Charlotte Brontë, or even Walter Scott. But whoever does read Trollope in 1930 will gather from his pages better than from any others an impression of what every-day life was like in England under Queen Victoria.

His range was not wide, for he could not present either grand characters or tragical situations, any more than he could break into the splendid humor of Dickens. His wings never raised him far above the commonplace earth. But within that limited range he had surprising fertility. His clerical portrait gallery is the most complete that any English novelist has given us. No two faces are exactly alike, and yet all are such people as one might see any day in the pulpit. There is scarcely one of his stories in which a young lady is not engaged, formally or practically, to two men at the same time, or one man more or less committed to two girls, yet no one story repeats precisely the situation of any of his predecessors. Few people who have written so much have so little appeared to be exhausting their resources.

It must, however, be admitted that Trollope's fame would have stood higher if he had written less. The public which had been delighted with his first two or three groups of novels, and especially with that of which 'The Warden' is the first and 'Barchester Towers' the second, began latterly to tire of the mannerisms of their favorite, and felt that they now knew all he had to say, although the occasions and ways of saying it might be ingeniously varied. Partly, perhaps, because he feared this, he once or twice attempted to represent more extravagant situations and exceptional personages. But the attempt was not successful. He lost his touch of ordinary life without getting into any higher region of poetical

truth; and in his last few stories he had returned to his earlier and better manner.

Among the writers of fiction who survive him there is none who so well combines artistic quality with the gift of hitting the popular taste. Miss Braddon is more popular, if one is to reckon popularity by the number of readers, but in giving herself up to the production of an immense number of hasty works she has set aside such possibilities of becoming a true artist as she possessed. Miss Broughton has power, but it is not a power which seems to ripen toward anything finer or more perfect than she produced at first. Mr. Henry James and Mr. Howells, as well as Mrs. Oliphant and Miss Thackeray, are true artists, with a subtle sense of character, but they have not yet laid hold of the general public, highly as their work is appreciated by cultivated people. Mr. George Meredith, a strong and peculiar genius, who has a great fascination for those who will take the pains to follow him, remains unknown to the vast majority of novel-readers. The rest of our fictionists, Mr. James Payn, Mr. W. Black, Mr. Blackmore, Mr. Wilkie Collins, with many others of equal or minor note, are what one may call story-tellers of incident—some of them possessed of an excellent gift for narrative, amusing or exciting, but giving us neither original studies of character nor positions or situations of dramatic power. Mr. Collins, for instance, though in a sense a skilful constructor of plots, accomplished in the art of keeping his readers in suspense, has never been able to make any of his plots really impressive, because his people have no passion; they are mere lay figures, whom we recognize by some habit or some set of phrases which the author assigns to them; but as they do not themselves engage our interest, so the crises in which they are involved do not move us. We say, "How clever," but we forget all about them when we close the book. One does not thus forget the dénouement of 'The Mill on the Floss' or of 'Jane Eyre.' In this respect the leading novelists of France are certainly ahead of us. Their characters are studied with far more care, and the whole action of the story is carefully subordinated to the development of these characters, and the placing of them in a critical position which will set their strength and weakness in the fullest light. There is far more of a judicious adaptation of the parts to the whole in French fiction than in ours, and therefore more unity of impression is attained. Mr. Trollope no doubt set a bad example in this respect. He crowded his canvas with figures; he pursued the fortunes of three or four sets of people at the same time, caring little how the fate of the one set affected that of the others; he made his novel a sort of chronicle which you might open anywhere and close anywhere, instead of a drama converging toward one centre and animated by one idea. This looseness was in him redeemed by the brightness and faithfulness of his sketches of character and manners: in those novelists of incident who have just been mentioned these merits are much less considerable. It is fair to say, however, that they generally deserve with him the praise of purity of tone. Even our sensational novelists, even our fleshly school, gives our host of novel-readers food which may be pronounced wholesome, or at least harmless, when compared with that which Paris provides for all the rest of Europe. Y.

ARCHÆOLOGICAL PROGRESS IN GREECE.

FLORENCE, Dec. 14, 1882.

THE past year has not been prolific of discoveries in Greek archæology. The most important finds have been made in Asia Minor by the Germans, and are not yet reported on. That of a Mausoleum, made by the Austrians at Gulbaktche, on the main land opposite Rhodes, is the most important find, in an artistic point of view, since that of Pergamon, and has an additional value in the resemblance of its sculptures to those found at that place. They are in an excellent style of Greek art, with combats of Amazons and Greeks—scenes from the 'Odyssey,' etc. The whole find has been carried off by the agents of the Government, and will be reconstructed at Vienna. The sculptures are unfortunately not in marble, but in a fine sandstone, yet are in good preservation, and, so far as we can judge from the photographs and descriptions, are of the end of the good period of Greek art. In Greece proper, with the exception of the half of an archaic cuirass of the sixth century from Olympia, which I found at Zante, and some fragments at Delos, nothing especially noteworthy has turned up, unless it be in the just announced discovery of some statues, etc., under the Acropolis, of which I have no details. The Archæological Society of Athens, which is more active than ever in seeking to prevent any other society or agency from making any excavations in Greece, really does more to impede archæological research than it has ever done to help it. Its actual work is always insignificant as compared with its pretensions and plans, and, dog-in-the-manger like, it struggles against any concessions being given to any Government or other society, while the Acropolis, which, from all consideration of archæological and historical interest, should be thoroughly, and first of all localities, cleared of its rubbish slopes, is being built up to and the ground rendered for ever inaccessible without enormously increased expense. The builders of the houses, knowing the advantage of the site, generally go to the rock in search of antiquities, and in this way some articles are now and then found by private search. At the same time, the Society is expending its means in the purchase of sites of far less importance to prevent at any future time any one but themselves from digging in them.

With slight exceptions, the entire aggregate of noteworthy discoveries in Greece are due to foreign research and capital, and as, according to the Greek law, nothing can leave the country, all concessions must involve the condition that Greece receives the entire results of the excavation. Yet at the present moment the Society is offering the most obstinate and effectual opposition to the French plan of excavation at Delphi, and the School at Athens has, I understand, abandoned the work at Delos, under the annoyance and petty vexations of the Greek supervision. As an instance of the way in which opposition is carried on, I will tell what happened to the delegate who has been for the past two summers superintending the work at Delos. The demarch of Mykonos (the demarchy to which the uninhabited island of Delos is attached) insisted on choosing the workmen who should work at the excavations, *as they must be chosen from the party in power.* The French excavators naturally refused, point-blank, to permit any such meddling with their work. Upon this, the demarch openly declared that the French, in understanding with the ephors who supervise the work for the Greek Government, had systematically stolen the objects found, and that they had shipped whole cargoes to Paris. At the conclusion of last summer's work, the delegate, accompanied by the ephor, left on a sailing craft direct for Syra, on which the demarch telegraphed to Athens that the Frenchman had fled from Mykonos with all the statues of Delos. This caused the Government to summon the ephor to Athens, when it was known that there was not a fragment of marble in the boat. This year, at the conclusion of the works, the departure took place from Mykonos, when the demarch, in the most insolent manner, accused Mr. Reinach of having stolen the statues, etc., and insisted on searching his traps, boxes in which the tools were, etc., although the ephor in supervision was on the spot and protested against such insolence of a petty official without authority or sense of decency. It may be supposed that excavation in Greece is not a pleasant matter; and when we remember that the work is done mainly in the burning summer, as the winter is spent by the scholars at Athens; that not only discomfort but disease is incurred (this summer at Lamia one of the scholars died of fever caught in his investigations); that no facilities are offered by the authorities or people; and that a continual petty persecution is kept up by local officials like the demarch of Mykonos—the difficulties of the pursuit of archæology in Greece become fully apparent.

Nor does the treatment of their art treasures by the Greek Government and people honor their patriotic more than their archæological feelings. It is known pretty generally that the marbles and bronzes excavated at Olympia still lie in the worksheds at the diggings, and that the sea-air and damp is ruining them faster than their interment did. That they are utterly inaccessible to the large majority of students of art and archæology, is not enough; they are left to decay *in situ*, as a law says that where a commune will provide a museum for the objects found in its limits, it may keep them, and the provincial and individualistic rage which is the greatest flaw in the Greek character—carried as it is to the point of envy of, and antipathy to, everything foreign in the degree of its foreignness—entirely swamps all patriotic pride. Love of art *per se* does not exist in the nation.

The Germans have finished their thankless labors, and probably the French will follow their example perforce. The results of their work at Delos have never won them the least expression of the most formal gratitude. Yet the discoveries at Delos alone would make interesting any minor museum in Europe. They include—besides the ruins of the temples of Apollo and Artemis, of Isis and the Syrian gods, that of Helios on Mt. Cynthus, the porticos, the agora, and the theatre, which cannot be removed—the pediment of a temple in the most beautiful style of Greek art, eight life-sized archaic statues of Artemis, from her shrine—one of which, bearing a votive inscription from a woman of Naxos, is, from its close imitation of wood-carving (the ξόανα of the earliest art), as well as from the very early literation, the most interesting archaic statue yet found, and probably the earliest Greek statue in marble known, dating from the early part of the seventh century; a marble statue of Nike, signed on the pedestal by the famous archaic sculptors Archermos and Mikkiades; a splendid woman's head in the style of Scopas, probably a head of Artemis, from her shrine; several beautiful portraits of the Ptolemies; two colossal statues of Greco-Roman work, signed by well-known artists, one of them by the Athenian Melanos; a warrior, by Agasias of Ephesus; inscriptions of the highest importance, and numberless minor fragments. Of these the most bulky are still lying at Delos and being defaced by the elements and the ignorant and barbarous shepherds who keep their flocks there; the smaller ones are being, or have been, stolen, and the portable ones are buried in two basements at Mykonos, where they can be neither drawn, photographed, nor properly seen, piled up in confusion—statues, bronzes, terra-cottas—in the dark and damp; and this, which is the legal pretext for the museum required by law, has only been opened once in two years. But when the Hermes of Praxiteles

the most interesting identified statue in existence, lies on the ground without a defence from the sea-air, works of Agasias and Melanos may be considered favored by being in a basement where the rain can't get at them.

It becomes impossible, under all the circumstances I have recounted, to retain any sympathy with Greek greed and invidiousness, which are the most potent motives for their exclusive and narrow policy, while the almost universal corruption of the officials who control these interests permits the evasion of all the restrictions, so that the most valuable works are exported clandestinely by speculators; and, on the other hand, the peasants who find objects of interest which are too large to be dealt with secretly, break them up and sell the fragments. The injury done in this way, and by the loss of all data as to the locality and relations of the objects found, causes greater detriment to the science of archæology than the Society in Athens organized for its advancement does good by all its labors.

The laws forbidding exportation of antiquities, and confiscating them under certain circumstances—laws in their utter disregard of individual rights not equalled by those of any civilized, or half-civilized, country in the world—apply also to coins; and wherever the archæological authorities choose to suspect that any coins come from a find in Greece, whether on public or private property, they are seized and confiscated for the museum without formality. Yet this summer a find of the greatest importance (including several unique coins, of which one, struck in commemoration of an alliance between Elis and Olympia, was not only unique, but the only datum yet known of that event), having been seized and impounded, was released as without any importance to the museum, through payment of bribes, amounting to 2,000 francs, to the officials of the ministry—on condition, however, that they should be sold to a certain dealer, the father of one of the officials; and the curious thing was that the peasant-finder kept his word and sold them to the person designated for 6,000 francs, though 10,000 had been offered by another dealer and they would have brought 20,000. The utter contempt of law, art, archæology, and public interests which one sees on every side in Greece makes the friends of the country despair of everything in it. But this is much too lengthy a subject for the end of a letter. W. J. S.

Correspondence.

THE ANTEDATING OF BOOKS.

To the Editor of The Nation:

Sir: A practice which cannot meet with too severe condemnation seems to be gaining ground among publishers. I allude to the habit of dating books issued at the end of a year as if they had been published at the beginning of or during the succeeding year. It would matter but little if the practice affected only birthday and holiday literature, but when false dates are placed on the title-pages of scientific works the matter becomes a serious one. I received to-day two volumes from two prominent European publishers which bore the date "1883." Both were scientific ethnological works of very considerable importance. I have also received others from American houses. Last year the practice seemed to be less prevalent.

When it is necessary that it should be known that books are published near the close of the year would it not be better to use the name of the month in connection with the year, as, for example, "December, 1882," rather than "1883"?

The prevailing custom should call forth the censure of all lovers of truth in literature, and especially of those who deal with books in the capacity of bibliographers.

Very respectfully, Frederick W. True,
Librarian.

United States National Museum,
Washington, December 26, 1882.

POSTAL INFORMATION WANTED.

To the Editor of The Nation:

Sir: Having occasion lately to send a sample of merchandise to Europe through the mails, the charge for postage to destination was found to be just one-half as much as our rate for the same between any two offices in the United States.

Will some high or low official, or any one else who has endeavored to produce the impression that the last-named rate is insufficient and needs to be increased, please state by what process of reasoning, or by what delusion, the representatives of all the countries of South America, Europe, Asia, and Africa embraced in the Universal Postal Union were led to adopt one-half of our domestic rate as sufficient not only for that but for another domestic rate added thereto, together with the connecting ocean carriage?

Inquirer.

STIPULATIO.

To the Editor of The Nation:

Sir: That the custom of breaking a straw, stick, corn-stalk, or the like in token of assent to a contract (referred to in discussing the origin of the word stipulation in the *Nation*, No. 908) survived in England until modern days, may be seen from 'Robinson Crusoe,' sec. xxxviii. The French ecclesiastic, in suggesting to Crusoe to marry the English sailors left on the island to the Indian women they were living with, is made to say, "yet a formal contract before witnesses and confirmed by any token they had all agreed to be bound by, *though it had been but the breaking of a stick between them*, engaging the men to own these women as their wives," etc. This must, I think, refer to a still subsisting English custom, recognizable by the ordinary reader.

In a picture of Raphael's (I believe) of which engraved copies are common enough, representing the marriage of the Virgin and St. Joseph, a young man who assists at the ceremony is represented as breaking a stick across his knee. I remember when a boy, fifty years ago, being told in explanation of this act that the breaking of a stick was an ancient form of attesting a contract, and the introduction of it into the picture points pretty clearly to such a custom in use, or at least well known in the painter's time and country.

Quere, is not this analogous to the origin of the word *indenture*, as given by the old law writers? Both parts of the contract being written on a single sheet of parchment, they were cut apart by a waving or indented line, and the fitting together of the two parts proved their correspondence to the most illiterate jury. D.

Menlo Park, Cal., December 16, 1882.

ARE "CORNERED" CONTRACTS RIGHTLY VALID?

To the Editor of The Nation:

Sir: The articles which appeared in your last issue upon the subject of "corners" present a criticism upon the agitators the validity of which no one but a Prohibition orator could call in question. Those who are at the head of the agitation are attacking the whole system of speculation in order to prevent a single evil connected with it. "If thine eye offend thee, cut off thine head," seems to be their version of the Scriptural injunction. Such laws as they propose will at best be dead letters. Otherwise, law-abiding speculators will be shut out and our "corner" laws will fail as ignominiously as our usury laws.

Nevertheless, the folly of the methods proposed must not blind us to the necessity of some measure. When Mr. Gould, with what we might call a Satanic humor, says that *before he knew it* he had bought up more Chicago & Northwestern stock than there was in existence, and *was induced to part with some of it* at 250 to the very brokers who were immediately to sell it to himself at 80, it is very evident that the wrong is a glaring one. In fact, it is not a strong statement to say that the *highway* robber of two generations ago reappears as the *railway* robber of to-day. Each in turn has looked upon the public as powerless to defend itself, and has contemptuously sent forth the challenge, "If you don't want to be plundered, you must keep away from our roads." Here the parallel ceases, for the highway robbers were law-breakers, while their successors are often law-makers.

For my part, I believe that something must and can be done. In cases such as that given above, the most ordinary juryman can be made to appreciate that trickery has been used in order to compel the purchaser to pay more than the goods are worth. In ordinary business the proof of similar dealings invalidates the contract of sale. Why should not this principle be made to apply to "corners"?

Yours very respectfully,
Charles B. Spahr.

Columbus, O., December 27, 1882.

HOMICIDE AT THE SOUTH.

To the Editor of The Nation:

Sir: I have read with painful interest your articles on "Homicide at the South," and also the correspondence, generally in the way of protest, called forth by these articles. As a Southerner born and bred, I would like to believe your statements and deductions nothing more than the outcome of inveterate "Northern prejudice." At times your strictures do seem to me too harsh; and sometimes, too, you seem rather to evade than to answer an objection. But I have never yet seen any refutation of your general charge, that human life is not properly regarded, and that homicide is habitually excused and palliated by the public conscience in the Southern States. I think this is also true of the West and Northwest; but that is no argument in our favor.

My observation at college and since that time—say for the last sixteen years—has forced upon me the hateful conclusion that my people are not only not averse to the fierce spirit of bloodshedding apparently hereditary in the Anglo-Saxon race, but that they prefer to *cultivate* it to the extent of "avenging a man's honor," and are willing to excuse, as far as possible, the excesses beyond that point, which, they know, *inevitably* grow out of that spirit. This seems to me to be a fact, and a sad one. It does no good to say that the North, too, is full of criminals; so is England; but the English criminal meets swift punishment, and, in the North, conviction and punishment may reasonably be expected. Punishment for bloodshed is the exception with us.

As to the causes of such an habitual predisposition, the "cavalier ancestry" idea has a good deal of influence, as stated by "Y." in your issue

of December 7—an influence which would be ridiculous were it not formidable. Slavery necessitated, in a measure, the execution of law by the master upon the slave, and hence, undoubtedly, was fostered the habit of taking law lawlessly into one's own hands, as, I think, one or more of your correspondents note. But that produced duels rather than the outrageous homicides of the present day. Still more influential for murder is the opinion very generally entertained by our people, that crimes of bloodshed where a "gentleman's" *feelings* are at all involved, will not or cannot be punished by our courts of justice promptly and effectually. A gentleman from one of the Gulf cities told me, a year or more ago, that he did not believe a conviction for bloodshed could be *obtained* and *carried out* in his community. Of course his statement gave only his opinion, which, however, he proceeded to illustrate in a very ghastly way; but that *was* his opinion, and he was an intelligent and successful business man. The courts are controlled by habitual public opinion and expectation in this particular matter. But I believe that the most potent of all these causes is to be found in the disastrous effects, moral and social, of four years of destructive and unsuccessful warfare, together with the consequent hideous necessity, which tens of thousands of good men believed themselves to be under, of controlling, by force of arms even, a half-civilized slave race made their foes and equals at the polls—of controlling this race in order to self-preservation. The iniquity of the negro ballot, against which Senator Oliver P. Morton protested, has not finished its harvest of wrong, as we in Virginia are experiencing in all bitterness, and as the people of the whole country will yet find out. The demoralization of the war was kept up and intensified by the "reconstruction" troubles; and thus the evil tendencies in Southern life were fostered into virulent activity. Such a state of society demands sympathy, and much has been shown us, and it arouses hostile criticism which has been heaped upon us without stint. But we *have* the evil, and it ought to be eradicated, not concealed, nor palliated, nor offset by the "and you too" argument.

How these causes operate may be illustrated by two notable cases. I was in South Carolina some months ago, and talked with some gentlemen about the Cash-Shannon duel. My impression had been that all well-disposed men of intelligence, in and out of that State, regarded that affair as a most cruel, wanton, and deliberate murder, under the disguise of a duel. To my surprise, I was told—by young men, it is true—that "there was nothing else for Cash to do," and that the newspapers had stated the whole affair so erroneously as to "do Cash great injustice." Some older men by whom the duel was spoken of, expressed the same horror and disgust which such an occurrence would naturally excite everywhere; and they probably expressed the feeling of the State at large. I do not wish to be understood as giving the opinion of young South Carolina as opposed to old South Carolina. I merely give the significant utterances of a few persons. But it seemed to me that the defenders of Cash thought he should have *punished* Shannon for "insulting" and annoying him, just as he should have punished a slave for annoying him, the method, however, being different, since Shannon was an equal, and equals are to be punished with steel or fire-arms, and not, as slaves were, with the lash. I do not think this view in itself more characteristic of South Carolina than of other old slaveholding States.

The street homicide grows most frequently, it would seem, out of the belief in the non-administration of justice, and may be illustrated by the murder of O'Connor and the two Mabrys recently in Knoxville, Tenn. O'Connor knew that Mabry had threatened his life, knew Mabry's reputation as a heavy drinker and as a dangerous, desperate man when drunk. He evidently did not believe that the courts could protect him, nor that public opinion would sanction an appeal to the courts against Mabry; and so he killed and was killed. It is doubtful whether anybody in Knoxville was surprised at this threefold murder, after hearing that threats had been made. Some most estimable ladies from that city, whom I have seen since the shooting, were dreadfully "shocked," thought it was "awful"; but they showed not the slightest surprise, beyond the surprise caused by any startling occurrence, as, for instance, the burning of a hotel—and everybody knows that hotels will burn.

Indeed, one of the saddest aspects of this phase of our Southern civilization is the reflected habit of mind of our lovable and loving women on this subject. I say "reflected," for I do not and cannot believe, knowing them as I do, that they would hold the opinions now habitual to so many of them, did they not get these opinions from their fathers and brothers and husbands. I am in a position where for several years I have been brought into constant contact with young ladies from almost every State in the South, and I cannot now recall any act or any expression of opinion which would show that these young ladies would not regard any young unmarried man as "disgraced" should he decline to fight a duel; and, on the other hand, many of their acts and expressions warrant the belief that they would so regard him, and have been taught so to think. That remark *may* be based upon insufficient evidence. Doubtless many of those young ladies would deny that they held any such opinion, and doubtless many do not. None the less, I believe, it is true of them as a class. And to no man do I yield in admiration and reverence for the sweet, true womanhood of Southern women; but very good women may habitually entertain very wrong ideas. My observation in social life also leads me to think that the reputation of not being willing "to go into the field" is no advantage to a young man, though notoriety as a duellist, generally, is a positive disadvantage.

How to remedy this state of things I do not know, unless it be by attacking the opinions underlying it. Certainly keeping silent about it, or denying it, does not seem very efficacious. And positive harm is done by such stuff and twaddle as you published several weeks ago from that reverend gentleman who denied that the homicidal class among us was found anywhere except among the ungodly frequenters of barrooms and billiard saloons. To think of a congregation committed to the tender mercies of such colossal obtuseness! Let us discuss such a subject in earnest, when we discuss it at all.

This letter is already too long for me to say more than that I am sorry your strictures are so true (may they soon cease to be so!); that I do not like to say what I have said, because my remarks may seem to be an attack on my people, though I desire them to be considered as an additional warning merely; and that my reason for writing at all is, that I want to do what I can to keep all that was good, and to get rid of all that was bad, in the old South, because I am ardently desirous of seeing the new South established worthily, upon the strong foundation of sound and honestly administered government—and in such a society lawless violence has no place.

I believe in looking the truth in the face. I despise neither the past nor the present of this country, South and North, and I want to see the evils in its social and governmental life rooted out, North and South.—Respectfully,

NEW SOUTH.

VIRGINIA, December 16, 1882.

TO THE EDITOR OF THE NATION:

SIR: Your articles on "Homicide in the South," and the various letters which they have evoked, have been read with great interest by your subscribers here. They have occasioned frequent discussions among us, and generally when we have succeeded in clearly presenting the single issue to which you have narrowed the question, we have found the views of our more thoughtful acquaintances concurring with those of the *Nation*. There are those, however, who insist that the interest of certain "Colonization Societies," and not the interest of this section, is sought to be served by these articles; and there are others who urge that political purposes prompt this "bloody-shirt" waving, as they term it. These, of course, consider the alleged facts slanders, and sneer at the conclusions.

Some few plead, by way of confession and avoidance, that our sanguinary settlement of disputes is due entirely to our large frontier area, and declare that an increase of population, and not Northern essays addressed to the reason, will bring the remedy. They do not, however, show very clearly by what means these frontier settlements may become populous.

There are others who, despairing either of their case, or of their ability to manage it, resort to the old and easy practice of abusing the plaintiff's attorney.

We have conversed with some who, while admitting the facts which are well pleaded, deny that they are sufficient to warrant the conclusion. They maintain that the immigration of such people as we need is prevented entirely by the nature of our present labor system, with which the Swedes, the Irish, and the Germans dislike to compete.

Last, and most insignificant of all, are those few who rejoice in that state of public opinion which requires one not only to punish the violator of one's own absolute or relative rights, but to kill him for the slightest invasion of them.

The "big brother," and the avenger of his own honor, form in the South an "institution," so to speak, out of which have come decided benefits, which in this discussion should, probably, not be overlooked, not because these benefits justify the countenancing of the "institution," but because they somewhat excuse its toleration. On account of such a force in society there are some offences comparatively unknown in our borders. There is a consciousness not only that swift punishment will follow the commission of these offences, but that such punishment will meet with public approval. Of course, in this there is, to speak mildly, a tendency to lawlessness, and many Southern people who cannot help a feeling of satisfaction with the killing by individuals of insolent swaggerers, or the lynching by mobs of brutish ravishers, are nevertheless becoming impressed with the great danger of permitting those to be the instruments of justice who cannot be expected "to draw the proper line." There can be no doubt, however, that the deference, the suavity, and the courtesy which distinguish Southern people are due in great measure to the modes of feeling and habits of thought which this time-out-of-mind social "force" has encouraged.

Many Northern people whom the writer has known and esteemed have, when domiciled in the South, been found wanting in no gentlemanly trait, but in adaptiveness to certain of these feelings. They do not hesitate, for instance, to say, upon occasion, to a Southerner with whom they have business transactions: "Your state-

ment is untrue," or "Your promise has been broken." Southern men also use such expressions, but they use them to express the deepest contempt, and generally with the apprehension that they will be resented with blows or shots. They, therefore, very rarely use them. But Northerners quite as readily and quite as calmly use such expressions in the ordinary course of business as we and the majority of mankind use them in judicial proceedings. They have no intention to insult, certainly none to challenge to combat, when they state in their counting-rooms, as they would state in their court-rooms, "You have not kept your word."

A Massachusetts man in describing a certain Western town, in a recent conversation with the writer, said, in a tone that implied expected incredulity, "Why, they have people there like some of yours here who want to fight you if you call them liars." This gentleman, it was plain, considered such a desire as surprising as if it had been caused by a general traverse in pleading. A Southerner cannot choose but smile at any horror being occasioned by such a wish. His training has caused him to consider the giving of the lie a deliberate insult, and a deliberate insult as a challenge to fight. At our Southern schools, and particularly at the Virginia Military Institute, an insult is never given by any one but with a view to the consequence, which is an altercation. The advocates of the system adopted at such schools assert that it almost entirely rids them of the offences and annoyances which spring out of mere wantonness. Even the younger professors, if insulted, would resign their positions, and resort to the "historic hole" at the V. M. I. to meet the offender, or his *representative*, in pugilistic combat. What this system does for schools it does for communities, and hence it is endured by even those who do not attempt to justify it.

There are many Southern people as fair-minded as your recent correspondent, "X. Q. Z.," who are anxious to know the extent of the evil among us, and all of its causes, that they may cordially coöperate with you in attempting its eradication. There are many eminent men in the South who have for years endeavored to rid our people of the mawkish sentimentality which leads to the acquittal or pardoning of such men as Cox. Among these may be mentioned the venerable professor of law at the University of Virginia, who is constantly reminding his pupils of the injunction which Lord Hale impressed upon himself as Chief Justice of England: "There is a mercy due the community as well as the criminal." As I believe you have not set down aught in malice against us, I hope you may not consider that I have attempted to justify what even Southern communities "deplore," and what I earnestly trust you will yet do much to correct. It may be that your Southern seconds can help you to understand more fully certain prejudices, and more readily anticipate and thus more completely demolish certain defences. This has been the object of this letter. GEORGIA.

ATLANTA, Ga., December 26, 1882.

[It is worth remarking how little effect on French journalistic manners the weekly duels between editors have. The abuse which gives rise to them is no doubt often directly prompted by a blackguard's desire to pass for a man of courage, ready to back his words, and the same thing must occur wherever duelling is sustained by public opinion. Across the Channel, where the duel is obsolete, editorial personalities are, or have been till lately, almost unknown. But in France, again, though duelling flourishes, homicide of our Southern variety is unheard of. Whatever relation may exist, therefore, between these "twin relics of barbarism," they are not inseparable.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: I have read with considerable interest the articles and letters published by you relating to homicide, and the use of fire-arms in the South. The following facts, taken from the State Auditor's Report (page 120) of Alabama, for the fiscal year ending September 30, 1881, have considerable bearing on this question, and doubtless will be interesting to most of your readers.

The total valuation of mechanical tools foots up to $228,537; of farming implements, only $77,086, making a total of $305,613, while the valuation of guns, pistols, and dirks amounts to $354,247 25, or $48,634 25 more than is invested in tools and farming implements combined. I have been able to find no evidence that in this respect Alabama is an exception to the other Southern States. Yours respectfully,

X. Y. Z.

NEW YORK, December 28, 1882.

Notes.

HOUGHTON, MIFFLIN & CO. have in press 'The Voyage of the *Jeannette*,' being the ship and ice-journals of Lieutenant De Long, edited by his wife. These will be supplemented by the testimony of the survivors of the expedition and a biographical sketch of Commander De Long.

The Colegrove Book Company, of Chicago, have published 'The Unending Genesis,' by the Rev. H. M. Simmons, of Minneapolis—an attempt to place the true story of creation in a clear and striking light, and to show that the same processes are in operation every day.

Three bound volumes of periodicals are on our table. The first two—*Lippincott's Magazine*, vol. 30, and *Harper's Young People* for 1882—need no description. The third is vol. 5 of the *Granite Monthly* (Concord, N. H.), a publication like no other. Its aim is mainly biographical and genealogical, and each number contains an engraving, usually of good quality, of some prominent New Hampshire citizen, with a notice of his life. Thus, in the first two numbers of vol. 6 we have portraits of the new Governor of New Hampshire and of Secretary Chandler. Historical and purely (rather than highly) literary articles are relied on to furnish variety. In the number for last month a complete list of Yale graduates who reside in New Hampshire is given. The small number (forty) shows perhaps that the State is still considered a good one to emigrate from.

We are glad to learn from a circular that the attendance at Washington and Lee University is twenty per cent. greater than last year.

The Maine Historical Society, at its winter meeting, in Portland, celebrated the eighty-fourth birthday of the venerable Prof. Alpheus Packard, who entered Bowdoin College as a student in 1812, graduated in 1816, became tutor in 1819, and professor in 1825, and has ever since been a member of the Faculty. Prof. Packard's response to the Society's felicitations was singularly happy.

From Mr. Agassiz's annual report on the condition of the Museum of Comparative Zoölogy we learn that it is his intention, in connection with Prof. Faxon and Dr. Mark, to issue in the Museum Memoirs a 'Selection from Embryological Monographs,' containing quarto illustrations derived from innumerable scientific transactions and periodicals, and serving as an atlas for any text-book on embryology. By the purchase of the large Schary collection of Bohemian Silurian fossils, and by its own rich amassing in the West and Southwest during the year, the museum now contains one of the finest collections of palæozoic fossil invertebrates in existence. Mr. Samuel Garman, whose explorations for mammalian remains in the Western Territories were very successful, was led to believe from the mode of their accumulation that the cause of extinction of the more recent was "a very severe winter, much more extensive and severe" than the occasional blizzards of our time. "As if from freezing, the shafts of the larger bones are generally splintered."

The November number of the *Bollettino* of the Naples African Society, unusually full of news, gives a portrait of the late Marquis Antinori, the latest victim among African explorers, and a sketch of his romantic career and melancholy end by G. B. Licata.

The lower courses of the Rivers Trombetas, Yamundá, Urubú, Watumá, and Capim, northern affluents of the Amazon, are mapped in the double number 100–101, of the Berlin Geographical Society's *Zeitschrift*. The accompanying narrative (translated) is by the same hand—that of the Portuguese explorer, Barboza Rodrigues.

The third German Geographical Congress is to meet in Frankfort on March 29, 30, 31, and in connection with it there will be an exhibition of apparatus for geographical instruction. Notices of intention to read papers may be sent up to February 1 to Professor Rein, Marburg. The exhibition will remain open for two or three weeks. For this nothing can be received later than March 1, and notice should be given a month earlier to Herr P. A. Schmölder, No. 25 Neue Mainzerstrasse, Frankfort. Lists of exhibits forwarded to the same address will be used in preparing the catalogue.

The *Ausland*, a weekly periodical devoted to ethnology, geography, travels, etc., edited since January, 1882, by Professor Fr. Ratzel, has kept up its ancient reputation for strict subserviency to the true interests of science. The *Jeannette* expedition, the new developments on the Congo River, the disastrous end of the Crévaux party on the Pilcomayo River, have all been related with the fullest and freshest details, and letters on Mexican and New Mexican travel are just now engaging the attention of its numerous readers.

The first number of 'Dumas's Art Annual: an illustrated record of the exhibitions of the world—1882' has just appeared (J. W. Bouton). It is in size and style conformable to the same editor's illustrated catalogue of the Salon, and contains about 200 drawings not alone of paintings and statuary, but also of *mobilier* and architectural ornaments, for one of the exhibitions taken cognizance of is that of the Central Union of Decorative Art, Paris, with its collections of more or less ancient pieces. The Russian pictures have perhaps the greatest interest. Owing to the lateness of the enterprise the incomplete representations have almost the air of caprice, but the editor promises two editions this year, in order to catch up. At the end of the volume a cursory review is given of the English exhibitions, by Henry Blackburn, of the American, by "Edward Strahan," etc., and an account of sales at the Hôtel Druot. Some defects in the arrangement are obvious. Not only are the pictures pertaining to a given exhibition not all grouped together, but no hint is given under each where it belongs.

The November number of the *Rundschau*, which continues to be at the head of German magazines, opens with the concluding part of a novelette by Gustav zu Putlitz, and ends with the usual political and literary reviews. A brief

account is given of the Hamilton collection. The editor, Julius Rodenberg, contributes an interesting article on Buckle, apropos of a condensed translation of Huth's 'Life and Writings of Buckle,' by Leopold Katscher. "Die Anfänge der Universitätsverfassung" is a reprint of Professor Behrendt's inaugural address as rector of the University of Greifswald, and gives a clear picture of the constitution, the Faculties, and life at the oldest European universities—Bologna, Paris, Prag, etc. Neumann-Spallart examines the curious regularity existing in the annual records of births, marriages, crimes, etc., and their relations to freedom of the will, while Professor Nöldeke, of Strassburg, has an historical article on "Der Islam."

Our national vanity may derive some slight satisfaction from the fact that M. Em. Terquem, who has established what we should call a periodical bureau in Paris, where he receives subscriptions to foreign journals, has put upon his catalogue 729 American journals and newspapers, with only 274 English.

The Société Historique, whose foundation we announced, held its first general meeting November 11, when a membership of more than 400 was reported, and fortnightly conferences were appointed to begin forthwith, MM. Sorel, G. Paris, Cordier, and Renan leading off. In December the first number of the *Bulletin* was to be published.

Cabinet and civil-service changes are chiefly to be remarked in the new *Almanach de Gotha* (New York: B. Westermann & Co.), apart from the *bouleversement* in Egypt. This nondescript government is still reckoned part of Turkey, as are Bosnia and Herzegovina, but no longer Tunis. President Arthur's portrait, not flattered by the engraver, replaces that of Garfield in last year's *Almanach*. The frontispiece is a family group consisting of the Emperor Wilhelm and his male heirs for three generations—the last an infant whom "der alte Herr" is holding smilingly in his lap. The other plates represent the King and Queen of Servia, both fine types of manly and womanly beauty. The *Almanach* here touches its 120th year.

With part 45, Brockhaus's Conversations-Lexikon closes its third volume at Carlow (New York: L. W. Schmidt). In the recent numbers the most prominent general articles have been Bibliography, Book-printing, and Book-trade; Bulgaria and California, among countries; and Bismarck, among great men. The freshness of the article on the German Chancellor is shown in the reference to the three volumes, 'Preussen im Bundestag, 1851-59,' from which our Berlin correspondent has taken such tempting specimen extracts. Bismarck's biographer, or familiar interviewer, Moritz Busch, has an article to himself. The maps and illustrations are, as usual, numerous and good.

—Apropos of our comments last week on the failure of the Coöperative Dress Association, "An Old Subscriber" writes:

"From a fairly sufficient experience, I can give some reasons why consumptive coöperation does not prosper in the United States. Firstly, the people of this country (except, possibly, the very rich and the very poor) are not 'penny-wise'—they will not take the least trouble to make a *small* saving. Secondly, it is impossible to hire for a salary the necessary amount of thrift, energy, and fidelity in management to compete with private shopkeepers. Thirdly, the giving of long and large credits in retail business having never approached the proportions it had reached lately in Great Britain, it is not possible for coöperative stores here to offer those inducements in return for 'cash on delivery' which have had so much to do with the success of coöperation in England."

—Now that all sorts of proposals are made for the improvement of our postal system, we may suggest printing on the face of postal-cards the names of a few of the large cities, as, New York City; Boston, Mass.; Chicago, Ill.; Philadelphia, Pa.; Washington, D. C. Persons having much correspondence with these cities would gladly buy them. The additional cost to the printer of one more plate for each city would be slight, and the cost to the Government probably nothing at all. It would make a little more trouble in selling postals; but that might be confined to the larger offices, supplies of these partially-directed cards being sent to the smaller offices only when ordered in quantities. Indeed, it would be best everywhere to sell no less number than 100 of these cards.

—Inaugural addresses are not always to edification. The incoming professor is under bonds to magnify his office and to underrate his capacity, and the lines are laid down in advance almost as inexorably as those of the old-fashioned "long prayer." But the opportunity of making a noble preface to noble work, of giving the keynote to the coming harmony, has in exceptional cases called out the best utterances of able men, and Professor Butcher's 'Inaugural Address delivered at the opening of the Greek class in the University of Edinburgh' is worthy of the brilliant scholar who is known to the English-reading world as one of the authors of the best prose translation of the 'Odyssey,' and as the writer of an admirable book on Demosthenes, which shows not only a thorough command of the subject, but a rare power of luminous presentation and literary perspective. The theme of the discourse is not and could not be new, but it would not be easy to find in the same compass the story of "What we owe to Greece" presented with the same completeness and the same balance. To phrase about Hellas and Hellenism is not difficult, if one may judge by the various studies that have appeared of late years. One can recall a number of such fine adjectives as "large," "serene," "statuesque," "swift," "subtle," that have done admirable service in characterizing every variety of Greek genius; but Professor Butcher is not a man who has selected the remains of antique art as suitable material on which to carve his own fancies. His tone is that of a master who knows and who is earnestly desirous of making others know, not that of the mere literary man who is forward to console us by his own productions for what we have lost, and to outshine what we have saved.

—And yet simply as a literary performance Professor Butcher's address lacks no charm of graceful eloquence. "If we find," he says in the opening of his discourse, "as I think we shall, that Hellenism has not given us enough to live by, yet we shall also see how greatly they misread the mind of Greece who think to become Hellenic by means of eccentricity tinged with vice." It may be gathered from this that the new professor of Greek is not likely to prop his mind with Sophocles in times of trial, as Mr. Arnold does, nor yet to run to the same excess of riot with the "art for art's sake" people. "Love of knowledge, love of rational beauty, love of freedom" are "the qualities most distinctive of Greek genius"; and our obligations to Greece in these respects are admirably illustrated by literature, philosophy, politics, and art. "To her we owe the love of Science, the love of Art, the love of Freedom: not Science alone, Art alone, or Freedom alone, but these vitally correlated with one another and brought into organic union." But "our religion has not its roots in Greece," and Calton Hill is not to be crowned by an altar to the Graces.

"Greece had already more freedom in all its branches—freedom for society, freedom for the individual, freedom for thought. She had written her spirit on books and on tables of stone, which time has spared for our reading; she had shown how the love of beauty might be united with the love of truth, art with science, how reason might be made imaginative. She had given living history for dry chronicle, oratory for rhetoric, tempered imagination for Eastern phantasy. This imperishable legacy she left to mankind. She could now afford to give place to that Eastern religion which has deepened the sense of responsibility and the meaning of personality, which has enlarged the conception of life as something to be won through death, which has left human freedom intact, while it has claimed an obedience before unknown."

—The audience at the sale of the fourth portion of the Sunderland library was somewhat indifferent, but one lot (sold November 11) awoke a lively competition. It was No. 9,545, one of the seventy-one editions of Petrarch, his 'Triumphi,' Venetia, Bernardino da Novara, 1488. The catalogue merely said that it had two series of six illustrations, one on wood and one on metal, and that it was incomplete. The auctioneer accordingly started it at £2, but it quickly went up to £100, and then, by leaps of £50 and £100 at a time, to £1,950. The reason was that the series of illustrations on metal had been recognized by some amateurs as being the rare set attributed by some to Nicoletto da Modena and by others to Botticelli or Filippo Lippi, and very likely not engraved by either, but by some unknown Florentine artist. They were in admirable condition, and had evidently been inserted in the volume at the time of its publication. There is a passage in Zani's Encyclopedia which discusses the authorship of these engravings, and evidently alludes to this very set in the Sunderland copy. The prize was carried off by the British Museum. A certain number of its humbler companions were purchased to swell the all but unrivalled Petrarch collection of Prof. Willard Fiske, the Librarian of Cornell University. Their titles appear among the addenda to Prof. Fiske's remarkable 'Catalogue of Petrarch Books' just printed by the University Press, but not published, for it is designed to facilitate the completion of his collection. It fills sixty pages, imperial octavo, closely printed in double columns, of which six are devoted to iconography and bibliography; and there is a very full index besides. Titles before 1700 are transcribed with great particularity. Not only are special editions of or works about Petrarch included, but also incidentally associated performances like the sonnets on Petrarch in Carducci's 'Poesie,' or the translated sonnets in Mr. T. W. Higginson's 'Oldport Days,' and even articles extracted from periodicals. Occasionally, the bindings are noted.

—The list is an author-catalogue, and under Petrarca are arranged chronologically editions (1) of his collective writings; (2) of his Latin writings (*a*) in prose and (*b*) in verse; (3) of his Italian writings, which form, of course, much the largest department. Translations follow the original texts, and are classed by nationality—Bohemian, German, Italian, Spanish, French, English, etc. Prof. Fiske describes his three copies of the earliest collective edition of Petrarch's works, Basle, 1496, edited by Sebastian Brant, whose own title to fame rests on his 'Narrenschiff.' All of these are perfect, except one, for which an incredibly fine facsimile of page 1 has been supplied. Prof. Fiske discredits, apparently on good grounds, the alleged Deventer edition of 1494, Basle, 1494 and 1495, and Venice, 1496. The puzzling printer's date, 1416, at the end of the Venetian edition of 1503, is accounted for by a very rational hypothesis. Under Epistolæ, the indebtedness of Chaucer to Petrarch for his "Clerke's Tale" is remarked, and Prof. Fiske adds: "The literature of the

Griseldis tale has still to be written. Petrarch's version of it, rather than Boccaccio's, seems to have passed into general European literature. Translations of it are among the earliest printed books of England, France, and Germany; and it even reached as far as Iceland, where it was known under two titles, . . . and soon passed, as it did elsewhere, into the domain of folk-lore." Prof. Fiske's collection contains two MSS. of the Italian writings of Petrarch, one of about the year 1470. Francesco da Bologna's edition of the Canzoniere, 1516, is said to have a special interest by reason of recent discussions relating, "first, to the claims of Francesco da Bologna to the original design of the Italic or cursive type, commonly ascribed to Aldus"; and, secondly, to his identity with the famous artist Francia. The first may perhaps be considered established. The most elaborate bibliographical excursus which Prof. Fiske allows himself concerns Dr. John Nott's anonymous translation of the Sonnets and Odes, London, 1777 and 1808. It will be found highly readable by book-lovers. Under Petrarch Bibliographies, the fate of the incomparable collection of Prof. Marsand is narrated. Sold to Charles X., and deposited by him in the Louvre, its preservation seemed assured, but, unhappily, the part of the building in which it was stored was burned by the Commune. So, by way of coincidence, the war between France and Germany, in the bombardment of Strassburg and its library, destroyed Sebastian Brant's municipal annals. The foremost Petrarch library now extant is that of Domenico Rossetti at Trieste. Prof. Fiske's Catalogue represents a prodigious amount of labor and a high degree of scholarly and typographical accuracy, and adds one more to the indispensable tools of the student and specialist.

—*La Bibliophile*, a monthly publication, of which 3,000 copies are distributed gratuitously by the Veuve Adolphe Labitte, being in fact a bookseller's catalogue with seven or eight pages of reading matter prefixed, has begun an octavo series with the November number. This No. 1 contains an interesting note on the Bibliothèque Nationale, whose possessions are enumerated as follows: printed books, 2,200,000 volumes, covering fifty kilometres of shelves; manuscripts; an exhibition of the history of writing and printing, in the Salle Mazarin; a reading-room with 20,000 volumes; a rich section of maps and plans; more than 2,500,000 engravings, kept in 15,000 volumes and 4,000 portfolios; an exhibition of the history of geography; the hall that contains the famous globes of Coronelli and various instruments of cosmography and astronomy of great value; more than 150,000 medals and coins; archives. All these riches have hitherto been exposed to serious danger of fire from the neighboring buildings. Lately, however, the Government has bought all the buildings in the block and torn them down, and is constructing on the site buildings much needed for the extension of the library. Among them are two rooms to be lighted by electric lamps, in which the long winter evenings can be used for study. If the experiment succeeds, the space devoted to this purpose will be extended. Another change, of some interest in this country, is the proposed adoption of the "dictionary" plan of cataloguing.

—If differentiation be the sign of high organization, German journalism must indeed be highly organized. It has already two bird journals, *Der Geflügelhof* and *Das Allgemeine Geflügelzeitung*, and now the little variety of carrier-pigeons are to have a periodical all to themselves, "*Die Brieftaube:* Organ für Brieftauber-Liebhaberei in ihrem ganzen Anfang." The last clause is good. Does it foreshadow a future in which some single brands of carrier-pigeon-fancying shall have their own particular weekly? English journalism is running in the same way into specialties. Besides the numerous trade journals, which no one outside of the trade cares for, such as the *Cutters' Monthly*, the *Colliery Guardian*, the *Live Stock Journal*, the organs of the grocers and the carriage-makers and the lawyers and the doctors, there are many of which the general public catches an occasional glimpse, such as those devoted to bicycling and tricycling and Alpine climbing and (just now) to electric lighting, and perhaps we should add the illustrated *Furniture Gazette*. One wonders in looking over the list which the periodical-dealers send round at this season, where readers are to be found for them all. Stevens has over 400 dailies, weeklies, monthlies, and quarterlies on his list of English publications alone, and he is by no means complete. The number of writers, too, must have increased enormously in the last half century; for the writing of books has not fallen off at all, though it is true that a large portion of our best books appear first in periodicals. While on this subject, we may chronicle a rival to the *Deutsche Rundschau*, begun last month at Vienna, under the title of *Oesterreichische Rundschau*, and a second Chinese daily, *Hu Pao*, just started at Shanghai. It is hardly worth while to mention the new anti-Gambettist journal, *Indépendant Français*, the new weekly *Républicain Catholique*, of which Jules Simon is to be editor or associate editor, and the new rival to the *Revue des Deux Mondes*, the *Revue Libérale* (F. W. Christern). Paris is too prolific of new journals, and especially of new political journals, and her progeny is too short-lived, for a new birth to attract much attention.

—Professor Haeckel's 'Indische Reisebriefe,' which were first printed in the *Rundschau*, and of which the most interesting portions were translated for *Nature*, have now been issued as a volume of 355 pages (Berlin: Gebr. Paetel; New York: Westermann), with a touching dedication to the author's mother, apropos of her eighty-fourth birthday. As characteristic extracts from these letters have already been given in our columns, it only remains to state that they constitute one of the most charming books of travel ever published, in readability quite worthy of being placed by the side of Darwin's 'Voyage of the Beagle.' With the power of minute observation peculiar to a great naturalist, Prof. Haeckel unites a clearness, concreteness, and brilliancy of style very rare among German professors. Passing over some of the more technical results of his observations, the present volume contains a vast amount of details about the climate, the scenery, the fauna and flora, the inhabitants, etc., of Ceylon, with a graphic account of the voyage to and from that place. The following is a good specimen of Haeckel's manner and style: "First among the delicacies for which I was indebted to my rifle was roast monkey. Both in a fresh condition and soaked in vinegar, I found this species of game to be excellent, and began to understand that 'cannibalism' really comes under the head of refined gormandism." One of the leading traits of the Singhalese, he found, was a disposition of every person to warn him against the dishonesty of everybody else. An old native dubbed Socrates accounted for the general depravity by a new theory of heredity, involving the prevailing tendency toward polyandry: "As each one of these lowlanders has several fathers, to begin with, and as he inherits so many bad qualities from each of his fathers, it is quite natural that this race should become more and more degenerate." Very amusing also is the account of the fate which befell the Munich *Bilderbogen*, of which Haeckel had taken a few hundred along only to regret that he had not twice as many. In exchange for the fruits, etc., which the natives brought him, nothing seemed capable of giving so much pleasure as these colored pictures, mostly in the comic line. Even from neighboring villages the chieftains came and brought him flowers and fruits for the prints, which afterwards adorned their huts. Most popular were the military pictures and those from Wagner's "Nibelungen" and other operas.

—Spielhagen is a bold man; he has undertaken to prove the superiority of German fiction over the English and especially over the French. Whoever has waded through many German novels will hesitate to accept his decision in advance. Spielhagen himself has no doubt: the French and the English are vastly inferior in the depth of their views and in the extent of their canvas. We have no disposition to deny that the average English novel is shorter than the average German; and the French and American are shorter still. As to the other point, even Dickens and Thackeray are superficial, says Spielhagen. We might urge, on Mr. Howells's authority, that they are antiquated, and say that, if we are to draw the past into comparison, Spielhagen's other objection will not hold, for the English and the French have sufficiently large canvases in 'Clarissa Harlowe' and 'Sir Charles Grandison,' in 'Clélie' and the 'Grand Cyrus.' But we waive this plea, and rest our case on the belief that the vast world of novel-readers will find more to their taste in the superficiality of Dickens and Thackeray than in the profundity of Auerbach. On the real objects of the novel, in exciting the imagination, in moving the feelings, in painting character, in exhibiting its development, English fiction has been and may again become the first—the place is vacant now. The French have followed closely with a remarkable profusion of writers of ability and not one writer of genius. The Germans, in spite of their theories, are a distant third. Their novels of incident are no more profound than other people's; their novels of character are apt to be too profound. Nothing *vetat ridentem dicere verum*. One may philosophize in a novel; one may teach theology, sociology, history, hygiene, if one wishes; but it must be in homœopathic doses. In a novel the profundity that is visible is worse than the art that does not conceal itself; instruction undisguised ceases to instruct, because it ceases to be read. Here is a disastrous defect in German art. The French novel of the day is readable; the German is not.

—Spielhagen, however, believes that it ought to be, for it is much better constructed. In the first place, in Germany, he says, the story and the romance are two entirely distinct species. In France there is a hybrid race: the tale in one volume, neither story nor romance, but both at once. Then, the French authors have a bad way of introducing the necessary information about the past history of their personages. Thus Daudet, in 'Fromont jeune et Risler aîné,' makes Sidonie see the place where her childhood was passed in order to go off into a digression of fifty pages of explanations. This is not epic; these are artifices that offend art; the poet should never put himself in the place of his personages and make himself the cicerone of his portrait-gallery. But in these stories no other course is possible, because they are not romances, but only the last chapter of a romance, just as the classic tragedy was simply a catastrophe—the result of many previous events, but itself occurring in a single day. The last defect found by Spielhagen is one which less theoretical critics had believed to be often a main source of the excellence of

French novels—viz., that they are written with the idea of a future adaptation to the stage. From the point of view of the reader that is a merit; it gives a spirit and movement and unity to the story. But from the point of view of the classifier—and all Germans are naturally classifiers—it is a grave evil. The romance, they say, is an epopee—it narrates and depicts; a drama, on the other hand, develops character by action. The two kinds of writing are directly opposed to one another, and their mixture is an offence against good taste. But if a man writes a long, tedious, pedantic romance, is it to become famous by calling it an epopee? On the other hand, if he writes a neat sketch, with characters that live and talk and, still better, grow; in which the interest of the story chains the attention, and the sparkle of wit enlivens the way till the force of passion becomes too absorbing, will it not deserve its reputation even if it does not fit into any of the compartments of the critic's system? Spielhagen's theories are not badly imagined as theories, and no doubt find their support in the *Æsthetik* of many a learned German; but if he will write a novel as good as 'Middlemarch,' or even as good as the best of Daudet and Cherbuliez, he will do more to demonstrate the superiority of German fiction than he can by a dozen critical articles.

—It is a postulate of modern lexicography to add to each word its etymology. Many linguists have gone still further, and compose dictionaries that are purely etymological, although etymologies do not teach us everything about a word's history. To elucidate the origin of *German* words, Prof. Friedrich Kluge, of the Strassburg University, has just begun the publication of his 'Etymologisches Wörterbuch' (Strassburg: Karl J. Trübner), to supplement those already existing of K. Schwenck, the Grimm brothers, Fick, etc. Kluge traces every word as far back in time as it is possible to do, exhibits sound criticism, and admits nothing as certain or probable which does not agree with approved canons of Indo-European phonetics. As German is peculiarly rich in forms difficult to analyze, the author has busily gathered as many parallel forms as possible from all cognate dialects. In a work like this, Fick's Comparative Dictionary of the Indo-European Dialects is of more avail to linguists than any other, and Kluge has fully availed himself of it as well as of the results given by his other predecessors. Linguistic science has not advanced sufficiently far to show the origin of every term, and therefore Kluge's conscientious work frequently disappoints us in not yielding what we look for. For the second part of *elf*, Eng. *eleven*, Kluge proposes the radix *lik*, "to remain over," while Schleicher explained it as a phonetic change of *δέκα*, *decem*. *Brot*, Eng. *bread*, the author supposes to be a derivative of *brauen*, to brew, and mentions in support of his opinion the middle-German *biebrôt*, Eng. *beebread*, honeycomb—literally, "bread of bees." Grimm refrains from giving a decisive opinion on the origin of *Brot*, but it lies very probably in the old German *brôdi*, "brittle, mush-like, soft as pulse"; compare the term for *pancreas*, sweetbread. *Batzen*, a small coin, is from Ital. *batezzone*, referring to the imprint of St. John the Baptist's figure; but Kluge derives it from *betz*, a nickname for the bear. *Brust* is from *bersten* in the special definition of budding forth, *Galopp* from the French *galop*, and this, according to Diez, from *galaupjan*, "to make run"; in both cases the author refrains from giving a derivation. *Bastard* he traces from the Celtic. The better to distinguish foreign words, which are given in Roman type, Kluge's work is set up in Gothic characters. There is no doubt that to students of the cognate English and Scotch language and their earlier periods of development it will prove preëminently useful. The first two parts end with *hehlen*.

ASHTON'S REIGN OF QUEEN ANNE.

Social Life in the Reign of Queen Anne. Taken from Original Sources, by John Ashton, author of 'Chap Books of the Eighteenth Century,' etc. London: Chatto & Windus; New York: Scribner & Welford.

THIS set of social pictures is an interesting and valuable addition to the materials for a history of the reign of Anne. It is strange, considering the extreme attractiveness of the subject, that a good history of that period has not yet been written. While Macaulay lived, the theme was appropriated to his pen. That he did not live to handle it was deemed an immense calamity, yet it may have been a literary blessing in disguise. His work, amazingly brilliant as it is, and wonderful as is the art of conducting a narrative displayed in it, is not history, as all who know the history are aware. It is a splendid Whig epic, of which William is the hero; and the character of the hero, like everything else, is marred by rhetorical exaggeration. Point, picturesqueness, antithesis are perpetually sought at the expense of fidelity, and sometimes in disregard of plain fact. Macaulay was devoid of philosophy; he never thinks of assigning his period to its place in general history; hardly ever does he even refer to anything beyond the four corners of his canvas. Hence his want of proportion and balance. Since his death the subject has been waiting for some one who could treat it worthily. Lord Stanhope tried, but the result was a mere abortion. The qualities which made his former work very pleasant reading, though not a masterpiece, seemed to have utterly deserted him. Mr. Burton had given us a history of Scotland which, albeit not brilliant, was deservedly esteemed as a sober, trustworthy, and judicial narrative. His 'History of the Reign of Anne' is sober with a vengeance, and, saving some display of Scottish feeling, judicial; but it can hardly be called a narrative at all. It is rather a series of dissertations on successive portions of the history, without a previous knowledge of which it would not be intelligible to the reader. So the War of the Succession, Marlborough and his victories, the union with Scotland, the great struggle between the Whigs and Tories, with its strongly marked characters and striking vicissitudes; the impeachment of Sacheverell, and the singular revolution to which it led; the intrigues and the fall of Bolingbroke; the glories of the Augustan literature and art—still solicit the pen of a historian who wishes for a theme full of dramatic life, and as complete in itself as the best constructed play.

Of the intellectual products of the reign of Anne, it is needless to speak. Mr. Ashton truly says that it was the merit of Addison, Steele, and their compeers, not only to refine literature, but to render reading popular. Science had made, in the reign of Charles II., a progress which throws Mr. Buckle off his balance, and leads him to glorify a by no means glorious period. Under Anne, the Royal Society is the butt of all the wits, not excepting the liberal-minded Addison; and perhaps the ridicule was partly deserved, if scientific collectors exhibited "the bones of mermaids" and "the horns of unicorns"; but even the author of 'Laputa' would scarcely have sneered at Newton. An additional interest attaches to the giants of those days on account of their lack of the subsidiary appliances which now enable men who are not great to do great things. We admire Newton more when we think of the ponderous geometry which he wielded, and Bentley when we think of the editions which he must have used. The drama was at a low ebb—the genius of the nation had spent itself in the glorious profusion of the Elizabethan era; but the theatre was pretty flourishing, though not patronized by the Queen. There were good actors, and still better actresses, such as Mrs. Oldfield and Mrs. Bracegirdle, though, as Mr. Ashton says, it was then not more than forty years since the first appearance of women on the stage. Pamphleteering, both political and religious—or rather ecclesiastical—was lively, and had plenty of matter: political journalism was in its cradle. The chief organs of daily discussion seem to have been the coffee-houses, the closing of which, under Charles II., was therefore equivalent to imposing silence on the press. The political oratory of the period was not reported. Probably from the very fact of its being addressed, not through reporters to constituents, but to the House and with the object of gaining votes, it was superior to the prolix editorials which fill the weary hours of Parliament at the present day. But as the avowed aim of Bolingbroke was "to show game to the Tory squires," it is not likely that in his speeches those of a second Demosthenes are lost.

To painting, sculpture, and music neither English genius inclined nor had Puritanism been propitious, though Cromwell himself loved music, and the miniature portraits of him by Cooper are superb. Engraving in Anne's reign was good; and carving, excellent after its fashion, both in wood and stone, was done by Grinling Gibbons. If the reign could claim St. Paul's, it might boast of having produced as noble an exterior as any in the world; but Wren and his work belong rather to the generation before. The great building of Anne's period is Vanbrugh's Blenheim, a work original, picturesque, and imposing: a real palace, and a worthy embodiment of historical grandeur, let criticism say what it will. Mr. Ashton gives us a shock by treating the house architecture of the reign as almost a fiction, and telling us that what is taken for the Queen Anne style is really Dutch. As the best of the genuine specimens remaining, he names two town houses, Nos. 10 and 11 Austinfriars. But surely there are country houses, the date of which is undeniable, that present a style of their own, far inferior in beauty to that of the Tudor mansions, yet characterized by an amplitude and a stately formality which seem to correspond well with full-bottomed wigs and My Lord's grand manner.

Of vital religion, Mr. Ashton is probably right in saying that there was not much: that had taken its departure with the Puritan. Free-thinking was pretty rife, though often covered by a politic mask, as in the case of Bolingbroke, who, to gain the votes of the High Church party, framed persecuting laws against Dissenters, and left infidel treatises to be printed after his death. There was, however, a good deal of outward observance, such as daily prayer in churches and wearing black in Lent; perhaps there was even rather more of real awe and reverence than is commonly supposed. Marlborough, before a battle, always had prayers read at the head of each regiment, and himself received the sacrament from his chaplain. Of political religion, such as the Sacheverell affair called forth, there was an amount fully proportioned to the lack of Christianity. It seems wonderful that the red-hot supporters of the Church of England should have treated her clergy with contumely; that they should have behaved to the chaplain as to a menial servant, made him leave the table before the dessert, and forced him, as the condition of being presented to a small living, to marry My Lady's waiting-maid. But the solu-

tion is to be found in Swift's 'Sermon on Brotherly Love,' which, after a paragraph or two on a feeling of which the preacher himself had but a limited experience, proceeds to ask whose fault it is that Brotherly Love does not more prevail. The ready answer is, that it is the fault of the Papists and the Nonconformists, upon whom the preacher then heartily comes down. The Church of England was prized as the bulwark against these two foes—Popery, which, in the time of Louis XIV., the nation might still reasonably regard with terror, and Puritanism, of whose reign the gentry still retained the bitterest recollection. Besides, the subjection of the Anglican Establishment endeared, and still endears, it to the squire. "As soon as the sermon is finished, nobody presumes to stir till Sir Roger is gone out of the church. The knight walks down from his seat in the chancel between a double row of his tenants, that stand bowing to him, on each side; and every now and then inquires how such an one's wife, or mother, or son, or father do, whom he does not see at church; which is understood as a secret reprimand to the person that is absent." What Sir Roger would not fight, or at least vote and drink, for a branch of the universal Church so "pure and reformed" as this? Nor were the clergy always personally objects of reverence. Swift writes to Stella: "I walked here after nine, two miles, and I found a parson drunk fighting with a seaman, and Patrick and I were so wise as to part them, but the seaman followed him to Chelsea, cursing at him, and the parson slipped into a house, and I know no more. It mortified me to see a man in my coat so overtaken." Perhaps it might have equally mortified the "man in my coat" to see certain portions of the Dean's writings.

Saving in exceptional times, such as that of Scroggs and Jeffreys, the English courts of law seem to have been always dignified and, after their fashion, just. After their fashion, it was; for the law was unscientific, irrational, and barbarous in the highest degree. All that could be said for it was that it did aim, in its narrow way, at upholding personal rights and liberties against arbitrary power. Even the *peine forte et dure*, of which Mr. Ashton gives us a hideous picture, was a widely different thing from judicial torture: its object was solely to compel the man to plead to the indictment, without which, it was supposed, his trial could not rightfully proceed; and it ended the moment his obstinacy was overcome. There does not seem to have been on the part of the English courts the eagerness to convict which French courts have always shown. The death penalty was lavished with the cruel prodigality of an aristocratic legislature reckless of the blood of the people. Humane quibbles often tempered the cruelty of the code; yet there were wholesale hangings, and they were frightful butcheries—the cart, not the drop, being used, and the friends of the victims pulling their legs and striking their breasts to shorten their agonies. The state of the prisons, also, was hideous, extortion on the part of the keepers conspiring with neglect. Lifelong imprisonment for debt was, perhaps, of all these barbarous pedantries the most barbarous. The aspect of the courts must have been much what it is in England now. Wigs were worn by the judges and barristers, though in those days only as a part of the ordinary dress of a gentleman, and *green* bags, it seems, instead of blue, were carried. Lawyers were accused of roguery and of setting people by the ears for their own profit, but the accusation is not peculiar to the Augustan Age.

Medicine was mere empiricism. In the pharmacopœia given by Mr. Ashton were "Live Hog Lice," "Man's Skull," "Leaves of Gold," "Stone of a Carp's Head," "Frog's Livers," "White dung of a Peacock dried," with many other remedies equally sovereign. It earned its fee by purging and bleeding without stint. Its chief professors, whose skill probably, like that of our spiritualists, was moral, made large incomes—incomes equal to at least $60,000 or $70,000 in our day—rode in coaches with six horses, and behaved themselves like pashas. Dr. Radcliffe, the most renowned of them, was sitting over his wine when he received a message from the Princess Anne, who had become somewhat hypochondriac after the death of her sister, desiring him to come at once to see her. He refused to go, and sent back a message that it was all fancy, and that her Royal Highness was as well as any one else. So Mr. Ashton decorously puts it; but the real message, according to tradition, was too coarse to be repeated to ears polite. This cost Radcliffe his appointment at court. When the Queen was dying, he was sent for; but the implacable old Turk answered that "he had taken physic, and could not come." There was an outcry against him at the time; in these days he would be torn to pieces. He was always saying the rudest things, and sometimes he met his match. He never would pay a bill without demurring, and he told a pavior who had been mending the pavement in front of his house and applied for the money, that he had done his work badly and covered it with earth to hide it. "Doctor," replied the pavior, "mine is not the only bad work that the earth hides." Queen Anne, as we know from a passage in Boswell's 'Johnson,' touched for the King's Evil: strange to say, it appears that she did it in response to a Jacobite challenge to prove her legitimate royalty, and that the result was satisfactory to the public mind; so that the conditions proposed by Renan would seem to have been fulfilled by the performance of a miracle under critical inspection. On the part of Johnson or his parents there must have been a want of faith. With the treatment of children the medical faculty would not have deigned to concern itself. It was such that the race may be said partly to have owed its vigor to a process of natural selection, carried on through a most desperate struggle for existence. The young Duke of Gloucester, the heir to the Crown, having water on the brain, and finding himself unable to get up stairs without help, his royal parents, to cure him of his sickness, shut themselves up with him and gave him a good whipping.

At the top of society was a grand urbanity of manner, of which the paragon was Marlborough, who found it of no small use to him in his diplomacy. There was also a set of fops, much like the fops of other times in their folly, their frippery, and their ridiculous adulation of the female sex, but distinguished from their counterparts in our day by brilliancy of costume, and, above all, by their wigs, the chief care of the dandy, for which immense prices seem to have been given, and which consequently became the mark of street marauders.

> "Nor is thy flaxen wig with safety worn:
> High on the shoulder, in the basket borne,
> Lurks the sly boy; whose hand to rapine bred
> Plucks off the curling honors of the head."

But social refinement had as yet extended little to the country, where Squire Western predominated, and not at all to the lower classes. Mr. Ashton has given us plenty of pictures of barbarism, such as riotous fairs, affrays in taverns, and bull and bear baiting, for which twin colosseums rose conspicuous above all the other buildings in Southwark. This is not the reproach of a particular reign or country; it is the state of European civilization two centuries ago. Bull and bear baiting were after all not so cruel an amusement as autos-da-fé. The people in Anne's time do not seem to have been gourmands or gluttons—they took only one substantial meal a day, and their cooking was plain; but they drank deeply. "How say you, Daniel Dammeree, are you guilty of the high treason for which you have been indicted, and are now arraigned, or not guilty?" "My Lord, I was so much in liquor that I did not know what I did." "Night very drunk, as the two former," is an entry, and not the only one of the kind, in the contemporary diary of Tom Brown. When Walpole was a boy, he was plied with wine by his father, because it was not becoming that the son should see his parent drunk. Manners at the watering-places were astoundingly free, and we have a squib upon somebody's matrimonial affairs posted in the chief resort of the company at Bath; not that this is worse than the society journal of England in the present day.

Gambling, also, was high, and so was its twin sister, speculation. A certain M. Bourchier, who had begun life as a footman, raised himself by success at the gaming-table, and by the grand style in which he operated, to the rank of a great social potentate. He went over to the camp in Flanders with a magnificent equipage, played with King William and won of him £2,500, an incident not mentioned by Macaulay. He played at the same time with the Duke of Bavaria; the Duke at last threw double or quits with him for £15,000, and "lost the money upon reputation, with which Bourchier was very well satisfied, as not doubting in the least; and so taking his leave of the King and those noblemen that were with him, he departed." He died, Mr. Ashton tells us, very rich. The diversion of the "Mohocks," as is well known, was filling the streets with outrage by night; and though panic seems to have exaggerated their atrocities, they appear undoubtedly to have indulged in the merry practice of slitting people's noses. Other gangs of upper-class scamps practised the same thing under different names. But of all the ferocities of the time, the worst was the incessant duelling, which would have clouded with fear the lives of the class who were bound by honor to fight, if they had not been as reckless as they were. The Duke of Hamilton and Lord Mohun are opposing parties in a lawsuit. They meet in the chambers of a Master in Chancery, and the Duke remarks of a witness: "There is no truth or justice in him." Lord Mohun replies: "I know Mr. Whitworth; he is an honest man, and has as much truth as your Grace." This is enough: two days afterward His Grace and My Lord go to Hyde Park and fight; their seconds fighting also, or, as they expressed it, "taking their share in the dance." Lord Mohun falls dead, and the Duke on the top of him mortally wounded. It was averred that Lord Mohun's second treacherously stabbed the Duke, but this seems clearly to have been a calumny bred by the fury of the Jacobites at the loss of the head of their party in Scotland.

Amid all the savagery and brutality of these people, however, there shine forth unmistakably immense vigor and fortitude. The army was recruited, as Mr. Ashton shows, from the loose and even from the criminal population; but it would be a mistake to fancy that it was a blackguard army. There were in larger numbers two centuries ago than now men out of whom perhaps the nomad had not been thoroughly worked, who were out of place in a state of regular industry, yet had their qualities, and made good soldiers, though bad citizens. These men service in an army, under a great commander, not only restrains and disciplines, but purifies and exalts. Marlborough seems to have felt perfect confidence in his men: no misgiving as to their discipline, any more than as to their courage, made him hesitate in undertaking the most daring and critical operations. He found

them trustworthy in the deadly mines of Tournai as well as on the blood-stained slope of the Schellenberg and in the terrible passes of Malplaquet. Uncle Toby and Corporal Trim were rough people, but they had strong hearts in strong bodies, and they did their duty without a word. It was all the more to their credit, because their officers had no title to their confidence but valor, being generally destitute of military education; Marlborough, the grand exception, having been trained in the French school. The simplicity with which the victories of Marlborough and his soldiers over the veteran troops of the Great King were announced and celebrated is thrown into strong relief by the inordinate jubilation which has followed a triumph over the wretched mercenaries of Arabi, who fired one random volley and ran away. The seamen were even rougher than the soldiers. Benbow and Cloudesley Shovel were, no doubt, as coarse as the salt-junk and grog on which they lived. But they were heroes, if by perfect fearlessness united with single-hearted devotion to professional duty a man can deserve that name. It was a French officer who said of them to the Prince de Condé, that they rode the sea in all seasons and in the worst weather with as much tranquillity as the swans floated on the lake at Chantilly. Nor had they, to sustain them, much hope of reward or honors. These old sea-lions could not exist now: they would be interviewed, feasted, photographed, decorated, harangued, and shown about till they had lost the rough simplicity of their nature. However, in paying them due honor, no Englishman would wish to return to their days, or to have a seaman's life made again the display of fortitude under every sort of privation and suffering that it was in the days of Anne, and even in much later times.

On the most important point, perhaps, of all, the relations between the sexes and female character, there was little that was new to be said. The upper-class woman of that period is perfectly known to us all through the *Spectator* and other social literature. She was never a Saint Theresa nor a Mrs. Somerville; often she was a butterfly, sometimes she was naughty, and gambled at basset. Her hours were not later, the heels of her shoes were not higher, nor was her dress, even taking into account her patches, much more unnatural than those of her descendants. Dissipation for dissipation, perhaps hers and that of her partner in those days rather had the advantage over that of London society in these days, inasmuch as it was at all events real enjoyment. There was no standing for hours in a hot and crowded room to talk to people to whom you did not want to talk, about things in which you felt no interest. Sir George Lewis might have said that the amusements were highly reprehensible; he could hardly have said that life would be pleasant enough if it were not for its amusements. Matrimony was far from spotless. There were Fleet marriages performed by tipsy parsons, forced marriages, runaway marriages, matrimonial wrongs, cruelties, and infidelities. But in England, on the whole, man and wife were true to each other—more so, certainly, in the upper classes than they were in France; and if that generation left plenty of work for marriage-law reformers, it also handed on the strength of conjugal affection and of domestic sentiment which makes the experiments of reformers on the constitution of the family safer than they would otherwise be.

RECENT POETRY.

One is apt to suspect that the critics, like the custom-houses, ignore the existence of all books more than twenty years old, when we see 'Songs from the Dramatists,' edited by Robert Bell (Dodd, Mead & Co.), treated by them as a new work; the fact being that it is a reprint of a volume under the same title, published by Parker & Son, London, in 1854, as part of the 'Annotated Edition of the British Poets.' The American publishers have added only some vignette head and tail-pieces, and they would perhaps have done well to mention the origin of the book; but it is as good now as it was a quarter of a century ago, and is really a remarkably well-chosen and well-annotated collection. Mr. W. J. Linton's 'Rare Poems of the Sixteenth and Seventeenth Centuries: a Supplement to the Anthologies' (Roberts Bros.), is a collection of much the same kind, but with rather more pretension. It undoubtedly gives some poems which are additions to the 'Anthologies'; but some of the newly-discovered poems are trash, and some of the best are far from being newly-discovered. Why include, for instance, in a volume expressly devoted to "rare poems" such well-known favorites as Suckling's "Ballad of a Wedding," Crashaw's "To his supposed Mistress," and "Phillida flouts me"? Mr. Linton might almost as well have inserted "Chevy Chase." We notice that some critics are objecting to some of his selections as hardly suited for the parlor-table, but it may be fairly urged that the very title of the book implies that it ventures on dangerous ground; and Mr. Bell's collection is open to the same criticism. We should rather criticise Mr. Linton from the opposite point of view, and complain of his emendations. He alters the refrain of Suckling's "A Health" (p. 119) to suit "modern liking," as he says in a note (p. 246); but Mr. Bell has secured the needs of propriety quite as well by simply omitting the offending lines ('Songs from the Dramatists,' p. 260). Mr. Linton's own woodcuts, though wayward enough in their distribution, are commonly charming.

Still another good and well-annotated collection is 'Poems of American Patriotism,' by J. Brander Matthews (Scribner), which begins with Emerson's noble poem "Boston," and covers the whole course of our history. Of course no two persons would quite agree about the poems to be selected, or even what classes of poetry to include. It is not quite clear why Stedman's "John Brown" should be included, and the whole field of early anti-slavery poetry omitted. In some cases, the best things by an author do not appear; there are, for instance, two or three better poems by Halpine (Miles O'Reilly) than those here given, notably the capital lines, written from the Irish point of view, in favor of the enlistment of colored troops, the burden being:

> "Ivery day in the year, my boys,
> And ivery hour in the day,
> I'll let Sambo be murthered in place of meself,
> And niver a word I'll say."

Mrs. Helen Jackson's "Decoration Day" might also be well included; and that admirable poem, "Driving Home the Cows," by Miss K. P. Osgood, which comes nearer to reaching the true pathos of the war than any single poem yet written.

Two attractive volumes by young English poets come to us from Macmillan & Co. 'The Renewal of Youth, and Other Poems,' by F. W. H. Myers, is a collection of fresh and spirited poems by a man so widely travelled that he has even visited the United States and writes a very graceful "Letter from Newport" (dated Sept., 1879), in which he tries his hand, like everybody else, at describing that modern Sphinx, the American Girl:

> "Through English eyes more calmly soft
> Looks from gray deeps the appealing charm;
> Reddens on English cheeks more oft
> The rose of innocent alarm:
> Our old-world heart more gravely feels,
> Has learnt more force, more self-control;
> For us through sterner music peals
> The full accord of soul and soul.
>
> "But, ah, the life, the smile untaught,
> The floating presence feathery-fair!
> The eyes and aspect that have caught
> The brilliance of Columbian air!
> No oriole through the forest flits
> More sheeny-plumed, more gay and free;
> On no nymph's marble forehead sits
> Proudlier a glad virginity.
>
> "So once the Egyptian, gravely bold,
> Wandered the Ionian folk among,
> Heard from their high Letôon rolled
> That song the Delian maidens sung;
> Danced in his eyes the dazzling gold,
> For with his voice the tears had sprung,—
> 'They die not, these! they wax not old,
> They are ever-living, ever-young!'" (pp. 99, 100).

After such pretty compliments, it seems hardly fair to criticise his descriptions any further. He seems, however, to have confined his observations rather closely in-doors, for he speaks in the same poem of "flowerless forests" as characteristic of this continent. Perhaps he did not go beyond the island of Rhode Island; and yet even there he could have found no flowerless forests, inasmuch as there are no forests at all. But so far as youthful maidens are concerned, it is just to say that Mr. Myers describes them as gracefully in England or in Spain as at Newport—witness his "Phyllis" and "Elodia."

Mr. Alfred Austin, whose elaborate tragedy, "Savonarola," we criticised some months ago, would perhaps object to being classed among the young poets, as it is his seventh volume, 'Soliloquies in Song,' which lies before us. He is less a devotee of pure beauty than Mr. Myers, and less successful in producing beauty; but there is more of mature strength, and he has decided opinions, though marked by that advanced "Jingoism" which finds little sympathy on this side of the Atlantic. His wrath against Russia in "All Hail to the Czar" now seems a piece of almost childish petulance; and his boastfulness in behalf of England—

> "Victor without a blow,
> Smilingly leaning on thy undrawn sword" (p. 123),

reads strangely since the bombardment of Alexandria. Most unintelligible of all to American ears seems the impassioned strain with which he denounces the proposed tunnel under the British Channel:

> "And can it be, when Heaven this deep moat made,
> And filled it with the ungovernable seas,
> Gave us the winds for rampart, waves for frise,
> Behind which Freedom, elsewhere if betrayed,
> Might shelter find, and flourish unafraid,
> That men who learned to lisp at English knees
> Of English fame, to pamper womanish ease
> And swell the surfeits of voracious trade
> Shall the impregnable breakers undermine,
> Take ocean in reverse, and, basely bold,
> Burrow beneath the bastions of the brine?
> Nay, England, if the citadel be sold
> For lucre thus, Tarpeia's doom be thine,
> And perish smothered in a grave of gold!"
> (pp. 44, 45).

Probably no Englishman can comprehend what an effect of petty timidity is suggested to the American mind by such shrieks of terror at the thought of opening the ordinary modern facilities of communication between England and the Continent. It seems a wonder that the alarm did not begin earlier, and that heaven and Roman history were not invoked to prevent the first steamboat from crossing those "ungovernable seas." Surely, the argument from Divine Providence would have been just as applicable at that time; though it might, indeed, be argued that the trip by steamboat from Calais to Dover would of itself add new terrors to invasion, and that no Gaul or Teuton who had ever tried it for himself would wish to bring his friends. Meanwhile, has any French poet yet taken the trouble to warn his countrymen against letting perfidious Albion be brought within reach of the French coast by tunnel?

Lest we should, however, seem to do injustice to Mr. Austin's poetical power through any want of political sympathy, we hasten to quote the very finest thing that has yet been written about George Eliot, only regretting that we cannot give every line of the poem:

> "How plain I see her now,
> The twilight tresses deepening into night,
> The brow a benediction, and the eyes,
> Seat where compassion never set, and like

That firm, fixed star which altereth not its place
While all the planets round it sink and swim,
Shone with a steady guidance. O, and a voice
Matched with whose modulations softest notes
Of dulcimer by daintiest fingers stroked,
Or zephyrs wafted over summer seas,
On summer shores subsiding, sounded harsh.
Listening whereto, steeled obduracy felt
The need to kneel, necessity to weep,
And craving to be comforted; a shrine
Of music and of incense and of flowers,
Where hearts, at length self-challenged, were content
Still to be sad and sinful, so they might
Feel that exonerating pity steal
In subtle absolution on their guilt" (pp. 101, 102).

The thick volume entitled 'Poetical Works of Alonzo Lewis' (Boston: A. Williams & Co.) recalls the memory of one whose name was long familiar as "the Lynn Bard," and who is deservedly commemorated by his son as having been a vice-president of the first anti-slavery society in Massachusetts. This is a more permanent ground of fame than that of securing a lighthouse on Egg Rock and a breakwater on Nahant Beach, with both of which good deeds Mr. Lewis is also credited; but either of the three must be pronounced a more lasting service than the authorship of these poems, although some of the anti-slavery lyrics are not without fire. The volume includes two portraits of Mr. Lewis, taken at different ages.

The pretty volume of poems by Mary Clemmer (Boston: Osgood) seems, like the volume just mentioned, to be an echo of a past generation, so distinctly does it prolong the slender strain of the Cary sisters, whose biographer Mrs. Clemmer was; and this strain no doubt still has its warm admirers, though it does not sink very deeply into the mind or heart. Mrs. Clemmer—better known, perhaps, as Mrs. Ames—has won her chief fame as a courageous and rather reckless Washington correspondent, and it is pleasant to find that one who has lived so constantly on what may be called the social war-path in that city can still have the inclination to write poetry about nature and gentle things. 'Poems of the Household,' by Margaret E. Sangster (Boston: Osgood), belongs in some degree to the same class, but the poems seem rather stronger and less self-conscious. This may connect itself in some way with the Scotch dialect, in which a few of them are written, and which always gives a certain flavor of honest feeling. 'The Wife's Manual,' being prayers, thoughts, and songs on several occasions of a matron's life, by Rev. W. Calvert (Boston: Roberts Bros.), is the reprint of an English volume, with a charming style of ornamentation on the margin of every page, this being borrowed from Queen Elizabeth's Prayer Book of 1569. The poetry is devout and simple, and is dedicated to the author's wife.

Rev. Dwight Williams, in his volume of poems (New York: Williams & Hunt), describes outdoor nature in a placid way; he has also poems to Agassiz, Irving, and Gerrit Smith; a poem on "Archie and his six-cent Testament"; and one which preserves a rather interesting account of a ruined castle, built in the woody highlands of Madison County, N. Y., by a French refugee of the last generation—popularly supposed, like all such personages, to be a Bourbon. We can find nothing so interesting as this in 'Song-Captives,' by John Albert Wilson (Boston: A. Williams & Co.). The author, whom we take to be a Unitarian clergyman, has apparently written poems in all the prominent cities of the world, from Rome to San Francisco, and shows abundant facility in rhyming, but no corresponding flow of thought. The following verses contain perhaps his boldest flight of fancy:

"BILLIARDS INTENSIFIED.

"Could I from Nature take the cue
That sets the spheres in play,
I'd send those ivories spinning through
Each other, on their table blue,
In a promiscuous way.

"And when, at last, I left my place
Amid the gaping crowd,
By power unseen shot into space,
I'd strike the pale moon in the face,
And *carom* on a cloud!" (p. 75).

It is fair to say that Mr. Wilson's publishers have prefixed to the book three letters in facsimile, from Holmes, Longfellow, and Stedman. The last-named poet commends a previous poem by Mr. Wilson; Dr. Holmes says more cautiously that he has read very little of it; and Mr. Longfellow, still more guardedly, that he wishes it success. Mr. Francis H. Williams, author of a drama called "The Princess Elizabeth," has published a poem called 'Theodora: a Christmas Pastoral' (Philadelphia: Lippincott), which is pleasing and domestic, without pretending to be anything more. Mrs. A. D. T. Whitney has had Mr. Augustus Hoppin's aid in hammering out the pure gold of Mother Goose very cleverly in 'Mother Goose for Grown Folks' (Boston: Houghton, Mifflin & Co.), but we must confess to preferring the gold.

Short Sayings of Great Men. By Samuel Arthur Bent. Boston: James R. Osgood & Co. 1882.

THE misnomer of this book, which the author's preface rather obscurely tries to justify, may easily be indulged. If only a moderate number out of the 700 names it celebrates belong to men who deserve to be styled great, on the other hand very few of the sayings it records are unworthy to be called good. When Disraeli declared that those men who reach posterity are not much more numerous than the planets, he forgot how many have already floated down to it of whom nothing is real beyond some just thought or fortunate phrase. Sometimes the personality is known of that one whose wit condensed into a proverb the wisdom of the many. Oftener the accident of belonging to a group about some striking historical event has preserved an obscure name. The death sentence of Louis XVI., for instance, proved a rare occasion for such flies to thrust themselves into amber.

Of course no ideas of sequence or quality could suggest a symmetrical plan for recording the sayings of men of the most diverse minds and states, inspired by the widest variety of situations. The alphabetical arrangement is the simplest, indeed the only practicable one; and, in following this, it is easy to be seen how really great names, giving lustre to some era, recall to the collector's mind the contemporaneous sayings of the insignificant, who have left nothing else of mark. These have accidentally helped to write history with the aid of epigrams. Their remembered words served mankind better than their forgotten deeds. So the Grand Monarque's golden day, the Reign of Terror, and times of political change in England, stimulated all men's minds to pointed sayings, illuminating history as sparks of color heighten the greatness of some memorable picture.

Naturally, in this as in any record of brilliant sayings, the palm of terseness belongs to the ancients, and that of wit to the French, while the English and Germans express the deepest thought. The seven wise men of Greece were happier than any sages before or after them, in being the first of the wise whose words were taken down. Succeeding wits and poets, long before modern days, envied those earlier minds that seemed to have exhausted original thought, leaving them only its adaptation to new occasions. *Pereant qui ante nos nostra dixerunt* is the witty complaint of many a man who would be a genius, and could only be ingenious. No wonder that more than a third part of the pearls in this collection have dropped from French lips. The alert Gallic spirit surprises resemblances among differences, the vanity of the race is always on parade, and their speech, clear and exact, never burdens the informing thought. Then, again, no modern nation has gone through such crises of passion and terror, forcing startling situations, kindling energy of acts and words. Their history wrought supreme occasions, stimulating their rare faculty of utterance to fit them. They are preëminent in the ghastly wit of the guillotine and the death-bed. With their more sober neighbors across the Channel and the Rhine, circumstance is less often the parent of wit. They touch the more sympathetic note of humor evoked by personal temperament. Rabelais, the greatest of French names in this kind, gains but one quotation. The difference between wit flashing out from the occasion, and philosophic reflection embodied in jest or humor, is illustrated by the sayings of Voltaire or Talleyraud contrasted with those of Goethe or Doctor Johnson. The former seem to speak like their own race, and to speak to them—the latter utter universal thought in words welcome to mankind.

Very few Americans contribute to this collection, and of the sayings of some among these their merit is to be short, and would be greater if they were shorter. The collector's good taste excludes the whimseys of the comic almanac. Indeed, that wretched small beer of jest known just now as American humor neither nourishes nor enlivens. On the other hand, any literature would be adorned by Franklin's proverbs or Beecher's points, as they are here recorded.

If many men have perished unsung for want of singers, still more have died unreported because newspapers came after their day. The modern great suffer in the reverse way from excess of record of their unsifted sayings. Our author notes, for instance, a good many *mots* of Beaconsfield and Bismarck which might well have been left to die with the incidents that brought them out. They illustrate gossip more than they disclose genius. Yet we would not willingly spare the latter's boast, "We are not going to Canossa," remembering the irony of the event. In general, our author's incidental notes, his dates of careers, remarks on historic puzzles, and corrections of tradition, are valuable. It is well to have Charles IX. deodorized, and Louis XIV. taken down a peg, even if we have to give up Raleigh's mantle, Belisarius's penny, Francis I.'s diamond, Charles V.'s clocks, and the Countess of Salisbury's garter. Against one obstinate error he sets himself in vain, when striving to restore its true meaning to *cui bono?* The false one, we fear, describes the attempt. Yet he need not despair of expressing the alliterative form of Voltaire's noted *canaux, canards, canaille*, which might be fairly rendered, "mobs, moats, and mallards," or "ditches, ducks, and dregs." Of pure proverbs few are given, as they are mostly *filii nullius*, almost the spontaneous growth of experience. Yet, opening quite at random, we come upon the pedigree of many a good saying ingeniously traced back to its ancestor in one of those primal maxims. Thus, "After us the deluge," in idea if not in form, was used by Tiberius, and borrowed by him from an earlier unknown. "Burning one's ships" is only adapted from facts of remote centuries. "From the sublime to the ridiculous" dates from Longinus. "No man is a hero to his valet," or the like of it, was first known in Sparta. "Speech is given to man to conceal his thoughts" is but the worse half, naturally chosen by Talleyrand, of a maxim older than the Middle Ages. That "Hell is paved with good intentions" was declared by St. Bernard. "Silence is golden" was said by a Greek poet before Carlyle invented or borrowed it. And it reads strangely to find Grant's "Let no guilty man escape" anticipated by Sixtus the Fifth.

A book so carefully studied and so neatly prepared deserves to be cleared of its few blemishes. At p. 195, the date of Elizabeth's accession is wrongly given as 1538. Several careless translations appear. For example, Catherine II. did not misapply the phrase *gagne-pain* to her kitchen affairs, but intended her bread-winning business of the Cabinet. Voltaire's *d'ailleurs*, said of Shakspere, cited at p. 248, means "moreover," not "anywhere else." Sieyès understood his own language better than to confound, as the translation does, the indicative and subjunctive moods.

This collection is superior to the ordinary compends of quotations as far as the "winged word," with its personal accent and context of life, surpasses the studied and selected excerpt. It is a casket of "jewels five words long," not merely arranged and indexed, but enriched with descriptions telling where they were mined, or rediscovered, how set and polished, when and by whom worn or bestowed.

Meyer's Konversations-Lexikon. Jahres-Supplement. 1881-82. Leipzig, 1882.

On the completion of the third edition of 'Meyer's Konversations-Lexikon' the publishers engaged in the rather ambitious task of issuing every year, by way of supplement, a volume uniform in shape and print with the sixteen heavy volumes of their Cyclopædia. Three of these supplements have now appeared, each comprising more than a thousand pages. They are not only valuable to all who have bought the parent work, and indeed to every possessor of a cyclopædia who can understand German, but are of great service to a very large class of scholars and readers eager to keep abreast of the time. The scope of this publication is far more comprehensive than that of 'Appletons' Annual Cyclopædia.' The latest developments in the various fields of science and in the technical arts are treated under a great number of special heads, while social and economic topics, the fine arts, literature and the transactions of learned societies, and the miscellaneous topics that happen to engage public attention, have respectively a large amount of space devoted to them. Political and military events are described at great length. Finally, each volume contains a host of new biographies and statistics, the whole having the usual alphabetical arrangement.

In the domain of natural history the leading article this year is *Darwinismus* (covering thirteen pages), from the pen of Ernst Krause, who also contributes a long article on the movement of plants. Darwin's interesting observations on earthworms are embodied in the article *Regenwürmer*. Among the contributions in the department of terrestrial physics and physiography we may cite the articles *Gebirge*, dealing with the theory of the plasticity of rocks under extraordinary pressure, and *Norddeutsches Flachland*, treating of the phenomena of glaciation presented in the lowlands of Germany. Under the head of *Elektrisches Licht* we have an interesting account of the experiments of Siemens to determine the action of the electric light upon the growth of plants; and, under *Elektrische Eisenbahn*, of the two electric railways now in successful operation in the outskirts of Berlin. The article *Berliner Stadtbahn* describes the viaduct railway which now affords rapid transit to the citizens of Berlin, and connects the railways centring there. In the article on Albania much interesting information will be found concerning the Miridites and other mountaineers of that region. Interesting to the special student of geography only are the articles on the International Geographical Congress at Venice, on the German congress held at Berlin, and on the geographical literature of the years 1880-81, which together cover thirteen pages. The space devoted to the history of the various countries would of itself almost make a little volume, and this feature of the publication is invaluable to the general reader, who, wearied and confused with the daily reports in the newspapers, is unable to obtain a clear and connected view of current events. The plan embraces more than the chronicling of events year by year under each country. Thus, in the volume before us, the article *Achal Teke*, extending to five pages, gives the whole history of the war waged by Russia against the Tekke Turkomans, beginning with the campaign of 1879. A large part of the article *Irische Landfrage* is taken up with the historical development of the land troubles in Ireland. Among special articles dealing with the statistics of commerce, we will mention those on the grain trade, on the commerce of Germany, and on the commercial navies of the world. Significant articles in the department of literature are those on Shaksperean literature, on the modern novel, on the historical and economical literature of the years 1880-81, and on historical literature in Russia since 1855. The appropriateness of the last-named article in a publication of this kind may perhaps be questioned. The article *Theater* (twelve pages) makes the round of the German and foreign stage, including the United States.

A very valuable feature in this publication is the introduction of supplementary matter, bringing down to date the more important biographical notices. The reading public of Germany, which has been utterly unable to penetrate the maze of American politics, is now, probably for the first time in an encyclopædic publication, introduced into the circle of our professional politicians. We are not used to finding even such meteors as Blaine and Conkling figuring under their own titles in German cyclopædias. What shall we say, then, to separate and full biographies of the various members of Garfield's and Arthur's Cabinets? American politics and politicians, to be sure, are here handled in a way not very inspiring to the German Republican. The untutored German mind will perhaps be puzzled at first as to what is meant by Garfield's having been nominated to the Presidency as the "dark horse," but will probably conclude that this was a nickname which had stuck to him from the time when he led his weary steeds along the tow-path.

This publication is illustrated with numerous cuts in the text, as well as with plates and maps. The large folding map inserted at the back of volume iii., showing the density of population in the German Empire, might have been compressed into a much smaller compass without impairing its usefulness.

Fifty Perfect Poems. Selected and Edited by Charles A. Dana and Rossiter Johnson. With seventy illustrations. D. Appleton & Co.

The title of this handsome volume is the subject of an apologetic preface which was much needed, but which does not leave very clear the criterion employed by the editors:

"As every art has its limitations," we are told, "in whatsoever work the imperfections are caused by these limitations alone, the artist may fairly be said to have succeeded to perfection. . . . The endeavor has been made to include in this group of poems a wide variety in kind, only demanding that each shall be perfect after its kind, and having a reasonable regard for the possibilities of illustration."

If this amounts to anything more than saying that, in the compilers' belief, the authors of the chosen poems did as well as they could under the circumstances, we fail to find any meaning in it. Its worthlessness as a so-called "principle" of selection, in the absence of any definition of the limitations of the poetic art, is obvious. What results is, that the "fifty perfect poems" are not the finest in the English language, and are not (either necessarily or in fact) the finest of their respective composers. They are simply fifty *favorite* poems of Messrs. Dana and Johnson. Moreover, one of the "poems" consists of four of Shakspere's sonnets (not his best, either), a singular sort of literary equation. Three of these, again, and six of the poems proper are all that is not to be found also in the 'Household Book of Poetry'; so that we suspect Mr. Dana of having been the silent partner in this enterprise, and that the selection, the title, and the apology for it are all Mr. Johnson's. We are confirmed in this suspicion by the heterogeneousness of the table of contents, in which Wordsworth's "Peel Castle," the "Lines to an Indian Air," "Lycidas," Gray's "Elegy," Emerson's "Each and All," and the "Ode on a Grecian Urn" hobanob with "Marco Bozzaris" and with poems by Mrs. Hemans and Buchanan Read. In fact, the misleading character of the epithet "perfect" shines in the fact that no less than ten American poets are represented. Another commentary upon it is furnished by the extensive alterations made by Mr. Edwin Arnold in the latest edition of his "He who died at Azan" ('Pearls of the Faith,' p. 188)—whether perfecting the already perfect poem, we will not attempt to decide. We may remark also the discrepancy between the reading of the title-line of this same poem in the table of contents and in the text ("Azim" by error for "Azan").

In sum, this volume contains a number of surpassing poems, enduring treasures of our tongue and race, and a greater number of less fine, down to ordinary if not mediocre. The singularity of the illustrations deserves mention. They are vignettes cut on wood, printed on Japanese paper, and delicately pasted upon the printed page, the effect being nearly that of the peculiarly French fashion of mixing etchings and letter-press. The covers, finally, are of silk, and the general effect very elegant.

Our Liberal Movement in Theology. By Joseph Henry Allen, Lecturer on Ecclesiastical History in Harvard University. Boston: Roberts Bros.

Mr. Allen's 'Fragments of Christian History' was noticed in our columns a few months ago. The gap between that volume and the present is to be filled by a volume on 'The Middle Age' which is in press already, and will be published before long. The three volumes will furnish a connected series of papers on the entire course of Christian history. Though published in quick succession, they bear no marks of haste upon their pages. The present volume, with the exception of its introductory chapter on the antecedents of New England Unitarianism, is within the scope of Mr. Allen's personal recollections, and it has, on this account, a more vivid tone than it could otherwise have. The preliminary chapter is an interesting study of English Unitarianism. This was originally a defence of Christianity on the grounds of reason against the attacks of reason. It had a double character. It was a movement of reason in sympathy with the scientific spirit, and a movement of right in sympathy with the revolutionary spirit. These original characteristics have never, at any time, been wholly absent from the course of Unitarian development. The ethical element was from the first predominant: a moral interpretation must be put on every doctrine. Arriving at New England Unitarianism, Mr. Allen distinguishes a period of growth, a period of criticism, and a

period of construction. The great name of the first period is Channing, that of the second Parker, that of the third Hedge, "the ablest, deepest, and most widely cultivated intellect that the denomination has embraced." Mr. Allen's estimate of both early and later Unitarianism will hardly be considered flattering by the most orthodox critic. He is so much afraid of running into eulogy that his tone is colder and more critical than would be excusable in one writing of his own household of faith. His co-religionists will be less pleased with him than others: they will think they had a right to expect something a little more effusive. It is as if Mr. Allen had written under the immediate influence of Emerson's essay on "The Superlative." The power of understatement finds an admirable illustration in the chapters upon Channing and Parker. It may be doubted whether the characters and functions of these two men, so different in their mental and their moral make, have ever been more justly exhibited. Especially interesting is the account of Channing's relation to the anti-slavery struggle. The weakness of Unitarianism on the emotional side was made strong in Parker's tender piety.

Mr. Allen's subsequent chapters are called "A Scientific Theology," "The Religion of Humanity," and "The Gospel of Liberalism." Though he is one of the older men among the Unitarians, these chapters represent their latest tendencies. They are scientific, undogmatic, anti-supernatural. Jesus is here a purely human person; the Bible is a purely human book. The faith in God and immortality is far less concrete and tangible than that of Theodore Parker. A return upon the deepest moral convictions of the soul is Mr. Allen's confident solution of the afflicting problem of the time. He has much increased the value of his book by an appendix containing an address by Dr. Hedge upon Dr. Bellows and Mr. Emerson. In either case the characterization is marked by an admirable sincerity and simplicity. Dr. Hedge's relation to Mr. Emerson was such that no one has a better right to speak his praise. If these words could have been spoken at his funeral, as they would have been but for the writer's illness, the services on that occasion would not have been so miserably inadequate as they were felt to be by the general public.

Knocking Round the Rockies. By Ernest Ingersoll. Illustrated. Harper & Bros. 1882.

Mr. Ingersoll is one of the many supernumeraries who enjoyed the hospitalities of the parties of the Hayden Survey in Colorado and Wyoming, and repaid their debt directly by "writing them up," or vicariously by the votes of their friends and relations in Congress. The author belonged to the former class, and his book, as he states in his introductory chapter, is composed of material dredged up out of the deep sea of magazines and newspaper files, to which he has been a frequent contributor during past years. This fact might be apparent to the reader from a certain want of coherency in the narrative, an airiness of style, and a happy carelessness in the statement of facts which seems a necessary characteristic of most of that hastily-written literature. His book is, nevertheless, very readable and instructive, as an account of the daily life and incidents of travel of a scientific exploration in the untrodden wilds of our American Alps could hardly fail to be. The woodcuts, moreover, mostly copies of photographs of scenes analogous to, if not always identical with, those described in the text, add very considerably to its attractiveness. It is in the main an account of campaigns in Colorado in 1874, and among the Wind River Mountains of northwest Wyoming in 1877, with, by way of digression, a graphic description of the author's loss of himself in the arid region of the Rio Dolores in southwest Colorado. For the rest, Mr. Ingersoll intersperses his narrative with the usual modicum of Western stories, together with some account of the varieties of birds observed and their habits, which is intelligently done, and of the geological structure of the country, which is not. It is a pity that, having such interesting material on hand, he could not have given time to more careful editing and in part rewriting his matter, and have submitted his technical statements to the criticism of some competent geologist, rather than have rendered immortal in print such statements as that the coal of the Rocky Mountains is of Triassic age, that green granite is a kind of orthoclase, and that placer miners find lead in the black sand in their pans, and draw it out together with the iron by means of a magnet.

The Falls of Niagara. With Supplementary Chapters on the other Famous Cataracts of the World. By George W. Holley. With illustrations. A. C. Armstrong & Son. 1882.

If Mr. Holley has not said the last word upon his subject, he has at least said a little of everything. History, geology, bibliography, poetry, local incident, industrial utilization—all are discussed in a pleasant manner and with such measure of fulness as his 183 pages would allow. The scientific student will still need to go to Lyell and Tyndall; the enthusiast for the sublime must find elsewhere the data upon which Lord Dufferin's scheme of an "International Park" is based; but to that large and liberal-purchasing public which is made up of bridal tourists eager to perpetuate the emotions of that interesting epoch, and of English travellers whose American journey extends from New York to Niagara and back, the volume will be an acceptable and elegant memorial. The mechanical execution of the work is irreproachable, except that the cover is symbolical almost to a fantastic degree, and that the illustrations fall short of that exquisite beauty to which the latest school of American engravers have accustomed our pampered eyes. We may fairly complain of the scanty notice paid to Sam Patch, a heroic character who has already become to most minds more legendary than William Tell. Nor do we find, in the collection of incidents of the lower river, any allusion to the Morgan tragedy, which set all New York by the ears only half a century ago. The absence of an index, too, is a fault which deprives the work of an important part of its intrinsic value.

The dedication is to the memory of two heroes—one a plain man, Joel R. Robinson, who might in early days have passed into mythology as the *genius loci*; the other, the noble Peter B. Porter, whose family has almost "owned the Falls," as a young lady member of it is said to have maintained long ago, with vivacious audacity, at an English dinner-table, and who fell at the head of his regiment at Cold Harbor.

Molinos the Quietist. By John Bigelow. Charles Scribner's Sons. 1882. 8vo, pp. 127.

Readers of 'John Inglesant' will be grateful to Mr. Bigelow for this timely study, which tells briefly and clearly who Molinos was, what he taught, and why he was silenced. This historical view does not differ materially from that of the romance; Mr. Shorthouse has laid before his readers the main truths in regard to the matter, and so just and sagacious are the comments that he places in the mouth of his hero, that Mr. Bigelow has copied them at length in an appendix to his last chapter. Another appendix contains some of the most important documents, including the bull of condemnation of Pope Innocent XI.

Two remarks are naturally suggested by this melancholy story. The first is, the sagacity and persistency with which the Church of Rome maintains its authority—its fundamental principle, that *obedience* is the first and most requisite virtue; consistency being a matter of little account. Mr. Bigelow illustrates this by the comparison he draws (p. 98) between the treatment of Molinos and that of earlier mystics who occupied essentially the same position. The second is in respect to the charges of immorality made against him, and their plausible foundation in the doctrine of Quietism. They are exactly the same that were made against the early Christians, and we suppose rest upon as good authority; the fact being that whoever rejects the established and accepted foundation of morality exposes himself to just such suspicions and charges. But Quietism was more than this: it was at bottom Antinomianism, and Antinomianism is exposed to dangers and temptations from which a mere rejection of formal religion is free. In this point of view Molinos provoked a comparison not with the early Christians, but with the Anabaptists of Luther's time.

BOOKS OF THE WEEK.

The Children's Christmas. James Pott.
Warner, Anna. The Light of the Morning. A. D. F. Randolph & Co. 35 cents.
Wedgwood, H. Contested Etymologies in the Dictionary of the Rev. W. W. Skeat. Boston: J. R. Osgood & Co.
When Papa Comes Home: The Story of Tip, Tap, Toe. Macmillan & Co. $1 25.
Willis, R. S. Pen and Lute. Detroit: Thorndike Nourse.
Wilson, A. Chapters on Evolution. With 250 illustrations. G. P. Putnam's Sons. $2 50.
Woodberry, G. E. A History of Wood Engraving. Illustrated. Harper & Bros. $3 50.
Yeatman, Lavinia P. Edith: a Poem in Four Parts. Philadelphia: J. B. Lippincott & Co. $1.

The Nation.

NEW YORK, THURSDAY, JANUARY 11, 1883.

The Week.

THE attention of the President ought to be again directed to Mr. Frank Hatton, the First Assistant Postmaster-General, who has become editor of the *National Republican*, and is making use of the Post-office to push the circulation of that precious sheet. He has prepared a highly-commendatory lithographed puff of it, addressed to the United States postmasters, a copy of which he has sent to each Republican member of the House, asking him to sign it. His paper has steadily opposed the Star-route prosecutions, and abused the prosecuting officers, supported all the leading abuses which have brought discredit on the party, and lately announced that the Commissioners to be appointed under the Civil-Service Reform Bill would sell the offices to the candidates. A more shameless or disreputable sheet of a political kind does not exist. That it should be edited by a United States officer, and that he should be using the Post-office to canvass for it, is a great scandal. The President knows now full well what kind of persons these Post-office politicians are, and he will doubtless before long take Mr. Hatton's case in hand. The editorship is clearly as much as that officer can attend to.

General Butler, who, we see, is being put in nomination by some of his friends in Boston as the Democratic candidate for the Presidency, would do well to remember that it is not enough nowadays, as he and they possibly suppose, that a candidate should be able to carry his own State, unless it happens to be the State of New York. The relative strength of the parties just now is such that New York, with her large electoral vote, is almost certain to hold the decision in her hands, and the result of the last State election is surely sufficient warning to all whom it may concern that there is not the smallest use in coming here from any part of the country, like the wag in Macaulay's story who deceived the Brahmin with a mangey dog, and trying to persuade the voters that he is a fine sheep, fit for sacrifice to the gods. There has been for many years much talk about the corruption of New York politics, owing to the influence of the great cities on State contests in off years; but we believe there is no State in the Union which can be counted on with more certainty to stand no humbug when really important issues are at stake. It has shown this on many occasions during the past thirty years, and, if we may judge from Mr. Folger's fate, which contains an awful example, is now less prepared to stand it than ever. Any one, therefore, who supposes he can bring a shady candidate here in 1884 and whip the devil round the stump with fine phrases, will do well to inquire diligently between now and then.

The story of repudiation in Tennessee is now an old one. After long and troublesome discussions and much agitation, the State had come to an agreement with its creditors, according to which the latter were to have a little over 60 per cent. of the amount due them. But this scaling down did not yet satisfy a large portion of the Democratic party of Tennessee. At their last State Convention they repudiated the agreement, and the position taken by the Convention was endorsed by a considerable majority at the polls last November. But no new laws on the subject had been passed, so that when the interest on the reduced debt fell due the old arrangement was still in force. But when the creditors called for their interest, the State Treasurer, Mr. Polk, refused payment, on the significant ground that the people (as represented by the Democratic State Convention and the majority at the recent election) "were opposed to the money being appropriated in that way." But now it turns out that the State Treasurer saw fit to appropriate the money of the people in another way, by putting it into his own pocket. It has been discovered that he is a defaulter to the amount of at least $400,000, and both branches of the Legislature have passed a resolution authorizing the attachment of all of Mr. Polk's available assets. The repudiators of Tennessee would not pay their creditors, and there seems to be some poetic justice in the fact that, in spite of this, they got rid of their money through the very agent who refused to pay interest on the State debt because the people did not want to squander their money in that way.

The alliance of the Republicans with Mahone bids fair to bear some singularly sweet fruit. It has been reported that President Arthur, at the solicitation of General Grant, whose ideas about the qualifications necessary for judicial functions have always been very remarkable, was willing to appoint Colonel Mosby to a United States District Judgeship in Virginia, but that Mr. Mahone tried to put in his veto, and that thereupon the friendship between him and President Arthur came to a sudden end forever. All this is emphatically denied by Mr. Mahone himself, who says that his relations with the President are as cordial as they have ever been, and it is stated by persons in his confidence that if Mr. Mahone should really insist upon the appointment to the Judgeship of a man favored by him, he could have it. Upon the same authority it is stated that Mr. Mahone intends to make his power felt when the election of a new President *pro tempore* in the place of Senator Davis, whose term expires on the 4th of March, and the reorganization of the Senate as to its committees and officers come up. Mr. Mahone will then insist that only persons agreeable to him be put in the Senate offices, his principal point being that Mr. Gorham must be made Secretary of the Senate; and, in case the Republican Senators refuse to accept his terms, he threatens to throw his vote with the Democrats, and to turn the organization of the Senate over to them. If this report of Mr. Mahone's intentions is confirmed—and it does not seem at all improbable—the Republicans of the Senate will find themselves confronted by a nice alternative. The understanding is that Senator Edmunds is to succeed Mr. Davis in the chair of the Senate. The election of Mr. Edmunds to that place would meet with universal commendation. But suppose, when the time comes, that Mr. Mahone coolly informs the Republican Senators that they will have to make Mr. Gorham Secretary of the Senate, or he will defeat Mr. Edmunds and turn over the organization of the Senate to the Democrats—what then? The Republicans will have reason to remember the predictions of those who warned them that an alliance with so unscrupulous a politician as Mahone would, whatever temporary advantages it might secure, finally result in bankruptcy of character and fatal disgrace.

The public have watched with curious interest the "reform" of the tariff instituted by the Committee of Ways and Means, whose revision of the Tariff Commission report has resulted in producing decidedly the most disgraceful scheme of duties on imports that the country has yet seen. Their last effort has been a paring down of the free list. Take the case of borax as an example of their work. This article is now admitted free of duty. The Committee recommend that it be taxed ten cents per pound. Why? Because a deposit of borax has been discovered on the Pacific Coast. So it appears that the consumers of borax would have been better off by ten cents per pound if no such discovery had ever been made. So long as this deposit of borax remained mercifully hidden from view we were allowed to get our supplies at a fair price—that is, at the cost of production and transportation—but as soon as somebody finds borax within the limits of this great republic, we must all contribute our pennies to give him an increased profit in his business. This is not a solitary instance of the application of the principle which seeks to punish the nation for its possession of great natural resources—the copper tariff is perhaps the most conspicuous case of the kind—but it is the latest, the most ridiculous, the most lamentable.

The Democrats will some day wish that the opposition to the Civil-Service Reform Bill which expressed itself in the House of Representatives had not all come from the Democratic side, and that of those voting against the bill there had not been as many as forty Democrats to six Republicans and one Greenbacker, and that of those voting for the bill there had been more than 50 Democrats against 100 Republicans. In the Presidential canvass of 1884 they will feel the necessity of showing that they are, and always have been, as much in favor of civil-service reform as anybody, or rather more so. These figures are disagreeable, but it is to be hoped that in the meantime they will lose no opportunity to strengthen their case.

A review of the State legislation of the past year on the liquor question, recently made by Mr. Henry Hitchcock, of St. Louis, before the Missouri State Bar Association, contains some very suggestive and interesting facts. During the year 1881, legislation intended to restrain or prohibit the sale of liquor has taken place in six States, differing very widely in social conditions—viz., Kentucky, Mississippi, South Carolina, Massachusetts, Connecticut, and Iowa. In Iowa it took the form of a constitutional amendment, absolutely prohibiting the manufacture or sale within the State of any intoxicating liquor whatever. One of the courts has, however, pronounced the amendment invalid because it was not submitted to the popular vote in proper form, and the question is still under appeal. In Kentucky, the legislation has taken the curious form of special acts prohibiting or providing for the regulation of the sale of liquor in particular counties or districts, apparently in satisfaction of the prevailing sentiment on the subject in each locality. Some of these acts, too, show that in some localities the state of opinion which once called for such legislation has changed, for they repeal the prohibitory laws now in force in these localities. In Mississippi things have taken a similar course. The sale of liquor is prohibited in fifty different towns, and within five miles thereof. One act prohibits it in all the towns of a particular county except one, and in another permits the sale of malt liquors only. Another act relieves from the operation of the law which prohibited the sale of liquor within seven miles of two specified churches, "that portion of territory lying north of Strong River and east of Pearl River." In South Carolina we find a similar series of special acts prohibiting liquor-dealing in certain localities, and one general one, providing for a local vote in any town, city, or village, on the demand of one-third of the legal voters, to decide by a majority whether there shall be "license" or "no license," but exempting domestic wine sold by the gallon from the jurisdiction of the local majority.

In Massachusetts, the existing license law has been made more stringent. In Connecticut, the question of license or no license was remitted to a majority vote at town meetings, and liquor-dealers were made punishable for selling to habitual drunkards, minors, or intoxicated persons, besides being made liable in civil damages for injuries committed by men made drunk on their premises. In Texas, the local-option law already in force was slightly amended. In Ohio, the so-called "Pond Law" endeavored to evade the constitutional prohibition of licenses, by imposing a heavy special tax on liquor-dealers, but the Supreme Court pronounced it unconstitutional. Another act closed on Sundays all "places" in which liquor was sold or exposed for sale on other days, but the difficulties of enforcing it have been found so great that it remains a dead letter. This increasing tendency to legislate about the liquor traffic in various parts of the Union may of course have several different interpretations put upon it, but there can be no doubt as to its indicating increasing public contempt and condemnation of excessive drinking, which, whatever the efficacy or inefficacy of liquor laws, must result in promoting temperance. In England the spread of popular education has already exerted a marked influence on the yield of the liquor taxes, which now constitute about forty per cent. of the revenue, or about $155,000,000.

The Dukes-Nutt homicide in Pennsylvania continues to give great comfort at the South. Most of the leading papers have gleeful editorial articles on it, as showing that the North cannot fairly reproach the South with its business and social homicides. Considering that until this occurred they had to base their *tu quoque* on the Webster murder in 1848, and the Sickles case in 1859, and the daughter-whipping case in Western New York a few years ago, and the child sacrifice by the crazy Massachusetts fanatics two or three years ago, the relief it must give is easy to understand. But it can only be temporary relief at best. It will not bear reflection among candid men at the South, who have seen whole families destroyed in their own neighborhoods by the vendetta. Moreover, there must be dozens of "difficulties" brewing in Southern towns at this moment, which will result in street and office homicides before the end of March, and wipe out all remembrance of the Dukes-Nutt affair. We say this mainly in answer to that excellent paper the Atlanta *Constitution*, which also has felt obliged to publish a Dukes-Nutt *tu quoque*, and apparently reaches the droll conclusion that one unpunished business or social homicide is as good proof of social or political demoralization as twenty or any number, and that when you say to a community, "Why have you for a century allowed your business men and farmers to shoot each other 'on sight' with impunity?" it can always close your mouth by answering, that "one gentleman lately murdered another in a scuffle in your section, and is now out on bail."

The editor of the Opelika (Ala.) *Times* makes two somewhat mournful announcements in his issue of December 22. Our readers know what terrible troubles in the way of street fighting there have been in that beautiful little town, and how they resulted in the death, among many, of "Mr. Maloney," a noted barkeeper of the place, who, according to a local eulogist, though "forced by circumstances into a profession not at all in accordance with his wishes," was, nevertheless, "a polite, obliging, courteous gentleman, a noble, affectionate friend, and an upright, honorable citizen." Anyhow Mr. Maloney is dead, and that as a polite, obliging gentleman, reluctant to keep a bar, death must have been very welcome to him, may fairly be inferred from the following excuse of the editor of the *Times*:

> "We are this week late with this issue of our paper. We have the best excuse for that of any editor or proprietor on God's green earth.
>
> "First—The printers are afraid to come to the city on account of the belligerent situation of affairs.
>
> "Second—That the printers in our office are not expected to work at night in front of windows exposed to the rabble who have been shooting upon the streets after dark.
>
> "Third—The firing into the editor's house will not intimidate him from telling the truth and expose all their dirty transactions."

After reading the above one is fully prepared for another announcement which appears in the same number:

> "Our inclination is to publish a full sheet; but our printers, who have been faithful and patient through the city troubles, wish a little recreation of a few days, so we will publish nothing but an advertising sheet next week."

No wonder the printers "need a little recreation," as the strain on their nerves must have been terrible. But if editorial and printing work in Opelika is attended with such fearful excitement, what must Mr. Maloney's last day have been at the head of one of the leading bars of the place, to which "the boys" came for refreshments, when out of ammunition or weary with shooting? No wonder the local poet says in his obituary verses:

> "He has gone from this strange world of ours,
> No more to mingle its thorns with its flowers."

A very "strange world" it was, indeed, for which Mr. Maloney mixed the drinks.

The Alabama Legislature has repealed the charter of Opelika, and given the government to a Commission and to the Sheriff, but order has not yet been restored. Since the new régime went into force there has been a terrible homicide of Mr. John Adams, "than whom," says the Memphis *Avalanche*, "no better or more widely-respected man lived in East Alabama." Mr. Adams lately had occasion, however, to chastise two brothers, bearing (for Opelika) the singular name of "the Loves," "about some trifling matter," says the Columbus (Ga.) *Times*,

> "in which Adams, no weapons being used, chastised these renowned veterans severely and drove them from the scene of conflict with his good right arm, the weapon that is good enough at all times for the brave and honorable man. Yesterday *Adams, who was intoxicated and really in a condition of helplessness*, happened to go into a house where the Loves had purposely stationed themselves, and upon the pretence that Adams had been seeking them they waited deliberately until he approached as near as they desired and shot him down in cold blood. Adams, at the time of the shooting, *was irresponsible and totally unable to harm* any one or defend himself."

It is deplorable that so well-known and widely-respected a man as Mr. Adams should have approached the Loves in a state of beastly drunkenness, as he must have been aware that his chastisement had not mended their manners or elevated their character. "The brutal story," adds the Columbus (Ga.) *Times*, "does not end here." Of course it does not. The next instalment of this one is, that the Loves had a justice of the peace named Gorman waiting near by with bail-bonds ready, who promptly admitted them to bail while Mr. Adams lay writhing in his death agony on the sidewalk. The *Times*, therefore, justly observes that "it would seem hard to say whether life is safest on the streets of Opelika or in her judicial temples." We should say, observing the situation from this distance, that it was about an even thing. Life, anyhow, is certainly not safe in Justice Gorman's "temple," as long as the Loves are hanging round the altar. "Every one," it is said, "is desirous of leaving the town." This is the true remedy for the whole trouble. Let every man put his family on his mules and leave, with his shotgun, his pistol, and his knife, and let Justice Gorman have the whole place for a "temple of justice," and play poker in it with the Loves.

Three of the Swiss Cantons which a few years ago abolished capital punishment have restored it. They find that nothing but death will deter manslayers from slaying. The old argument which one hears with such curious frequency, that hanging does not put a stop to murder, fallacious as it is, does not seem to have its fallacy brought home to some people except by trying to put a stop to murder by imprisonment for long terms. When they find that this is still further from stopping murder, the great but simple truth dawns on them, that no punishment prevents all crime, and that the object of punishment is always to diminish the amount of crime, and that if it does this it is efficacious, even if much crime is still committed. Probably the worst enemy of the opponents of capital punishment is the pardoning power. As long as Governors and Presidents can pardon, imprisonment for long terms will never have much terror for murderers, because it leaves hope still active. If those who dislike hanging are wise, they will couple with the abolition of it a constitutional prohibition of pardons for murderers, except on clear proof of innocence, or, in other words, on proof that they were wrongfully convicted.

The "Mountain Evangelist" Barnes, who has been curing people of diseases by putting a little olive oil on their foreheads, and giving them his blessing, has failed in the case of Mr. Bunting, the Superintentent of the Christian Home for Intemperate Men, in a way which is well calculated to discredit his whole system. Mr. Bunting is afflicted with rheumatism, and was somewhat sceptical about the Mountain Evangelist's miraculous power, but, nevertheless, submitted to the anointing, on receiving the Evangelist's assurance that faith on his (Mr. Bunting's) part was not necessary. He was thereupon cured of his inflammatory rheumatism, which had kept him nine weeks in bed, for he got up and walked about. But in a day or two he was down with the gout, and is now as badly off as ever. This looks as if the Mountain Evangelist was not able to cope with more than one form of disease at a time, and could not take in all the ailments included under what the doctors call a particular "diathesis." Gout and rheumatism are undoubtedly cognate diseases, and a doctor who relieves one by giving you the other is entitled to no credit. One does not need a Mountain Evangelist to do this; there are plenty of practitioners down on the plains quite equal to it. We feel warranted in assuring Mr. Barnes, too, that if there was any real virtue in his system, Talmage would long ago have resorted to it, and would by this time have made disease rather scarce along this coast.

One of the charges made by M. Léon Say in his late well-known attack on the administration of the French finances was that the recently-created village schools were, in a large number of cases, unnecessarily costly and "palatial." The subject has come up again in a debate in the Assembly over a bill requiring each commune to establish a school not only in its chief village, but in every hamlet more than three miles from it having twenty children fit to go to school. The cost of this will be $140,000,000, of which the communes are to find $60,000,000, and the State $80,000,000. The bill has been violently attacked on the ground that the Government cannot in the present state of the finances afford any such outlay; but it was explained that it would be distributed over three years, and that, whatever else might suffer, schools should be provided for. Jules Ferry, the author of the School Law, intervened in the debate to show, in answer to M. Léon Say, that the "palatial" school-houses, numbering over 19,000, which had been erected between 1870 and 1882, had not cost on an average over $2,600 each, which called forth the remark that they cost less than parsonages, and M. Ferry added that they cost much less than churches —a village church often costing $8,000. He then went on to avow that the Government had turned the local pride and ambition of the communes, which forty years ago went into church-building, in the direction of school-building, and was now bound to encourage the tendency. There will be 40,000 new school-houses erected within the next ten years under this law, which is compulsory. There can be no doubt that the effect of this educational movement, both on the generation which establishes the schools and the generation which is taught in them, will be very destructive to the influence of the clergy, and is intended so to be by the present Government. It takes no pains to conceal the fact that the movement is intended to be anti-clerical, and to substitute for whatever interest the peasantry still take in the Church an interest in the schools and school questions, both by compelling them to build schools, and to send their children to them after they are built.

What does this interest of the peasantry in the Church now amount to? It is very hard to say. How very little reliance can be placed on the observation of travellers in this matter, is shown by the great mistake made by the European press as to the effect of the crusade undertaken by the Government two years ago against the unauthorized religious orders. It was predicted almost unanimously by the English and German press that it would shock the peasants and alienate them from the Republic. If any reliance can be placed on a popular vote as an indication of popular sentiment, however, the elections which followed soon after, and gave the Republicans an overwhelming majority, showed that the country people rather enjoyed seeing the monks and nuns roughly handled or dislodged. The modified opinion of the English press now called forth by recent attempts of the Legislature to cut down ecclesiastical salaries and allowances is that, although the peasant does not go to church himself, and does not like the curé, he likes to have him kept by the state to marry him, and baptize his children, and bury him, and furnish worship for his wife and daughters on Sunday, and that no government which attempts to rob him of these privileges can stand. But it is very doubtful whether this is not as great a mistake as the other. For anything that is known to the contrary, it is not rash to say that if the Republic maintains itself during the next ten or twenty years, a gradual diversion of the ecclesiastical stipends and allowances now paid by the state from the clergy to the schoolmasters and school-houses, with hearty popular approval, is among the possibilities if not the probabilities. We have clearly, in spite of all the examination they have undergone since 1790, not yet got to the bottom of the French character and French views of life here and hereafter, as found in the country districts. Paris is pretty well known, but who really knows the French provinces?

The French are having a fresh illustration of the proverb that misfortunes do not come singly. The death of Gambetta has been followed by that of General Chanzy, so that they lose within one week the only two men who came out of the campaign against the Germans with any real credit. General Chanzy was the only soldier who had acquired or retained the popular confidence at the close of the war by services in the open field. There were one or two defenders of fortresses, now dead, whom the war gave a certain fame, but to Chanzy belonged the merit of resisting obstinately and retiring in good order to fight again. This he did on the Loire, when opposed to Prince Frederic Charles and General von der Tann, the Bavarian. Under him there were no panics or *débandades*, though the weather was frightful, his men raw levies in the main, and his supplies very deficient. He came on the scene, too, luckily for him, when the French had got so used to terrible defeats and military misconduct that they were satisfied with any general who did not despair and who did not allow his forces to be captured. If France had been involved in any European complication since 1871, General Chanzy would have had the chief command by common consent. He was the only man in high command in whom the public believed as a strategist. He leaves behind hardly anybody in whose military talents it has much confidence except the Marquis de Gallifet, and he is only a cavalry leader. So that Chanzy's death is likely to aggravate that self-distrust which, for the first time since the Hundred Years' War, seems to have become a French national trait.

The failure of the Municipal Bank of Sapozhok in Russia is not a financial event of much importance, but it is worth telegraphing, because it shows the remarkable progress made by the Russians in the art of financing. Indeed, judging by this failure, they are now abreast of the foremost nations of the world in this field of art. In some respects New Jersey cannot hold a candle to them. The Bank of Sapozhok has failed for some millions of rubles in a town of 3,000 inhabitants, and has only twenty-nine rubles in assets. Who is the cashier or president among us who can equal this? There is a courage of a very high order in leaving twenty-nine rubles in the safe. Weaker men would have left four or five hundred, or probably have only failed for one million. No wonder that European opinion inclines to the belief, after this failure, that the Russian municipal banking system is unsound. It certainly does seem as if there were some grounds for this apparently harsh view.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 3, 1883, to TUESDAY, January 9, 1883, inclusive.]

DOMESTIC.

THE House of Representatives passed the Pendleton Civil-Service Reform Bill on Thursday, without amendment, by a vote of 155 to 47. There was scarcely any debate, the bill being passed thirty minutes after the previous question was called. Six Republicans, forty Democrats, and one Greenbacker voted in the negative. The quick way in which the bill was passed caused great surprise, even in the House itself. The way in which it was done was this: Mr. Kasson was about to submit the report of the committee on the bill, and asked in behalf of the committee that the House should finish the bill that week. Mr. Cox, of New York, then rose and said that he regarded the Shipping Bill as quite as important as the Civil-Service Bill. In order to save a long discussion, therefore, and in view of the fact that the Pendleton bill had been very thoroughly discussed in the Senate, he proposed that the question be now put upon its passage without debate. This motion took the House by surprise, but was in accord with the spirit of the moment, and the bill was thereupon passed.

In the House on Thursday the Army Appropriation Bill was passed. On Friday the District of Columbia Appropriation Bill was passed. On Saturday the Shipping Bill was taken up, and Mr. Cox delivered a carefully-prepared speech in favor of free ships. The debate on the bill was continued on Monday.

In the Senate on Wednesday Mr. Logan finished his speech against the Fitz-John Porter Relief Bill. Messrs. Sewell and McPherson spoke in favor of the bill. No vote was reached. On Thursday, by unanimous consent, the West Point Appropriation Bill was taken up and passed. It was then agreed that the Porter Bill should be set down for further consideration on Thursday next, and that the vote on its passage should be taken at 2 o'clock on that day. The Bonded Whiskey Bill was then taken up and passed by a vote of 23 to 20. This is a bill to extend for two years the payment of the tax on about 85,000,000 gallons of whiskey which certain distillers have manufactured in advance of the demands of consumers. On Friday the Presidential Succession Bill was taken up, and Messrs. Hoar and Garland made speeches in favor of it. The debate on this bill was continued on Saturday and Monday. Mr. Edmunds spoke in favor of recommitting it. On Tuesday it was passed, with amendments, by a vote of 40 to 13. It provides that in case of the removal, resignation, or inability of the President and Vice-President, the succession shall lie in the Secretaries of State, Treasury, War, Attorney-General, Postmaster-General, Secretary of the Navy, Interior, respectively, until other provision can be made for filling the vacancy. There is no definition of "inability."

A communication from the Secretary of the Navy was laid before the Senate on Thursday, containing recommendations for the construction of a steel cruiser of about 4,000 tons displacement, to cost, it is estimated, $1,576,854; three steel cruisers of about 2,500 tons displacement, to cost each $1,031,225; one iron despatch-boat or fast clipper of about 1,500 tons displacement, to cost $460,000; and one cruising torpedo-boat, to cost $38,000.

The Attorney-General has rendered an opinion to the Secretary of the Treasury that Chinese laborers desiring to return to their native land from other foreign lands cannot be transported across the territory of the United States without violating the act of Congress unless the persons mentioned were in the United States on November 17, 1880, or came there within ninety days after the passage of the act. The Treasury Department will hereafter be guided by this ruling. The opinion of the Attorney-General given to the State Department on this matter is said to be exactly the reverse of the above.

Messrs. Ames, Spofford, and Baird have made a report on the public documents printed by the Government, and the haphazard manner in which they are distributed. The number of documents printed by authority of the Forty-sixth Congress reached the enormous aggregate of 2,324,254 copies; while for the first session of the present Congress the aggregate was 1,354,947 copies. The Committee were "deeply impressed with the lack of system and economy in the distribution of these documents." They found that "nearly all documents, whatever may be their cost or value, are distributed by from two to four agencies," and concluded that, "to no small extent, documents are sent in duplicate and triplicate to the same parties." They therefore repeat the recommendation, which for half-a-dozen years has been urged upon Congress, that all public documents shall be distributed through a single agency. The Committee express the opinion that the number of public documents printed may be materially diminished without detriment. It appears that, of the "usual number" (1,900 copies) of all documents, about one-half are delivered in an unbound form, "most of which are doubtless ultimately sold as waste paper."

General Butler was inaugurated Governor of Massachusetts on Thursday. There was a great crowd in attendance. His message was very long, and was received with great "applause and laughter." He objects to making the payment of the poll tax a necessary qualification for voting, considering it an abridgment of the privileges and immunities of citizens of the United States, and therefore in violation of the Fourteenth Amendment of the Federal Constitution. He favors the extension of the suffrage to women, beginning with municipal elections, but proposes first to take a vote of the women to see if they want the suffrage. He attacks the militia organization and the "reformatory, correctional, and pauper institutions" of the State, and shows that the management of the latter is expensive and faulty; recommends that one-third of the paid officials of the State be dispensed with and the salaries of the remainder cut down one-half; and attacks the system of public education in Massachusetts. He thinks the teachers receive too much pay, and that too much money is devoted to teaching the higher branches and to special departments of instruction, while the rudiments of learning do not receive proper attention. He finds fault with almost everything connected with the government of the Commonwealth.

At a dinner in Boston to celebrate the anniversary of the battle of New Orleans on Monday night, Gov. B. F. Butler was presented as a Presidential candidate in 1884 by Chairman French of the Democratic State Committee, and his claims were supported by ex-Governor Sprague, of Rhode Island, and ex-Governor Plaisted, of Maine.

The Connecticut Legislature settled the black-ballot controversy on Wednesday as soon as it had met, by passing a bill making valid all illegal ballots cast, without reference to political parties, and declaring Mr. Waller and the other officers elected. Governor Waller's message recommends the passage of a law providing that no contribution of money shall be made by any candidate for office, for election purposes, and that before taking office the person elected shall make an oath that he has not violated the statute; favors civil-service reform; suggests the expediency of conferring upon women in Connecticut the same public rights that they have in New York and Massachusetts; recommends the passage of a law requiring taxpayers to report to the assessors all the property owned by them, and opposes constitutional prohibition of liquor-selling.

Governor Foster, of Ohio, in his message to the Legislature, recommends the submission to the people of a prohibition constitutional amendment. Referring to the question of taxing the liquor traffic, the Governor says: "I am clearly of the opinion that a simple law taxing the traffic at a uniform rate throughout the State, and making the premises wherein or whereupon the business is conducted liable for the tax, is clearly constitutional and will be found popular with our people, can be easily executed, and that it will act as a practical, effective, and satisfactory measure of restraint."

Governor Cullom's message was presented to the Illinois Legislature on Friday. Of 5,000 insane persons only 2,000 are provided for in State institutions. The Legislature is asked to give this fact consideration. The estimated amount necessary to be raised by taxation for State uses for the next two years is $3,681,000; for public schools, $2,000,000. He recommends legislation in the interest of permanent roads, and for the revision of the Criminal Code and Practice Acts, especially the jury law. He also recommends a constitutional amendment, giving the Executive power to veto single items in appropriation bills.

The message of the Governor of Florida shows a full treasury and an excellent financial condition, and recommends the reduction of the State tax.

The Republican members of the Michigan Legislature, to the number of fifty-seven, assembled in caucus Thursday evening to nominate a candidate for United States Senator. On the first informal ballot Senator Ferry received forty-six votes and there were ten scattering. On the formal ballot he received fifty to six scattering. The nomination was then made unanimous. Twenty-four Republicans did not attend the caucus, and declare themselves not bound by the proceedings.

On Thursday the Tennessee Legislature adopted a resolution suspending payment of the January interest on the State debt.

It was announced on Friday evening that Marshal T. Polk, State Treasurer of Tennessee, was a defaulter to the amount of about $400,000. A year ago Polk succeeded in defeating a resolution providing for an investigation into the affairs of his office. On Thursday last both branches of the Legislature appointed a committee to examine the books of the State officers. On Friday the committee reported that they had information from some of the Treasurer's bondsmen that the condition of the Treasury was such that they felt justified in recommending that the workings of the Treasury be stopped until an examination could be had. Polk left Nashville on the previous Wednesday, and on Tuesday he was arrested in Texas, near the Mexican border. His bond as Treasurer was for $100,000.

The funeral of Mr. Elisha H. Allen, late Minister from the Sandwich Islands, took place in Washington on Wednesday. The President and members of the Cabinet were present, and the Senate and House Committee on Foreign Affairs attended in a body. All of the Foreign Legations were represented.

The United States Steamer *Alaska* has been ordered to proceed to Honolulu, to be there at the time of King Kalakaua's coronation. The *Lackawanna*, now at Honolulu, will remain there, and it is expected that the *Wachusett* will be ordered there. The principal naval powers will send war ships to Honolulu. The avowed object is to pay proper courtesy, but it is understood that the real object is to protect foreign interests in case of trouble, which may arise from opposition to the extravagant arrangements for the coronation. A rumor of a possible revolution is in circulation.

On Monday a letter written by Mr. John A. Walsh, an important witness in the Star-route trial, to the President, was given to the press. The letter is in reference to the Star-route prosecutions. Mr. Walsh says he sent the letter to the President about three weeks ago, and has received no reply. He states his belief in the strength of the testimony against

Senator Kellogg, and criticises the manner in which the cases have been prosecuted.

The monthly statement of Comptroller Campbell shows that the funded debt of the city of New York on January 1, less the amount in the sinking fund for its redemption, was $96,141,948, a reduction during 1882 of $2,159,000. Stocks and bonds were issued during the year, exclusive of revenue bonds, to the amount of $4,468,000, which sum was added to the debt, making the total expenditures of the city government during the year (including the appropriations by the Board of Apportionment) $33,880,000. Of the bonds issued more than $3,000,000 were for expenditures by the Public Works Department, making the total sum used by that Department for the year 1882 reach nearly $6,000,000.

It is estimated that there are at least 10,000 looms and probably 200,000 spindles now idle in the cotton and woollen mills of Philadelphia and vicinity in consequence of the continued depression in the trade.

FOREIGN.

The funeral of Gambetta took place on Saturday, and was the greatest demonstration of the kind ever seen in France. Over 300,000 people followed the remains to their temporary resting-place at Père-la-Chaise. The whole city was draped in mourning, and business entirely suspended. At 10:30 o'clock the funeral procession started. The pall-bearers were the Ministers of the Interior and War, the President of the Chamber and Vice-President of the Senate, representatives of the electors of Belleville and of the bar of Paris, and the Mayor of Cahors, the birthplace of Gambetta. The coffin was placed on a magnificent funeral car covered with wreaths and flowers. In front of the car was a platform borne by twelve men, on which was a colossal bust of Gambetta, surrounded with flowers arranged to represent the national colors of France. Preceding this were three chariots richly decorated, carrying the crowns and garlands sent by the different cities and towns of France as offerings of respect to the memory of the dead statesman. All the military bands of Paris contributed to the music to which the solemn march was made. The procession was the largest ever seen in Paris, and when the coffin reached Père-la-Chaise some of the deputations in the rear were still waiting to leave the Palais Bourbon, from which the procession started, but perfect order was maintained and there were no serious breaks in the line. When the coffin had been placed at the entrance of the cemetery M. Devès, Minister of Justice, made a short address on behalf of the Government. He was followed by other speakers. All day Sunday and Monday great crowds visited the tomb and numerous speeches were made. The French Royalist papers of Sunday described the proceedings at the funeral as theatrical and insincere, and the extreme Radical press declared that the people were absent from the funeral. The Republican journals unanimously testify to the grave, calm, and patriotic demeanor of the populace during the funeral, and express the hope that the events of the week will produce concord among the Republicans, and that the sentiments of unity uttered in the funeral orations will last longer than the flowers on Gambetta's tomb. It has been decided that the interment shall take place at Nice, Gambetta's father having refused to allow the body to be interred at Paris. The Government has informed the father of Gambetta that if he insists upon the removal of the body to Nice, the seals placed on Gambetta's papers at Ville d'Avray will be taken off before consent is given for the removal of the body.

A despatch from Berlin says that Germany will ignore the demonstrations at Gambetta's funeral, and avoid everything likely to excite French public opinion. The *Norddeutsche Zeitung*, the organ of Prince Bismarck, deprecates exaggerated opinions concerning the effect of M. Gambetta's death. It says Germany, like France, neither desires nor fears a war.

The funeral of General Chanzy took place at Châlons on Monday. Prince Orloff, the Russian Ambassador, General Billot, Minister Fallières, Marshal MacMahon, and many other distinguished men were present. Salvoes of artillery were fired at the opening and closing of the services. Several short addresses were delivered, after which troops belonging to all branches of the service marched past the entrance of the Cathedral where the body lay.

The trial of the Anarchists was begun before the Correctional Tribunal at Lyons on Monday. The approaches to the court were guarded by troops and gendarmes. All the prisoners interrogated admitted carrying on the Socialist propaganda by speeches and writings, but denied the charge of conspiracy. They disavowed any complicity in the recent explosions in a restaurant at Montceau.

Prince Krapotkine refuses to employ counsel, and defends himself. The charge brought against him of being a contriver of Anarchist plots has been dropped, and he is being tried under a law of the Empire making Communism punishable by imprisonment for five years. There is no jury, but three judges are trying the case. The defendant is perfectly frank and defiant.

At a Cabinet Council on Thursday Señor Camacho, Spanish Minister of Finance, submitted a report in which he declared that the period of deficits had come to an end. The only change he proposed in the budget for 1883 was the suppression of all items of expenditure not indispensable.

At the Council held on Saturday to discuss the budget, with a view of reducing taxes and at the same time increasing the revenue, Señor Camacho proposed the sale of the state forest lands on the mountains, valued at $8,000,000, in order to provide funds to pay, during the term of eight years, the increased interest on the public debt, beginning in July. Señor Albareda strongly opposed the proposal, and, being unable to agree, both he and Señor Camacho tendered their resignation from the Ministry. On Sunday the Ministers met again, and, after four hours' deliberation, an agreement being impracticable, they resolved to resign in a body. The crisis was unexpected and caused a great sensation. The sittings of the Cortes were suspended during its continuance. Señor Sagasta was invited to form a new Cabinet, which he did. It is as follows: Señor Sagasta, Premier; Gen. Martinez Campos, Minister of War; Señor Guzon, Minister of the Interior; Señor Armijo, Minister of Foreign Affairs; Señor Giron, Minister of Justice; Señor Cuesto, Minister of Finance; Admiral Arias, Minister of Marine; Señor Arce, Minister of the Colonies, and Señor Gamazo, Minister of Public Works.

The floods in Europe have been increasing, and great damage to property caused. On Thursday there were 3,000 persons reported homeless at Ludwigshafen, 2,000 at Manheim, and 2,000 at Worms. On Friday a Berlin despatch said that the inundations were taking the form of a great public catastrophe, and the distress was increasing hourly, although the military and civil authorities were making the greatest efforts to alleviate the suffering. In France the rivers Saône and Doube inundated several villages. Dikes and dams on the large rivers in Germany and Austria were washed away, and railroad communication stopped. On Friday the Rhine and its tributaries began to fall. In the Reichstag, on Tuesday, Prince Bismarck announced that the Emperor had granted $150,000 out of the Imperial Treasury as relief for the sufferers by the flood. Its distribution was immediately provided for. A house-to-house collection is to be started throughout the Empire. The Prussian Government has granted £25,000, and the Government of Hesse has given the same amount. The subscriptions in Prussia have reached £175,000, and large sums are arriving from England and America.

The Frankfort *Gazette*, on receipt of 33,000 marks from New York, says: "These gifts furnish a fresh and happy proof that the Germans who have found a new home in America are not lost to the old Fatherland, but have ever warm and active sympathy in Germany's fortunes and also in her mishaps."

It is officially announced that Mr. Gladstone's medical adviser reports that he is suffering from overwork and needs rest. He has, therefore, abandoned his proposed visit to Midlothian.

Delaney was found guilty on Wednesday of conspiracy to murder Judge Lawson, and was sentenced to ten years' penal servitude. A number of outrages have been reported from Ireland during the week. A priest in Donegal telegraphed to the London *Daily News* on Thursday that he had accompanied Mr. Trevelyan on a tour of inspection in the parish of Glencolumbkill, and that they visited twenty families and found not a morsel of food in any house. Returns from Carrick-on-Shannon show that a larger number of farmers, with holdings of from one to twenty acres, are absolutely without stock or food. The Chief Commissioner of the Dublin Police has resigned. Mr. Leamy, member of Parliament for Waterford, and Mr. O'Brien, editor of the *United Ireland*, who is the Nationalist candidate for the seat in the House of Commons for Mallow, addressed a large meeting of the Mallow electors on Saturday. A letter from Archbishop Croke was read at the meeting endorsing the candidature of the "fearless and uncompromising editor of the *United Ireland*." A despatch from Dublin on Saturday said that at a private inquiry held at Dublin Castle the authorities obtained most important information, as a result of which there would be at least four prosecutions for perjury.

The Dublin *Freeman's Journal* says that the applications under the Arrears Act, the time for receiving which terminated at the end of December, affect 130,000 holdings, and that if they were all granted it would involve the payment of £800,000 by the state to the landlords.

At a meeting of the Committee of the Irish National League on Wednesday it was announced that £300 had been received since the last meeting, and that 100 new branches of the League had been formed. The total of the receipts since the formation of the League is £1,200. The total number of branches of the League is 300. The receipts reported to-day include £50 from the New Zealand branch.

The returns issued by the Board of Trade show that during the month of December British imports increased by £2,100,000, as compared with the same month last year, while the exports for the same month show a decrease of £2,000,000.

The Inman Line steamer *City of Brussels*, which sailed from New York on December 28, was run down in the English Channel on Sunday morning, near Liverpool, by the *Kirby Hall*, from Glasgow. A dense fog prevailed. The bow of the *Kirby Hall* struck the starboard bow of the *City of Brussels* with great force, cutting her down to the water's edge and almost half through. About twenty minutes after the collision the *City of Brussels* sank. All the passengers but two, who were steerage passengers, were saved. Eight of the crew were lost, including Second Officer Young. All accounts bear testimony to the coolness and courage of the captain and crew.

The members of the American expedition sent to the Cape of Good Hope to take observations of the transit of Venus have arrived at Plymouth, England, on their way to the United States. They report that they obtained two good observations of the internal contact, and took 236 photographs, over 200 of which can be measured.

The body of John Howard Payne, author of "Home, Sweet Home," was shipped from Tunis for the United States on Friday.

"THIS PARTICULAR MEASURE" PASSED AT LAST.

THE passage of the Pendleton Bill in both houses is, all things considered, one of the most remarkable phenomena of recent times. Even six months ago we presume there were few if any in the United States who thought such a result possible for years to come, if ever. It is due, as we remarked some weeks ago, it must be confessed, only partly to the friends of reform. The friends of the abuse have contributed to it largely by their defiant attitude, and by the apparently Providential blindness with which they furnished the reformers with illustrations and proofs. In our day simple preaching is rarely sufficient to move large masses of men unless accompanied by striking examples, and these examples the spoilsmen during the past year have supplied, with a profusion and recklessness never before witnessed. Part, and a large part, of Thursday's triumph is, therefore, due to Mr. Hubbell and the Republican Congressional Committee.

Some people will probably be surprised that the Bill should have been passed in the House, where it was supposed it would meet with most opposition, almost without discussion. But there is really nothing surprising about it. In the first place it must be remembered that the opponents of civil-service reform have never debated the matter at all. In Congress they have always treated it with contemptuous silence. At conventions they got rid of it by commending it in the platform in vague generalities. In speeches and newspaper articles they disposed of it by ridiculing its advocates as "theorists," "doctrinaires," or "millennarians," and by calling it "foolishness," "snivel," "craze," and "monarchical," and showing that, owing to certain peculiarities of human nature which they never described minutely, governmental administration could not be improved or made in any respect different from what it is in this country. In other countries—England, France, or Germany—it might, but not in this. We could improve everything else—elections, legislators, legislation, railroads, canals, life-insurance, houses, agriculture and manufactures, food, clothing, schools, courts of law, and churches, the Army, the Navy, and the Merchant Marine, but not our civil service. By some mysterious dispensation of Providence, Americans had in one century reached the limit of the possible in the matter of the proper conduct of public business.

In the second place, the friends of the spoils system, even if disposed to discuss, had really no argument on the merits of the case which would bear presentation. What the reformers asked could only be denied by appeals to motives and passions so base that even the lowest demagogues did not like to make such appeals often. For what the reformers asked for was simply that the business of the Government should be conducted on the principles and through the instrumentalities on which the business of private individuals has been conducted in all civilized countries since they became civilized. They asked, in short, that the American people should, in the conduct of its affairs, reward and promote merit, recognize the value of experience, show respect for honesty and diligence, and refuse to allow any man to justify negligence or ignorance in the discharge of his duty by pleading industry and capacity in something else. It is by attention to these things that the race progresses in the arts and in morality. If American citizens disregarded them in their private affairs, the nation would go back to savagery. Nobody can, therefore, argue against them, though he may deride or misrepresent them.

If it be asked what is the use of referring to the unpleasant side of the agitation now that the triumph of the reform is assured, we answer that it is not quite assured; that large numbers of Congressmen undoubtedly voted for the bill under the influence of the terror inspired by the late election; and that large numbers of politicians have acquiesced in its passage simply because they hope to see it share the fate of the law of 1853 instituting pass examinations, and become a farce or a dead letter in actual practice. It will therefore be the duty of the friends of the measure to see that it is faithfully executed, without evasion, perversion, or negligence. It must be watched over until it has become imbedded in our political habits, and the old race of politicians who were bred in the spoils system has been thinned out by death and retirement. President Arthur, we have no doubt, will do his part in carrying it out, but he has little more than two years to serve. His successor may be a man who will see in it nothing but a Republican device to cheat Democrats of their well-earned rewards, or a weak man ill able to resist the pressure of old friends and patrons. In either case constant vigilance will be necessary, until all trace of the notion that the public offices are "spoils" or prey has disappeared from the public mind.

The bill is the first retreating step on the downward road on which our administration entered when in 1820 the term of certain offices was limited to four years. That was a turning-point in our administrative history. The rapid growth of the Government business had by that time begun to reveal defects and shortcomings in the simple system which during the first forty years had sufficed for its transaction. What was then called for was improved organization, increased checks, and more elaborate and stringent discipline. What was done was to prepare the principal offices to become stakes in the new game of "politics," which was at that time invented, and which, after being brought to greater and greater perfection, finally produced the bosses, the packed conventions, and the assessments, and the rest of the system against which the people has at last revolted. We have in truth begun a process which ought to have been begun just sixty years ago. But it is only begun, and must be watched to completion.

It is reported from Washington that the passage of the bill excites great interest in the Government departments. The heads of bureaus and divisions are very glad to be relieved of the pressure brought to bear upon them in behalf of political or personal favorites by members of Congress, but they almost unanimously condemn that provision of the bill which makes promotion dependent upon competitive examination. Their reason is that no outside commission could know, or could ascertain by any kind of examination, the ability and fitness of a candidate for promotion as well as the head of the division in which he has served. This objection is in many cases well founded. A competitive examination of the ordinary sort may not always furnish as trustworthy a means to bring out the merits of a candidate for promotion as the experience and judgment of his immediate superior, who, during a considerable period of time, has watched his performances. If, therefore, that judgment could be depended upon to be entirely unbiassed by favoritism or outside influence, it would be decidedly preferable to competitive examination.

But can it be so depended upon? In this respect we might appeal to the experience of the heads of bureaus and divisions themselves. They may be sincerely desirous of grading the clerks who work under them strictly according to merit, and of recommending only those for promotion who are the most deserving. But have they always been permitted to carry out that desire? Have they not, when promotions were to be made, frequently been set upon by members of Congress or other influential politicians with the most urgent requests, if not absolute demands, that this or that man, whatever his working record, should be promoted because he had done good service for the party, or because he belonged to an influential family? And have not promotions been frequently ordered because it was thought necessary to oblige such and such an influential member of Congress? And would not the faithful bureau chief or head of a division have been very glad to entrench himself behind some civil-service regulation making promotion dependent upon some test of merit, and thus enabling him to repel the urgency of the powerful politician with the authority of the law? Would he not, too, have been thankful for having some such shield as an obligatory competitive examination for his own protection? It is scarcely necessary to add that there have been chiefs of bureaus and of divisions of a different way of thinking—men who rather delighted in using their power for purposes of favoritism and to make themselves strong with persons of influence by doing their bidding, and who certainly ought to be restrained by some imperative regulation.

There is no doubt that as long as any chance for favoritism in making appointments and promotions exists, and as long as the traditional habit of seeking office through political influence and of bestowing office as a political reward or bribe survives, candidates for promotion will first think of going to their "influence" to get recommendations, and the "influence" will come to the chief of the department to demand the promotion of the favorite for reasons with which the interest of the service has nothing to do. A barrier must therefore be built up for the protection of the service to exclude political influence and favoritism, and that barrier must be maintained until our political habits are so changed that influence and pressure in the matter of appointments and promotions are no longer to be feared. This will

require some time. Perhaps the present generation of political managers and Congressional spoils-brokers will first have to drop out. They will, however, drop out quickly if the spirit of the reform bill passed last week leavens our politics as it should.

When that point is reached, chiefs of bureaus and divisions may be intrusted with much more direct influence in the matter of promotions than the competitive system leaves to them. But in the meantime wisdom may be gathered by experience, and methods may be discovered to identify the competitive examination with the record of merit. In some branches of the service, where there is great sameness in the character of the work, as, for instance, in the Pension Office, the comparative efficiency of clerks may be ascertained with almost mathematical certainty, and promotions may be made according to the periodic record of performance, which is, in fact, the most trustworthy kind of competition. It was so under the last Administration, and, we understand, a similar rule has been tried under this. It will rest with the Civil-Service Commission to adapt the system in this respect to the peculiar requirements of the service in its various branches, and some experimenting may be desirable. But there is no doubt the establishment of some competitive test as to promotions, which will exclude favoritism of every kind, is at present indispensable for the protection of the very bureau and division chiefs who think that the competitive system is not as trustworthy as their own discretion would be.

REPUDIATION AND DEFALCATION.

Some of the Republican Congressmen who were interviewed by the *Herald* on Saturday have been tracing a connection between the repudiation agitation of the last six or seven years in Tennessee and the late defalcation of Mr. Polk, the State Treasurer. It is of course impossible to prove any such connection, but there is abundant reason for believing it highly probable. The defalcation and flight of an officer so highly placed as a State Treasurer are happily of rare occurrence. In fact, we can recall no case in which one of similar rank has stolen the funds committed to his care, except during the Tweed régime in this city and the carpet-bag rule at the South. South Carolina suffered in a similar way from the Moses-Scott-Parker gang. But it must be admitted that the management of State and city finances at the South by the native whites has on the whole been very honest. Before the war it was extremely good. Since the war, what with poverty and the feeling that the obligations contracted by the carpet-bag governments were not morally binding on the taxpayers, there has been considerable relaxation of the old spirit of integrity in the administration of the public finances

In no State, however, has this gone so far as in Tennessee. Virginia follows close behind; but in Virginia the scaling or readjusting movement is largely the work of black Republicans, combined with Democratic converts like Mahone, who are hungry for a share in Federal patronage, or, as they call it, "have their faces turned toward the morning." In Tennessee, on the other hand, the Readjusters are mainly pure white Democrats, who care nothing about "the morning." Moreover, their State is one of the richest in the Union. Unlike Virginia, it has an unexhausted soil, a growing population, and immense resources in coal and iron. There is no reason, moral or material, which will bear examination for a moment, why the State should not pay its debts precisely as the holders of its bonds originally expected them to be paid. Still less reason is there why the State should not pay in accordance with some one of its later readjustments. The peculiarity of its dealings with its creditors has been, however, that thus far they have found it impossible to get any compromise into which they were forced carried out. No sooner have they agreed to it than they have found that the debtor wanted something more favorable. In fact, we doubt if there is anything in financial history more shameful than the negotiations of this great State with the holders of its obligations, largely issued in return for money which has been used to make railroads.

Now, it is not possible for the discussions attending these negotiations to go on in a civilized State for several years without sapping the moral sense of everybody engaged in them. When a whole community goes to work to find reasons for not paying debts which no power on earth can force it to pay unless it pleases, and which it is quite able to pay if it chooses, it is sure to inflict considerable damage on many of the scruples by which good faith between man and man in the ordinary transactions of life is supported. Such discussions are apt to be like the arguments which the *Lord Chancellor* addresses to himself in Gilbert's opera, "Iolanthe," in order to convince himself that he is a proper person to marry one of the wards of his court. The creditor is sure to get the worst of it, no matter from what point of view the debtor looks at the debt. The doctrine, too, that a debt ought not to be paid, if it is disagreeable or inconvenient to the debtor to pay it—on which the whole case of the Tennesseean Readjusters rests—cannot be preached very long about the public obligations without spreading abroad the notion that it is not wholly inapplicable to private obligations also. A State bondholder cannot be painted for years at a time as an extortioner simply because he has lent his savings, confiding in the promises of the Legislature, without some of the odium overtaking people who lend money to individuals, confiding in *their* promises.

Treasurer Polk began taking the public money during one of the intervals passed by the Government in backing out of one of the State bargains with the bondholders. The reason why he had so much money in his hands was that the State majority had ordered a new experiment in repudiation. During all this time he was surrounded by an atmosphere of dishonesty, and quibble, and evasion, and was daily listening to arguments which shook the very foundations of social morality. So that it is not at all improbable that the excuse that he is said to have finally made for not promptly paying the coupons—"that the people did not wish the money to be appropriated in that way"—had really a strong lodgment in his own mind, and helped to overcome his scruples about appropriating it to his own use. The people had at the polls directed another breach of faith with the State creditors, and the only reason why it had not been carried out was that the Legislature had neglected to provide for it by a statute. Under these circumstances Polk probably worked himself into the belief that he was just as much, or nearly as much, entitled to it as the bondholders. He lent, it is said, a considerable amount to private friends, who, we may be sure, are to a man in favor of the frequent "readjustment" if not total repudiation of the public debt.

THE PERJURY SCARE.

Some attention has been attracted in England to the question whether the crime of perjury is on the increase, by the evidence given in the trial of a lawyer named Levy, who seems to have carried on a regular business in subornation. The case shows that testimony of a certain sort can be had in London very easily and very cheaply. Levy appears to have been able to get all the witnesses he wanted for about $5 if the case was won, and half as much if it was lost. This, at least, was the rate where testimony was wanted on the subject of a "cart accident"—*i. e.*, where damages are claimed for injury caused by negligence in driving. On the trial, too, all the witnesses confessed the facts, and admitted that their evidence was a "pack of lies." They were regularly "coached" to stand cross-examination, and seem to have regarded their employment in the light of an ordinary business transaction.

According to the London *Spectator*, these revelations are very "depressing," because "such cases are, in the opinion of experienced men, growing frightfully frequent." No statistics are to be had on the subject, but there is said to be "a distinct falling off in the old awe of the witness-box," which is attributed by "experienced men" to the decay of the "old fear of hell," and to the discovery by the lower classes that punishment for perjury is rare and difficult. The matter is of just as much interest in New York as in London. The same causes are in operation. There is the same decay of the fear of hell, the same infrequency in the punishment of perjury, and the same belief that perjured evidence plays an important and increasing part in the courts in deciding cases.

As to the remedy, the *Spectator* says that the only thing to do is "to simplify and strengthen the law against perjury," but admits that it does not know precisely how this ought to be done. It suggests making the punishment more certain by punishing "deliberate lying" in court by summary process before a magistrate—*i. e.*, depriving the accused of the right to trial by jury. We are precluded from trying any such experiment here by the fact that the criminal has a constitutional right to jury-trial, and we fancy that it will be a very long time before an English magis-

trate is invested with a power so easily liable to abuse as the right to punish summarily for telling lies. Lying, it must be remembered, is always done with the intent to deceive, and therefore the discrimination of a "deliberate" from an ordinary lie would be a matter of nicety. The late Mr. Greeley used to speak of "lying knowingly, wilfully, and with naked intent to deceive," and this seemed, on first hearing of it, like a horrible kind of falsehood; yet, on examination, it turned out to be simply lying. A lie, of course, may be more or less deliberate—*i. e.*, the amount of premeditation may be different in different cases—but a lie which is cooked up on the spur of the moment may be just as dangerous to society as a lie which has been thought over for a month.

If it were really a fact that perjury is spreading all over the world, and that there were no adequate means of preventing it by law, it would be a very serious matter. There are, however, one or two points of a reassuring nature connected with the subject which in most discussions of it are overlooked. That the decline in the "dread of hell" has much to do in promoting perjury we very much doubt. The argument is, of course, that in an "age of faith" the witness has before him both the dread of hell and the dread of the penitentiary; in such an age as ours, more and more witnesses have only the penitentiary. Consequently, a strong inducement to tell the truth is wanting. The absence of statistics as to whether the modern perjurer is or is not a believer in hell, makes it dangerous to be dogmatic about him; but we are inclined to think that few lawyers who are in the habit of trying "accident cases" would say that the class of witnesses that they most dread are agnostics. The testimony in these cases—and it is in them that we most often hear of perjury as spreading—is of what may be called a very casual kind, and we fancy this is the reason why they always have and always will offer a tempting field to the perjurer and suborner. An accident collects a chance crowd, and causes excitement and confusion, in which every one's attention is riveted upon what is taking place rather than upon what his neighbor is doing; and if a man is willing to swear that he saw the whole thing from near-by, and is tolerably well "coached" in his story, it is the most difficult thing in the world to disprove the truth of what he says. Consequently such cases are the suborner's and perjurer's opportunity. Now, we cannot prove, though we believe it to be the case, that the class of witnesses used for this purpose is in the main ignorant and superstitious, and, in fact, just that class among which fears of all kinds are most rife; but certainly, if perjury were spreading as the fear of hell declines, we should expect to find the same phenomenon displayed in at least as marked a way in a higher class. But we do not hear of the spread of perjury displaying itself in commercial litigation, or in will cases, or among witnesses belonging to the learned professions or possessing a college education. In criminal cases there is always believed to be a great deal of perjury, but here again the witnesses who get up "alibis" and other devices for saving their friends from justice represent a part of the community on which religion and superstition commonly have a good deal of hold.

Of course, it may be said that enlightened people do not commit perjury because, though they may not believe in hell fire, enlightenment brings into play other considerations—such as a sense of honor, public spirit, and so on—which among the unenlightened do not count for so much. But this only shows how cautious we should be in jumping at the conclusion that there is a "spread" of perjury for which we need new laws, merely because the belief in hell is not what it was. And did the belief in hell ever prevent perjury? How much efficacy a belief in fire and brimstone had we cannot now tell; but, we must remember, there were ways of expiating the most deadly sins which the Church always held out to the repentant, and the fact that there was a chance of repentance and salvation from hell open must have always given a hard-pressed witness a comfortable feeling about the consequences of a deliberate lie. The dread of hell was no doubt a deterrent; but the fact that you might be saved from hell through a mercy which you could always count upon if you sincerely repented, must have prevented it from being the powerful deterrent it is often now represented.

It must be remembered, too, that if the decline in the belief in hell is causing a spread of perjury, it must be causing a spread of crime generally. Hell-fire was used to prevent people not only from perjuring themselves, but from murdering, robbing, embezzling, and, in fact, from wickedness generally, and if the decay in the belief in it causes an increase in one crime, it ought to do so in all, and if we need a revision of the laws as to one, we must need a revision as to all. If punishment for crime were based on the expectation that the criminal would have before his eyes a penalty in another world, plus that provided by the Legislature, clearly any decline in a belief in future punishments ought to be accompanied by a thorough overhauling of the criminal code. But this is a view of the subject which is, we believe, seldom advanced.

RECENT MINISTERIAL CHANGES.

LONDON, December 20.

THE changes in Mr. Gladstone's Cabinet which were so long expected have come at last. They are not yet completed, but two important results have been made known—the resignation by Mr. Gladstone himself of one office, and the admission of Lord Derby to another.

Since the formation of his Government in April, 1880, Mr. Gladstone has, in addition to the post of First Lord of the Treasury, which we call in common speech that of Prime Minister, held the office of Chancellor of the Exchequer, although this is practically the Ministry of Finance, and therefore one of the most important places in our administration. It is, owing to departmental arrangements, not necessarily a place of great labor, and thus Mr. Gladstone, whose powers of work have seemed scarcely affected by his age, was able to discharge its duties in addition to those of chief of the Ministry and leader of the House of Commons. For some time past, however, it was understood that he desired to hand it over to some one who could devote more undivided attention to it, and therefore make more of it. Mr. Childers was recommended as his successor by two opposite reasons. The first was his long administrative experience and familiarity with financial matters—an experience which began in one of our Australian colonies, where he was Chancellor of the Exchequer before he ever thought of embarking in English politics. Mr. Gladstone is well known to entertain a high opinion of his practical talents, and has always selected him for the most responsible posts. His other claim arises from the exertions he made as Secretary of the War Department in organizing the Egyptian expedition—exertions which largely contributed to its success, but told heavily on his health. A month ago he was obliged to leave London and seek rest at the seaside. This misfortune, encountered in the public service, gave him a fair claim to some lighter work than that of the War Office, and accordingly he takes the Chancellorship of the Exchequer. The main political significance of the change seems to lie in this, that it discountenances the rumor that extensive alterations in our financial system are at hand. It was supposed, from hints thrown out by Mr. Gladstone, that the Succession Duties, particularly as they affect land, would be rearranged, and the revenue so much increased thereby that other taxes might be remitted. Some even hoped that Mr. Gladstone might resume his old plans of extinguishing the income tax, although the cost of the Afghan and South African wars of the late Government, followed by that of the Egyptian expedition, had thrown back the hopes of a great surplus, while the ordinary public expenditure shows an irresistible tendency to grow. If any such extensive financial reforms were in contemplation, Mr. Gladstone himself, with his unrivalled gifts of combination and exposition, would, no doubt, have been the person to frame and to state them, and he would have retained the Exchequer until he had done so. It may, therefore, be assumed, especially considering the state of Mr. Childers's health, that we shall have quiet and unambitious finance for some little time to come.

The appointment of Mr. Childers left the War Office vacant, and it has been delivered to Lord Hartington, hitherto Secretary for India. Thus the Indian Secretaryship had to be allotted. It was given to Lord Kimberley, hitherto Secretary for the Colonies, while the Colonial Office, in its turn left vacant, has been filled up by the appointment of Lord Derby. The total result, therefore, of all these shiftings is that Mr. Childers, Lord Hartington, and Lord Kimberley, all of them old Ministers, have got new offices, while Lord Derby comes in from outside to join the Ministry. It was at first expected, and indeed had apparently been arranged, that he should be Secretary for India. He had filled this great post once before in the Ministry of his father, the late Lord Derby, and was believed to like it. But some obstacle was discovered, and, instead of his succeeding Lord Hartington, he went to the Colonies, while Lord Kimberley took the India Office. What this obstacle was is at present matter for gossip and conjecture. Some say that he cannot take India because he was a member of the Beaconsfield Ministry when it had serious difficulties with Russia over Afghan affairs; others, because he is supposed to be too pronouncedly non-annexationist in India; others, because he has recently expressed opinions unfavorable to an English protectorate of Egypt. Probably the true reason is something quite different, and may have come out before these lines reach you.

He is the only statesman in the front rank who has of late years changed his colors from Tory to Liberal. For a long time before his resignation of the Foreign Office in 1878, he had been a member, and an important member, of every Tory Government, first under his father, then under Mr. Disraeli. Now he is a Secretary

of State in a Liberal, and some would say a Radical, Government. Yet he incurs, and has incurred since he first avowed himself a Whig in 1880, very few of those reproaches which are usually levelled at a politician who changes sides. This is certainly owing to no gentleness in our Conservative press, nor to any tenderness for him individually. Its cause seems to lie in the fact that he was all along, even when a Tory Minister, understood to be quite as much a Whig as a Tory in his sentiments. Having been brought out in the political world by his father, the leader of the Tory party, he served as an officer in its ranks, and no one blamed him for doing so, since he never had the air of saying what he did not believe and could not honestly say. There is a kind of Conservatism which does not substantially differ from a kind of Liberalism; and, just as there are Liberals who might as fairly be called progressive and unprejudiced Conservatives, so there are Tories who might be called cautious and moderate Whigs. Such an one was Lord Derby. He was quite free from the passion and prejudice which mark one type of Toryism, as the reckless thirst for change marks one type of Radicalism. People often predicted that he would some day be found in the Liberal ranks, and some even sought to make him the head of a middle party—a coalition which was to draw in Sir Stafford Northcote and Mr. W. H. Smith from the Tory side, Lord Hartington, Lord Granville, and Mr. Goschen from the Liberal. However, Lord Derby might never have quitted the allies of his youth but for the warlike line which Lord Beaconsfield took up in 1878, when Russia had overpowered Turkey and was supposed (in England) to be on the eve of seizing Constantinople. Lord Derby did all in his power to check what he regarded (and what, as the event showed, the majority of the English people regarded) as a dangerous policy. He became, therefore, an object of aversion to the hotter spirits among the Tories, who intrigued and manœuvred to get him out of office and so take the drag off the coach-wheel. Their object was attained by his resignation in March, 1878, and the sense that he was then intrigued against and otherwise not quite fairly treated by members of his own party has contributed to justify, in the eyes of the world, his subsequent conduct in quitting his former standard and in now taking office under Mr. Gladstone. No one accuses him of any unworthy motive; it would, indeed, be the more absurd to do so since he would have been quite as prominent and powerful a personage in the Tory camp as he now will be in the Liberal.

His accession to the Government is regarded as an important event, for he unites four considerable sources of influence—rank, wealth, ability, experience. He obtained office when still very young, was immediately found equal to its responsibilities, and has ever since had a post, and a great one, when the Tories have been in power. He has thus a large knowledge of the methods of public business and the matters it is concerned with, as well as of the personnel of our political world. His talents are not brilliant, but they are everything else—they are as great as any talents can be which it is impossible to describe by that name. He is industrious, careful, penetrating; he gets to the bottom of every question, he faces every difficulty; he can carry a large mass of facts in his mind, dispose them in their proper order, draw the reasonable and natural conclusions from them. So cool and fair a judgment is probably not to be found in any other of our public men. Its only fault is, that coolness passes into coldness. Carefully removing sentimental considerations from his own mind, he is apt to underestimate their influence on others, and to treat men a little too purely as reasoning and reasonable beings who will obey the promptings of an enlightened self-interest. To the oratorical gifts and graces of his father he makes no claim; yet he is a weighty and effective speaker—effective by the very plainness of the form into which he puts his thoughts, without imagination, without passion, without wit, without even fluency, but perfectly lucid, perfectly candid, perfectly rational. Some one has said that common sense rises in him to genius; and, indeed, as stated by him it has much the same influence. He never says a foolish thing; and, when you have listened to a speech from him, you feel as if nothing more that was worth saying remained to be said upon the subject. Such a man does not excite the enthusiasm of the masses. He is not what you call "magnetic," either toward individuals or toward bodies of men. But he acquires the confidence of the sober and quiet people, who think he will not ever go far astray, and feel safe while they are in his company. And he is prized as a colleague, not only on account of his administrative capacity and this confidence which he inspires, but because he is so valuable a critic. Any measure, any line of policy, which can stand the touchstone of his criticism, may be safely launched into the world. Nor is it superfluous to add that his public life has been, in spite of this change in his political allegiance, straightforward and consistent, with no concealments or tergiversations such as may be charged on some others of our leading politicians. The defect which his censors find in him is one that naturally springs from a carefully-balanced judgment and an unemotional nature. It is a tendency to hesitation, to compromise, to take middle courses even when they are not logical, but merely postpone a decision. It would occupy too long to examine the course of his policy as Foreign Minister, on which this criticism bases itself; but the criticism deserves to be mentioned as the side on which he has been attacked both by strong Conservatives and by strong Liberals.

Most people seem now agreed in thinking that Mr. Gladstone has got in him a valuable ally, whose adhesion will add stability to the Government. The Tories regret him, because he exercised great influence over moderate and moneyed men, people who like to think that nothing unexpected, nothing sensational, will be attempted either at home or abroad. Such people, who are mostly Conservatives practically, if not nominally, had never the same confidence in Lord Beaconsfield's Ministry after Lord Derby left it. On the other hand, both wings of the Liberal party welcome him. The moderate Liberals regard him as an ally against Radicalism, a champion of the rights of property, an opponent of all sweeping legislation. They think he will be a powerful countervailing influence in the Cabinet to Mr. Chamberlain, who is at present the *bête noire* of "moderate men"; they expect henceforth steady, quiet, solid, humdrum legislation, which they need not fear as they have feared the example of Mr. Gladstone's Irish Church and Irish Land Acts. They conceive that if Lord Derby had supposed Mr. Gladstone likely to adopt revolutionary courses, he would not have joined him; and that having joined, he will, if necessary, hold him back. All these forecasts, if they be well founded, ought to make the other, the advanced wing of the Liberal party, rather cold in their welcome. They desire those things which the moderates look to Lord Derby to prevent. But they seem on the whole very little alarmed. Some of them, being strong non-interventionists, and anti-annexationists, are pleased to have in Lord Derby a recruit whose opinions are thoroughly sound on these points; who, in particular, desires that we should clear out of Egypt as soon as possible, and leave the country to itself "whenever the Khedive can stand alone." The question of Egypt being that which for the moment most presses on us, and on which Mr. Gladstone is conjectured to have not come to a positive conclusion, Lord Derby's view upon it has no doubt a special importance, and all the more from his having previously held the seals of the Foreign Office. Besides this, however, the Radicals have so much faith in Mr. Gladstone and his control of his own Cabinet that they do not much care who comes in or who goes out. The Prime Minister is sound, and the Prime Minister is the Government. If he thinks a large measure of local self-government for Ireland desirable, or a comprehensive reform of the English land-laws, or a bold redistribution of seats, we shall (they hold) have these measures whether or not Lord Derby feels inclined to throw cold water on them. Feeling this assurance, they do not fear Lord Derby's Whiggishness, and they are glad to have a well-known and powerful name, a voice to which the country listens, on their side.

There is, however, another view perceptible among the Liberals. Some of the more advanced men regard his admission to the Cabinet with disquietude. They insist that Mr. Gladstone will not, and indeed cannot, remain very long in power. He is seventy-three years of age; he has intimated that his time of active political work is nearly over. When he goes, the Cabinet will no longer be the same thing. The moderate and the advanced element in it may possibly struggle for supremacy. In such a struggle Lord Derby would be a strong force on the moderate side, and might give a direction to the Ministerial policy which the Radicals could not approve. Hitherto, though he has been influential in the country, he has had no claim to the deference of the Liberal party. Once a Liberal Minister, he will have acquired such a claim; and when questions arise which divide the party, his weight will be cast into the moderate scale, and perhaps carry with it Liberals who might otherwise have followed leaders of a bolder temper. These critics, therefore, insist that some politician of a radical type should be taken into the Cabinet to counterbalance Lord Derby, and name Sir Charles Dilke as the right man. Even apart from Lord Derby's admission, it has been understood for some time past that Sir Charles will soon receive a Cabinet office, and every one agrees that the ability and diligence he has shown as Under-Secretary for Foreign Affairs more than justify such a promotion. But it has not yet been announced what particular post he is to receive. Y.

ANOTHER VIEW OF LORD DERBY.

LONDON, December 21, 1882.

LORD DERBY'S entrance into the Ministry is an event deserving notice. It suggests two questions. The one is of immediate, though transitory, interest; the other involves considerations of lasting political importance.

First. Will Lord Derby's accession to office strengthen the Cabinet?

All the best authorities—men who agree in nothing else, such as the editor of the *Pall Mall Gazette* and the editor of the *St. James's Gazette*—concur in answering this inquiry with an unhesitating affirmative. It was not till to-day, or at earliest three or four days ago, that I saw any signs, in the articles of the daily press or in the speeches of politicians, of any doubt whatever that his Lordship's admission to the Government was an unmixed gain to the Liberal party. Yet those who are sceptical as to the gain to Liberalism from a close alliance with the

recent convert from Conservatism, may urge strong, not to say cogent, reasons in support of their scepticism. Did I venture to trust my own judgment in opposition to the authoritative deliverances of men who are far better qualified than I am to form an opinion on the politics of the day, I should with little hesitation express my conviction that Lord Derby would in any event add little to, and might under conceivable circumstances detract a good deal from, the weight, the influence, and the power of the Government which he has joined, and of the party to whose opinions he has now for the first time avowedly subscribed. My reasons for this opinion may be easily made clear to your readers.

A statesman who joins a government which he has long opposed can be of service to his new allies in three ways, and in three ways only: He may conciliate the opponents of the Ministry; he may add new heart to the flagging zeal of the Ministry's supporters; he may bring to the deliberations of his colleagues a vast stock of political wisdom, of administrative skill, or of statesmanlike boldness. In which of these ways will Lord Derby strengthen the Cabinet? He will not conciliate the Opposition. Tories will hate him as a deserter; Jingoes will feel no confidence whatever in a politician whose doctrines of foreign policy and (what is of more consequence) whose whole sentiment in regard to international questions square much more closely with the convictions of Mr. Bright than with the acts of Mr. Gladstone. Nor will Conservatives feel his Lordship's presence in the Ministry any guarantee against plans which Tories denounce as confiscation or spoliation. Lord Derby is, it may be said, both a great landowner, a political economist of what may be termed the most orthodox economical school, and a zealous adherent (if a man so cool can be called zealous about anything) of the dogma of *laissez-faire* While he is in the Cabinet, Conservatives may feel sure that there will be no further ground to complain of attacks on property. Unfortunately, all that can be said of Lord Derby might have been said with equal, if not with greater, truth of the Duke of Argyll. He, too, is a rigid economist after the straitest sect of economical orthodoxy; he, too, is a great landowner; he, too, is opposed to all schemes which have the slightest appearance of interfering with the rights of property. Yet the Duke's having a seat in the Cabinet was no real protection against assaults or inroads upon the right of landlords to do what they like with their own.

It is impossible that Lord Derby should exert as much authority among his colleagues as did the Duke of Argyll. His Grace could always add force to the opinions he espoused by a threat of resignation in the event of his colleagues refusing to adopt his views of justice or of expediency. Resignation is a weapon which cannot be used by Lord Derby. One act of even legitimate change of principles is, in the judgment of the public, as much as can in general be allowed to a statesman of weight. There is in England no toleration for reconversions. To resign would be, in the case of Lord Derby, equivalent to political suicide. His Lordship will not resign, and he is too sensible a man to threaten his colleagues with a resignation which will never take place until Lord Derby is prepared to retire not only from the Ministry, but also from public life. A man of iron will would feel it difficult, in Lord Derby's peculiar position, to coerce or check his Ministerial colleagues; but Lord Derby is not a man of iron will, and he is subordinate to a leader who, whatever his faults, has never been accused of failing in resolution to have his own way. As long as Mr. Gladstone holds the reins of the state coach, he and no other will determine both at what pace and in what direction it shall be driven. Conservatives who object not only to the rate at which we are advancing along the path of democratic progress, but to going along that path at all, will not feel that matters are much improved because, while Mr. Gladstone acts as coachman, handles the whip, and directs the journey, Lord Derby lolls as footman in the hind seat and occasionally suggests the propriety of putting on the drag.

His Lordship's presence in the Cabinet will neither soothe nor reassure the Tories. Is there any reason for supposing that his accession to the Ministry will hearten up the vigorous Liberals whose support is the true source of the strength possessed by the Ministry? The effect of Lord Derby's conversion to Liberalism has been discounted long ago. His name has never had, and probably never will have, any wide popularity. It is not a word to conjure with. The Whigs, who justly trust Lord Hartington, cannot feel any particular confidence in the converted Conservative leader. The Radicals, who on isolated points are in sympathy with his Lordship, know that he is and must be opposed to any extensive schemes of constructive legislation, or to any large innovations or reforms in the tenure of land, or in the laws which in any way affect property. The man whose main power consists in discovering sensible reasons for doing nothing, is not likely to excite the enthusiasm of reformers who think that there is a great deal still to be done in the way of social and political reform.

Is there, then, any reason to suppose that, though Lord Derby can neither conciliate opponents nor arouse the enthusiasm of friends, he can contribute to a cabinet which embraces talent of various kinds a great accession of wisdom, insight, and character? He will certainly bring with him a whole lot of sensible maxims; he will also bring a signal capacity for showing the difficulties besetting any conceivable course of action proposed to him for his acceptance. That he will bring with him any other qualities of great worth, I find it difficult to believe. Of the practical resource of men like Peel he has never shown any trace whatever. Even his admirers would hardly credit him with insight into the character or sympathy with the feelings of his countrymen. He has not one of the gifts which made Palmerston the hero of the middle classes. Nor, lastly, does his career give the least proof of decision, of boldness, of that indescribable quality which influences the world far more than talent or intellect, and which, for want of a better term, we may call character. Till the moment when Lord Derby left Lord Beaconsfield's Government, he had on all occasions followed the guidance or misguidance of his leader; he had not avoided any one of the errors into which Lord Beaconsfield led his party. Lord Derby may have greater talents than I give him credit for, but one may pretty safely assert that he is not the man to add force of will or strength of character to a Cabinet containing Mr. Gladstone and Lord Hartington.

After all, the best way of determining whether Lord Derby will bring additional strength to the Government, is to consider whether the Cabinet would or would not have gained by his presence from the day when Mr. Gladstone succeeded Lord Beaconsfield. He would not, we may feel sure, have been able to promote the policy of the Land Act; the real question is, whether the mere suggestion of an inroad on freedom of contract and the rights of property would not have driven him from the Government. It is scarcely conceivable that a man of his temperament could have aided the stroke of statesmanship which has been abused under the name of the Kilmainham Treaty, but which was in reality a vigorous, and in the main successful, attempt to substitute in the government of Ireland the rule of strict law for a system of ineffective despotism. Can it even be imagined that Lord Derby's criticisms and hesitations would have been of any service when the question of the moment was whether the authority of the Khedive should or should not be supported by force of arms? At that crisis he would of necessity either have followed the example of Mr. Bright, or have given a feeble acquiescence to acts which he could not heartily approve or consistently defend. If we look at the past, it is nearly as certain as anything can be which must from the nature of things be matter of conjecture, that had Lord Derby formed part of the Ministry during the last three years, his counsels, if they had produced any effect at all, would have diminished the vigor without changing the course of Mr. Gladstone's policy; they would, that is to say, have taken from the Premier's action the energy which, in spite of difficulties of opposition and of mistakes, has insured the success and preserved the popularity of the Government. If we look at the future, we may therefore with plausibility conclude that, if Lord Derby's advice has weight with his colleagues, its effect will be to introduce into the action of the Ministry a new source of weakness. The worth of his maxims will hardly equal the damage entailed on the Government by the defects of his temperament.

Secondly. Is not Lord Derby's entrance into the Cabinet a curious comment or satire on the alleged advent of democratic government in England?

His Lordship has been till lately the defender of Conservative causes and the advocate of Conservative interests; he is among the wealthiest of a wealthy aristocracy; he is a capitalist with all the prejudices or principles of a rich manufacturer; he is a political economist of the strictest school; his habit is on all occasions to denounce cant and rant; he is, in short, as far as the public can judge, a man of a cold, professorial turn of mind, who uses his dialectical powers in analyzing and exposing all popular democratic or socialistic delusions. Such a man ought, according to many notions current among Conservatives or educated Liberals, to be all but ostracised by the democracy. The plain fact is, that the Liberal party, supported as that party is by all the democrats of England, considers Lord Derby's conversion to Liberalism as a signal triumph to be celebrated with exultation which exceeds the bounds of decency and of wisdom. Grant that, as is perhaps the case, Liberal politicians, together with their opponents, overrate the advantage of Lord Derby's coöperation. Still, it is quite incredible that a whole body of politicians should utterly mistake the feeling of the classes by whom the Liberals are kept in power.

Two conclusions appear, therefore, all but inevitably to follow from the welcome given to his Lordship on his coming over to the Liberals. The first is, that the English democrats, who, with all their voting power, have never, if my memory does not deceive me, sent more than four workingmen to Parliament, genuinely like a lord, and prefer to find their leaders among men of rank and property. This feeling, which betrays a close affinity to snobbishness, has no particular claim to admiration, but its existence is a political fact of first-rate importance. The second conclusion is, that a wide suffrage does not involve the existence of a democratic constitution, and still less involves the existence of a democratic society or of a democratic spirit. Property, wealth, and social position, and all the things that go therewith, are still and will, it may be anticipated, long be the forces which,

on the whole, rule England. It is more than possible that within the next fifty years, or within a much shorter period, universal suffrage, or even republican institutions, may be established in the United Kingdom; but in so far as it is possible to anticipate the future from a study of the past, there is the strongest possibility, I had almost said probability, that during any period for which it is worth while for a statesman to look forward, wealth, rank, and position will have in Great Britain at least as much weight and influence as any good or wise man of whatever party would wish, for the sake of mankind, to see attached to the mere gifts of fortune. It will need much more than a change in the forms of the Constitution to produce a condition of things under which English Liberals will not think that the cause of Liberalism is strengthened and honored by the political conversion of some Lord Derby of his day.

A. V. Dicey.

THE RESTORATION OF THE DUCAL PALACE.*

Venice, November, 1882.

Venice is still disfigured in her fairest part by the hoardings around her principal monuments. The presence of these unsightly screens is the less patiently to be borne in that they mean permanent injury to the precious works of art which they now disfigure and partly conceal. When the screens come away, the Ducal Palace will be a less valuable building than before they were put up—permanently injured, and that in a perfectly measurable way, by the substitution of modern copies for ancient originals of some of its most precious sculptures. St. Mark's Church, already so great a sufferer, will have lost still more of its charm. The little loggia at the foot of the great tower (now wholly concealed) will not be much the worse, indeed; but then the little loggia was never very important. Your readers have read and heard of these Venetian restorations and of the controversy concerning them, and yet it does not appear that any account of what is actually doing has reached them. The literature of the subject is considerable in quantity already, but it appears to consist chiefly of vituperation on one side and sneers on the other. Perhaps this is not to be wondered at, but assuredly it is all less interesting to far-away people who cannot well come to Venice this year, but who care for her lovely art, than would be some brief description of the mischief that has been done and is doing. There may be a melancholy pleasure in hearing how it seems to one on the spot, and even how the Piazza and the Piazzetta look, this lowering, cloudy, rainy autumn of 1882.

Their aspect was seasonable enough on the 28th of October. One would have thought that he had left floods at least behind him in the flat country along the Adige, the Brenta, and the Canal Bianco; can the very level of the salt sea be raised by autumn rains? But whoever, at about nine o'clock on the stormy morning above named, passed through the porches at the west end of the Piazza, found everything afloat beyond the raised stylobate upon which he himself was standing. Two feet of water, shallowing to ten inches or so where the pavement was crowned up, covered all the square—the pillared porches of St. Mark's and the arcades of the north side, where the Caffè Quadri is rising out of the flood. A lively surf beat against the steps where the southern and western arcades stand on higher ground. The doves of the Piazza, like their progenitor of old, found no rest for the soles of their feet in their ordinary feeding-ground. Boats were plying busily, for there was no footway open to those who might wish to cross to the Merceria or to visit their drowned shops along the north side of the square—no footway, at least, except to bare feet and legs. That way remained, and the boatmen used it; for perhaps there was more pulling and pushing of boats by waders than either rowing or poling. Was it rain? were the drains choked, and had all that water fallen from the clouds in one night? Old Venetians, who knew what sirocco and spring tides could do when they worked together, and had seen the same phenomenon before, though rarely, knew better than that. But the new-comer may have found a fresh surprise awaiting him when he turned the corner into the Piazzetta. Does everybody know how the land lies? The Piazza is an oblong, lying east and west, nearly 600 feet long; the Piazzetta makes an L with it, and stretches southward 300 feet to the water's edge, where is the chief harbor of Venice. And here, along the quay, the sea was coming ashore bodily, in waves that broke sharply at the stone sea-wall. Salt spray mingled with the rain that drove across the square. A wooden foot-bridge of planks laid on horses had been established the whole length of the quay, from the steps of the old Library of St. Mark to the bridge that crosses the little canal beyond the palace and leads to the Riva degli Schiavoni; and on this bridge tottering citizens, with umbrellas that held too much wind for their holders' comfort, were making what way they could. Parts of another bridge outside of this seemed to have been put in place by the boatmen for the sake of access to their gondolas and barchettas; but this construction was tottering under the shocks of wind and sea. It was only as the stranger came back to the great square, with its salt lake and the people punting about in it so tranquilly, that he realized that Venice was an amphibious city, safely based upon piles and anchored in hydraulic cement, not to be set off her balance by a few feet more of salt water.

For those few hours, at least, the workmen who have made a marble-yard of the lower arcades of the Ducal Palace were put to rout. They were merrily at work again a few hours later. And this is how the palace presents itself to its ardent admirers: A screen of planking hides its base along the whole Piazzetta side and one-third of the water side. Above this are seen the six water-front capitals of the lower arcade, whose shafts are concealed behind it, and three in like manner on the Piazzetta side. The great corner column is wholly boxed in with a sort of pavilion, roofed over and lighted with glazed sash. The remaining columns on the Piazzetta are also wholly concealed, as the screen is higher there. And, finally, at the northern end of the Piazzetta front, and occupying one-third of its length, a vast scaffolding is reared against the walls, concealing both the upper and the lower arcades, and even a part of the checkered marble wall above. This great scaffolding turns the corner, too, and covers the little north face, and reaches the Porta della Carta.

Is it not safe to assume that photographs of this building are within every one's reach? The topography, the distribution of the building and its surroundings may need explanation, if allusion is to be made to them; but these two Gothic façades? The photograph-sellers on the Piazza could tell us how many photographs of these they have sold to Americans during the past twenty-five years. Let the reader, then, look at the first photograph, woodcut, Turner vignette, or Venetian water-color which comes in his way, and there will be manifest to him an open arcade on the level of the pavement. Eighteen columns on the water-front, nineteen on the Piazzetta front, or thirty-six in all, as the corner column counts twice. The capitals of these columns are famous, and rightly so. The great corner capital is an immense and elaborate work of art, worthy of the most prominent place in the richest building of the richest city of the Middle Ages. The work upon it is estimated at six years, for the sculpture alone; the block itself is about three feet high, and nearly five feet in diameter where it is greatest; the sculpture is designed to be seen by eyes only from six to ten feet distant, and is executed in white Istrian stone. The loveliest leafage invests it, and, mingled with the soft plant-forms, and emerging from their convolutions, eight figures or groups crown the eight faces of the capital, setting forth the astrological doctrine of the stars, and their influence over men. This, in its place and with its old surroundings, is the very ideal of Southern Gothic sculpture, in that respect unequalled in Italy, the best single piece of work for comparison with the sculptures of Chartres and of Reims.

Only less important than this are the three capitals which come next to it on the Piazzetta side, and two of those near it on the water-front—Nos. 16, 17, 19, 20, and 21, if you count as Selvatico and Ruskin do in their analyses, and as every one ought to count, beginning at the extreme east end of the water-front, so that the corner column becomes No. 18, and the most northerly one on the Piazzetta side No. 36. No. 19, then, is devoted to the glorification of the sculptor's art by eight busy little workmen, all employed upon delicate pieces of work: a Gothic capital, a row of little arches, which Zanotto thinks a cornice and Ruskin a row of windows, a nearly completed statue. Three of these, at least, have the indication of aureoles around their heads, and saints' names inscribed above. Two, at least, are crowned. One of the quaintest and most unexpected things about the palace is the insertion in this capital of little pieces of colored marble, porphyry, and serpentine, as part of the work under the sculptors' hands. No. 20 is less elaborate—a splendid simple design, with heads of beasts, each holding in its jaws its chosen prey. No. 21 is, again, one of the most elaborate, eight of the chief trades and occupations—smith and carpenter, shoemaker and farmer—about their avocations. Also on the water-front, No. 17 has, amid its leafage, the philosophers and sages; the Aristotle, poring over his open book, with forked beard and strongly-marked, thoughtful face, in a hat which looks like a study of a petasus (wherever the fourteenth-century sculptor found the model of one), is a wonder of concentrated design. The world may be searched in vain for more perfect decorative work than these capitals. The loss to the world, therefore, can be estimated, now that they are finally taken away, for genteel confinement in a museum-prison, from the place intended for them by their designers. The loss to all art-lovers of the future, who will have to study the palace *without* so many of its details, and who will be compelled to make inquiry as to which capitals are original and which are modern imitations, who will have to look at the building itself with allowance always made for what it has lost, and then go to a museum somewhere to see the sculptures of which it has been deprived—all this remains, and will remain, however inevitable was the taking out of these stones.

For all the capitals we have specially mentioned have been removed and their places supplied by copies. The repairs began on the quay front, six years ago, at the sixth capital east of the corner of the Piazzetta, No. 13. From that point along both fronts to the point nearest

* [This letter was written before that on "Venice Revisited" in No. 910 of the *Nation* (by another correspondent) had reached Mr. Sturgis.—Ed. Nation.]

St. Mark's at the north end, all that is to be made new has been already done or is now doing. And we find that of the twenty-four capitals of the lower arcade included in this extent of front, eight have been taken out and replaced by copies. There is a long story told about the new corner capital, its first sculptor, a Roman, and his disappointment and death. It has been in its place for three years, and carrying the whole weight of the angle of the palace. Its second sculptor, a Venetian, is busy at it, with plenty of work still before him. Beside him, relieved from the weight it had borne for five hundred years, the old capital is set upon a high pedestal which raises it to its old level. The sculptor works from casts of parts of this original capital, the original itself visible also to him, at a distance of from four to nine feet. The other new ones are completed, and the other originals stowed away in a store-room on the ground-floor of the palace, awaiting the decision as to their permanent place of deposit.

In the upper arcade, from the point where the work began to the north end, are, of course, forty-seven columns. The capitals of these, only less important as works of art, and only less effective in design, than their unrivalled mates below, have never been fully studied or described in any work known to the writer. In some of them emblematic or religious symbolism lurks, awaiting interpretation. Seventeen of them are now taken out and replaced by copies, some of these already stained in imitation of that black crust which invests white marble and limestone in Venice. One, however, of these new capitals is said to have been put in its place several years before the present repairs were begun. Many of the shafts are new, but the replacing of these little affects the building, as they have no sculptured or other ornament, beyond a delicate necking of leafage in some and a mere cable moulding in others. Many new stones have been inserted in the great arches of the lower arcade and in the cornice or stylobate above it, upon which the columns of the upper arcade are supported. Whole lengths of the frieze of square rosettes which forms part of this cornice have been renewed. Columns, and especially bases of the upper arcade, have been replaced to a great extent. But all this, sad enough to see, taken by itself, is of so little moment compared with the loss of the great capitals, that one looks at it with a sense of relief—"Not much harm done here!"

Now, what means have we of judging of the propriety—that is to say, of the absolute necessity—of all this? Was the palace in actual danger of falling, or at least of ruin to its beautiful and famous façades? It is clear that no defacement of a capital would justify its being taken out, and that no injury of whatever nature to any piece of decoration could be sufficient reason for replacing it by a copy. But if a piece of stone on which a whole bay of the building rests is indeed so shaken and split as to be untrustworthy, then, indeed, it must be replaced by another piece of stone, and the only question that remains open is, whether the new stone should be carved in imitation of the old one. In the upper arcade, and to be seen of all persons who can obtain permission to visit these screened-off domains of the workmen—a permission readily granted—is kept the corner-piece of the stylobate which carries the second row of columns, and the base resting on it of the corner column of this second row. The solid stone is split through and through, lengthwise and across, with clefts that run, some vertically and some diagonally, from top to bottom. The circular base of the column is rent into fifteen separate pieces, and many of these clefts are continuous through the cornice below, while others meet and cross one another in the heart of the stone, so that pieces of irregular shape and of less than a pound weight can be lifted out. The engineer in charge, Signor Forcellini, has assured the writer that it was found in this state, precisely, when the shaft was lifted from it, and the sheet of lead—forced out of shape and squeezed on one side out from the joint—had been removed. The sculptor of the great corner capital below, Signor Zanardi, has given the same assurance, adding that he was present when the base was first exposed to light, and also that the column before its removal was out of the vertical and the lead joint-plate projecting in a ragged way. The original corner capital of the lower arcade can be seen of all Venice (as it stands beside its substitute) to be split through and through by a great, irregular cleft, running generally from top to bottom, but not vertical. The other original capitals, in the store-room where they are, so far as they can be examined, are found to be all split in one or another direction, and some of them even into many pieces. The taken-out pieces of stone from the arches and stylobate have not been preserved, except in a few cases, but casts were made and can be seen of some of the most defective pieces of wall—casts made before the masonry was disturbed, with the view of answering just such questions as our present one.

The repairs are being prosecuted very slowly, as the Government allows only 200,000 lire a year for both the palace and St. Mark's Church, and the city gives very little—probably the same amount. Of the small sum available, a notable part goes to the shoring-up of the building, which is done in the most elaborate and thorough way. A large model of the whole system of support is to be seen in the palace, and a part of the wall (namely, where the great scaffolding is, above mentioned) is now held up in a corresponding manner; the arches of the lower arcade, those of the upper arcade, the circles of the tracery above, and the wall of the main story of the palace, high over all, being all separately supported. The very many capitals, bases, shafts, voussoirs, pieces of stylobate that have been removed and replaced, have all been successfully handled. Not a crack or defect appears in any part of the work. The new stone seems to be of excellent quality—the sculptors assert, much harder than the old, though probably they are not assured of that; and one is left with the conviction that, from the engineer's point of view, all that has been done was absolutely essential to the safety of the whole structure.

From the engineer's point of view? Yes! for from the art-lover's point of view, from the archæologist's point of view, only the one capital or base actually threatening to crumble away—only the one voussoir actually seen to be yielding—ought ever to be condemned. No "complete repairs," no thoroughgoing restoration, making all safe for centuries to come, ought ever to be dreamed of. Repairs should be *en permanence* in every important ancient building; a trustworthy engineer should always be on the watch, and the timbers for shoring up and for support always ready. Is it evident that a certain stone must go, or cause ruin? To work, then, and take it out, and replace it! but stop there, and put away your apparatus until the evil hour strikes again. But from the engineer's point of view the building needs extensive repairs to make it safe: conscientious examination decides which parts can be left untouched and which need to be made new; the work shall be done as thoroughly and as cheaply as possible, and the building warranted for another term of centuries. This view is tenable, under the supposition that the new sculptures are, in a way, the equivalents of the originals: but this is a supposition that cannot be admitted for a moment.

R. Sturgis.

Correspondence.

SOUTHERN HOMICIDE.

To the Editor of The Nation:

Sir: I have to-day stopped my subscription to the *Nation*, on account of your persistent and malicious misrepresentation of Southern people. If continued, I think you may quite certainly count on losing many another, as well as this one. Old Subscriber.

Richmond, Va., Jan. 1.

[From the Louisville (Ky.) *Courier-Journal*.]

"The announcement that the State Treasurer of Tennessee, M. T. Polk, has absconded, will cause general sorrow and surprise.

. . . . . .

"This defalcation is another blow at the prosperity of Tennessee. It is not unexampled, unfortunately; it does not exhibit a state of society differing in any respect from that which prevails in Illinois, Ohio, New York, or Pennsylvania. Yet its effect on the public mind in Tennessee will be widespread and unhappy.

"Mr. Polk is not a carpet-bagger nor a Republican; he is 'to the manner born,' and a Democrat. If he had killed a man in heat and passion, or if he had coldly assassinated him, the effect would have been different, and his condemnation much less certain. In the Southern States we can find it in our hearts to forgive a murderer, but the crime of theft we punish more rigidly, when we catch a thief."

[From the Charleston (S. C.) *News and Courier*.]

"In the opinion of the Springfield *Republican*, what Missouri and all of the Southern and Western States need is 'a finer degree of courage' than that which is required to pull the revolver and blaze away—the courage in public officers and magistrates to make complaints against dangerous characters and require them to furnish bonds for good behavior; or to bring them to trial after the commitment of crime and carry out the procedure to conviction, sentence, and punishment. It says: 'The courage to do this in an orderly and deliberate manner, and without fear or favor, seems to be very much lacking in those parts of the country. As a civic virtue, it is worth about three times as much as the puerile anger which gets up a lynching, or the fussy bravado which arranges a duel.'

"There is a good deal of truth in all this; but we cannot expect public officers and magistrates to exhibit this 'finer degree of courage' until the general public shall have manifested it. In the *News and Courier* on Wednesday there was an account of a murderous conflict between two prominent citizens of Shreveport, La., in which one man was killed and the other was badly wounded. There was an account also of a shooting affray at Clayton, Texas, in which one man was mortally wounded and two others were wounded severely. In the *News and Courier* on Thursday there was an account of a street fight at Baird, Texas, in which both the combatants were instantly killed. The probabilities are that some stupid misunderstanding, or hasty word, or innocent misrepresentation was at the bottom of every one of these fights. Where there was a substantial grievance, the probabilities are that it was one that could, or should, have been redressed in the courts of the land. The 'finer degree of courage' which is needed in the South is that which shows itself by a flat-footed refusal to regard the pistol or the knife as the arbiter of right and wrong, and which looks to the machinery and means which organized society has provided to cure and to atone for any wrong that may be done, and any injury that may be sustained. It is not a rule without its exception, of course, but it is evident that our civilization would be no lower than it is, if the law were constantly regarded as the protector and avenger of private right and wrong, as it is regarded in European countries which have reached a very high place in the scale of civilization."

To the Editor of The Nation:

Sir: The term of my subscription ends to-day. I send enclosed three dollars for the

coming year. I take this opportunity to thank you for the manly way in which you have rebuked that foul spirit in the South. Your words are true. I lived there fourteen years of my manhood. I know what you say is true. May God make you an instrument of good to the whole country. I say this on the eve of threescore years.—Sincerely yours, G. S.

MISSOULA, MONTANA, Dec. 28, 1882.

THE *NATION* AND PROHIBITION.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* is so vigorous and persistent an enemy to "low civilization" and bad laws, that I am prompted to inquire—if the question has your approval—the cause of what has appeared to me a curious anomaly: I mean the *Nation's* apathetic attitude toward one of the greatest social questions of the day, the problem of how to deal with intemperance. To the *Nation* more than to any other influence—more than to nearly all other influences combined, I believe—we shall owe the reform of our national civil service, which now, at last, seems to be drawing near. It was the pioneer in this field of reform long back in the days of Mr. Jenckes, when the whole subject was a laughing-stock to "practical" politicians, and ignored alike by the intelligent voter and the rank and file. Through good and evil report, through popular indifference and the hostility of politicians, it has labored with a force and iteration truly admirable to educate public sentiment up to the point of demanding a prohibition by law of the pernicious methods of civil appointment which have been so corrupting an influence in American political life. More recently, with an energy and pertinacity which almost seems to defeat its object by excessive zeal, it has been attacking the spurious chivalry at the South which tolerates duelling and homicide as a remedy for personal offences, and which, it argues with perfect truth, is a survival from a lower state of civilization.

In the same spirit, and looking toward the same object, the elevation of the type of American civilization, are some very forcible paragraphs in the last number of the *Nation* on the recent tragedy in Cincinnati in which an actress lost her life. In the course of its comments on that occurrence, it says:

"It is the old passion which made mediæval Christians enjoy judicial tortures and heretic-burning so much, and made hangings at Tyburn and public whippings and prize-fights so delightful to an English mob. In short, it is a brutal passion, a relic of the old animal from which we sprang, which the advance of civilization has much diminished, but *which we ought, as far as law can do it, to put out of sight altogether.*"

Now, if it is right to put out of sight by law an exhibition the tendencies of which are brutalizing to the spectators, and from which there results occasional loss of life, but in which all the risks of demoralization and accident and loss of life are voluntarily assumed by both the actors and the spectators, in the name of conscience, why is it not a thousand-fold more imperative, "as far as law can do it, to put out of sight altogether" the thousands of groggeries in the country, every one of which is not only an evidence and a cause of "low civilization," but a menace to the lives and peace and comfort of hundreds of innocent citizens? What special cogent reason is there that the law should place its ban altogether upon dangerous and brutal sports, upon gambling, upon disreputable houses, upon indecent exposure, upon concealed weapons, and yet license to ply its baleful trade the saloon which does more a hundred-fold than all these agencies together to endanger life, happiness, and refined civilization? A single poor woman may not be permitted to earn a meagre living by allowing an apple to be shot from her head because such a practice may finally terminate in her death, besides corrupting the delicate morals of the refined companies that assemble to see such an amusement; but daily and nightly throughout the whole land, in every crowded city and in every hamlet, any number of men and women may drink themselves into a state of violent, murderous delirium, and kill or maim or terrify hundreds of innocent victims, and thousands of virtuous dram-sellers may be willing accessories! Not altogether, however, without hearing from the law. The raving sot shall be locked up in a cell till he sleeps off his debauch, and if he has murdered or wounded a woman or a child, or a boon companion, the majesty of the law shall be vindicated in his trial for the crime, and his probable acquittal on the ground of his *non-compos* condition; and the enterprising publican who plied him with the maddening draught shall go scot free, having duly paid the paternal Government a license for this very privilege of manufacturing criminals. And the admiring public and the estate of the victim, if he or she left any, shall be allowed to pay the costs of the arrest, the trial, and the acquittal of the poor vagabond, or his life-long support in jail and the maintenance of his family, as the case may be.

Is there not a preposterous want of logic and common sense and common humanity in our present method of dealing with the liquor traffic? We admit—how can we help it?—its dangerous and destructive tendencies, and seek to restrict them by partial prohibition, by allowing only those who pay a license to sell; by closing the saloons on Sundays and on election days; and having thus admitted the morality, the constitutionality, and the expediency of prohibition, and bound ourselves in conscience by the admission, we still allow the deadly traffic full sway, under the law, in its war against all the best interests of society. But, it is said, a certain amount of intemperance is inevitable; temperance advocates are so fanatical, so remiss in endeavoring to enforce the restrictive laws we have; total prohibition has not been a success where tried—it leads to underhand drinking and selling. Grant it all, though it is only true in a degree: does it follow, therefore, that there shall be no attempt by the press to educate public sentiment against the liquor traffic, and to have recorded each advance of the public conscience in laws of increasing stringency, till it is practically extinguished?

Did the *Nation* reason thus about civil-service reform? Years back the sentiment on that subject was very low; wholesome precedents from the earlier days of the Republic, that had had the force of law, were utterly disregarded; advocates of an improved service were lukewarm and often injudicious; and a certain amount of administrative inefficiency and corruption is inevitable in the nature of things. Therefore, the *Nation* argued, by its uniform practice, the greater need of earnestness and unflagging zeal and effort to overcome all these obstacles. The day of fruition of its noble labor, so patiently pursued through long years, is dawning, and the country will reap unnumbered blessings from it. Will not the *Nation* now lend the weight of its great influence to the education of the people up to that stage of civilization and self-sacrifice (for there is a small measure of sacrifice required in giving up a certain amount of innocent indulgence and social enjoyment) which will lead to the prohibition by law of a traffic which is certainly as fatal to true progress as was the African slave trade, or as is the opium trade in China, or homicidal "chivalry," or dangerous theatricals? Or, if not, will it not gratify the curiosity of many readers by giving its reasons, which doubtless are good and sufficient ones, for its not taking an earnest and aggressive attitude, as seems so consonant with its character, on this grave question?

LAWRENCE TURNBULL.

BALTIMORE, December 11, 1882.

[There is no analogy between the civil-service reform agitation and the prohibitory agitation. The one simply sought to have the business of the Government transacted in the same manner and under the same rules and restrictions as the business of individuals—which latter is based, in all its processes, on the experience of the human race since the dawn of civilization. The prohibitory agitation seeks to prevent by law the consumption of an article of drink which has been in daily use, in one form or another, from the earliest period and in all countries, and by nearly every distinguished member of the human family, which the great majority of the human race now use, and which the great majority of its moralists and legislators and teachers either still approve of or do not sharply condemn. An attempt to abolish a practice of this kind by law, not on the ground that it is evil *per se* in every case, but on the ground that in a large number of cases it tends to evil; not on the ground that no man can drink wine without injury, but that some men are sure to be hurt by it—is an undertaking which has no chance of success, in our opinion, without the support of a popular condemnation of drinking so strong that, if it existed, laws against drinking would hardly be necessary. To enforce such a law with any police we now have at command, or any American community would submit to, would be impossible; and we agree with Burke in thinking that in politics what is not practicable is neither wise nor right. No greater evil can overtake a community, in our mind, than the habit of passing laws, which nobody expects to see executed, simply as an expression of feeling. The law should be kept sacredly for execution, and not for expression; it ought to be a command to be obeyed, not a yearning, or an aspiration, or a piece of advice. The proper place for these things is the pulpit, the press, and the platform. Through these the excessive use of alcoholic drinks is rapidly diminishing. Within a generation, it has ceased among the better-educated classes in England and this country. It is now rapidly diminishing, through the same agencies, in England among the working classes. We expect to see it diminish in the same way here, and in many parts of the country it is diminishing. We are, however, by no means opposed to all legislation on the subject: we are in favor of as much as public opinion will execute, directed against excessive drinking, or temptations to excessive drinking, and think legislatures ought to follow public opinion up with regulatory laws. In such communities as can bear a good license law, we would have one. In such as can bear a prohibitory law—we know of none such as yet—we would have one; but we think that whenever any community really can bear a prohibitory law, the drunkards will be such a small and despised class, and the social culture so high, that it will probably seem childish to pass an act forbidding people to have wine in their houses.—ED. NATION.]

THE ARCHÆOLOGICAL SOCIETY OF ATHENS.

To the Editor of The Nation:

Sir: The strictures by W. J. S. upon the Archæological Society of Athens, published in the *Nation* of January 4, are certainly founded on fact; but it would perhaps be more useful to press them upon the attention of the Greek Government and upon that of the management of the Society, than to publish them in a foreign journal without giving the Society credit for the considerable good which it has accomplished. In 1881, not a year of unusual activity, the Society expended, in round numbers, $10,000 upon museums in Athens and in the provinces, upon excavations, and upon the purchase, repair, and publication of antiquities of all kinds. The museums, and the collections of antiquities in the Polytechnic at Athens, all in charge of the Society, are highly creditable, and in some departments unrivalled. The arrangement of these collections is in general good, although they are still, in most departments, without an adequate published catalogue. Such a catalogue is in preparation, under the direction of the Society. The museums are free to all; for the collections in the Polytechnic a small entrance fee is charged. The Society is now conducting excavations of considerable importance at Epidauros and at Eleusis; and its Πραμτιμά, published yearly, constitute nearly always an important contribution to archæological knowledge. As an example, it is sufficient to refer to the volume of the Πραμτιμά which treats of the Erechtheion.

The northern and eastern slopes of the Acropolis, which are still, as W. J. S. says, almost entirely unexcavated, present certainly a very important field for investigation, although probably far less important than the other slopes which have been excavated; and this investigation ought to receive immediate attention. But these slopes, at least near the base of the Acropolis, are as yet but little encroached upon except by hovels of "squatters," which can be removed at the pleasure of the authorities.

The direction of the Society is in the hands of men of acknowledged superiority, such as Kastorches, Koumanoudes, Evstratiades, and Mylonas; and it is certainly actuated by the most earnest desire to promote the study of Hellenic archæology, and to protect Greek antiquities from the vandalism of ignorant Greeks, which is only surpassed by that of ignorant foreign visitors. These facts render it the more difficult to explain the narrow action of the Society heretofore in the matter of opposing foreign exploration upon modern Hellenic territory. With the spirit that inspired the law forbidding the exportation of antiquities, it is impossible not to feel some sympathy; although, as W. J. S. says, the machinery for the enforcement of this law is so inadequate that it fails in great part of its intended effect. Greece is still a much newer country than even our own; but she possesses a large class of highly educated men who, influenced by commendable pride in the antiquity of their country, brought forward this law with the hope that it would keep in Greece those monuments of that antiquity which remained after foreign spoliations committed under Turkish domination.

The condition of many of the Greek provincial museums, especially of those of Olympia and Delos, is certainly unworthy of the priceless treasures stored in them; but it is less the will to remedy this state of things that is wanting to the Society than the necessary resources, where there is so much to do. These treasures are the world's inheritance, not that of Greece only; and contributions from abroad for the better housing of them would be received with gratitude in Athens.

No excuse can be offered for official venality and political jobbery; these blots are, however, neither peculiar to Greece nor of darker dye there than in other civilized countries which enjoy a large measure of individual freedom. It is painful to read of the insult and annoyance heaped upon M. Reinach by the authorities in Delos, as a reward for his splendid work there. Happily, the French school is a Government institution; and France has not yet lost the habit of protecting her representatives abroad.

I am, sir, very respectfully,

A Member of the Archæological Society of Athens.

Cottage Lawn, Yonkers, N. Y., Jan. 5, 1883.

LOUIS AGASSIZ AT NEUCHATEL.

To the Editor of The Nation:

Sir: The city of Neuchâtel has just celebrated the fiftieth anniversary of the foundation of its Natural History Society. On the 6th of December, 1832, under the leadership of L. Agassiz, a small group of six scientific men met to found this society. Agassiz was then only twenty-five years old. He came from Paris, where he had studied with Cuvier and Humboldt, and the small city of Neuchâtel, which had then scarcely 6,000 inhabitants, by a rare good fortune which does the greatest credit to the wisdom and liberality of its citizens, acquired this young naturalist, full of enthusiasm, of learning far beyond his years, and of a prodigious activity for work for the propagation of science such as few people are gifted with.

First Secretary of the Society of Natural History of Neuchâtel, Agassiz "multiplied himself" for the communication of memoirs, correspondence, and publications. Everything had to be done; and everything was done as though by magic, under the inspiration of the young savant. During the fourteen years of his stay at Neuchâtel, Agassiz produced 'Les Poissons fossiles,' in itself a work sufficient to immortalize a scientist; then came the fresh-water fishes, living and fossil echinoderms, fossil mollusca, the 'Nomenclator Zoölogicus,' the 'Bibliographia Zoölogiæ et Geologiæ,' the translations of Sowerby, of Buckland; and, as if all this were nothing, he lavished his instruction on pupils, of whom several afterward became celebrated, such as Frederik von Tschudi, Armand Gressly, Édouard Desor, Karl Vogt, Franck de Pourtalès, Charles Girard, etc. Above all, Agassiz created the theory of the extension of the ancient glaciers—"the Glacial Epoch," "the Great Ice Age."

The orator of the day, Prof. Louis Favre, while recounting the history of the Society of Natural History during the fifty years of its existence, recalled all these works of Agassiz's, and how much of its life and prosperity the Society owed him. All are proud to do justice, on this their fiftieth anniversary, to the qualities and the wonderful scientific value of their founder. Especially when the orator spoke of the "glacial theory" did he interest all his hearers. Venetz, of the Valais, had shown the transportation by glaciers of the enormous erratic boulders which lie all along the valley of the Upper Rhone, and first had the idea of the glacier as the conveyer and carrier of these colossal masses. Then his friend De Charpentier, of Bex, pushing the first idea a step forward, extended the glacier of the Rhone over the Lake of Geneva, over the Canton de Vaud, and stopped it at the Jura. Then Agassiz came in, convinced by De Charpentier that the theory of the ancient extension of glaciers and of the transportation of boulders by ice was based on irrefutable observations; he went further, and at a meeting of the Helvetian Society of Natural Sciences at Neuchâtel, on July 24, 1837, over which he presided, in his opening speech he declared "that there had been a time when glaciers covered the whole area of the Alps, and extended far beyond; that there had been in Europe a period of great cold, a 'Great Ice Age,' when the mammoths lived."

It was a great revolution in science. These words on the existence of a "Glacial Epoch" raised a tremendous tempest. His adversaries present at the meeting were Leopold von Buch and Élie de Beaumont, two of the greatest geologists of the first half of this century, and the greatest advocates of the currents of mud and the transportation of erratic blocks by geological floods of prodigious and incalculable force. Endless discussions followed, but the Rubicon was crossed, and it was at Neuchâtel that first dawned the idea of this "Great Glacial Epoch," which, little by little, by means of the accumulation of observations in almost all points of the globe, has confirmed the view of the President of the Helvetian Society of Natural Sciences of 1837.

It was Agassiz himself who discovered the traces of ancient glaciers in Scotland, in England, and later in all the eastern part of North America, from New York and Halifax to the northwestern extremity of Lake Superior. Then ancient glaciers were found in the Vosges, in the Jura, in Auvergne, the Morvan, the Hartz, the Black Forest, the Carpathians, the Balkans, the Pyrenees, the Sierra Nevada of Grenada, the Atlas of Marocco and Algeria, the Upper Niger, Abyssinia, Lebanon, Ararat, the Caucasus, the Ural, Scandinavia and Finland, the Taurus, the Himalaya, the Altaï, the mountains round Lake Baïkal, Kamtchatka, the Aleutians, Kurile Islands, Yezo, and the northern port of Nipon in Japan, New Zealand, Kerguelen, the Strait of Magellan and the south of Chili (L. Agassiz), in the vicinity of Rio Janeiro (Dom Pedro II. and L. Agassiz), in the Andes of Bolivia, of Peru, of Eucador, of Colombia, in the Sierra Nevada of Santa Martha, in Nicaragua, in the south of Alta California, the Sierra Nevada of California, in Colorado, Nevada, and Utah, on the Upper Missouri and Upper Columbia Rivers, Washington Territory, British Columbia, Alaska, and the Arctic regions (Greenland, Iceland, Jan-Mayen, Cherry Island, Spitzbergen, Nova-Zemlia, Franz-Joseph's Land, New Siberia Islands, and the Arctic American Archipelago); and at last Agassiz had the happiness before dying of seeing his theory of a "Glacial Epoch" accepted by all—even by some of his most constant adversaries, like Sir Roderick Murchison, who wrote to him in 1863 excusing his long opposition. It was but justice. Agassiz, by a stroke of genius, had seen and seized with a single glance a whole period in the history of the earth—a period till then entirely unknown to all; and, regardless of opposition, he had bravely proclaimed it before the scientific world, certain beforehand that this idea must prevail.

The Glacier of the Aar, the theatre of Agassiz's observations; his famous "Hôtel des Neuchâtelois"; the polished and striated rocks of Landeron, the "Pierre-à-Bot," etc., were not forgotten in the celebration of the fiftieth anniversary; the localities, as well as the men and their studies, were reviewed, and figured in the speeches, banquets, and visits to the Museum. Nothing was forgotten; Neuchâtel celebrated on this occasion a past of scientific works such as few cities possess. A city which so honors science deserves the prosperity which has crowned its efforts, and given it great celebrity not only in Switzerland, but also in the whole world.

Jules Marcou.

Cambridge, Mass., January 3, 1883.

MR. MARSH ON THE WORD "LOVELY."

To the Editor of The Nation:

Sir: The combination of vast learning and a tenacious memory with wonderful accuracy and perfect good taste have given to the philological dicta of the late Mr. George P. Marsh the very highest authority. Consequently, if he has happened to make a slip, it is important that it should be pointed out. In his 'Lectures on the Origin and History of the English Language,' in a note to Lecture xii., he says:

"Every generation, every year almost, has its pet words, etc., . . . originating now in some accidental circumstance, now in some theory, early association, habit, or caprice of a favorite writer, which, for the time, constitute unsightly excrescences upon the body of speech, but finally drop off and are forgotten. To take single words. . . . The epithet *lovely* can fitly be used only of *beings* capable of exciting by their moral and physical perfections the passion of love, and at the same time of reciprocating it. That only is *lovely* which is both lovable and loving. In the affectation and exaggeration which so often characterize the phraseology of polite society, this unhappy word was seized upon and generalized in its application, and it soon became the one epithet of commendation in young ladies' seminaries and similar circles, where it was and is applied indiscriminately to all pleasing material objects from a piece of plum-cake to a Gothic cathedral. Ruskin unluckily adopted this schoolgirl triviality, and by the popularity of his writings has made it almost universal, thereby degrading, vulgarizing, and depriving of its true significance one of the noblest words in the English language."

Now, whatever one's personal preference in the use of words may be, this cannot alter the facts of the English language. I fully share with Mr. Marsh his repugnance to the indiscriminate use of the word; but when he says that "the epithet *lovely* can fitly be used only of *beings*," I must differ. Here are a few instances that prove the contrary: "Whatsoever things are pure, whatsoever things are lovely," etc. (Phil. iv. 8); "For nothing lovelier can be found in woman than to study household good" ('Par. Lost,' b. ix., l. 332); "Two lovely berries moulded on one stem" ("Midsummer Night's Dream," Act iii., sc. 2); "Richard, that sweet, lovely rose" ("I. Henry IV.," Act i., sc. 3); "Loveliest of lovely things are they on earth that soonest pass away" (Bryant, "Scene on the Banks of the Hudson").

Another philological suggestion occurs to me. The merits of Worcester's Dictionary are universally appreciated, but the circumstance that it was edited exclusively by American scholars shows itself, I think, in the following definition: "*Lay of the land*, the features or the relative position of the parts of any land or place." This use of the word "lay" I believe to be purely American, and that it would never be heard in England. However, I do not find "lie" in this sense quoted in any English dictionary, except the new edition of Ogilvie, and there no examples are quoted. I have noted the following: Green's 'Making of England,' chap. iii., note 49, "I have been guided in tracing these boundaries by the *lie* of the ground itself"; Freeman's 'Subject and Neighbour Lands of Venice,' page 312, "The *lie* of the city and its haven is truly a sight to be studied."

Yours very truly, H. W. H.

Boston, December 24, 1882.

Notes.

A. C. Armstrong & Son will publish during the year 'The Introduction to Christian Theology,' by the late Prof. Henry B. Smith, edited by Prof. W. S. Karr, of Hartford Seminary.

Moses King, Cambridge, has in press 'The Concord Lectures,' comprising outlines of all the lectures at the Concord Summer School of Philosophy in 1882, and one lecture in full (by Professor Garman, of Amherst). The publication has the approval of the Faculty and the concurrence of the lecturers. Biographical footnotes concerning the latter are promised.

The second or prose volume of Prof. James Baldwin's 'English Literature' will be published early next month by John E. Potter & Co., Philadelphia.

G. P. Putnam's Sons announce for the new year volume 2 of Colonel Williams's 'History of the Negro Race in America, 1800–1880'; Part second and last of 'The American Citizen's Manual,' by Worthington C. Ford; 'The Woman Question in Europe'—a series of essays prepared by representative women and edited by Theodore Stanton; 'The History of the Jesuits,' from the German of Theodore Griesinger, in 2 vols., 8vo; 'The Golden Chersonese,' by Isabella Bird; and 'Shaftesbury and Hutcheson,' as vol. 5 of the "English Philosophers" series.

The same house has brought out a uniform edition, in five volumes, of the works of "Barry Gray," a name already well forgotten, though the latest volume was copyrighted in 1871. The vapid contents of this collection are past comment; but the illustrations of 'My Married Life at Hillside' we recognize as having been produced by a process now entirely out of vogue, we believe, and to that extent they are curiosities.

In the third edition of her 'Pennsylvania Dutch' (Lippincott), Mrs. Phebe Earle Gibbons includes chapters on the Scranton miners, and even on England and Ireland, so that the book needs and gets a supplementary title—"and Other Essays." Though the later themes have no connection with the earlier, the treatment of them will be found interesting. Mrs. Gibbons has an inquiring mind and a shrewd observation, and her reports of foreign travel are fresh and individual. For its main object, this work proves to have a permanent value.

The *Athenæum* states that the first instalment of the English Dictionary, edited by Dr. Murray, will be published early in February. In the same paper Mr. Leslie Stephen unfolds the plan of his 'Biographia Britannica.' He will shortly issue lists of names intended for insertion, and a few specimen lives.

Of the three publications of the English Dialect Society for the past year, two belong in Series C (Original Glossaries), and one in Series D (Miscellaneous). Mrs. E. L. Chamberlain furnishes an excellent 'Glossary of West Worcestershire Words,' preceded by a list of popular remedies and other superstitions. Similar ones are recorded in the Rev. Hilderic Friend's 'Glossary of Devonshire Plant Names.' For example, "it is unlucky to transplant parsley." This superstition we met with only the other day in a negro farm-hand on the Eastern Shore of Maryland. Mr. Friend is sometimes apparently over-confident in his etymologies, but his collection is very valuable. Master Fitzherbert's 'Book of Husbandry' is very entertaining reading. It is reprinted from the edition of 1534, and edited with notes and a glossary by W. W. Skeat. In his introduction Mr. Skeat shows pretty conclusively that the author is none other than Sir Anthony Fitzherbert, the law-writer. Besides the ordinary affairs of the farm, Master Fitzherbert has chapters on conduct, the duties of husband and wife, etc., which reflect the spirit of the time. In particular, the cares which he prescribes for the woman ("What warkes a wyfe shulde do in generall"), "ut te diabolus inveniat occupatam," make a formidable array. The quaint and archaic character of the text we need not dwell upon. The vocabulary is a considerable addition to those already issued by the Dialect Society (Trübner & Co.).

D. Appleton & Co. have issued the second volume of their very taking Parchment edition of Shakspere's Works. The four plays included are "The Comedy of Errors," "Much Ado About Nothing," "Love's Labour's Lost," and "Midsummer Night's Dream."

Trübner & Co., 57 Ludgate Hill, London, begin publishing this month a new illustrated monthly magazine, conducted by Paul N. Hasluck, entitled *Amateur Mechanics*. Each issue will contain at least four full-page lithographs of practical working drawings, besides thirty-two pages of letter-press.

The *Living Age*, Boston, enters this month upon its 156th volume.

Life is the title of a new weekly comic paper issued at 1155 Broadway by John Ames Mitchell and Edward S. Martin. It is, by evolution, an offspring of the *Harvard Lampoon*, whose most genuine designer, Mr. F. G. Attwood, is here represented by a cartoon and by some clever initial letters and head-pieces. The drawings and the fun are much above the average of the *Lampoon*, and would be respectable anywhere. Mr. W. L. Alden and Mr. G. T. Lanigan make their mark in the opening number, which is well printed. Is there adequate support for a decorous and monochromatic *Puck?*

Hereafter the *Critic* is to be issued every week, instead of fortnightly, as heretofore.

In the *Library Journal* for December Mr. Frank S. Dobbins has an interesting communication for the guidance of those who wish to purchase Japanese sketch-books. A list of these is given, with their by no means dear prices, along with the titles of numerous books on the language and arts of the country, and directions for procuring them by mail.

The *Journal* of the Military Service Institution of the United States publishes the prize essay on "Improvements in the Art of War," during the past twenty years, and their probable effect upon future military operations. The Board of Award consisted of Generals McClellan, McDowell, and Fry, and they were unanimous in placing the essay of Lieutenant-Colonel Lazelle, Commandant of Cadets at West Point, at the head of the list of competitors. Colonel Lazelle has given a clear and valuable résumé of the approved changes which have been made in cannon and small arms, in naval and seacoast defences, in the equipment and use of cavalry, and in the construction and use of entrenchments by armies in the field. In a second part he groups the actual and probable changes in the tactics and general manœuvres of troops brought about by the improved weapons and the greatly increased range of firearms of all kinds. The limits of an essay have forced a condensation of material and the brief statement of results rather than the full discussion of the topics presented. We have, therefore, an excellent bird's-eye view of the subject, not so long as to deter the general reader from its perusal, yet full enough to make a useful synopsis for the professional soldier.

The January number of the *Magazine of American History* has for its leading article a discussion of the resting-place of the bones of Columbus, by Dr. John G. Shea, who decides in favor of the Santo Domingo pretensions. Mr. H. B. Adams concludes his discursive chat about "Plymouth Rock Restored"; and there is a sketch of the life of Sir Thomas West, third Lord De la Warr, accompanied by the first engraving ever made after his portrait at Buckhurst Park.

A tentative list of William Penn's letters relating to the settlement of his grant between the time he received it and his return to England

(1681–1684) is given in No. 23 of the *Pennsylvania Magazine of American History*. The same number contains a census of Pittsburgh in 1761, copied from MSS. in the British Museum by Mr. G. D. Scull; and some very interesting original letters and extracts from the journal of Wm. Plumer, jr., 1822–29. These are striking contemporary evidence as to John Quincy Adams's independence in disregard of his highest ambition, and as to his share in originating the "Monroe Doctrine."

The Providence Library's *Monthly Reference Lists* closes its second volume with a double number, which will usefully guide the students of our tariff legislation, as well as those interested in reading about the transits of Venus. The volume is provided with table of contents and index, and Mr. Foster relates the development of this unique publication, and promises occasional increase in size and other improvements.

From the fifteenth annual report of the Trustees of the Peabody Museum of American Archæology and Ethnology, at Cambridge, it appears that there is a good prospect of resuming explorations, though the fund for that purpose has not yet reached the desired amount. Besides his own report, Mr. F. W. Putnam fills nearly one-half of the pamphlet with notes on the copper objects from North and South America in the Museum, which are illustrated.

Vol. I. of the Transactions of the Linnæan Society of New York is the best printed and altogether the handsomest work of the kind we have seen in this country, where learned bodies seem to be too often satisfied to have their proceedings printed without regard to excellence of mechanical execution. Its beautiful appearance is doubtless due to the zeal and liberality of Mr. L. S. Foster, the publisher, who is also the present Recording Secretary of the Society, and who contributes the frontispiece, a portrait of Linnæus, from an old engraving in his possession. More than half of the volume is occupied by Dr. C. H. Merriam's Vertebrates of the Adirondack region, which admirable paper, after a general introduction, treats the mammalia through the order Carnivora. Mr. William Dutcher discusses the winter residence of the fish crow on the northern border of its area of distribution, and Mr. E. P. Bicknell reviews the summer birds of the Catskills, with prefatory remarks on the faunal and floral features of that region. The Society is a very young one, having been founded in 1878, but would appear from this first showing of results to be a flourishing and promising organization.

N. W. Ayer & Son, Philadelphia, send us their 'American Newspaper Annual' for 1882. It is a well-arranged and well-printed volume, containing all the essential facts and statistics which should enable an advertiser to acquaint himself with the worth of advertising mediums and with the character of their patrons. The descriptions of States and counties are equivalent to a gazetteer; even their political complexion is noted.

Under the appropriate title of 'Un Écolier américain,' Mme. Th. Bentzon has put forth a French adaptation of Mr. T. B. Aldrich's 'Story of a Bad Boy.' It is published in Paris by Hetzel (New York: F. W. Christern).

The latest American additions to the Tauchnitz series are Mr. Howells's 'A Modern Instance' and Mark Twain's 'Mississippi Sketches.'

M. Théodore de Banville has recently published a most entertaining and characteristic volume called 'Mes Souvenirs' (Paris: Charpentier; New York: F. W. Christern), and containing twenty-four short essays on the chief celebrities of France with whom he has come in contact during his long literary life. Among the more important chapters are those on Hugo, Balzac, Dumas, Gautier, and Baudelaire. Among the most amusing are the sketches of Scribe, of *Robert Macaire*, and of Nestor Roqueplan.

In defending the memory of Mgr. de Belzunce the Abbé Jauffret, of Marseilles, made certain attacks upon the Congregation of the Oratory which Father Ingold, of the Oratory, replied to in the *Bulletin Critique*. The controversy is not of much importance, and we allude to it only to mention the fact that all the Marseilles papers, anti-clerical as well as clerical, unite in defending the Marseillais Abbé against the Parisian Oratorian. That the provincial affinity should be stronger than the anti-religious affinity, that the impulse to defend a townsman should be more powerful than the impulse to cry, How these Christians hate one another—is not what we should have expected.

Le Livre for December opens with an amusing appreciation, by Champfleury, of the bibliographical worth of the stamp placed by circulating libraries upon certain productions of the Romantic era. M. Blondel also gossips pleasantly, with many personal anecdotes, about the tools of the writer—his pen, penknife, and eraser. William Beckford, his works, and particularly his 'Vathek,' are the subject of an article by H. S. Ashbee, entitled, "Englishmen who have Written in French," which will repay reading. In the miscellany we find mention of a tablet recently set up by the city authorities of Paris at No. 6 Rue du Mont-Thabor, to commemorate the fact that the poet Alfred de Musset died there May 2, 1857. Also, of an extant autograph agreement between Lamartine and Michel Lévy, concerning the sale of the former's 'Toussaint Louverture,' in which it was provided that Lamartine, should he become President of the Republic, might prohibit or suspend the sale, on reimbursing MM. Michel Lévy frères for their payments to him. The sole illustration of this number is a colored print after a binding for 'Faust,' by Amand.

We have received from the house of Henninger in Heilbronn a copy of 'Anmerkungen zu Macaulay's History of England,' by Dr. R. Thum. It is intended for the study of English, rather than of history, and the notes are rather linguistic than historical. It is a striking proof of the capacity of a modern language to serve as a basis of minute linguistic study, that we have here 154 octavo pages devoted to the elucidation of a little over a page of the author; and the notes are for the most part instructive even to English or Americans, although rather overloaded with citations of parallel and illustrative passages. We notice that, on page 137, Macaulay is called "der grösste Geschichtsschreiber dieses Jahrhunderts."

In a letter to the Cologne *Gazette*, a few weeks ago, Paul Lindau protested against the absurd custom, prevalent among German stage managers, of purchasing new plays from popular French playwrights before they know anything at all about them. As much as 6,000 francs are often paid by managers who have never seen the manuscript; sometimes when as yet nothing has been written but the title. When received, these plays are not seldom found to be worthless, and are not produced at all, or, if produced, result in a fiasco. Some of the leading managers —Hülsen, of Berlin; Perfall, of Munich; and Dingelstedt, of Vienna—have never encouraged this custom, but there was a rumor that Wilbrandt, Dingelstedt's successor at Vienna, was not so scrupulous. We notice, however, in a Vienna paper, an account of a meeting of the directors of the Burg Theatre, at which it was resolved that in future no French piece should be purchased before the manuscript had been examined. The new rule is to be applied for the first time to Sardou's "Fédora."

The sixteenth annual Exhibition of the American Water-Color Society will open at the National Academy of Design on January 29, and close on February 24.

Mr. Charles Lanman, 3035 West P Street, Washington, D. C., sends out a list of 350 sketches of American scenery which he has made, and which he offers to reproduce in oils, in portfolios of ten (or fewer) each, as subscribers may designate their preference.

—One name in the death-roll of 1882 is sufficient to give it a hardly surpassable lustre. But if science lost in Darwin the greatest light of the century, it could ill afford to miss also the promise of Francis Balfour and the younger Draper, or the good work of John W. Draper and Zöllner in astronomy, Fried. Wöhler in chemistry, Hermann Schlagintweit in geology, Luigi Palmieri (of the Vesuvius station) in seismography, and Wyville Thomson (of the *Challenger*) in deep-sea exploration. Garibaldi, again, is a military reputation of the first magnitude, but Skobeleff, too, has been blotted out before his time, with his Central Asian confrère General Kaufmann, with Ducrot and De Cissey in France, with G. K. Warren and J. G. Barnard and Silas Casey, and their political fellow-soldiers Kilpatrick and Hurlbut, in our own country. Gone, too, is Sir William Palisser, inventor of guns and projectiles. Longfellow, already admitted to the English Pantheon, and Emerson together make a splendid vacancy among the poets; but Dante Rossetti, with his double art, D. F. McCarthy, Gottfried Kinkel, Bishop Moe, and half-forgotten Barbier (of the "Iambes"), must also be commemorated. Scholarship had its shining losses, too: George P. Marsh, and the Orientalists, E. H. Palmer, John Muir, and Ernst Haas. Pusey's is the greatest name in the list of theologians; but here belong also J. J. Herzog, Bruno Bauer, and our three Unitarian divines, Henry W. Bellows, whose monument is the Sanitary Commission, Samuel Johnson, the historian of Eastern religions and author of many favorite hymns, and Orville Dewey. Trollope we shall miss, among the novelists, and Auerbach, who went sorrowing to his grave over the *Judenhetze;* but W. Harrison Ainsworth had fairly outlived his reputation. So had Mme. Céleste, the danseuse and actress, one of the few losses of the stage; and perhaps Adelaide Phillipps had passed her prime as an operatic singer.

—The sovereigns and rulers of mankind have at least mostly escaped with their lives during the past year; nor, with the notable exception of Gambetta, has death been busy with the upper walk of statesmen. Lanza, perhaps, would stand next in importance. Of American politicians, the superfluous veteran Thurlow Weed was the most famous, and we may enumerate, besides, ex-Governor C. C. Washburn, Horace Maynard, Clarkson Potter, Senator "Ben." Hill, and E. W. Stoughton, unless we choose to rank the latter rather among lawyers than among "visiting statesmen." But he would have no proper place alongside of Richard H. Dana and Theophilus Parsons. Political Economy mourns two capital representatives in Prof. Stanley Jevons and P. G. F. Le Play, in addition to the much-respected Prof. T. Cliffe Leslie. The industrial and mechanic arts have suffered in the taking off of Scott Russell, builder of the *Great Eastern* and of the iron dome of the Vienna Exposition; and still more of our own Alexander Holley. Art was bereft of one of its best critics, Charles Blanc, of William Miller, one of Turner's engravers and (what is curious) a Friend, and of H. K. Browne, the "Phiz" of Dickens's earlier illustrated works. Arthur Gilman will be remembered not only as an able

architect, but also as the promoter, if not the suggester, of the great extension of Boston westward. Henry James was perhaps too much of a metaphysician to be classed among the littérateurs; Francis George Shaw too much of a philanthropist, in spite of his translations from Mme. Sand and Zschokke. Henry Giles will long be associated with a bygone phase of the lyceum system. The Navy has fared better than the Army: Rear-Admiral John Rodgers and Admiral Pothuau are the chief figures wanting. But Commander De Long's fate may be longer spoken of than their achievements, as may the romantic experience of another Arctic explorer, Isaac I. Hayes. Two historians shall conclude our summary: François Alphonse Wey, best known outside France by his sumptuous work on Rome, and Louis Blanc, whose obituary is fresh in every one's mind.

—The last number of the Παρνασσός brings fresh evidence that the exploration of the Acropolis of Athens—although this is probably the best known, as it is the most famous site of antiquity—is still far from complete. The Athenian Archæological Society undertook last month excavations before the foundations of the small museum on the Acropolis, for the purpose of clearing away the rubbish collected there. In the course of the work have been found many antiquities worthy of notice, among them inscriptions, fragments of sculptures, a few vases of great elegance, and bronze figurines, of which one, in particular, possesses much artistic merit. A few weeks ago, there came to light on the north side of the museum, where the stratum of modern accumulation is thickest, a fine archaic marble statuette of Hera or Aphrodite. The height of the figure, which is broken in four pieces, is eighty-one centimetres. It stands facing the spectator, upon a base three centimetres high, which retains still the leaden fastenings that once attached it to its pedestal. The right hand is broken away; the left held an object, now missing—probably a bird. The goddess wears a στεφανή upon her head, and her hair, as usual in early work, is arranged in formal ringlets on the forehead. The figure preserves fairly brilliant traces of artificial coloring upon different parts of the drapery and ornaments, and also upon the eyes, hair, and sandals. In particular, there can be distinguished an ornamental meander in color upon the broad middle fold of the close-fitting χιτών. The expression of the face is characterized by the archaic hardness. Beside this statuette there was found another, of Parian marble, also representing a draped female figure, but only twenty centimetres high, and a colossal arm of Parian marble, of which the artificial coloring is well preserved.

—In a letter published in the *Bulletin Critique*, J. B. de Rossi mentions the unprecedented discovery at Pompeii of a Biblical fresco. He says that when he first heard of it he experienced an instinctive feeling of incredulity, but investigations on the spot showed him that it was genuine, that it was Biblical, and that its presence could be accounted for. It is an unmistakable Judgment of Solomon, but with as little of Oriental character in the costume or other accessories as there was of Greek or Roman in the actors who played the classical dramas of Racine and Corneille. Moreover, the figures are caricatures, with enormous heads and the lower part of the body dwindling to frogs' legs. This made it unlikely that the house where it was found was that of a Jew, who would not thus have ridiculed his faith; yet how could a pagan have ordered or conceived such a painting, the Greeks and Romans being so utterly ignorant as they were of Jewish history and legend? The neighboring fresco, however, explains the enigma. It is a Nile scene, with pigmies in burlesque attitudes, and crocodiles ready to devour them. This points for the ownership of the house, not indeed to Jews, but to Alexandrian Greeks. Rich Alexandrians appear to have affected Pompeii, since Nile scenes are common there; and Alexandrian Greeks were not at all unlikely to be acquainted with the Septuagint version of the Hebrew Scriptures.

—While the Russian high seats of learning, including the Universities of Kazan, St. Petersburg, and Kharkov, are again attracting public attention by riotous demonstrations of discontent, it is interesting to glance at the intellectual food which the Government prescribes for the students, and the regulations to which it subjects the press in general, in order to prevent the growth of seditious sentiments among learners and readers. We have before us the sixth edition of the late Professor Solovyeff's 'School Manual of Russian History,' published in St. Petersburg during the most liberal period of the reign of Alexander II. We are curious to know in what manner that renowned historian is allowed to speak of the death of Grand Duke Alexis, the son of Peter the Great, who, as everybody knows now, was racked to death in his father's prison. The voluminous Russian histories—Ustrialoff's 'Peter the Great,' for instance—no longer hide this terrible fact; but the 'School Manual' dares to say no more than that "the Czarevitch died in his dungeon." And what does this school-book tell us about the demise of Peter III., who was murdered by the courtiers who conspired with his wife and successor, Catharine II.? On the outbreak of the rising against him, "death overtook him in the suburban palace of Ropsha." And what about the equally violent death of Paul I., who was removed to make room for Alexander I.? Amid preparations for an expedition into the heart of Asia, "death overtook the Emperor." We compare Toll's 'Encyclopædic Lexicon,' also published during the freer period of the reign of the late Czar, and find in the respective notices, that Alexis "died of a blow"; that Peter III. "died suddenly at Ropsha, in the presence of A. G. Orloff, T. S. Baryatinski, and G. N. Teploff"—the murderers being thus covertly named; and that a "sudden end" which befell Paul terminated the military enterprise. Kliushnikoff's similar publication, begun under Alexander II., and completed in 1882, informs us that Alexis "died in a fort," Peter III. "in 1762," and Paul "suddenly." The last-mentioned 'Encyclopædic Dictionary' spreads the mantle of oblivion even over royal crimes committed long before the accession of the house of Romanoff, as is shown by its totally ignoring, in the notice of Novgorod, the massacre of almost all the inhabitants of that vast city by Czar Ivan the Terrible, the most stupendous butchery ever executed by a Christian monarch. It is by suppressions of facts like these that the advisers and ministers of Alexander II. and Alexander III. have striven to exclude from the minds of the Russian youth the knowledge of atrocious deeds done by Russian princes, and all idea of Russian regicide—with what effect, Nihilism, organized regicide, and the terrible 13th of March, 1881, have shown. Yet the Tolstoi of Alexander III. continues to practise as Minister of the Interior what he practised as Minister of Education before the assassination of Alexander II.; and the official preservation of darkness in schools continues to have its counterpart in student plottings in the dark, followed by "sudden deaths."

—M. Georges Perrot, in a paper read before the Académie des Inscriptions, brings forward a puzzling problem for scholars, to decipher the inscriptions of the Hittites, neither the language nor the alphabet being known—indeed, no one being sure that all the inscriptions are in the same language. A discussion of these inscriptions, and of all the Hittite monuments, has been published in the seventh volume of the Transactions of the London Society of Biblical Archæology (pp. 248-308), and M. Perrot intends to issue, as a supplement to this thesaurus, all the Hittite seals known, eighteen in number. Here is a work in which the inventive American ought to shine; but hitherto the persevering German has succeeded better with such problems, possibly helped therein by practice in deciphering the difficult characters of his own language. The Hittites, by the way, were at one time a powerful people that one would have expected to leave more track behind; their dominion extended from the Ægean Sea to the Euphrates, and from the Black Sea to Egypt. But constant wars against the Egyptians and afterward against the Assyrians exhausted them, and they disappeared from history half-a-dozen centuries before our era.

—Mr. Thomas gave the first of his popular matinées at Steinway Hall on Thursday. Taking into consideration the fact that such matinées are almost for the sole benefit of ladies, gentlemen being seldom able to attend, the audience was a good one. The concert opened with Cherubini's "Water-Carrier" overture, which was played in a spirited manner by the orchestra, although with an occasional lack of smoothness, as is apt to be the case when so delicate a composition is placed at the head of a programme. All the other orchestral work, however, was excellent. The orchestra was only half as large as it is at the Philharmonic concerts, but, owing to the acoustic superiority of Steinway Hall over the Academy of Music, it was almost equally effective. Details of orchestration and thematic treatment can be followed in Steinway Hall as in no other locality in this city. The best orchestral work was in the "Tannhäuser" overture, which was superbly rendered, and in Cowen's Scandinavian Symphony, the beauties of which become more and more manifest, and which bids fair soon to rival Raff's "Im Walde" in popularity. If the scherzo and finale were equal to the first two movements, it could be placed in the front rank of recent symphonies. The first movement contains the marrow of the whole work, the themes being pregnant, well developed, and beautifully clothed in instrumental colors. It would seem as if England were about to have a promising composer. Much may yet be expected of Mr. Cowen, who is only thirty years of age, and is now at work on another symphony which will be looked forward to with interest. The concert was almost as "high-toned" as a Philharmonic performance. We regard this as a mistake. A symphony and a classical concerto are quite in place in a classical concert, but for a "popular" concert their combined weight is too great. For the last piece nothing could be more appropriate than a good Strauss waltz. Those who have seen his operettas know that Strauss is as great a master of sentiment as of rhythm. His waltzes are not mere dance movements, but embody all the coquettish and emotional by-play of the dancing couples, and for instrumentation they are unsurpassed. For our part, we should see no objection to a Strauss waltz at a Philharmonic concert; but let us at least have one in the popular series.

—Two interesting novelties appeared on the programme of the third Philharmonic Concert on Saturday evening: a new symphony by Dvořák (pronounced Dvōrshock) and Brahms's Rhapsodie for alto solo, male chorus, and orchestra, which, although not a recent work, had never before been given at these concerts. Dvořák is a Bohemian composer, forty-two

years of age, who a few years ago was almost unknown outside of his own country. Through the influence of Liszt and Brahms his works were introduced in Germany, where at present his compositions are frequently heard, especially at chamber-music concerts. An opera of his, "The Rascally Peasant," has been produced at Prague, Dresden, and Hamburg, and favorably received, while his "Stabat Mater," too, is gradually making its way into public notice. The danger which lies in the sudden discovery of a gifted composer is the same as that which attends the sudden appearance of a new lyric "star"—the danger of exaggeration. From this Dvořák has not escaped, and the consequence is that many will be disposed to expect too much from him, and consequently suffer disappointment. Every man of genius is a Bohemian, but not every Bohemian is a man of genius, is an aphorism which Dvořák does not contradict. We do not find in his works the creative power of a Rubinstein, a Bargiel, or a Saint-Saëns to stamp his works with an unmistakable individuality. Highly gifted, he doubtless is, but it seems to us that his leading trait is ability to express commonplace ideas in neat and brilliant language. The material of his symphony is not new, but it is treated with such facility that the audience is disposed to forget the matter in the manner, especially when it has the good fortune to be interpreted by such a superb orchestra as the Philharmonic. An exception to this general statement must be made in favor of the scherzo marked Furiant, which has some of the rhythmic wildness and exotic charm of Brahms's Hungarian dances. The adagio is the weakest of the four movements, while the first and last movements are marred by the slam-bang Rossinian cadences appended, which at the present day are always the sign of an inferior order of mind that has not learned the lessons taught by Chopin, Schubert, Liszt, Wagner, and Rubinstein. The Brahms Rhapsodie is a musical setting of Goethe's 'Harzreise,' depicting a friend "Who from love's fulness Drank in misanthropy only, First despised, now a despiser," etc. It is one of the best of Brahms's compositions, the general character of which can be pretty definitely described as a combination of Schumann and Wagner. The declamatory alto solo, steeped in the melancholy of expressive orchestral discords and glowing but dark tints, was well sung by Miss Henne, whose voice only lacked power to contend against her surroundings. The male chorus of the Liederkranz coped successfully with their difficult part. The remaining two numbers, Graedener's Capriccio and Beethoven's Eighth Symphony, were interpreted with a beauty of tone, a delicacy of shading, and an energetic command of rhythm worthy of the orchestra and its conductor.

FREEMAN'S AMERICAN LECTURES.

Lectures to American Audiences. By Edward A. Freeman, D.C.L., LL.D., Honorary Fellow of Trinity College, Oxford. I. The English People in its Three Homes. II. The Practical Bearings of General European History. Philadelphia: Porter & Coates. 8vo, pp. 455.

THESE lectures contain very little that is new to persons already familiar with Mr. Freeman's writings. They afford, however, an instructive example of the method by which he has exerted a more powerful influence upon his generation than perhaps any other historian who ever lived. His historical opinions are to him vital doctrines, closely bound in with the destinies of the English race. He has lost no opportunity, in these twenty years, of enforcing them by repetition, enlargement, and illustration, and in most dogmatic style; and the English-speaking people, as the result of this unwearying propagandism, have come at last to accept them in the main. These characteristics are the characteristics of the two courses of lectures contained in this volume. It must be confessed that Mr. Freeman approaches the American public somewhat in the spirit of a missionary, as if the American public had not been reading his books for twenty years. The first course is precisely adapted to an audience that had never heard of Mr. Freeman or of "the English people in their three homes." The thought is excessively diluted, but it is agreeably stated, and will prepare the neophyte very satisfactorily for the stronger meat of the second course.

This second course is altogether admirable. The reader who is already somewhat acquainted with his author will often find diffuseness even here, but for an audience of listeners nothing could be better. The subjects of the six lectures which compose it are: "Causes and their Effects," "The Democratic City" (Athens), "The Aristocratic City" (Rome), "The Ruling City and its Empire" (Rome again, with Venice and Bern), "The Elder and the Newer England," and "Rome Transplanted" (Constantinople). This last is an admirable example of what the whole series makes its aim—the application of the lessons of history to the problems of to-day. This is not saying that what Mr. Freeman has done is always well, but that it is always exceedingly well done. Mr. Freeman hates Austria and Turkey more intensely than seems to us necessary—not more intensely, perhaps, than their history would justify, but more intensely than, in the case of Austria at least, present conditions would appear to justify. Such a nation as (the so-called) Austria certainly has no real personality, as Mr. Freeman excellently shows; and we are not to ascribe to her any such sentiment as gratitude, justice, or even repentance for her long-continued oppression of subject nationalities. Yet Austria has entered on the path of constitutional reform.

Some may be inclined to take exception to Mr. Freeman's cardinal doctrine—the identity of the English race in its three homes. The Norman Conquest in its second home, the enormous Irish and German emigration in its third home—to say nothing of the not inconsiderable infusion of Scandinavian, Slav, and Romance elements—appear to have wholly destroyed the homogeneousness of the race and made it in the highest degree mixed. For the matter of that, philologists are careful to explain that, when two languages are shown to have a genetic connection, it does not necessarily follow that the people who speak them are kin to each other. Nobody can tell how mixed the English people may have been even in their first home in Jutland; and in Britain we have little doubt that there was a much larger survival of the native population than Mr. Freeman would have us understand. But, if "blood is thicker than water," there is something thicker even than blood—kinship in thought and sentiment, the inheritance of civilization. For example: we are glad to have the mythology and legend of our Teutonic ancestors made more familiar to us, and we do not undervalue the light they throw upon our ways of thought, and especially our institutions. But, after all, our relationship to the old Teutons is chiefly that of blood—the Greeks are the ancestors of our civilization; the 'Iliad' will always be nearer to people of the English race than the 'Nibelungen Lied,' and Zeus and Athena than Odin and Thor. We do not hesitate, therefore, to agree with Mr. Freeman that, with all the heterogeneous elements which are mingled in our nationality, we are still English by virtue of inherited memories, associations, language, and institutions, as well as blood.

Mr. Freeman's comments and criticisms upon our political machinery and methods are always sagacious and worthy of consideration; whether in praise or blame, they are always made in a friendly and sympathetic spirit. We note here the interesting remarks, page 379, which serve to enforce Mr. Gamaliel Bradford's favorite theme—the desirability of allowing Cabinet officers a seat in one of the houses of Congress. Those of our people who are in the habit of regarding the constitution of our Senate as unequal and unjust to the large States, will find here cogent reasons (*e.g.*, pp. 270 and 392) in favor of this arrangement, as well on historical grounds as on grounds of permanent expediency. And this leads us to speak of Mr. Freeman as a political historian, which we should call his favorite rôle. His remarks upon political and constitutional questions are always full of instruction; nevertheless, we should say that he belongs to a class of writers whose tendency it is to exaggerate the importance of *machinery*—of constitutional forms—as much as writers of the school of Herbert Spencer are inclined to undervalue it. This is illustrated on page 328, where he points out, as has often been done before, the fatal defect of the Roman constitution in wanting the principle of representation. No doubt this was a serious—we may call it a fatal—defect; but, if we look the situation squarely in the face, can we think that even representation could have saved the Roman republic? Whom was it to represent? We are not disposed to overstate the corruption of ancient Rome. There has been more than one period in Christian times when society was as bad as it appears to have been in Rome; and such times of social decay often seem to have the power of exciting a reaction against their own foulness. But there was a disease in the Roman state far more deadly than the anarchical constitution, far more incurable than the corruption of society—that is, slavery. Roman society was founded upon slavery; and although slavery in its primitive and patriarchal form is a natural and perhaps wholesome institution, and although in all its phases there are certain virtues which it fosters and promotes, yet slavery in its *speculative* stage—which Roman slavery had reached at this period—is the deadly enemy of free institutions. A republican government requires a substantial middle class, and a middle class cannot exist in the presence of slavery. The real cause of the fall of the Roman republic was that a middle class, or free peasantry, no longer existed or could exist.

On the whole, these two lectures on Rome give an admirable sketch of the constitutional development of that city. Mr. Freeman is generally very happy in his analogies and illustrations, but we must think that he has missed the real meaning of the term *patres*, as applied to the heads of the Roman families (p. 286). He says that the name "in its origin meant no more than such plain names as *goodman*, *housefather*, and the like." But *goodman* is a neighborly term; *housefather* is a domestic title; the Roman *patres* were the heads of patriarchal groups, which they ruled with absolute authority. The association was a wholly different one, carrying with it from the first, as we suppose, that vigorous conception of authority which is so characteristic of the Romans. We find on page 330 a statement which is certainly true, but expresses only half the truth, and leaves out the most vital part: "The position of Diocletian and Constantine was one into which the position of the first Augustus gradually grew; it was one which gradually changed into the position of the last Francis." It is very true that both

of these changes were in a sense gradual; but to say only this implies that all this succession of changes was the result of a natural process of evolution. These remarks appear to fall in with the common, superficial opinion that the establishment of the Empire was the most radical change made in the Roman constitution; surely, it would be said, the change from republic to monarchy is a more fundamental one than that from limited to absolute monarchy. But the establishment of the Roman Empire was an act which lay directly in the line of the development of the Roman constitution; there was not a new principle or institution introduced—only a new combination of old principles and institutions. The reorganization by Diocletian and Constantine, on the other hand, was a fundamental change, bringing in new principles and usages *from outside*. It was not in any sense a development of purely Roman forces, but at best a development of principles introduced since the establishment of the Empire. Mr. Seeley has very well characterized one feature of it in saying that Augustus lived as a private gentleman, and Constantine as a Sultan. Now Mr. Freeman recognizes and states the fact—substance of monarchy without the form in Augustus, form without the substance in Francis II., both combined in Constantine; but he does not emphasize the point that needs emphasis. The reorganization of Diocletian and Constantine was the most important turning-point in secular history; the end of ancient history—the homogeneous development of Roman institutions having come to an end; the beginning of those forms and ideas of government which have had control throughout modern history. It is a weak point in Mr. Freeman's favorite doctrine of the continuity of history that it fails to recognize in full the momentous character of this revolution, but assumes that modern history is nothing but a continuation of ancient.

RECENT NOVELS.

A Modern Instance. A Novel. By W. D. Howells. Boston: J. R. Osgood & Co. 1882.

Kinley Hollow. A Novel. By G. H. Hollister. [Leisure-Hour Series.] Henry Holt & Co.

Hester Stanley at St. Mark's. By Harriet Prescott Spofford. Boston: Roberts Bros.

Rachel's Share of the Road. [Round Robin Series.] Boston: James R. Osgood & Co.

All Sorts and Conditions of Men. An Impossible Story. By Walter Besant and James Rice. [Harper's Franklin Square Library.] Illustrated.

Two on a Tower. A Novel. By Thomas Hardy. [Leisure Hour Series.] Henry Holt & Co. 1882.

Mr. Howells has written a very striking novel which every one praises for its life-like fidelity to nature, and no one seems to like thoroughly. The plot and characters are drawn from ordinary New England life, of which Mr. Howells has made a most conscientious study. For any one who wishes to understand a certain aspect—and a very important aspect—of this life, there cannot be any better introduction to it than through 'A Modern Instance.' There may be found in any New England village one or more Bartley Hubbards, predestined by their natural "smartness" and want of principle to early success and popularity and also to later ruin. There are also in any New England village one or more Marcias, high-spirited and interesting girls, provided with a refinement and education which disqualify them for their ordinary, commonplace surroundings, and fill them with aspirations of a kind that doom their lives to disappointment. Such a girl as Marcia of course falls in love with such a clever young man as Bartley. He is altogether the most likely person in the place to please her fancy. All the rest follows naturally in its order. Exactly what part in the story Mr. Howells intended Marcia's jealousy to play is difficult to see, for it does not seem to contribute actively to the catastrophe. She is a devoted wife, and her jealousy is hardly tragic. It is Bartley's innate rascality, which the discerning reader is allowed to see from the outset, that makes it inevitable that the pair should go from bad to worse, until he meets his well-deserved end at the hands of the victim of a "personal paragraph."

Without attempting to analyze the causes which give the novel its disagreeable flavor—though we suggest that it is perhaps owing to the fact that every reader, however good or refined, feels in himself or herself a resemblance to some one of the common American types with which it is filled—we shall simply say that as a work of moral fiction 'A Modern Instance' is unequalled. It is a picture of the career of a rascal of the most frequent American pattern. He is neither cruel nor a slave of his passions, nor has he any desire to sacrifice others to himself. On the contrary, he is very good-natured and amiable, and likes to see everybody happy about him. But of honor or principle he has no idea whatever. In fact, for the old-fashioned notion of principle he has substituted a new idea—that of the primary importance of "smartness"—*i. e.*, of that quality which enables a man to get ahead of his fellows by short cuts, dodges, tricks and devices of all kinds that just fall short of, and easily degenerate into, crime.

'Kinley Hollow' is a novel of New England life of a by-gone time, the period being that of three generations since, when the old Puritan régime had a strong hold upon the minds and habits of the population of that part of the country. The tone of the book, however, is essentially modern, so that the grim Puritan father, who does what he can to preserve the traditions about holy living and dying prevalent in the time of Cotton Mather, strikes the reader as a rather unsubstantial and ghostly person, asphyxiated in an alien sentimental atmosphere. The hero is easily identified as belonging to a type confined to no particular country or period. He is an unmitigated and irreclaimable prig, and as such he is born, lives, loves, and even marries the heroine, who had formerly loved an unworthy rival. The rival, a depraved though clever man, first comes to a bad end, as he richly deserves, and the hero comes within an ace of being hung for his murder, and, in fact, could not possibly have escaped execution had it not been for the sudden, and to us entirely expected, arrival of a witness who is able at the last moment to exculpate him. It must not be supposed from this that 'Kinley Hollow' is an over-exciting book. It can be read by very young persons without danger to their nerves. It is, in fact, permeated by a gentle dulness which is irresistible. There is just enough of a plot to lead the reader on from page to page, and little enough of one to make it a matter of indifference how closely he attends to the minor details of its development. He can skip here and there, but he will find it out of the question, when the dulness of the tale has once thrown its spell fairly over him, to lay it down unfinished. There is an infinite quiet about the style, which produces a sort of literary nirvana in the reading.

That an author with something of a reputation to stake should let her name be attached to such a farrago of nonsense as the tale of 'Hester Stanley at St. Mark's' would have been beforehand incredible. The school at Waterways is described as "a Pandemonium, a place of yelling girls." The principal, Miss Marks, has grace and sweetness enough to win from her pupils the sobriquet of St. Mark's, but what shall be said of her wisdom, when she employs as her chief assistant a woman "who shakes a girl till her teeth chatter," and, for an escapade as harmless as creeping to a distant bed in the dormitory, administers a cold douche from the shower bath? Anything beyond a strenuous warning against such a book would be a waste of words.

'Three Vassar Girls Abroad' might suggest a fair vision of grave, sweet maidens, steadied and yet softened by the study of the humanities, setting forth on a foreign journey with an eagerness all the fresher and keener for its intelligence. Such a vision will be rudely dispelled by the sight of the pretty babyish faces upon the smart cover of the book; and a further acquaintance with the heroines will only make the reader add the adjectives, flippant and shallow. Barbara is, by her own showing, "a harum-scarum thing," with no idea of the use of *shall* and *will* (nor has the author herself, for that matter). Cecilia makes "ecclesiological pilgrimages." Maud, "who detests Latin, . . . is devoted to art. She will never marry; nobody could induce her." These are the three who, under the guidance of Maud's sister, "Mrs. Arnold, who, though their senior, was far more frivolous than any one of the girls," travel up and down France and Spain according to the exigencies of the case, the "case" being to use a sufficient number of full-page illustrations which have already done duty in well-known books. It is a reversal of the "Granger" plan of making a book, some sentences being positively dragged in to make an excuse for a picture. It is a little too much when the party are set to telling dull stories for the sake of putting in a whole set of Indian temples and palaces. The original illustrations are clever renderings of the commonplaces of travel, but to portray a young woman who quotes George Herbert ("she breathed it as a prayer") in a costume of extreme fashion and a coiffure of the last absurdity, is a sort of sacrilege for which the author is as much to blame as the artist. The book may entertain some girls of ten and twelve, who will skip the pages from the guide-book, but it has no relation whatever to genuine college life, and Vassar students, one and all, may well say, "Surely mine enemy hath done this."

No one need be at any pains to overcome the unpleasant impression produced by the title 'Towhead,' for the book only goes from bad to worse. The least of the heroine's misdeeds are clever evasions, and the worst of them would have brought ineffaceable, irretrievable disgrace. The description of a great boarding-school is meant to be recognized, but it is so clumsily, so absurdly, done, that one wonders not at the weak

points, the overstrictness of a well-meant system, but at the blindness, the hardness, which could fail so signally to understand the merits of it. As to the life in a Western college, if the tale could be proved true, it would behoove the friends of "co-education" to suppress it outright, but happily it cannot be true: it is only a medley of flippant trash. Does the unfortunate tone of this book point a moral as to the risks of a facile or an accidental success?

'A Noble Name' gives the purposes and cross-purposes of the grandchildren of the aged head of the house of Dönninghausen, a house "whose members," according to his pronouncement, "are not in the world solely to enjoy themselves, but to do their confounded duty as far as they can, and fulfil their responsibilities." There is a suspicion that the translator and not the irate old Freiherr is responsible for the peculiar description of duty. The book is little above the average, but it will not come amiss to people who must have a novel. They will find in it good and ill duly portioned out, whether as regards conduct or its rewards and punishments.

Only the inveterate novel-reader will have patience with the much-involved plot in 'Of High Degree,' the nucleus of which is the will of a certain crotchety Mr. Dottridge. There is the will as the hero supposes it to be, the will as the good heroine thinks it, the will after the idea of the bad though at last repentant heroine, and finally the real will, which only the villain of the play knows of, besides its eccentric maker. The latter was intended as a sort of beneficent "deus ex machina" who would test the character of his relatives and friends by means of the will; but unluckily for our estimate of his high-mindedness, it ends in his securing the sweet and gentle Ruth for himself. It looks a little as if the story had run away with the author himself, and carried him whither he had no intention of going.

The plot of 'Her Crime' is more than farcical, for that is at least possible. This requires us to believe that a woman can personate another woman for many months, deceiving a whole troop of hotel servants, her own friends, and even her husband. It could not detain a reader except for the curious skill with which the narrator's point of view is kept. It would seem to be the result of a happy accident, else how could it have been spent on such an absurd plot? There is a similar discrepancy between the merit of some of the dialogue and the triteness of the illustrations and anecdotes. One may expect from such a writer something better—or something worse?

'Cupid, M. D.,' may be called "a wolf in sheep's clothing," or anything else which means false pretences. It is a rather meagre sketch of the method of cure for the passion of opium-eating. Of the essentials for a novel—plot, setting, dialogue—it has *nil*. A comparison with the bright, pretty sketch by Spielhagen, 'Der Vergnügungs-Commissar,' will show what genius can do with very similar materials.

Émile Pouvillon is a new name among French writers, but his brave little shepherdess, 'Césette,' deserves a cordial welcome. It is a Phyllis and Corydon story, but a Phyllis and Corydon of the real, practical nineteenth century, not out of the gay, smiling Watteau landscape. It is as realistic as the most thoroughgoing of the school, but with that sort of realism which loves to choose the sweet and the wholesome. Life on those stony fields of Southern France is toilsome; the peasant's lot is humble and homely enough; but in it the author has found all the elements of the true pastoral. The ploughing, the hay-making, the sheep-tending, the chestnut gathering, all are so many opportunities for Love to work his spells. The peasant is hard-handed and clear-headed, but there is a tender honest heart within his breast. The young man will calculate shrewdly about his prospects in view of marriage: "'Two pistoles!' Jordi repeated reflectively; 'that's a great deal of money for one sheep.'" But in the very same moment, looking into Césette's eyes—"two liquid drops of azure blue"—he can say, "'It's true I was charmed, and charmed I will stay.'" The translation is a rare success, reproducing, in vigorous, picturesque English, much of that rapid movement which the predilection of the French for short sentences gives to their prose.

'Life Among My Ain Folk' is made up of five sketches of people of much the same class in life in Scotland as those in 'Césette.' It is a life under ruder, sterner conditions, and the impression left is most painful, even though we admire their patient endurance of the ills of their lot. Political economists would have us believe it is to the land systems of the two countries that the difference is due, and Mr. Alexander's most pathetic story, "The Sharger Laddie," is meant for an illustration of the hardship of breaking up the cotters' homes, thus driving them far from their work. Certainly the French peasant lives under a kindlier sky. There is more light, more joy in the accessories of his life.

The story of Rachel Conway will be interesting rather than pleasing to the reader, for it is an unbroken succession of "might have beens." Like the sunset she failed of when a child—"it is gone forever, and I can never know what it was like!" As to setting and details, it is carefully and evenly worked out, and the quiet coloring of the whole makes strange incidents seem only exceptional rather than unnatural. The sketch of Adam Lauriston, however, lacks distinctness, and all the more because it is not clear whether the author meant him to be an enigma, or has left him one for want of skill to solve her own riddle. Be that as it may, it is an unfortunate break in an otherwise well-constructed story that it is only from the garrulous chatter of a vulgar and a not strictly sober old woman, that Rachel discovers her misapprehension of Lauriston's early life. It is an unnecessary shock that the veil so carefully drawn by the husband should be torn aside by so coarse a hand. As mere plot, an old letter or a forgotten journal would have been better. The tone of the book is dreary, and the best consolation that can be offered is, "If you will look for what is beautiful, each day may bring you something," and the best hope is in "time." "There should be a certain lapse of time, something vague in the way of summers, and winters, and changing scenes." The only book in the story is a volume of French poems, "telling of regret, of agony, of defiance, of endurance," and the sombre tints of the picture have no relief until the last. The close is unexpected, but it may be the author's recognition of the fact that no life is all dark, that we leave Rachel, even with the doom of her family still before her, yet with the smile of a child to brighten a life of tranquil, even though qualified, content.

The second Rachel on our list is a simpler soul, without traditions or legacies to trouble her. The daughter of a railway king, wrapped in all luxury, her heart is loving and her foot and hand are ready. Out of three little sentences her character may easily be constructed. The author says of her: "She of the sheltered shady nook had a tender spot in her heart for those of the rough highway." The disappointed suitor comforts himself with the reflection: "After all, there are times when it would be exceedingly inconvenient to have an exaggerated conscience for one's household divinity." But the accepted lover, remembering how the world judges men who marry heiresses, says to himself: "It may think exactly what it pleases. She is well worth enduring that for, my peerless Ray." He is himself so much to be liked, that it is a pity there are not more such men to marry heiresses. Rachel's opportunity lies among the few workmen upon the road with whom she comes in contact; and it is in the skilful management of incidents essentially melodramatic, such as railroad strikes, shop-burnings, and the like, that the great merit of the book is shown. To use so much of them, and no more, as shall bring out the individual characteristics of the personages of the story requires a power of reserve not often found out of the foremost rank of novelists. The story is not much more than a sketch, but the firm, delicate outlines, the clear, pure color, prove a hand that might succeed in more elaborate work. It is by far the best of the "Round Robin" series. Even "The Tallahassee Girl" equals it only in parts. It has throughout that same fineness of quality which made 'Is That All?' so much the choicest of the "No Name" series.

The literary firm of Rice and Besant has been dissolved, as the novel-reading public learned with real regret some months since, by the death of Mr. Rice, and it will probably be a long time before we have such successful collaboration in English fiction as they have given us. They worked together with the same ease that is so often displayed in conjoint French authorship, and each managed to conceal perfectly his individuality. One or both of them was gifted with a sort of French vivacity of description and narration which prevented their stories from ever being dull, and one or both of them had a considerable power of humorous caricature—enough to make extravagant characters entertaining when most unreal. 'All Sorts and Conditions of Men' is by no means their best story, but a good deal of amusement may be got out of it. A young lady, who undertakes a sort of philanthropic millinery-mission, under an assumed name, in the east end of London, is the heroine, and the scene is laid, during a considerable part of the story, in an East End boarding-house, where we make the acquaintance, among other queer characters, of an American heir, who has come over to England to get his rights and be restored to his title. He and his wife, respectable citizens of Canaan City, New Hampshire, are known among their friends as Lord and Lady Davenant, but their claim to the name has not received legal recognition, owing to a difficulty in making out the chain of descent. This difficulty is never overcome, but they, like almost everybody else in the book, are taught a wholesome lesson, and kindly provided for out of the ample purse of the benevolent heroine. The story is weakened by the unnecessary amount of philanthropy which is infused into it by the authors; so far as this is concerned, the tale is, as they say, "impossible," and, while we do not object to impossibilities when they entertain us, it is difficult to make the details of a comprehensive scheme of social improvement attractive, even with the aid of extravagance. The novel is one to be skimmed through rather than read.

'Two on a Tower' is a strange mixture of love and astronomy, in which it cannot be said that either shows at its best. If the undevout astronomer is mad, the astronomer affected by love appears to be a fool, nor does the science seem to have the slightest effect in steadying the female intellect. The consequence is that Swithin St. Cleeve and Lady Constantine have a miserable time of it, and whether the gain to astronomy is really a compensation for their sufferings we cannot say, for the author does not enable us to understand distinctly how great the gain is. Mr. Hardy undoubtedly might say in reply to this criticism that it was not his object to teach any moral with regard to the relations of love

and astronomy; but then what did he write the novel for? There is an obscurity about his intentions which needs clearing up, and the critic is compelled to grope through the maze which he presents us, for a clew. Mr. Hardy, by the way, introduces in the course of the story a detective device, which is, we believe, novel. Lady Constantine's brother Louis, in order to gain a knowledge of Swithin's nocturnal movements, stretches a spider's web across his door from jamb to jamb. After a time, he finds that it is gone. The inference made by Louis is that some one has passed through the door; and such is what proves to be the case. In actual life, it might not be easy to adopt this simple plan, owing to the frequent difficulty of finding a web when wanted; but in fiction the idea is excellent, and will no doubt be made further use of.

Hours with Art and Artists. By G. W. Sheldon. D. Appleton & Co.

THIS is a showy book of average quality. It is made up of adulatory paragraphs on popular American and foreign painters, and accompanied by twelve steel and eighty-nine wood engravings in illustration of their works. There is little in these pictures of real excellence—little that shows a genuine aspiration. On the contrary, they are largely calculated to please the average uncultivated taste of the moment. The woodcut from Boughton's "Autumn," for instance, represents a stupid and expressionless young woman, in ultra "æsthetic" costume, leaning, in a meaningless way, against a garden wall, which, with the distant landscape, forms a background like those painted ones sometimes employed by photographers. The thing is without beauty of design in pose of figure, fold of drapery, or arrangement of accessory, and it by no means does justice to Mr. Boughton as an artist. Then there is an early design, by Mr. F. A. Bridgman, of an "American Circus in France," which is as utterly wanting in good qualities of art as the commonest illustrations of the illustrated weekly newspapers. Compared with such works as these, the frank and strong, though coarse and artless, realism of Detaille and De Neuville, whose designs follow, is refreshing. There is an example of the art of Toulmouche bearing characteristic likeness to a cleverly wrought fashion plate, and an overcharged steel engraving from a picture of ragged children by Doré. One or two of Fortuny's theatrical subjects are followed by a half-nude figure by Landelle, well engraved on wood by Linton. There is a thoroughly vulgar and clap-trap female figure by Beyschlag, a poor steel engraving from a truly sweet little design by E. Frère, and a feeble landscape on steel after Birket Foster. Two woodcuts by Linton, after fanciful pictures by Barth and Knuepfer respectively, are remarkable—as Mr. Linton's work usually is—for the rendering of tones; but it is a pity, we think, that Mr. Linton's artistic feeling and skill should be thrown away on such work. Again, two woodcuts after Corot, and one after Millet, show truer feeling and more earnest purpose. There is a graceless and repulsive partly nude figure by Regnault, a design by Gérôme, a cut from Couture's famous "Roman Orgie," and illustrations of the works of Meissonier, Bouguereau, Zamacoïs, Vibert, and others.

Then come examples after our younger American artists: a characterless design, called "Summer Afternoon," and a facsimile of a figure-sketch, by Beckwith; a study of an ugly male model by Thayer; three reproductions of works by Chase, of which that called "Impudence" is beyond adequate characterization for vulgarity, both of conception and treatment. The facsimiles of sketches by Winslow Homer are artlessly natural. The disgusting study of a head, by Stinger, is a thing that ought never to have been painted, and much less ought it to be shown. There are two fallacious Venetian vagaries by Gedney Bunce, two studies by J. G. Brown, a sketch by Samuel Coleman, a pretty one by Bellows; also studies by Sartain, Quartley, and Bricher; two heads of common models, and a repulsively ugly, badly-drawn, and badly-painted study by Wyatt Eaton, and sketches by Shurtleff, Smillie, and Champney. Finally, we are presented with pictures of six "æsthetic" studios—those of Mr. Humphrey Moore, Mr. Coleman, Mr. Dolph, Mr. Tiffany, Mr. R. Swain Gifford, and Mr. W. M. Chase respectively. In short, the book presents a fair illustration of what may be called the present fashionable forms of painting, both Continental and American, as interpreted by engraving on wood and steel. But it contains nothing whatever of high or sterling quality.

Studies in Early English Literature. By Emelyn W. Washburn. G. P. Putnam's Sons.

THIS book is good enough in parts for one to wish it might be made good as a whole. It does not add, and it does not pretend to add, anything to what is already known; nor can it claim the merit of clear and consistent arrangement. The author, indeed, deals with special subjects designedly rather than with the general development of early English literature, which is here made to extend to the age of Elizabeth and even later. Yet, in spite of the rather fragmentary character of the treatment, a good deal of the matter is interestingly told; and in the earlier portion particularly the statements are generally to be trusted. Singularly enough, the worst failure in accuracy is in the chapter which has for its subject the greatest of early English authors. It is putting it mildly to say that the knowledge here displayed is forty years behind the times. Surely, a writer who puts down as authorities the publications of the Chaucer Society ought not to attribute to the poet at this late day the composition of 'The Testament of Love,' or repeat the fictions about his education at Cambridge and Oxford, or his imprisonment and exile. These, indeed, have now been exploded long enough to begin to be driven from those strongholds where ancient errors of this kind make their last stand—the school manuals of English literature. Nor is the author more familiar with the language and writings of Chaucer than with his life. The adverb *thries*, introduced in a quotation, is spoken of as an adjective with plural inflection. *Yaf* is given as a Saxon form for *gave;* there is a general impression among students that *geaf* is the Saxon form, and that *yaf* would be an impossible one to our earliest speech. 'The Romaunt of the Rose' is spoken of as a translation, or, rather, paraphrase. It would be difficult, it is pretty safe to say impossible, to find a poetical version in the English tongue which runs so close to the original, line for line, as does 'The Romaunt of the Rose,' whoever it was that translated it. Such statements disprove the author's assertion, in the introductory note, of inability to say anything new, as it is to be hoped, for the credit of earlier writers, do also the extraordinary remarks about the "outlandish Anglo-Norman" of Chaucer, and the "euphuism of the Court" of England in his time. These are but a few of many errors in this one chapter; but it would be most unjust to regard it as a fair specimen of the whole work. A controversial tone is given to the latter part of the book by remarks, rather foreign to the subject, on the English Church and Calvinism; but this is a matter of opinion and taste with which a reviewer has nothing to do.

Frontier Army Sketches. By James W. Steele. Chicago: Jansen, McClurg & Co. 1883.

THESE dozen and a half studies are, except two or three, not of the Army but are inspired by it. The author, an officer for a short time, used his perceptive faculties well, and after long years of waiting has printed these impressions of the remote Southwest. It is very well that he has done so. The literary grace is not always the highest—there are occasional passages suggesting the prosaic army mule rather than Pegasus—but he has told some things worth telling, and has told them well. His captions are not always fortunate—"Captain Jinks" is an eulogium on the average officer who is neither parodied nor represented by the doggerel prototype, and "Copper Distilled" by no means conveys the author's idea of incarnate demonism. The dialect is not always perfect, and the tales are unequal; but it is easier to cavil than to create, and few of those familiar with the scenes here sketched have a hand as graphic. Still, there are lapses from good taste, and enough that is undignified and unprofitable to compel but qualified praise of the whole.

Natural objects are well described and so are men in classes; and we particularly commend, as impressive and truthful, the account of New Mexican common life to those Congressmen who may be thinking of the admission of that Territory. New Mexico should stay out, if for a century, until colonized with blood that shall not merely dominate but shall purify, if that be possible, the native currents. It is a pity that the author did not, at least in one instance where he might as well have done so, adhere more closely to actual topography. After describing a distant view of Pike's Peak, using unconsciously ground but a few miles west from where Zebulon Pike first saw the famous mountain, he seems to confuse Bent's Old Fort with Old Fort Lyon, and by implication to transport them across the Arkansas. Chicquita's story is an invention; but then the terrestrial points of departure need not be transposed. We hope the writer may have the opportunity to remove the occasional blemishes.

On Horseback, in the School, and on the Road. By Edward L. Anderson. Henry Holt & Co. 1882.

THIS is a small book of some merit. Its best features are the defence in its introduction of the school training of both horse and rider—a defence which is quite unanswerable—and an excellent statement of the principle that successful management of the horse can be compassed only by a combination of good temper, courage, and good judgment. Mr. Anderson well says:

"It serves no good purpose to irritate a horse, as he will never yield while angry. . . . A rebuke in a harsh voice will generally suffice to correct a horse, and he will not know how to resent it. The best way to control the horse is through firmness and kindness, but timidity is worse than severity in inducing vice. . . . If upon an occasion he declines to perform some movement that is required of him, let his attention be turned to that which will please him. . . . To give up to him after a battle will confirm his obstinacy, but he will soon forget his unnoticed defiance."

As a guide to beginners of both sexes the book contains some good new points and a good restatement of old ones, but it is neither original nor striking as a whole. Its value is lessened by what may be called its *manége* jargon—an English rendering of the literary style of Baucher. For example, how is an American beginner in horsemanship to understand this: "In turning to the right or to the left, the rein of the side to which the

change of direction is to be made will be drawn toward the rider's body and the opposite heel will be pressed in to bring up the hind quarters upon the new line"? or this: "As the legs act on the forces of the croup, and as the hand directs the forces of the forehead, it will be seen that the rider can bring about a union and balance of those forces and obtain immediate and distinct control of the mare"? or this: "The approximate equilibrium must be constant, for the moment that it is lost altogether the horse becomes heavy, and one extremity or the other must drag in action"?

This is all perfectly true, and it might have been made lucid by avoiding the dialect of the riding-school, unfamiliar elsewhere, and using, as does Mr. March Phillips, in his capital 'Horse and Man,' plain, every-day English. Mr. Anderson says that the gallop is "a succession of leaps." Muybridge's photographs show this not to be the case.

Practical Hints on Camping. By Howard Henderson. Chicago: Jansen, McClurg & Co.

THIS is meant to furnish intending campers with complete directions for an outfit and how to use it. In fact, the list of requirements is so complete as to be discouraging, consisting of nearly two hundred items—or rather more, we should suppose, than would be required to start housekeeping with. However, the list is useful as one of articles to be selected from. We notice that although a pocket-flask and corkscrew are mentioned, along with a "small-sized Bible" and "whistle," nothing is said of any bottles, without which the corkscrew would certainly be superfluous. There are some good hints on the sanitary arrangements of camps, which are almost always neglected; instructions on the rod and line, evidently not from the personal experience of the writer, but perhaps all the better on that account; also, a chapter on shooting, and a very useful one on accidents and ailments, which should be in the hands or head of every one spending any time in the woods.

Eras and Characters of History. By William R. Williams. Harper & Bros. 1882.

No prefatory remark tells us how this book originated, or for what purpose it was written. But the almost equal number of pages allotted to each of its twelve divisions, and the uniformly religious tenor of its contents, strongly indicate that we have here twelve short lectures, delivered before an audience demanding edification no less than historical instruction. The characters and "eras" depicted are Nero and Paul; Titus and the Apostle John; Monasticism; Augustine and Chrysostom; Buddhism; Wyckliffe, Savonarola, and Huss; Mahometanism; the Crusades; Luther; Calvin; Knox; the Puritan and the Mystic. The sketches are animated and flavored with details of an attractive kind, the facts given require little research and often would not bear criticism, and the characterizations are far from profound. The style is correct, though not seldom unpleasantly turgid, and the tone unexceptionally devout. Those for whom it was written will read the book with delight, and admire, perhaps, no less the liberalism than the sound orthodoxy of the author, on meeting with sentences like the following: "Italy could far better afford to lose the magnificent Cathedral of Milan . . . than that it should have missed the glory and the impulse lent its literature by the great epic of Dante," or hearing him extol the beneficent activity of modern Jews, and the merits of such pagan writers of old as Virgil, Horace, and Juvenal. Readers of opposite leanings, especially those strongly tainted with heresies like the theory of evolution, will probably not proceed beyond the author's description, in the first section or lecture, of the continuance down to our times of the struggle between error and truth, as typified in Nero and St. Paul.

Libyan Vocabulary. An Essay toward Reproducing the Ancient Numidian Language out of Four Modern Tongues. By Francis William Newman, Emeritus Professor of University College, London. London: Trübner & Co. 1882. 16mo, pp. 204.

MR. NEWMAN undertakes the useful task of bringing together vocabularies of the Kabail, Shilha, Ghadamsi, and Tuarik dialects, which are scattered through various books, and not always given in intelligible form. The Libyan family (sometimes called Berber) is an interesting one, approaching in its inflections the Egyptian and the Cushite (Abyssinian), yet distinct from these, and offering several noteworthy peculiarities. Newman has carefully examined Brosselard's Dictionary, Hanoteau's Grammar, and the lists of words and grammatical information furnished by Barth, Freeman, Delaporte, and others; and, in addition to the vocabularies, he gives a comparative view of the pronouns, prepositions, adverbs, and verbal inflections. But he has done very little toward the reconstruction of the ancient tongue. The title of his book should rather be: 'A Collection of Materials to Aid in Reproducing the Ancient Numidian Language.' He seems not to be acquainted with Friedrich Müller's essay on these dialects, nor with Faidherbe's Grammar of the Zenaga. The value of the book is also somewhat impaired by the uncouth system of transcription he has adopted, which is similar to that which he employs in his 'Dictionary of Modern Arabic,' published in 1871. He is possibly right in his opinion that the Eastern languages should be written in Roman characters for the use of Western students, but he is not fortunate in his selection of equivalents; so far from confining himself to Western letters, indeed, he introduces a number of strange figures which are as hard to remember as Arabic, and much less distinctive to those who will probably be students of the Libyan dialects; and why should he represent English *sh* by *x*? Still, his collections of words are convenient, and he has taken special pains to discover the correct pronunciation of words from the reports of explorers. On page 31 occurs a statement which may be misleading: he gives the Tuarik form *yergel* or *irgel* as aorist, and remarks in a note that this answers to the Arabic and Hebrew perfect; in fact, it answers in form, and largely in meaning, to the Semitic imperfect.

Commentar zu Kant's Kritik des reinen Vernunft. Zum hundertjährigen Jubiläum derselben herausgegeben von Dr. H. Vaihinger, Privat-Docent an der Universität Strassburg. Erster Band. Stuttgart: W. Spemann. 1882. Pp. 506.

THE author is a good representative of the historical method in modern philosophy, and became favorably known six years ago by an admirable critical essay comparing and criticising the views of Hartmann, Dühring, and Lange. In the present work, although the first volume does not take us very far into the 'Critique,' the method is apparent and admirable. After sketching the Kant revival in one introduction, and the philosophical currents of Kant's time in a more special one, and commenting exhaustively on the title-page motto, dedication, and preface of the first edition, and the introductions A and B, the meaning of terms, etc., the author takes up the 'Critique' itself sectionally and topically, summing up the many controversies and developments in later systems which have grown out of the master's work. Dr. Vaihinger is perhaps less acute than Cohen, but more so than B. Erdmann, while his reading in the voluminous post-Kantian literature, which is designated with each topic, somewhat after the manner of Ueberweg, has been far wider than either. If there is any fault in the work which deserves to be named, it is that the author is often too purely objective and historical when we should like more often to hear a fuller verdict from him respecting controverted matter or interpretation. In general, his Kantism is of the orthodox kind, in that great importance is attached to the first edition, to K. Fischer's interpretations, to Hume's influence, etc. In general, it is a work which no student of Kant can afford to be without.

BOOKS OF THE WEEK.

Almanach de Gotha, 1883. New York: B. Westermann & Co.
Brayton, G. A. Defence of Samuel Gorton and the Settlers of Shawomet. [R. I. Historical Tracts, No. 17]. Providence: S. S. Rider.
Brehms Thierleben. Chromo edition. Parts 61, 62. B. Westermann & Co.
Browne, Irving. Law and Lawyers in Literature. Boston: Soule & Bugbee.
Chamberlain, Mrs. Glossary of West Worcestershire Words. London: Trübner & Co.
Dresser, C. Japan: its Architecture, Art, and Art Manufactures. London: Longmans; New York: Scribner & Welford.

WALKER'S

Political Economy.

By Francis A. Walker, President of the Massachusetts Institute of Technology, late Superintendent of the Census. (Volume V. of The American Science Series.) 8vo, $2 25.

President Walker's economical works on 'The Wages Question' and on 'Money,' not to speak of his great statistical Atlas of the United States, have given him a prominent position on both sides of the Atlantic. In contributing the present work to the "American Science Series," he brings to bear not only the powers shown in his former writings, but the experience of many years as teacher of political economy in the chair he occupied at Yale before accepting the presidency of the Massachusetts Institute of Technology.

HENRY HOLT & CO., New York.

FREE TO ALL.

D. M. FERRY & CO.'S

ILLUSTRATED, DESCRIPTIVE, AND PRICED

Seed Annual for 1883

Will be mailed FREE to all applicants, and to customers of last year without ordering it. It contains about 175 pages, 600 illustrations, prices, accurate descriptions, and valuable directions for planting 1,500 varieties of Vegetable and Flower Seeds, Plants, Fruit Trees, etc. Invaluable to all, especially to Market Gardeners. Send for it.

ARTISTS' MATERIALS

And Architects' and Engineers' Supplies of every description,

84 WASHINGTON STREET, BOSTON.

☞ Catalogues free on application.

*IN any family, whether large or small, but es-*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address Publisher of the *Nation*.

The Nation.

NEW YORK, THURSDAY, JANUARY 18, 1883.

The Week.

If President Arthur intends to carry on his Administration upon civil-service reform principles, not only as to the clerks in the departments, but also as to Presidential appointments, he would do well to look after the doings of Mr. Hatton, the Assistant Postmaster-General, who manages the larger part of the Post-office "patronage." The people of Camden, Maine, are holding indignation meetings to protest against the appointment as Postmaster of Mr. W. B. Rich in the place of "the present incumbent, Alden Miller, a wounded soldier, who did not pay his party assessment." And a strong protest is going to the Senate against the confirmation of Mr. W. H. Tubbs, nominated for reappointment as Postmaster at New London, Connecticut, it being alleged that Mr. Tubbs had been guilty of some exceedingly questionable proceedings as Assistant Postmaster under his predecessor, for which he is now under criminal prosecution. The recent exposure of Mr. Hatton's methods of making postmasters all over the country serve the interests of the Stalwart organ in Washington, the *National Republican*, of which he is part owner, seems to justify the inference that under Mr. Hatton's administration appointments and reappointments of postmasters will depend not only on a satisfactory answer to the question whether the candidate will be an active party worker and pay his assessments, but also whether he will be an efficient agent for Mr. Hatton's newspaper.

The St. Louis *Republican* publishes an extract from a letter addressed by General Sherman to a friend in that city, in which the General declares that "no earthly consideration will induce him to embitter the remainder of his life by holding out the least prospect that any possible combination of circumstances or events will make him a Presidential candidate." The General then goes on to say:

"There are plenty of good men able and willing to undertake the office—abler than I profess to be, and with as much patriotism. The President at best is but a figurehead. Congress is the real power in this Government, and any President who undertakes to stamp his individuality will find himself tied hand and foot by laws. I ask you to assert with emphasis that you know my unalterable determination, and that it will be idle to appeal to me. The country is perfectly safe, and no amount of party clamor can seriously disturb its harmony or prosperity."

This is eminently sensible talk. General Sherman has won a military reputation and a popularity which an attempt at playing a political rôle would be more apt to endanger than to increase. No candidate for the Presidency can in these days run on the mere strength of his military renown. General Sherman probably underestimates the power of the Presidential office; but he is right when he apprehends that a mind as active as his is would, on the political field, be constantly in danger of getting into trouble.

The new Governor of Michigan, Mr. Begole, opens his inaugural message with a suggestion that the term "governor" is "a harsh and inappropriate" designation for the office which he occupies. He says his position is really that of a "principal servant," and his feeling is that a servant of the people ought not to be called their "governor." But there are objections also to the use of Servant. Long use has accustomed us to talk about public servants and the public service; but, apart from association, there seems to be something repulsive and odious in the idea of a free American citizen being called a Servant. Does it not suggest menial, or what the Penal Code calls "servile," labor rather than public employment? To be sure we call the elective body a "sovereign," but the servants of a sovereign suggest a class known in literature and politics as "pampered menials," and are not both terms inherited from monarchical times? The word "help," introduced to meet the difficulties presented by the word "servant" in private life in the earlier and purer days of the Republic, seems to cover the ground exactly, and we do not see why it should not be extended to public employment wherever the sensitiveness of the community demands it. "Principal Help" would wound no one's feelings as the name of the Governor, while "Second Help" would be a good substitute for Lieutenant-Governor.

The bill restoring Fitz-John Porter to the rank he held in the regular Army before his dismissal twenty years ago, but without pay or compensation, has passed the Senate. It is to be hoped it will pass the House, but this is not so certain. Nothing really stands in its way but prejudice, which probably no argument or discussion would overcome. The case is one of the most remarkable on record, in that its history records the conversion of nearly every competent authority who has examined it from a strong conviction of guilt to a strong conviction of innocence. There is hardly anybody now of note who adheres to the decision of the first court-martial except General Logan, and his opinions on it are clearly mingled with, and can hardly be separated from, the recollections and traditions of the period of Porter's condemnation, when his treachery was one of the dogmas of all patriotic people. It is based, too, on an assumption of which the history of every war furnishes a score of refutations, that dissatisfaction with or contempt for a general makes a subordinate officer ready to betray the army and the cause. The fierce grumbler is one of the best known of military characters, but in most cases he is among the hardest fighters.

An interesting analysis by *Bradstreet's* shows that of the 2,328 failures reported during the last quarter of last year, 2,004, or nearly 86 per cent., were of traders ranging in commercial importance from "no financial standing worth taking into account" to a capital of $5,000. The capital of the remaining 324, or about 14 per cent., ranged from the last-mentioned amount to $350,000, only eleven having more than $100,000. Returns for the second week of this year show an increase of 139 in the number of failures as compared with the corresponding week of last year. In 1883, of 342 traders 307 had a capital of $5,000 or less. In 1882, of 203 traders 181 had a capital of $5,000 or less. The conclusion is that although there are more failures, the proportion of small cases is such as to prevent any widespread anxiety.

We are not sure to what homicide the pathetic article in the Lynchburg *Virginian* on which we comment elsewhere referred, but we believe it was a social homicide of an awful kind which occurred at a ball in Bedford County, Va., on January 8. A gentleman named Clayton was calling out the figures, and one of the ladies, a "débutante," Miss Idelle Read, corrected him in a way that irritated him a little, and he answered in a tone which offended one of her admirers, Mr. Armstead Barksdale, who thereupon remonstrated with Mr. Clayton. "Hot words passed, and finally Barksdale drew a knife, and, springing on Clayton, inflicted a horrible gash from the right eye to the back of the neck, severing the jugular vein, and causing death almost instantly. The scene that followed was sickening. The ball-room floor was a puddle of blood, and the gay white dresses of the girls were bedraggled with blood." Some of them fainted, and then there followed a "mêlée" among the men, in which, however, no one else was hurt. Here we have again the big butcher-knife concealed about the person even at a ball-room, the fierce temper, so unused to control that a few "hot words," even in the presence of women, lead to instant and brutal murder, the closing mêlée during which the murderer escapes—all, we are sorry to say, frequent incidents of the social homicide. This one had a happier termination than most of them, for the murderer showed sufficient sense of decency to shoot himself on the following day.

There was a typical business homicide at Monroe, La., two days ago. "L. D. McClain and Mr. V. C. McCollough, both prominent citizens, became involved in a difficulty over a business transaction, which resulted in the death of the latter gentleman." McClain owed McCollough some money. They met in the street, and McCollough asked for the money, which McClain promised to pay the next day, and they separated. But McClain stopped, and turned, and there were "hot words," and the debtor drew a pistol, and there was a scuffle, and he shot his creditor "just above the right eye," killing him on the spot. We can easily imagine the gloom which this affair will produce in Monroe, and how deeply it will be deplored by the whole State of Louisiana; but this will do poor McCollough very little good, and it must be admitted that it will have a chilling effect on people who propose to lend money in that State.

Ex-Senator Dorsey's letter announcing his resignation of the Secretaryship of the Republican National Committee is one of his most

characteristic performances. He tells the world once more what a great man he is, and what extraordinary things he has done as a political manager, and how he enjoyed the confidence of General Garfield and General Arthur. And then he informs the National Committee that the only reason why he can no longer be their Secretary is that his eyes are bad. And he explains his absence from the last two meetings of the Committee by the fact that he had "engagements elsewhere." What these "engagements elsewhere" really were he does not say. Neither does he dwell upon the possible engagements elsewhere which might in the future prevent him from attending the meetings of the Republican National Committee, unless those meetings be held, for his personal accommodation, in jail. If a hundred years hence some antiquarian should find among old records this letter of Mr. Dorsey's, and nothing else about him, he would be apt to say, "What a pity such a great and useful man had bad eyes and engagements elsewhere!" But if he should at the same time discover a record of the Star-route swindles, he would say, "How could a great party permit such a man to occupy a position among its leaders, and what an impudent impostor he was to strike such grand attitudes before the American people while on trial under an indictment for conspiring to rob the public treasury."

A curious despatch from Washington was published yesterday. It reported a rumor that Senator Cameron, of Pennsylvania, "will not, under any circumstances, be a candidate for reëlection in 1884." And to clinch the matter, it was further reported that Colonel Quay, one of Boss Cameron's principal henchmen, was, with others, "in deliberation all yesterday afternoon to determine the selection of his successor." Why Mr. Cameron's henchmen should at this early day be "in deliberation" all of an afternoon to "determine" two years ahead who is to be Mr. Cameron's successor, is mysterious. No wonder the report goes on to say that "their session was very stormy." But, notwithstanding "Senator Cameron's declination, as delivered to Quay, is said to be positive and imperative," the opponents of boss-rule in Pennsylvania had better be careful to secure to themselves, or rather to the Republican party at large, the power to "determine the selection of Mr. Cameron's successor," and, above all things, not to permit Mr. Cameron to be tempted to change that resolution which at present is said to be so "positive and imperative." Mr. Cameron might yield to the seduction of opportunity at the last moment, and accept the Senatorship once more for himself. Camerons are weak in that respect.

We are sorry to see a disposition in some of our contemporaries to ridicule the efforts of Jay Gould to do good. Mayor Stowell, of Milwaukee, in acknowledging Gould's subscription of $500 to the fire-relief fund, takes a different view of the subject. He says: "It is timely, and should rank you with the noble philanthropists who distinguish this age above all previous eras in the world's history." It seems to be thought in some quarters that Gould cannot be "a noble philanthropist" because he is a somewhat worldly and hardened "financier." But this does not prevent him from being a noble philanthropist, but, on the contrary, furnishes him with the required capital to set up as one. His time has been fully occupied hitherto in accumulating this, and in his case the task has been more than usually difficult and absorbing on account of the great risks which the peculiar nature of his financial operations involves. He has far less weight of that sort on his mind now than in the old Fisk days, however, and we are not surprised to see him begin to do good. In his old age we see no reason why he should not become an expert philanthropist. He may of course make blunders like other men. His stopping the night trains on the elevated roads, in order to discourage late hours, and thus elevate the morals of the public, is just one of those little mistakes which the well-meaning but inexperienced philanthropist would be likely to make; but he will no doubt improve continually as he becomes more and more accustomed to doing good.

The facts in the Miller extradition case, which is now under consideration by the State Department, are said to be these: Miller, in 1881, broke into a farm-house in Allegheny County, Pa., attacked the inmates, and carried off a quantity of Government bonds and other property. He was tried for the burglary, and sentenced to eight years in the Western Penitentiary. After serving nearly two years of his term he escaped, and was traced to Toronto. Under our extradition treaty with England burglary is not an extraditable crime, but assault with intent to murder is; so, in order to get him back, an application was made for his surrender, on the ground of the assault committed in the course of the burglary. The extradition papers were regularly issued, and Miller was brought back, but immediately on his return he was clapped into prison to serve out the remainder of his term for burglary, and he has never been tried at all for the crime for which he was extradited. The matter has been brought up in the Canadian Parliament, and resolutions passed demanding an explanation. The case again calls attention to the very unsatisfactory condition of our relations with England relative to extradition. In the Winslow case the question of the right to extradite a man for one crime and try him for another was raised, and the difficulty is still undisposed of, though some of the courts have cut the diplomatic knot by holding, as Judge Hoffman in California did the other day, that the criminal can set up a want of jurisdiction to try him in such a case. But whether Miller could resort to *habeas corpus* and liberate himself, seems very doubtful, because he is lawfully detained under his original sentence, however irregular his recapture may have been. On the other hand, it is perfectly clear that such proceedings as those said to have been taken in the Miller case are not contemplated by our extradition treaty with England. It is evident that we need a new extradition treaty between the two countries which shall regulate the international criminal code more minutely than the present instrument does. The intricacy of extradition questions as they exist is of no advantage to anybody in either country but criminals.

There appears to be a strong desire among English Liberals to regard the Irish question as settled, and the House of Commons as released from the necessity of devoting any more attention to Irish affairs. Mr. Forster gave emphatic utterance to the thought of which this wish is the father in a recent speech in Scotland, and the London press, except the *Daily News* and the *Pall Mall Gazette*, eagerly echoes it, and many of the moderate Liberal orators are joining in the chorus. The Irish have once more—for about the twentieth time—received all they are entitled to, and, what is more, all they are ever going to get, and if they are not quiet now, they ought to be thoroughly and perennially "repressed." Mr. Chamberlain, however, by no means shares these comfortable views, and we believe Mr. Gladstone does not do so either. The former pointed out at Birmingham that though much had been done for Ireland, a great deal remained to be done in the line of putting the country on a footing of equality with England as regarded the suffrage and the government of municipalities, and he warned his hearers that the Irish question would never be settled or out of the way until a sense of political responsibility had been implanted in Irishmen by prolonged practice in the management of their own affairs. Irish members of Parliament, in other words, must in some way be turned into legislators, and Irish voters, in voting for members of Parliament, must learn to feel that they are voting for legislators, and not simply for clever brawlers and revilers. Until these things have been brought about, all hopes of relief from the Irish question on the part of the English public are chimerical.

We believe it is no secret that Mr. Gladstone takes this view very strongly—that he holds that the growth of Irish national feeling during the past twenty-five or thirty years has been so great that no permanent pacification of Ireland can be looked for until it is in some manner satisfied. If he were to remain in office, he would doubtless set himself to satisfy it, for no such idea as this has ever lain long unfruitful in his mind. But it is becoming pretty clear that the great days of his legislative activity are over. He is not a man of the Palmerston type, who can make the cares of office bearable even in extreme old age by taking a semi-jocose view of all human affairs, nor yet a man of the Melbourne type, who thinks the best thing to do with a troublesome question is to let it alone. If he were to remain in office, he would, under what seems to be a law of his nature, have to embody his ideas in bills and try to get them passed, and to the endless toil and endeavor which this now entails he is probably no longer equal. We may, therefore, expect to see him retire after the coming session,

even if the doctors do not insist on it sooner. When this happens, there will probably be a sharp collision on the Irish question—which is sure to be burning, no matter who is in office—between the Radical wing of the party, as represented by Mr. Chamberlain and Sir Charles Dilke, and the Conservative wing, represented by Lord Derby and Sir William Harcourt. Both of the latter are, in the Irish matter, in favor of the old English remedy of "repression," as it is called there, or "troops," as it used to be called here, and they probably represent the prevailing sentiment among the class, whether Liberal or Tory, which hates Gladstone, and, on the Irish question and all other questions, takes its stand with the rights of property. No power short of Mr. Gladstone could keep two sets of men so discordant in opinion in the same Cabinet. When once his influence is removed they must separate.

The protestations of innocence made on the scaffold by some of the men recently convicted of murder in Ireland on evidence which no reasonable man could for a moment gainsay, have excited a good deal of attention in England, as some of the Irish agitators have treated them as proof of innocence. The controversy has caused the disinterment of a little religious manual, entitled 'What Every Christian Must Know and Do,' widely sold in Ireland at the price of one cent, and bearing the late Cardinal Cullen's confirmation, which is believed by some to throw some light on the matter. Whether it does or no, it offers Catholic theologians an opportunity of making an explanation of some kind. It says that when absolution is given by the priest, "your sins are forgiven, the pains of hell taken away, and your soul made bright and beautiful like an angel of God, and the kingdom of Heaven is yours." This, of course, suggests the theory that the murderer on the scaffold may, in good faith, after absolution, declare himself "innocent as the child unborn." The definition of murder in the Manual points in the same direction. It describes murder as "*unjustly* taking away another's life"—not, be it observed, unlawfully—and a foot-note on this adds: "It is not a sin to desire some temporal misfortune to another to make him cease to give scandal, or be converted, or not persecute the good." It is easy to see how readily in the mind of an excited peasant this definition and elucidation might be made to cover obnoxious landlords, agents, bailiffs, and even policemen and judges.

The Egyptian crisis has advanced one step nearer a solution, by Lord Dufferin's formal withdrawal from the Financial Control on behalf of England. This is, in other words, the restoration to the Egyptians of complete administration of their finances, which was surrendered to France and England by the late Khedive, and which was one of the causes of complaint on which Arabi most relied when getting up the late war. France has held on to the Control all along, and would probably hold on to it now if the Khedive did not abolish it, which he probably will in a few days. In lieu of the Control, Lord Dufferin recommends the appointment of some kind of European financial adviser. Such an officer before Tel-el-Kebir would probably have been of but little value, because he would not have been listened to. Now, he will probably do nearly as well as the Control.

The difficulties of the French in dealing with the various phases of British management in Egypt are very curious, and are described with great naïveté in the newspapers. The normal temper of the press toward England is rather angry, but the objurgations it bestows on her never end in any practical suggestion. It objected strongly to the invasion, but produced no plan of preventing it. It objected to the occupation after the war, also, but was unable to say how it could be helped. It has, too, protested loudly against England's undertaking the reorganization of Egypt alone, but has no way of dealing with the determination of the other Powers not to interfere with her. It now protests against the abolition of the Control, and warns the British that they will have to be very careful what they offer in its place, but it does not indicate what will happen if the British pay no attention, and are not careful.

The arrest of that thoroughly absurd person Prince Napoleon (Jerome), as he used to call himself, for placarding the walls of Paris with an announcement that the Republic was a failure, and that the remedy was Bonapartism, is the latest French sensation. Some foreign critics are disposed to regard the arrest as a mistake, and hold that the Prince's manifesto should have been treated with silent contempt, but the Chamber evidently thinks otherwise, and sustains the action of the Ministry by a large majority. He is not a great or important personage, but he is the heir of what was twelve years ago an apparently great dynasty, and, although he has been repudiated by its present adherents, he is the father of Prince Victor, whom they all treat as its present chief, and the rightful claimant of the throne. It would hardly do to pretend wholly to ignore the acts of such a man at such a time. On the other hand, it will hardly do to make too much of him. It will probably be wise to prosecute him like any other man for the violation of a police regulation, but it would be a great mistake to send him into exile as a dangerous person, and have his son grow up abroad as another Young Pretender. He would be treated with half-royal consideration by foreign courts, and form a little court of his own with sham state and dignity, surrounded with malcontents, who would send glowing accounts to the Bonapartist papers in France of the virtues and graces of their young master, and keep up a propaganda which would be impossible if their chief were an idle young gentleman of leisure living in Paris, and no more remarked or remarkable than scores of others of his kind to be found at the clubs. In fact, a French Pretender is now nowhere so harmless as in France, for in his case, more than in most, 'tis distance lends enchantment to the view.

As to Prince Napoleon, no one but himself pretends that he has any importance. He has failed in every position in which he has been placed, both civil and military, is old, and afflicted with a disease which, if not certainly mortal, unfits for care or responsibility. Of Prince Victor, the son, little or nothing is known. He is not long out of college, and has thus far nothing in his favor but the will of the Prince Imperial, who bequeathed the Empire to him, the favor of the ex-Empress, and the support of Paul de Cassagnac, the brawling editor of the *Pays*. These aids could, however, hardly count for much, unless the French people swallowed that curious theory of the Bonapartists, that although there is no such thing as hereditary right to rule, and all power should be based on a plébiscite, yet every properly conducted plébiscite is sure to find the right man to rule in the eldest male of the house of Bonaparte, or in the male designated for the succession by the last reigning member of the house or his acknowledged heir. A more curious mixture of the divine right of kings and of popular sovereignty was probably never concocted, but there is no proof that it ever at any time took hold of the French imagination. There has never been a freely elected Bonaparte, because every Bonaparte, when offering himself for election, has always stood ready with the army to see that the Noes got nothing even if they were in a majority. It is said that the Comte de Chambord is also preparing a manifesto to the French people. If so, it shows the wisdom of the majority of the French Senate in refusing to issue an address to the people on the occasion of Gambetta's death. It is now the game of the Monarchists to emphasize as much as possible his importance to the Republic, and to exaggerate the greatness of his loss; any Republican manifestations on the same subject which went beyond funereal honors, would help them in spreading the notion that his disappearance from the scene prepared the way for another revolution. M. Floquet's panicky motion in the Chamber of Deputies, calling for the expulsion from France and Algiers of members of former French dynasties, is open to much the same objection. It countenances the belief that the country is passing through some kind of a crisis, which makes dangerous the presence on French soil of half-a-dozen private gentlemen who have lived there peaceably for the last twelve years.

One good result, and perhaps the only one, of Gambetta's failure when he took office last year, was the demonstration which it afforded that he was not a necessary man—that France could get along when even he could not form a stable Ministry. Thiers's retirement did a world of good in the same direction. Anything which fosters the belief in the French mind that any one person is a serious loss, prevents the growth of the political self-reliance from want of which France has suffered so much. This is so true that it makes anything beyond funereal honors to a great politician almost mischievous. There is a constant tendency in French opinion toward the creation of necessary men or society savers, which it is the first duty of French statesmen to resist, as the great impediment to the firm establishment of free government, and it sometimes, as in the present case, may have to be resisted at the cost of seeming to fail in respect for a great memory.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 10, 1883, to TUESDAY, January 16, 1883, inclusive.]

DOMESTIC.

AT the Cabinet meeting on Tuesday, the Civil-Service Bill was the principal topic of discussion. The point was made that the section of the bill authorizing the Commission to employ a chief examiner was unconstitutional, as the appointment should have been vested in the President or the head of one of the departments. It was finally concluded that the difficulty might be averted by the President appointing the examiner upon the recommendation of the Commissioners. The bill was then signed by the President.

On Wednesday the Senate took up the Tariff Bill, and Senator Morrill made a speech in support of it. On Thursday the Fitz-John Porter Bill was passed by a vote of 33 to 27, Senators Cameron, Hoar, and Sewell voting with the Democrats for the bill. This bill sets aside the finding of the court-martial in 1863, which deprived General Porter of his rank in the Army and his citizenship. An amendment, providing that restoration to the Army should not entitle General Porter to pay for the time he has been deprived of his rank, was adopted. On Friday Mr. Ingalls introduced a Presidential disability bill, which was referred to the Judiciary Committee, and the Senate went into executive session. On Saturday the Agricultural Bill was discussed. On Monday the Tariff Bill was again discussed.

The House on Friday passed the Shipping Bill by a vote of 159 to 54, but the drawback, free-ship, and free-materials provisions adopted in Committee of the Whole had been stricken out. The bill provides that vessels duly registered, except coasting vessels, shall be deemed vessels of the United States, so long as they shall be wholly owned and commanded by citizens of the United States, and that all foreign articles and materials for the repair of vessels engaged in the foreign trade are to be admitted free of duty. The bill, as passed by the House, will not materially affect the ship-building interests of the country one way or the other. On Saturday the Fortifications Bill was passed. It appropriates $175,000 for the repair, and $100,000 for the armament of fortifications, and $50,000 for torpedoes for harbor defences. Total, $325,000. A bill was passed fixing the pension of a person who has lost an eye in the military or naval service. The House on Tuesday passed the bill amending the act regulating the removal of causes from State to Federal courts.

The House Committee on Foreign Affairs on Friday authorized a resolution to be introduced asking the President to make a more liberal treaty with the German Empire. Under the present treaty certain American citizens have been wrongfully forced to bear arms, while in other cases individuals have evaded the duties of German citizens by carrying papers of American citizenship when they had no right to them.

President Arthur gave the first state dinner of the season at Washington on Friday, in honor of General and Mrs. Grant.

The President has withdrawn the nomination of John F. Olmstead for District Commissioner of the District of Columbia, as it had become evident that the nomination would not be confirmed.

Ex-Senator Dorsey sent a letter to Mr. Jewell, Chairman of the National Republican Committee, on Tuesday, offering his resignation of the Secretaryship of the National Republican Committee, and giving a very pleasing account of his past party services.

The Prime Minister of British Columbia having requested Captain Stodder, of the United States revenue steamer *Oliver Wolcott*, to lend his assistance in suppressing Indian troubles at Fort Simpson, because no British war vessel is now in those waters, Secretary Folger has directed Captain Stodder to be present with his ship and prevent violence, but not to use force unless in repelling attacks on whites, and then only on a written request from the British Columbia authorities.

The thirty-first annual meeting of the United States Agricultural Society was held on Wednesday at the Department of Agriculture. The President, the Hon. John A. King, of New York, delivered his annual address, in which he gave a sketch of the operations of the Society until they were stopped by the war, and showed the necessity for beginning work again as a central Board of Agriculture, chartered by act of Congress, and having on its roll of membership many leading citizens. The officers of the past year were reëlected.

The trouble about the payment of the physicians who attended President Garfield has apparently been settled, as all of them have accepted their warrants and drawn the money upon them.

An attempt was made in the Ohio Legislature to pass a joint resolution endorsing the action of Congress in passing the Civil-Service Bill on Thursday, but it was referred to the Committee on Federal Relations. In the State House of Representatives a resolution thanking Mr. Pendleton, and congratulating him on the passage of the bill, was passed, but the Democrats opposed it and refused to vote.

Senator Salisbury was reëlected United States Senator from Delaware on Tuesday, receiving 8 votes in the Senate and 18 in the House. Senator Ransom was reëlected in North Carolina by a total vote of 108 against 47 for Johnson. Senator Harris was reëlected in Tennessee. Senator Garland was reëlected in Arkansas by an almost unanimous vote.

The Republican joint caucus of the Illinois Legislature on Thursday nominated Governor Cullom for United States Senator. The House on the same day adopted a resolution declaring any officer of the State ineligible for United States Senator, if elected while in office. This was intended to bar Governor Cullom, but as he received in the caucus three more votes than a majority of the whole Legislature, his election is regarded as assured.

At a meeting of the Democratic State Committee of Maine on Thursday, it was voted hereafter to make straight party nominations for all State officers, thus abandoning fusion.

Governor Stoneman, of California, was inaugurated Wednesday. In his inaugural address he took strong grounds in favor of compelling corporations to bear their share of taxation and submit to regulation of fares and freights; deprecated the consulting of partisan purposes in the reapportionment of the State, and demanded an economical and faithful administration of public affairs.

The Grand Jury of Davidson County, Tenn., on Saturday, presented an indictment against the defaulting Treasurer Polk for embezzlement and larceny of $480,000. It is stated that the Judge of the Criminal Court will fix a charge of conspiracy upon certain persons for obtaining funds from Polk knowing them to be funds of the State. Polk arrived in Nashville on Saturday in charge of officers.

A statement prepared by the Commissioner of Agriculture of South Carolina shows that there are twenty-seven cotton-mills in operation or nearing completion in that State, with an aggregate capital of $4,547,000. They give employment to 4,262 hands, and pay out annually in wages $728,900. In 1880 there were eighteen mills in the State, with a total capital of $2,294,600.

The Newhall House, at Milwaukee, Wisconsin, was totally destroyed by fire early Wednesday morning. The hotel was full of guests, badly built, very combustible, and unprovided with means of escape, the consequence being that over one hundred persons lost their lives, but the exact number has not yet been ascertained. It was one of the most shocking disasters of the kind that have occurred for many years.

The Planters' House, St. Louis, was slightly injured by fire early Sunday morning. All the guests were saved, but three employees were killed.

The prevalence of smallpox in Baltimore has caused the Health Department of Washington to adopt extraordinary measures to prevent the infection from spreading there. The Health Officer sent one of his subordinates to Baltimore to investigate the matter, and he reported that there were about 2,000 cases in that city, only 800 of which were reported by the Baltimore Health Department.

Lot M. Morrill died at Augusta, Me., on Wednesday. He was born in 1818, and became Governor of Maine, United States Senator, and Secretary of the Treasury by appointment of President Grant, to succeed Mr. Bristow. At the time of his death he was Collector of the Port of Portland.

The annual report of the President of Harvard College for the academic year 1881–2 was submitted on Wednesday. The number of special students in the University continues to increase, and the Faculty has finally admitted them to all the privileges of undergraduates, except that of obtaining a degree. The President says that the increased attention given to physical exercise and athletic sports during the past twenty-five years has been, on the whole, of great advantage to the University, and that the average physique of the students has been much improved; and he gives statistics showing that the majority of students prominent in athletic sports not only have not neglected their college work, but rank high in their classes. The library is greatly in need of funds to be applied to administration and service. The new laboratory, which is to cost $115,000, will be started in the spring. The measures taken to prevent the continuance of the annual deficit have been successful, and for the coming year there will probably be a small surplus. Since 1869 $2,300,000 has been spent for land and buildings. The attention of friends and supporters of the University should now be turned to the increase of the quick capital, or invested funds, and especially of unrestricted funds and funds devoted to comprehensive purposes. The attempt to teach the Chinese language has been a failure.

FOREIGN.

A manifesto issued by Prince Napoleon was published in the *Figaro* and placarded on the walls in Paris on Tuesday. It dwelt on the incapacity and impotence of the Government, the division of Parliament, and the decadence of the Army and finances; and declared that religion was attacked, and that the observance of the Concordat could alone establish religious peace. The manifesto was torn down from the walls, the *Figaro* was seized, and Prince Napoleon was arrested. In the country at large the affair seems to have excited little interest.

The remains of Gambetta were interred at Nice on Saturday. Only three speeches were delivered, Gambetta's family having objected to any more. All the shops remained open. Gambetta's father informed the delegation from Paris which endeavored to induce him to alter his decision in regard to the disposition of his son's remains, that after his death Paris might take them.

The French Senate has elected Senator Le-Royer President of this body. The Chamber of Deputies elected M. Spuller, member from the Department of the Seine, Vice-President. M. Challemel-Lacour made a proposal that the Republican Senators should issue an address to the country on Gambetta's death, but on the submission of the proposal to the several sections of the Republican Senators, the Left Centre and the Left objected to it. A meeting was held at which it was resolved that such an address would add nothing to the

grandeur of Gambetta's funeral. One objection urged was that such an address would appear like an admission that the Republic was in jeopardy. The decision not to issue the address is regarded as a rebuff to the Gambettist Senators. The members of the Extreme Left in the Chamber of Deputies have decided to demand of the Government an inquiry as to the origin and progress of the anarchical movement in France

At the trial of the Anarchists at Lyons on Monday, Prince Krapotkine, in addressing the court in his own defence, sought to show that the so-called Internationale did not exist. Anarchical ideas, he declared, were spreading, despite all efforts to suppress them. He said if he were condemned the result would be to attract proselytes to the cause. He had been arrested, he averred, because he was a foreigner, and because it was thought desirable to gibbet an effigy of the Internationale. The eyes of all workmen in France and abroad were fixed upon this trial, he said; but when they found that the Internationale did not exist, they would recognize it as merely a prosecution of one class by another. Prince Krapotkine concluded by predicting that ten years would not elapse without the occurrence of a social revolution. He conjured society to avert it by studying the social question instead of prosecuting anarchy.

In the French Chamber of Deputies, on Monday, M. Duclerc, Minister of Foreign Affairs, said that during the Egyptian hostilities the attitude of France was to England that of a confiding friend separated by temporary divergences. After the suppression of the rebellion, France favored the reëstablishment of the *status quo*. Pending overtures from England, the latter having wished alone to assume the task of regulating the situation, France resumed her liberty of action, the Government being certain that this course would meet the approbation of the Chamber.

Lord Dufferin has informed the Egyptian Ministry that Great Britain withdraws from the Control, and suggests the appointment of a European financial adviser who will not interfere with the public administration. It is expected that the Khedive will, in a few days, issue a decree abolishing the Control on account of this withdrawal.

Sir Auckland Colvin, the English Controller-General in Egypt, and the Private Secretary to the Control have tendered their resignations to the Khedive, who has accepted them.

The British Government has issued a note in regard to Egypt, which proposes that, in order to avoid any abuse of the freedom of the Suez Canal, it shall be enacted that in time of war a limitation shall be placed on the time during which the vessels of a belligerent power are permitted to remain in the canal, and that no troops or munitions of war shall be disembarked, and no hostilities shall be permitted in the canal or its approaches, or anywhere in the territorial waters of Egypt, even in the event of Turkey being one of the belligerents. The recurrence of an emergency resembling the late rebellion is provided for by a clause excepting measures for the defence of Egypt from the above restrictions. Egypt shall take all measures in her power to enforce the conditions imposed upon ships of belligerent powers using the canal. No fortifications are to be erected on the canal or in its vicinity. Nothing in the agreement shall be construed as curtailing the territorial rights of Egypt further than is expressly stipulated. Among other subjects the note declares the question of the suppression of slavery and the slave trade to be one which the British Government has much at heart, and that it will miss no opportunity of advising the Khedive to take steps calculated to attain the end in view.

The Prince of Wales on Saturday unveiled at the Royal Military Academy at Woolwich the statue which was erected to the memory of the French Prince Imperial by the subscriptions of 25,000 officers and men of the British Army, at a cost of £4,310. The Prince of Wales was accompanied by his two sons and by the Dukes of Edinburgh and Cambridge. The Queen sent two wreaths. Gen. Lord Wolseley, Prince Lucien Bonaparte, the Duc de Bassano, and a large and distinguished company assisted at the unveiling of the monument. In the course of his remarks the Prince of Wales said it was obvious that the ceremony was not a political one, in any sense of the word. "We are simply unveiling a monument to the memory of a young and gallant prince who fell fighting for the Queen of England."

A Parliamentary return reports that the depreciation in the value of the crops in Ireland for the year 1882, in consequence of the unfavorable harvest, aggregated the sum of £5,118,167, as compared with the favorable year of 1881, and £2,527,664 as compared with the average of the preceding ten years. The bulk of the loss was on the potato crop, which was £4,317,687 as compared with the year 1881, and £2,274,431 as compared with the average for the preceding ten years.

A great number of arrests were made in Dublin on Friday evening and Saturday morning under the Crimes Act. A number of the persons arrested had arms in their possession, and are charged with conspiracy to murder. The arrests were effected in various parts of the city. The prisoners are principally of the artisan class. The police are still following various alleged "clews" to the Phœnix Park assassins. Knives, said to have been used in the murder, were found behind the house of one of the prisoners arrested on Friday and Saturday, and the authorities are said to be convinced that they are the identical ones used; but as one of the proofs is that they "fit the cuts in the clothes of Lord Frederick Cavendish and Mr. Burke," not much reliance can be placed upon this report. The authorities, finding that there was no chance of bringing the guilt home to any one of them, have decided to group all of the prisoners together on a general charge of conspiracy. Most of them were arrested on information received that they belonged to a secret society which held a special meeting in Dublin, and had resolved to assassinate certain of the more active members of the Dublin police force. One of the prisoners is a man named Carey, a member of the Dublin Municipality, who has long been suspected of being concerned in some of the worst proceedings of the revolutionists.

In the Queen's Bench Division of the High Court of Justice on Thursday, Mr. Justice Field gave judgment against Mr. Charles Bradlaugh in his action against Mr. Henry D. Erskine, Deputy Sergeant-at-Arms of the House of Commons, for an assault on the occasion of Mr. Bradlaugh attempting to enter the House of Commons and take his seat as a member for Northampton Borough, after a resolution had been passed prohibiting him from so doing. Mr. Justice Field cited precedents showing the power of the House to control its own proceedings.

The Crown Prince and Princess of Germany have declined to receive any presents at their silver wedding, and request those who proposed to make them to spend their money in alleviating the distress caused by the inundation.

The town of Raab, Hungary, was inundated on Tuesday, the 9th. A considerable number of lives were lost, and the inhabitants abandoned the town. Several villages in the neighborhood of Raab have been ruined by the floods. In the Hungarian Diet on Wednesday Herr Tisza, Minister of the Interior and President of the Council, stated that he had sanctioned the payment of the sums of money required to relieve the wants of sufferers by the inundation of Raab, and that private charity had also begun the work of relief. It is officially reported that 10,000 persons are now roofless, and that between 300 and 400 houses are inundated and partially destroyed. The Prussian Landtag has voted a grant of 3,000,000 marks for the relief of the sufferers in the inundated districts. On Friday the despatches said that a portion of the city of Gran, on the Danube, was flooded, and that there would certainly be a famine in the inundated districts of Hungary unless assistance was prompt. The extent of the flooded country in the Middle Rhine district, exclusive of the tributaries of the river, is computed at 700 square kilometres. The Emperor William has increased his contribution from the imperial funds for the relief of the sufferers from the flood to 600,000 marks. On Tuesday a despatch from Pesth stated that the Danube had subsided everywhere above Mohacs, but the fugitives could not return to their homes, as their houses were destroyed or filled with ice.

The Spanish Cortes reassembled on Wednesday. Señor Sagasta, President of the Council, addressing the Senate, said the new Ministry would adopt the financial policy of Señor Camacho, the late Minister of Finance, except in regard to the sale of property of the State. The budget for the current year, he said, would show a surplus. The payment of the interest on the public debt would be secured without having to resort to a sale of State forest lands. The new Minister of Justice, Señor Giron, announced at a Cabinet council on Thursday that he proposes to abolish the hanging of women; also the suppression of newspapers, leaving suspension the highest press penalty. The new Minister for the Colonies has informed the Cuban representative in the Chamber of Deputies that in all social and political questions he will follow the policy of his predecessor.

The police in Rome on Friday evening made domiciliary visits to 135 houses and arrested 125 persons. They also made sixty-two seizures of newspapers containing revolutionary accounts of Overdank's life and so-called martyrdom. It is believed that the arrests will lead to the discovery of important information.

Italy has demanded from the Porte redress for a recent affront to a servant of the Italian Consul at Tripoli, and Count Corti, the Italian Ambassador at Constantinople, has been instructed to make representations in regard to certain false reports which caused the Porte to demand the recall of the Italian Consul.

A despatch from London on Monday said that telegrams from official sources in Constantinople reported that some Circassians attempted on Sunday to assassinate the Sultan. A woman divulged the plot. The Albanian body-guard met and defeated the Circassians in the vicinity of the Sultan's apartments. Several men were killed in the encounter.

A despatch from Sofia on Monday said that the reports that preparations are making for an early rising of the Mussulmans in the mountain districts of Eastern Rumelia have been confirmed. The authorities have seized several cases of Martini rifles sent by the "Young Turkey Committee" at Constantinople to a committee in Philippopolis. Turkish troops have been clandestinely massed on the Eastern Rumelian frontier.

The Russian budget for 1883 estimates the receipts at 778,500,000 rubles, and the expenditure at 100,000 rubles less. Accompanying the budget is a report which says a loan will be unnecessary. An improvement of the financial situation, although difficult, is not impossible, in view of the peaceful yet firm attitude pursued by the Government abroad, and the prosperity of internal affairs.

A disastrous fire occurred at Berditsheff, in Russian Poland, on Saturday. A circus was burned during the performance, and when crowded with people. It is estimated that 90 men, 120 women, and 6 children lost their lives.

THE SILVER QUESTION.

Senator Morrill, in his speech introducing the tariff amendments proposed by the Finance Committee, gave a statement of the probable expenditures of the Government for the next fiscal year, in order to show how far it would be possible to reduce taxation. Among those expenditures he mentioned the item of $24,000,000 for the purchase of silver bullion. He said that there was no probability that this expense would be discontinued, and that consequently the taxes must be high enough to cover that amount, together with other necessary disbursements. He showed that under the steady operation of the silver-coinage act two millions per month of the public revenue are swallowed up without yielding any benefit whatever. This money, if applied to the extinguishment of the public debt, would reduce the interest charge nearly one million dollars per year. But against this possible saving we are confronted with the fact that the silver which we have bought for coinage during the past four years has depreciated on our hands six or eight per cent., and that we have already lost several million dollars on the transaction. Moreover, if we should attempt to sell our silver, the price would probably fall six or eight per cent. more. In short, we have got ourselves into the same bad fix that the German and French Governments were in when we began our crazy experiment.

Yet the wasteful process goes on month after month, and Mr. Morrill sees no present prospect of its discontinuance. It is true that the House Committee on Banking and Currency reported a bill last spring to stop the coinage, and the Senate passed a bill which would have that effect, viz., the bill to abolish "permanent appropriations." This bill ought to be passed independently of its effect upon the silver coinage, the appropriations over which Congress does not exercise any control having risen to more than $15,000,000 per annum, exclusive of the interest on the public debt and the silver coinage. Including these items, the permanent appropriations amount to $146,000,000 per annum, or one-half of the entire expenditures of the Government. If the permanent appropriations were repealed, and Congress were asked to vote $24,000,000, or any other sum, out of the people's earnings every year for the purchase of bullion—either silver or gold—it is our belief that no such vote would ever be given. The purchase of bullion by the Government is now nothing but a subsidy to the owners of silver mines.

The question is often asked how long this senseless coinage can continue without bringing on a cataclysm, a crisis, a change in the monetary standard of the country. This is a difficult question to answer. If the country were poor, so poor that it could not afford to lay aside $24,000,000 per annum of idle capital in the Treasury vaults, but must needs realize upon it somehow, the strain would have brought on a crisis long ago. The Government would have been obliged to force these silver dollars upon its creditors, and enormous confusion would have been produced by the attempt to make two things of different values circulate side by side at the same value. But the country being rich and able to sink $24,000,000 per year in an idle investment, the only mischief to be anticipated, aside from the waste of capital, arises from the chance that political changes may bring somebody to the head of affairs who will conceive it his duty to pay out these silver dollars, which are now worth eighty-two cents, and may then be worth only seventy-five, at par. Such a proceeding would be calamitous in its effects upon the public credit, and would produce a grave commercial if not social conflict. The losses inflicted, directly and indirectly, by a battle of the standards taking place in all business circles simultaneously would probably be greater than would be incurred by taking all the silver dollars to the middle of the Atlantic and throwing them overboard. So long, however, as no steps are taken to force silver into circulation, no greater harm can come than wasting our treasure and making ourselves a laughing-stock for the nations.

We have now accumulated a larger stock of unused silver than Germany holds, and about one-half the amount that burdens France. The price of silver has fallen three per cent. within a few weeks, and the chance of its advancing is very slight. On the other hand, the production is likely to increase as the mines of Mexico are provided with railroad transportation and exploited with modern machinery. We shall soon be buying our two millions per month from that country, if we are not doing so now, because she will be able to furnish it cheaper than Colorado or Nevada. It is estimated by good authority that one-half of all the silver in the world has been produced by Mexican mines, and that they are capable of yielding more in the future than they have in the past. The Paris Conference of 1881, which adjourned for one year without doing anything, has since adjourned *sine die*, thus dissipating all hope of international remonetization on either a large or a small scale. In short, the outlook for further speculation in silver is most unpromising, while the collateral dangers to trade are increasing with the growth of our already enormous hoard of unused dollars.

It seems wonderful that no steps are taken in Congress to bring the bill which the Banking Committee reported last year to a vote. Perhaps it would be defeated; but what is wanted most of all is such a discussion of the subject as shall lead to an expression of public opinion upon the question in its present aspects. Two months ago nothing seemed more unlikely than that the Pendleton bill to reform the civil service would be passed by both houses of Congress. No one can say with certainty that a similar awakening of good sense may not be brought about by a fresh debate on the silver question.

MORE ABOUT SOUTHERN HOMICIDE.

An article in the Lynchburg *Virginian*, suggested by the result of a trial for a "late unhappy homicide" in that city, is in form "a plea for a higher civilization," but in its protests against the practice of carrying deadly weapons, and using them on slight provocation, it indirectly admits the truth of nearly everything we have been saying of late in the *Nation* about the cause and consequence of Southern homicide. Efforts have been made by some Southern newspapers, as well as by correspondents writing to us, to dispose of our strictures by pointing to the magnitude of crime in general at the North as well as to the Dukes-Nutt homicide in Pennsylvania; by citing comparative statistics of crime and its punishment at the North and South from the New York *Tribune*, which have, we believe, not the slightest weight or authority; and, finally—which is the queerest of all—by ascribing our remonstrances with Southern men against shooting each other on sight to our interest in some land speculation in the Northwest.

Southern men have been accused of want of humor, but no community can be so wanting in that respect as to believe that, if one remonstrates with them on their readiness to shed blood on slight provocation, it must be due to some sinister motive. What we have been discussing, we repeat, is not crime in general at either the North or South. We acknowledge that, as regards crime in general, the South cuts a very respectable figure beside any community in the world. Nor have we been dealing with the crimes of the vicious, or depraved, or dissolute, which endanger only those who keep bad company, and contact with which decent people can readily avoid by keeping out of bad company. The matter on which we have been commenting, we again repeat, is the readiness of Southern farmers, lawyers, merchants, and doctors—men in good social and business standing, whom a respectable immigrant must have for neighbors, and must meet in society and business, whether he will or no—to settle disputes and avenge social slights with the pistol or the knife, and not in regular duels either, but by chance encounters on the public streets or highroads. Add to this the refusal of Southern juries to punish these offenders, and the failure of Southern society to give protection, sympathy, or aid to a peaceable man whose life is threatened by an armed enemy.

Nor can the force of what we have been saying be lessened by decrying us as malignant slanderers or defamers of the South. The South has no truer or older friends than we. There are, too, no warmer admirers of whatever is admirable—and there is a great deal—in Southern character and manners. It is because we have for so many years been contending for the things which make for Southern peace and dignity and prosperity, against those whose dislike and distrust survived both slavery and the war, that we now make an earnest plea for the extirpation within her borders of the thing which enables her enemies with a show of reason to place her in the category of semi-barbarous states.

We have published a good many interesting communications from Southerners, acknowledging, describing, or explaining the evil in question. The best men at the South not only deplore, but abhor it and would fain get rid of it. The best portion of the newspaper press talks in the same strain. But no one can read either the letters or articles without being impressed by the writers' sense of inability to

do anything toward cure beyond the utterance of an occasional mild remonstrance. The difficulties of doing even this are well illustrated by the following characteristic warning addressed by the Richmond *State* to two of our correspondents—Virginians of high character and culture, and of good social standing, who ventured on a partial acknowledgment of the truth of our charges and on a calm discussion of them in our columns:

"So plausible and so cunningly contrived has been the *Nation's* trickery that it has recently published letters of commendation from two individuals in Virginia—one of them writing from Richmond—who were either fools or knaves, being either too silly to detect the injury that paper is doing our people, or too treacherous to refrain from endorsing slanders against their own friends and neighbors. Their affected 'liberalism,' however, is made naught by the exposure of the *Nation's* over-zeal in its foul work of abuse, and these two writers from Virginia, if they be real and known, should not fail to suffer the penalty of their treachery, and be forced, as the slanderers of their own people, to remain forever renegades from society, unworthy of the trust of honest men."

Here we have a thinly disguised threat of "boycotting," or worse (indeed one almost sees the stock of the shotgun sticking out of it), directed, in terms worthy of the Molly Maguires, against any Southerner who even admits that there is too much unpunished homicide at the South. The editor clearly writes under the influence of the tradition of a time when there was only one social question at the South, on which only one opinion could safely be permitted, and when agitation or public discussion of anything but the best means of protecting slavery was unknown. Apparently the art of agitation, or, in other words, the art of putting down an evil, whether of society or government, through organized machinery of persuasion, has still to be introduced into that region. Men who feel the need of change are still unable or unwilling to combine for the promotion of it through public discussion. At the North or in England, if there were as much sentiment hostile to the carrying of deadly weapons and their use in the settlement of private differences as there undoubtedly is at the South, associations would be formed of persons pledged to refrain from carrying them themselves, and to persuade others not to do so, to protect their members against assaults and threats by the enforcement of the law, to enlighten the class from which jurymen come as to the moral and social and commercial value of security; and to raise among the young the conception of the duties and responsibilities of citizenship by speeches, books, pamphlets, and newspapers, in season and out of season, until the victory was won.

The notion, for instance—which one of our Southern correspondents describes as still current at the South, and at the bottom of much of the homicide—that an enemy who speaks ill of you must be "punished," might readily be shown to be a survival of the notion on which all savage society rests—that the punishment of enemies is man's chief business. The Indians and Turcomans of our time do little else. They devote their lives to punishing enemies, to preparing food for consumption while punishing them, and to talking about them, and singing songs about them. The growth of civilization in a community may, in fact, be measured, with almost mathematical accuracy, by the diminution of the amount of time and attention spent by its members on enemies, and on their doings and sayings, and in keeping up a reputation for physical courage as a warning to them. In the most highly civilized States to-day the foremost classes give little or no attention to enemies at all. They are too busy with commerce, science, literature, and politics to bother about them. They do not care what an enemy says, and do not mind what he does, as long as he is not in debt to them. They keep up a disciplined police force to catch him and lock him up if he gets drunk, or threatens violence, or goes about calling names in the street. But they no more think of carrying arms in readiness for him, and laying ambuscades for him, or challenging him if he uses bad language, than of taking off their tailors' clothing, putting on a breech-clout and red ochre, and riding round with a long spear on a thin pony. Surely, it ought not to be difficult to convince the young men of a race which has produced Washington and Marshall that the time has come for the South, too, to take its place as to this matter "in the foremost files of time."

DOCTOR AND JUDGE.

A YEAR ago, the Senate of this State passed a resolution requesting the Attorney-General and the State Commissioner in Lunacy to report to the Legislature such amendments to the laws relating to the insane as might seem to them advisable. These two officials requested the Medico-Legal Society to assist them by making suggestions on the subject, and this society has now made a report, in which it recommends a good many changes.

It shows that the law of 1874, which regulates the incarceration of persons alleged to be insane, does not provide sufficient safeguards against abuse. The law requires the certificate of two physicians, under oath, and the approval within five days by a judge of a court of record. But whether the judge shall conduct any inquiry, or shall rely entirely on the physicians' certificates, seems to be left wholly in his discretion. The language of the statute is: "Said judge or justice *may* institute inquiry, and take proofs as to any alleged lunacy before approving or disapproving of such certificate, and said judge or justice *may, in his discretion*, call a jury in each case to determine the question of lunacy." With regard to the qualifications of physicians for the delicate task of giving a certificate of insanity, the law provides that practice for three years shall be enough.

The Society objects to both these provisions. It says as to the first that no judge ought to have any discretion in the matter, but should be compelled to hold an inquiry, so that there shall always be a judicial determination of the existence of lunacy sufficient to call for confinement in an asylum. As to the second, it insists that no physician should be allowed to certify to insanity who is not an expert alienist, and that such expert ought to be selected beforehand by some competent commission or tribunal for the work.

We suppose that no sensible man will deny that a three-years' practice is an utterly insufficient qualification for the performance of a medical duty of this kind. A three-years' practice means a young man, fresh from a medical school or from walking some hospital, and devoid of all experience in mental disease. It is, of course, no answer to this objection that in a vast majority of cases physicians of experience are called in. All that has to be shown is that now and then—before a negligent judge, for instance—abuses might occur. But abuses might also occur if we took the measures advocated by the Society, and required the certificate of two accomplished alienists in every case. In some respects an accomplished alienist is as dangerous a man as an inexperienced young doctor. The study of mental disease predisposes him to discover symptoms of insanity in persons perfectly capable of managing their own affairs; and occasionally we see criminals hanged and wills of eccentric old millionaires sustained, in the teeth of evidence by unquestionably eminent experts that they have been for years hopelessly irresponsible, and incapable of managing their affairs. The fact is, that to make out clearly whether a man ought to be shut up or not, the thing most needed is experience, not so much of mental disease as of the man himself, his habits, character, mind, and temperament. It is on this account that in courts of justice the evidence of family physicians, who have had a long familiarity with the patient, is always regarded as of so much more importance than the testimony of experts. But every alleged lunatic has not a family physician, so that this evidence is not accessible in ordinary cases.

The difficulties, however, which surround this branch of the subject would in a great measure disappear, if the judge were in all cases compelled to institute an inquiry of some kind into the allegation of insanity. The necessity of throwing a greater responsibility upon him than he now has appears from a consideration that the Society seems to have overlooked. The final decision ought to be made by somebody who is absolutely impartial, and this the physicians seldom or never are. In nine cases out of ten they are called in and employed by the patient's family for the express purpose of discovering insanity. They would be more than human if the desire of those who retain and pay them for their work did not affect their minds. We know how this is with regard to experts in court, who are paid large fees by one side or the other, and it must be so to a considerable extent in ordinary lunacy cases. For this reason, if there were no other, the judge ought never to be allowed to rely exclusively on the physicians' certificate. The physicians' certificate is merely evidence—evidence of great importance, to be sure, but which should be sifted like other evidence. The act which finally consigns the alleged lunatic to an asylum, should be the act of a court deciding judicially, as in all other cases in which the question of lunacy arises, upon the value of this evidence. The process of depriving a man of his liberty and the management of his property ought at least to be surrounded by as many safeguards as that of testing the validity of the disposition he has made of his property by will.

We doubt whether the suggestion of the Society that all lunatics confined in asylums should at any time have the right to an impartial medical investigation into their mental state without expense to themselves, on the ground that they may possibly have recovered, is practicable. A large proportion of the lunatics in the world always believe themselves to be sane, and in case this recommendation were adopted, we should have a vast number of wholly unnecessary investigations demanded. In fact, inquiries into their mental condition at the expense of the State would become a regular asylum pastime. On the other hand, examinations of asylums at stated intervals, by competent impartial experts, which the Society also recommends, seems highly desirable.

THE ANTI-BOUQUET MOVEMENT.

THE recent development of symptoms of hostility to bouquets on the part of Society cannot have failed to attract the attention of those who watch for significant social changes. This winter the young of both sexes have been startled by receiving invitations to parties, winding up with a request that girls will not carry bouquets. The object is understood to be to relieve dancing men of the feeling that it is necessary for them, if they invite any one to dance the german, to send an expensive bouquet. The german code has become in this respect, since the war, very rigorous. A man cannot invite a girl to dance the german without sending a bouquet, and consequently girls who come to a party unprovided with partners do not get any. Meanwhile the expense has gradually increased until dancing a single german has come to cost from twenty to fifty dollars. That numbers of worthy young men, just as well fitted by nature for german partners as any others, are deterred from dancing it by the expense, seems to be admitted, and of course it tends, like all social expenses of the kind, to become heavier and heavier. Whatever may be the precise nature of the impression produced by bouquets upon the feminine fancy, the commonplace young man, if wealthy—and the wealthy are so often otherwise commonplace—is able, by the mere use of money, to send a bigger bouquet, and thus produce more impression than the clever and attractive young man whose resources are slender. The latter, however, if his moral nature is not exceptionally strong, will always be tempted to imitate the extravagance of his rich rival, and thus he is apt to send bouquets more expensive than he can afford. The bouquet tax for an energetic and constant german dancer mounts up easily to many hundred dollars a year, a considerable slice of any poor young dancer's income. No doubt many a young performer whom we see gravely and seriously revolving in the mazes of the dance at Delmonico's is bitterly counting the cost, and wondering by what means, fair or foul, he can meet it. Indeed, the decline of the gayety and high spirits which used to be one of the principal charms of round dancing, and the general taciturnity and melancholy of dancing men, are believed by many observers to be due to the thoughts which the sight of unpaid-for bouquets inspires. Many a young defaulter, as he looks back on the causes which led to his downfall, remembers with terrible distinctness his first bouquet.

For the moral consequences of bouquet-giving, however, Society would probably care very little. But the expense has now reached a point which is beginning to tell on the nerve of the masculine performer. A custom which makes dancing men more and more shy is plainly full of danger to Society itself. The time when either the practice must be abolished, or when the german must be confined exclusively to the wealthy, is believed by many to have come. Of course, if the right to dance the german could be confined to the wealthy, there would be no need of troubling ourselves with the matter at all. But to confine it in this way would be fatal, for as the rivalry in bouquet-giving grew more and more intense, the class having sufficient means to provide flowers in the continually increasing amounts required would grow smaller and smaller, until in the end it would probably be confined to the families of a few old exclusive Knickerbockers of Pacific Coast origin.

The view taken of the bouquet by girls is of course closely connected with that taken by men. One is the reverse of the other. The girl's view of the subject is now a purely business view. The highest and most conclusive evidence of a girl's popularity is the number of bouquets she carries at a party. It is a solid tribute, estimable in money, and easily comparable in value with the trophies of other girls. The idea of sentiment being connected with it has for a long time been subordinated to its business aspect. It is said even that many leading modern girls discourage any such idea, because what they desire is numerous bouquets, of at least a standard size and expense, as evidence of attention. It is said, too, that very prudent girls do not consider it safe to go to a party with a single bouquet, because it implies, instead of an extensive vogue among men, that a sentiment exists which binds them to one, and is therefore calculated to frighten away the others. But this is probably an exaggeration. However this may be, there is no doubt that it was idle to expect reform on the subject of bouquets from girls except under pressure. No girl would ever be likely, in replying to an invitation for the german, to add to her note, "Kindly omit flowers." Men cannot break up the custom except in one way—that of holding aloof from the german altogether. This, it seems, they begin to show some symptoms of doing, and in order to prevent this calamity attempts are now being made to recall girls to a sense of their position.

Hence it is that we hear of the rise of an anti-bouquet movement, which enthusiastic reformers predict will not only rescue the young dancing man from the thraldom from which he now suffers, but do something to re-establish in the minds of women the old sentimental view of flowers—that their value was not dependent upon size and quantity, but on other considerations of a different order. Of course, with old girls who have fixed ideas on the subject, and regard bouquets simply as the best evidence, in a community governed by commercial standards, of social success, no change of feeling is likely to occur. They may pretend to like the reform, and go to parties without bouquets, but secretly they will pine for the old system and do what they can to perpetuate it. A hardened girl really likes social reform no more than a city politician likes reform in municipal government. But with very young girls it is different. They may be taught possibly to look on bouquets in the old sentimental way, and even to acquire a contempt for the strictly commercial view of them.

Girls capable of reflection will perceive that a choice must be made, sooner or later, between the business and the sentimental view of bouquets. All the poetical associations connected with bouquets are of course destroyed the moment the idea of obligation arises. If a man need not send a bouquet unless he desires to do so, his sending one is a delicate compliment. It implies that he has singled out the person to whom he sends it as the one of all others whom he wishes to please. It is the prettiest proof that can be given of this desire. But an obligatory bouquet suggests nothing, as we have seen, except the bill. Indeed, as the custom exists at present, the girl might as well get the bouquet herself and send the bill to her partner; obligatory bouquets can only be used for purposes of display, and display is fatal to sentiment. As a sentimental nation, our whole manner of dealing with flowers is open to criticism. But we must confine ourselves now to the bouquet question. What we have said sufficiently shows that any girl who joins the anti-bouquet movement and "swears off," will be striking a blow for sentiment in a society on which it is sadly losing its hold, and in her effort at reform she will receive the cordial encouragement of those whose admiration she values most.

THE LATE ARCHBISHOP OF CANTERBURY AND HIS SUCCESSOR.

LONDON, Dec. 24, 1882.

THE Archiepiscopal See of Canterbury, which became vacant by the death of Dr. Tait three weeks ago, has at last been filled. It is so much the most considerable ecclesiastical post in the British world, and indeed so unique a post in Europe, that American readers may probably like to hear something about its character and position in our public religious life, as well as about the personal attributes of the deceased prelate and his newly-chosen successor.

Ever since there was a bishop at Canterbury at all—that is to say, ever since the conversion of the English began in the seventh century of our era—he has been the greatest ecclesiastical personage in these islands, with a recognized authority over all England, and an influence and dignity to which the Archbishops of Armagh and St. Andrew's (heads of the Irish and Scottish Churches) practically bowed, even while refusing to admit his legal supremacy. To be the greatest and most powerful man in the churches of Britain, in days when the Church was far better organized, and in some ways far more powerful, than the State, meant a vast deal. He was, in fact, and was often so called, a pope of his own world—that world of Britain which lay apart from the larger world of the European continent. Down till the Reformation, the archbishops possessed immense power, and were sometimes a match for the kings. Many of them were the leading statesmen of their time—Dunstan, Lanfranc, Anselm, Thomas Becket,

Stephen Langton, Warham, were the foremost figures in the England of their day. After Henry VIII.'s breach with Rome, the Primate of England became in so far more dignified as he was more independent of the Pope; but, of course, the loss of Church power and Church wealth which the Reformation caused lowered his importance. In the sixteenth and seventeenth centuries, however, there were still some conspicuous and powerful prelates at Canterbury—Cranmer and Laud the best remembered among them. After the Revolution of 1688, a time of smaller men begins. The office retained its dignity as the highest place open to a subject, ranking above the Lord Chancellor or the President of the Council, but the Church of England was in a stagnant condition, and it mattered but little who her chief pastor was.

Bishoprics were in those days regarded chiefly as pieces of rich preferment with which prime ministers bought the support of powerful adherents. Of late years, as the Anglican Church has become at once more threatened and more energetic, as more of the life of the nation has flowed into her and round her, the office of a bishop has become more important: people are far more interested in the appointments made, and ministers have become proportionately careful in making them. Bishops work harder and are more in the public eye now than they were fifty, or even twenty, years ago. They have lost something of the antique dignity and social consideration which they enjoyed, but they have also gained by having countless opportunities opened up to them for exerting influence in philanthropic as well as in religious movements; and the abler and more active among them turn these opportunities to excellent account. Whatever is true of an ordinary bishop is true *à fortiori* of the Archbishop of Canterbury. He is still a great personage, but he is great in a new way. There is far less deference paid to his office, considered simply as an office, than in former generations, because society and thought are more democratic, and people see that all offices are only human creations, whose occupants are people just like themselves. But if he is himself a man of ability and force, he may turn his place to admirable account by using it as a platform whence to address the nation; he is sure of being listened to, which is of itself no small matter in a country where so many voices are striving to make themselves heard at the same time. The world takes his words into serious consideration, the newspapers repeat them. His position gives him easy access to the ministers of the crown, to the crown itself, to all who in any way can influence the march of events, and enables him to enforce his views upon them. All his conduct is watched by the nation; so that if it is discreet, provident, animated by high and consistent principle, he gets full credit, and acquires that influence which masses of men are eager to acknowledge whenever they can persuade themselves that it is deserved. Now, the English people is more interested in ecclesiastical and in theological matters now than it was fifty years ago; it is more inclined to observe ecclesiastical persons and read about theological subjects. Hence a strong archbishop, a prelate of character, rectitude, and utterance, is in a far more conspicuously influential position now than he was then; his personality is a more important factor in the history of his own time.

Needless to say that all this makes the selection of a bishop a more delicate and troublesome business than it was in the good old times. Seventy years ago the great recommendation for a see was the possession of some social or political influence which the minister could attach to himself by the gift of preferment. If the person was also a good Greek scholar—had edited some plays of Euripides, for instance—so much the better. If he was a man of piety, that also was well. Thirty years ago the possession of piety and of a talent for preaching had become much more important qualifications, but the main thing was moderation. A bishop must first and foremost be a cautious and guarded man, having nothing decided about his views, and concealing what he had. His chief virtue was to be the negative one of offending no section by expressing the distinctive views of any other. In the alarm created by the Tractarian movement, there was a tendency to appoint Low Churchmen, but since that panic has passed away the moderate High Church has had its share. Nor has even the Broad Church been left entirely unprovided for. One may say that the last and now prevailing theory of bishop-making is to give every party its turn, but to choose from every party the most judicious and least violent men. On the whole, this is a good plan, but it often results in the nomination of mediocrities, men chosen more because they are safe than because they are able.

As the Primate's is more important than any other episcopal chair, so is the difficulty of choosing its occupant proportionately greater. His acts and words are so closely scrutinized that he must be a very prudent and cautious man, yet not so much so as to give the impression of timidity. He must be conciliating, yet able to put his foot down and take a decided attitude. In order to do justice to all parties and sections of the Church of England, he must not be an avowed partisan of any. Yet he must be able and eminent, and of course able and eminent men are apt to throw themselves into some one line of action or set of views, and so come to be considered partisans. The position which the Archbishop of Canterbury holds as a member of the House of Lords, and the representative there of the whole Established Church, makes statesmanship the most important of all qualifications. Learning, energy, eloquence, piety, are secondary matters, because none of them, nor all of them together, would make up for the want of worldly prudence. Yet, of course, they are all very desirable, because they strengthen as well as adorn the prelate's position.

Dr. Tait, whom the See of Canterbury has just lost, united several of these qualifications in a high degree. He was, if it be not a paradox to say so, more remarkable as an archbishop than as a man. He had no original power as a thinker. He was not a striking preacher, and the more he prepared his sermons the less interesting they became. He was so far from being learned that you could say no more of him than that he was a passable scholar and a fairly well-informed man. He was pious, but in a quiet, almost a dry, way, which had in it nothing that impressed or inspired others. If he had remained in a subordinate position, had been all his life a college tutor at Oxford, or canon of some cathedral, he would have discharged the duties of that position in a thoroughly satisfactory way; but no one would have felt that Fate had dealt unfairly with him in depriving him of some larger career and loftier post. No one, indeed, who knew him when he was a college tutor seems to have predicted the dignities he was destined to attain. In what, then, did the secret of his success lie—the secret, that is, of his acquitting himself so excellently in those dignities as to have become almost a model to this generation of what an Archbishop of Canterbury ought to be? In the statesmanlike quality of his mind. He had not merely moderation, but what, though often confounded with moderation, is something different, something rarer and better, temperance of mind. He was not carried away by impulses or seduced by any one theory so as to lose sight of other views and conditions which had to be regarded. He knew how to be firm without vehemence, prudent without timidity, judicious without coldness. He was, above all things, a singularly just man, who recognized every one's rights, and never sought to overbear them by an exercise of authority. He was as ready to listen to his opponents as to his friends. Indeed, he so held himself as to appear to have no opponents, but to be rather a judge before whom different advocates are stating their respective cases, than a minister seeking to make his own views or his own party prevail. You could hardly call him genial, for there was little effusiveness, little display of emotion in his manner; yet he was kindly, always desiring to believe the good rather than the evil, and to lead people instead of driving them. And with this he was perfectly candid and straightforward, saying no more than was necessary, but never saying anything he had occasion to be ashamed of. He sometimes made mistakes, but they were not mistakes of the heart, and, being free from vanity or self-conceit, he was willing in a quiet way to admit them and to alter his course accordingly. Thus his character by degrees gained upon the nation, and even the clergy, who are of course always the most critical, and even bitter, in their comments on any ecclesiastic who does not accept their special doctrines, gradually came to respect and admire him. There can be no doubt that his influence has gone a considerable way to strengthen the political position of the Established Church, and to keep its several parties from breaking out into more open hostility with one another. He was himself what we should call a moderate Broad Churchman, leaning more to the Evangelical than to the Tractarian or Romanizing views in matters of doctrine. At one time the extreme High Churchmen regarded him as an enemy. But this animosity had almost died away, except among a few fierce partisans, when the death of his wife and his only son, followed by his own long illness, stilled the voices of criticism.

He exerted very great influence in the House of Lords chiefly by the firmness of his character and the consistency of his public course, but also by his powers of speech, which, matured as they were by long practice, had risen to a very high level. Without eloquence, without imagination or passion, which are the chief elements in eloquence, he had a grave, weighty, thoughtful style of speaking which profoundly impressed an audience. His diction was plain, yet pure and dignified, his matter well considered; he spoke as one who fully believed every word he said. The late Bishop of Winchester, the famous Dr. Samuel Wilberforce, was incomparably his superior as an orator, but no less inferior in his power over the House of Lords, so little does mere brilliance go for in a critical and practical assembly. For every one felt in listening how great was the difference between the solidity, the elevation, the unswerving truthfulness of the one, and the unstable character of the other.

To follow such a man as Dr. Tait is not easy; so there has been no surprise at the long delay in naming his successor. Dr. Benson, Bishop of Truro (one of those new sees which have lately been created by Act of Parliament), is at least a respectable nomination. He is personally a far less remarkable man than Dr. Lightfoot, Bishop of Durham, who is not only our greatest living English Biblical scholar, but also a person of a singularly winning and attractive character. However, Dr. Lightfoot has occupied his see for so short a time that it may, perhaps, have been thought he lacked experience for the primacy; or his writings on the New Testament and early

Church history may be thought to have been somewhat too liberal in their tendencies. Those who know him best most regret that he was not chosen; as those who know what great popular gifts, what force, what geniality, what a power of showing sympathy with the masses and evoking it from them have been displayed by the Bishop of Manchester think that a mistake has been made in not raising him to a place where these gifts would have had their largest field. But Dr. Benson is a man of ability and honesty, against whom there is nothing to be said except that he has not yet shown any such conspicuous merits as to account for his promotion. He is a decided, but not extreme, High Churchman, was formerly head master of a large public school, and subsequently made himself liked and valued both as Chancellor of the Cathedral of Lincoln and as Bishop of the new Cornish Diocese of Truro. He is a sound scholar and a good preacher, apparently also a sensible man, who will not get into scrapes. The position of the Anglican Church, and the attacks from within and without to which it is exposed, will need much judgment and coolness from its new chief. Y.

CANT AND CONSTITUTIONALISM.

London, December 19, 1882.

Is there any true connection between the prevalence of political cant and the existence of a constitutional form of government?

Carlyle certainly believed that the vice which he specially denounced was connected by more than an accidental relationship with the polity which he specially despised. One may disagree with Carlyle's theories, one may think lightly of the wisdom of a dyspeptic philosopher who was apt to make the state of his own digestion the measure of all things, human and divine. But it is difficult for a candid critic to get rid of the conviction that Carlyle's denunciations of constitutionalism as a sham, and the parent of shams, have in them an element of truth which political thinkers ought to disengage from the mass of exaggeration and bombast in which, like most others of Carlyle's half-truths, it has been concealed.

Cant—as distinguished from the quite different vice hypocrisy—is the use of formulas which, whether true or not in themselves, convey no real idea, and do not correspond with any genuine or well-founded belief on the part of the speaker who uses them. To "cant" is not to lie, but to repeat words which, though they may have a meaning to others, or may in other ages have borne significance which they no longer possess, do not represent any genuine or real meaning on your part. To clear your mind of cant is to take care that you are not deceived by words, to attach a distinct sense to every word you speak, to make it your aim that your expressions shall tally with your thoughts, and that your thoughts themselves shall, as far as possible, correspond with the nature of things. This kind of veracity, which is something different from what is ordinarily meant by truthfulness, is nurtured by the habit of calling a spade a spade; it is imperilled by any custom which involves the use of names, words, or ceremonies which do not answer to actual facts. Constitutionalism, on the other hand, as developed at any rate in England, is an attempt, and a singularly successful attempt, to transform without destroying a mediæval scheme of government into a polity suited to the wants of an industrial age. The curiosity of the thing, its charm to antiquarians, is, that the English Constitution has preserved the ceremonies, the formulas, the phrases, the outward show, even to a limited extent the political sentiment, appropriate to a mediæval monarchy, in combination with, or rather as the mask of, institutions compatible with that sovereignty of the people which forms the essence of modern democracy.

One main rule of the art by which this singular transformation has been performed is, that a change of things should never, if possible, involve a change of names. Constantly to modify institutions, never to alter titles and forms, has been and is half the secret of English statesmanship. This system, which has constantly enabled England to substitute reform for revolution, has, with some grave practical evils, still greater practical advantages; but no one who has eyes in his head, or a brain to note the bearing of what he observes, can doubt that English constitutionalism does lead to confusion both in act and in thought between form and reality. That this is so must, I think, have been patent to any person of reflecting mind who, on the 4th of this month, was present at the opening of the new Law Courts. The ceremony was as striking as any ever witnessed in England. The event itself had a real, genuine, and unmistakable importance, for it was the outward recognition of a revolution in the administration of the law of England which may produce effects of far greater permanent consequence than result from political alterations which excite popular enthusiasm, or strokes of statesmanship which give celebrity to the name of a minister. But the most extraordinary feature in an impressive scene was the unreality of the antiquated forms used to celebrate a great modern innovation or improvement in the law of England. Of all the persons engaged in the pageant, the one who presumably knew least about the law, who had certainly least to do with its administration, and had the least power of influencing the course or the development of the law was the royal lady in whose name justice is administered. Yet with that admirable or wonderful belief in forms which characterizes Englishmen, the official language employed throughout the whole of the grand ceremonial implied that the Queen possessed an authority and even took a part in the administration of law which her Majesty would be the last person in the United Kingdom either to exercise or to claim. If language were, in matters constitutional, the representation of fact, it might be inferred from the transactions of the 4th of this month that in 1882 Queen Victoria possessed and exerted powers somewhat greater than the authority which in 1582 was exerted by Queen Elizabeth.

To add to the innocent irony of the situation, it happened that while the Queen was treated as though she had in fact all the powers of sovereignty ever wielded by the most despotic of her predecessors, the Prime Minister, who is more truly than any other one person the governor of the country, had as Premier (the Premiership being entirely unknown to the Constitution) no place in the ceremony of the day. Mr. Gladstone took part in the pageant not because he was Prime Minister, but because he was Chancellor of the Exchequer. He came, in short, to the opening of the Royal Courts not in virtue of being what he is—the head of the British Government—but in virtue of the pretence of his being what he is not and never has been and never will be—an English judge. No fact can illustrate more forcibly the antiquarianism and therefore of necessity the unreality which infects the whole ceremonial of the English Constitution. That this antiquarianism is not only venerable but often useful, chiefly because it enables us to avoid or evade the necessity for defining matters hardly ripe for definition (as, for example, the exact limits of the power of the crown), which are best determined by practice and usage, I do not dispute; but it cannot, I think, be denied that neither a man nor a nation accustomed in the field of politics to reverence formulas which are not even supposed to correspond with fact, can easily avoid a tendency to that confusion between words and things which in its fully developed form amounts to cant.

"Many of our men of speculation," writes Burke, "instead of exploding general prejudices, employ their sagacity to discover the latent wisdom which prevails in them. If they find what they seek—and they seldom fail—they think it more wise to continue the prejudice, with the reason involved, than to cast aside the coat of prejudice, and leave nothing but the naked reason; because prejudice, with its reason, has a motive to give action to that reason, and an affection which will give it permanence. Prejudice is of ready application in the emergency; it previously engages the mind in a steady course of wisdom and virtue, and does not leave the man hesitating in the moment of decision, sceptical, puzzled, and unresolved. Prejudice renders a man's virtue his habit, and not a series of unconnected acts. Through just prejudice, his duty becomes a part of his nature."

These sentences admirably describe the mode in which the influence of public life, or, in other words, English constitutionalism, has affected the tone of English speculation. As a satire on the errors of the French *philosophes*, in reference to the practical turn given by English thinkers even to their theoretical conclusions, the passage is as effective as any one of the reflections on the Revolution in France. But language meant by Burke as a eulogy of English political methods suggests to a modern reader some obvious reflections on the mode in which constitutionalism has not only affected, but distorted, English speculation. There never was a country where so much talent and ingenuity has been expended in defending what was rationally indefensible as in England. The practical evils of this tendency to find reasons in favor of prejudices must more than once have been keenly felt by Burke himself. His lifelong efforts to repeal the penal laws were all rendered abortive by that peculiarity of national sentiment which he held up for the admiration of his French correspondent. The ingenuity of Eldon, and of men like Eldon, defeated the genius of Burke. The penal laws against the Catholics, the disabilities of Dissenters, the brutality of the criminal law, the ruinous impolicy of the old poor-law, the glaring abuse of rotten boroughs, and a hundred other anomalies, which no man out of Bedlam would venture to defend, were all kept alive for at least half a century beyond the time when systematic thinkers had perceived that they ought to be abolished, because our men of speculation supplied arguments or fallacies for the use of the multitude, who, from the nature of things, must be men of prejudice.

But let no one fancy that the evil of subordinating even speculative conclusions to considerations of supposed practical utility ends with the support it gives to existing abuses. A far worse result is that this tendency affects the freedom of thought itself. There is assuredly no fault more often to be found in English thinkers than a want of intellectual disinterestedness. With one eye they search for truth, with the other eye they look to the supposed practical results of the truth which they are seeking to discover. Where your treasure is there will your heart be also, is true in other spheres than in that of religion. The thinker whose real concern is to find arguments in support of some practical conclusion will find them in plenty, but it is only a lucky accident if he finds out the truth. The error of transplanting into the realm of speculation the habits of compromise which are proper to the sphere of politics, of course most naturally flourishes in the province of political speculation. If any one wishes to measure the extent to which the want of intellectual disinterestedness may vitiate the conclusions even of the most honest speculative writers, let him study the works of W. R. Greg, and consider the extent to which that eminent

writer's theories are affected by his bias as a manufacturer; or let any one of my American readers take up any English work upon America and examine whether the whole tone of the writer, be he Liberal or Conservative, is not in reality tinged by the bearing or supposed bearing of American experience on English politics. Constitutionalism has, in fact, become part of the nature of Englishmen. We are constitutionalists even in our theories. We gain something in moderation, but we lose a good deal in force and in insight. We often lose also that directness of view and simplicity of statement which are the great safeguards against cant.

Constitutionalism, however, fosters cant in other modes besides its tendency to lead to confusion between words and things and to promote intellectual compromises. Our modern system of government rests upon a constant appeal by statesmen to public opinion. Our political leaders are compelled to be constantly speaking to the public. They are forced to defend their conduct without being able in most cases to give the true grounds for its justification. They are compelled to speak off-hand about matters on which they may be ill informed or may not have made up their minds. They are forced to deny the errors of their friends and to exaggerate the errors of their foes. Debate, moreover, in Parliament is not intended to produce conviction. Its true object (when its aim is not simply to waste time) is to stimulate the zeal of the speaker's friends and to discourage his opponents. Lord Abinger, in the singularly interesting fragment of autobiography which gives value to an otherwise worthless life, contrasts the reality of the forensic contests in which he excelled all advocates, past or present, with the artificiality of the parliamentary debates, in which he failed. As an advocate, he in effect urges, "I hoped to convince the jury that my client was in the right, and constantly succeeded in convincing them. As a parliamentary speaker, I neither hoped to change nor did change a single vote." It is a little odd to find Scarlett denouncing the shams and unreality of Parliament. It is scarcely more odd than to learn from Mr. Disraeli that invective is the ornament of debate. The great verdict-winner and the great rhetorician both knew what they were talking about, and for once spoke the truth. The vice of parliamentary debate is unreality, and unreality lies next door to cant.

If a thoughtful critic might with great probability conclude that the conditions or necessities of English public life would necessarily engender cant, events passing before our eyes would afford sufficient proof that this expectation is not belied by experience. In truth, I am inclined to think that in England the action of leading politicians is a good deal more honest than their language. Foreigners, indeed, believe that English policy is tortuous, far-sighted, and untrustworthy. But an impartial historian of the nineteenth century will, it may be suspected, find very little of deliberate craft and subtle policy in modern English statesmanship. Popular government has many defects, but it does not develop cunning. Certain permanent influences, such as the relation of England to India, the absolute necessity of maintaining our naval power, the need of freedom for our trade, the national impulse toward emigration, the belief, on the whole well founded, that England has but comparatively small interest in many of the questions which divide Continental states—these and several other considerations fix, as by a decree of Fate, the course of English policy. It is no accident that while we did not care to intervene in the Franco-German war, we sent an army to Abyssinia to dethrone King Theodore; it is owing to no freak of Mr. Gladstone's, or of Mr. Gladstone's opponents, that an English Ministry which ardently desired peace and was sincerely opposed to all schemes for extending the Empire, has occupied, and may very possibly, in fact if not in name, annex, Egypt. The influences which direct the course of our foreign policy are permanent and intelligible enough. Unfortunately, it is hardly possible for English statesmen to make clear in their own minds, and still less to state in clear and honest language to others, the considerations by which their actions will ultimately be determined. Plain action is made to look dishonest by very unsatisfactory apologies; the whole attitude not only of the Government, but of the Liberal party, including the writers in the Liberal press, with regard to Egypt is a curious exemplification of this statement. That Mr. Gladstone and his colleagues have acted honestly and conscientiously I have myself not the remotest doubt. Any man not prepared to give the Khedive the armed support of England could no more have kept his place in an English Cabinet than could Mr. Bright. I have never met with any consistent opponent of English intervention in Egypt who was not, when hard driven, compelled to admit that he was opposed to the maintenance of the British Empire in India. Whether it is expedient, politic, or just for that Empire to be maintained, is a fair question of morals or of political theory. But it is a question which can no more be treated at present as open by an English Premier than it was possible for an American President to act twenty years ago on the conviction that the North ought to tolerate secession.

There is not the slightest ground, further, for supposing that Mr. Gladstone or Mr. Gladstone's supporters are prepared to break up the Empire. Against their action little can be said, except that their very just feeling against aggression, and their very natural feeling that there was an apparent incongruity between the tone taken by the Liberal leaders and party in 1880 and the attack on Alexandria, led them to delay action till nothing was possible but armed intervention. It is the language, or rather the tone, of leading Liberals which is open, if not to censure, yet certainly to observation. Conservatives are grossly unfair when they assert or imply that Mr. Gladstone's speeches in Midlothian pledged him to abstain on all occasions from foreign war. What, however, is in my judgment true is, that the tone taken not so much by Mr. Gladstone as by the whole Liberal party during the electoral campaign is hardly consistent with the tone they are forced to maintain with regard to the Egyptian campaign. It was quite right to denounce the faults, and I may add the dishonesty, of Lord Beaconsfield's policy of aggression; but there was little ultimate wisdom and some amount of intellectual confusion involved in the use of language which seemed to reprobate the policy not only of Beaconsfield, but of Palmerston. An evil result of this error is the constant use by apologists for the Ministry of very strange and unnatural apologies for very simple and, in my judgment, very defensible conduct. It is impossible to read a Liberal paper, or to listen to the speech of a Liberal M. P., without thinking how different would have been the language of the journal or the speaker if Lord Wolseley's triumphs had strengthened the Ministry not of Gladstone, but of Beaconsfield.

Another and even greater evil lies in the fact that a policy defended on non-natural grounds almost of necessity becomes of itself an ambiguous policy. But the last and worst result of the apparent inconsistency (for I think it is hardly more than apparent) between the rhetorical attacks which drove Lord Beaconsfield from office and the policy which events have forced on his successors is, that the electors throughout the country who were roused to action by an appeal to their moral feelings may think—wrongly enough, but not unnaturally for half-educated men—that the moral indignation avowed by Liberal leaders against Lord Beaconsfield, which was assuredly perfectly sincere, was a mere rhetorical trick. I do not share Mr. Bright's religious principles, and I am not an ardent admirer of his statesmanship; but, under his peculiar circumstances, his dignified retirement from office was, I am convinced, as great a service as any he has ever rendered (and he has rendered great services) to his country. He was, what his colleagues were not, really pledged against that form of "defensive" warfare which consisted in the bombardment of Alexandria. He preserved the moral tone of public life by redeeming his pledge.

The debates on the "closure" remind us, if reminder were needed, that the causes which infect political life with cant do not produce their effect on one party in the state alone. The Conservative case against the Government was that Mr. Gladstone, by means of his rules of procedure, was destroying parliamentary liberty of speech. Assume that the charge was true, or even that the men who made it believed it to be true, and no denunciation of the conspiracy against the liberties of Englishmen could be too strong. As far as strong language went, the Tories seem indeed to have done their best or worst. If their scolding did not rise to the level of invective, the defect lay in want of capacity, not in want of will. But the strangeness of their conduct, supposing the Conservatives to have believed what they said, lay in the miserable feebleness and futility of their opposition to an act which on their view was one of monstrous tyranny. They made no fight, or only made just fight enough to show that their heart was not really engaged in the matter for which they were fighting. The Tories were, it will be said, in a minority; so were the Tories of 1832, and if any one wishes to see the difference between a sham and a real parliamentary battle, he should compare the languid defence of free speech by Sir Stafford Northcote with the dogged and desperate defence of "rotten boroughs" by Sir Robert Peel. What is the explanation of the difference? Are we to suppose that the Tories of to-day lack the spirit of their fathers? The supposition would do them gross injustice. The explanation is far simpler. The men of 1832 were in grim earnest; the Conservatives of 1882 were only trying hard to believe that they themselves were in earnest. That this is so may be proved by two considerations, which are simple but, to my mind, conclusive. If the Conservatives had really believed that limits placed on the abuse of speech would really suppress freedom of debate, they ought never to have assented (and in fairness to them I must add they never would have assented) to proposals which would have made it perfectly easy to silence the only unpopular minority in the House—namely, the Home Rulers. Every argument in favor of protecting a minority told with double its usual force in favor of securing that the Home Rulers should not be silenced. It is essential that Irish opinion should be heard in England; it is most desirable that Irish opinion should not only have free expression, but should be known to all the world to have free expression, in the English Parliament. To silence Irish members of Parliament may really prevent Englishmen from knowing the wishes of Ireland. Even to appear to silence the Home Rulers may at least appear like oppression to the Irish people. Yet the protectors of free speech and the guardians of the alleged rights of minorities were willing to let a two-thirds majority—*i. e.*, in effect a majority of Englishmen—silence the representatives of Ireland.

If, again, the Tories believed that the rules of procedure were fatal to the dignity and to the

liberty of the House of Commons, it was both their duty and their right to announce that whenever the Tories again commanded a majority in the House the rules would be repealed. These rules are not, be it remarked, like a statute: they can be altered by any party who have the command of the House. Yet the Tories gave neither sign nor pledge that their return to power would mean the restoration to the House of Commons of its lost liberties. They probably thought that authority which might be ill used by Mr. Gladstone would be very useful in the hands of Sir Stafford Northcote. But if the Tories thought this, or anything like it, they did not really believe that Mr. Gladstone was assailing liberty of speech. The rhetorical denunciations of a useful and necessary reform of procedure turn out, therefore, to have been only the latest specimen of political cant. D.

"LE ROI S'AMUSE" REVIVED.

PARIS, December 21, 1882.

THE representations of the "Roi s'amuse" have, on the whole, not been favorable to Victor Hugo. In vain was a great banquet held at the Continental Hotel, presided over by the great man himself, and his glory celebrated in a hundred speeches. In vain did M. Perrin, the director of the Théâtre-Français, and M. Got (*Triboulet*) speak on the occasion. Victor Hugo said very little: "I thank you all, all"—and that was all. He could hardly thank the public; for the public, which had received lately with so much favor "Hernani" and even "Ruy Blas," had decidedly not given its sovereign sanction to the "Roi s'amuse." Of course, it was tacitly agreed that no mark of disrespect should be shown to the old poet; but silence is not disrespect, and I have never seen a more silent, a colder audience than I saw lately at the Français. I do not speak only of the public of the *Tuesdays*—of that chosen public which is essentially difficult to please, which is reserved even in its moments of enthusiasm, and which is opposed in its politics to Victor Hugo; I speak of the ordinary public, of what may be called the railway public, the hundreds of people whom the railways bring every day to Paris from all parts of France and of the world. The truth must be told: there is not in the "Roi s'amuse" a single character which attracts the natural sympathy of a great audience; and, in the second place, the absurdity of the plot is too manifest. When you are reading the play quietly at your fireside, all the absurdities, the incongruities, taking no tangible or visible form, disappear in the charm of the poetry, like strange sounds in the harmony of a splendid orchestra. The lyrical part of the play is very fine, but, on the stage, you want something more. You can interest yourself in *Hernani;* you almost believe in the young lord who has become a bandit, and who is waging war against his King; you can even, though it is already more difficult, believe in *Ruy Blas*, who has made himself, in a moment of misery, a lackey, but who has the manners and the soul of a gentleman. It is impossible to believe in *Triboulet*, in the King's fool. *Triboulet* is made odious from the beginning: he connives at all the follies of the court and of his royal master: he holds the ladder when he thinks the noblemen are going to rob *M. de Cossé* of his wife, and to bring *Madame de Cossé* by force to the room of *Francis I.* He is quite as bad, quite as immoral, as all the gentlemen against whom he turns when he finds that they have robbed him of his own daughter. He is almost disgusting in the first act; we cannot much sympathize with him when he shows himself in the character of a father.

I have heard it said that the comparative failure of the play is owing to the acting of Got, who took the part of *Triboulet*. "I have always thought," said M. Perrin to a friend, "that the part of *Triboulet* was a comical part; Got has persuaded me that it is a tragical part." So it is tragical; but it is tragedy without nobility, without any greatness. I cannot say that Got plays the part badly. He plays it very conscientiously, and it is not his fault if it is entirely out of harmony with the character of a buffoon. His long, eternal monologues are very tiresome on the stage, though they are full of magnificent poetry. Whenever he ought to act, he speaks—his indignation becomes too eloquent, his fury is lost in hexameters. When he has once undertaken to avenge himself and to have the King murdered by *Saltabadil*, he might become a little more concentrated. No, he still goes on; and when, finally, he thinks that he holds the corpse of the King of France, of *Francis I.*, in a bag which he himself will throw into the Seine, instead of accomplishing what he considers his mission, he begins the most interminable monologue. All this poetry out of place is exceedingly fatiguing, and *Triboulet* has been universally pronounced to be a complete failure in a dramatic sense.

Is there in the play some other character which might console the spectator? Alas! no. *Triboulet's* daughter, *Blanche*, is made very interesting—she is the angel of this hell; but the angels of Victor Hugo are sometimes very terrestrial. This innocent girl, brought up in seclusion, falls in love with a man whom she believes to be a young student. She is taken by force, brought to the Louvre by the courtiers, and recognizes her lover in the person of the King. At first she is indignant, she remonstrates; she runs away from him, and takes refuge—where? In the King's own room. And when, after a most distressing scene, during which *Triboulet* insults all the courtiers and screams for his daughter, she comes back, with her hair flowing and her white gown torn, to remain with her father and tell him her sad tale, and he resolves to take vengeance on the King, she implores her father for his sake: "Car je l'aime toujours!" I confess that this "Je l'aime toujours," after what has just happened, completely spoils *Blanche* for me. If *she* still loves the treacherous and brutal *Francis*, why should we be angry with him? This painful part of *Blanche* is extremely well rendered by Mlle. Bartet; she gives it a certain air of trouble, of confusion, of decency which is very praiseworthy. Her defects serve her as well as her qualities, for she is naturally weak and delicate, and very naturally enters into a part where she is quite sacrificed. The love which *Blanche* feels for the King is such that afterward, when she has witnessed his infidelity to herself and seen him making love to *Maguelonne*, the sister of the bandit *Saltabadil*, she resolves to sacrifice herself to him and become the voluntary victim of the brigand's poniard. It is extremely difficult to imagine self-sacrifice under such conditions. Why should *Blanche* give away her life in order to save the life of a man who has treated her as *Francis* did? She owes nothing to him, she ought to abhor him: she dies for him. Mlle. Bartet saves the painful absurdity of this situation a little by her delicate acting; she seems almost unconscious, like a poor victim following the dictates of destiny.

As for *Francis I.*, he is simply abominable from beginning to end. In the midst of his court, he appears like a drunken Faun; he smiles and laughs and shows his fine clothes. But all the costumes painted by Titian cannot give him the mien of the King who said on the evening of Pavia: "Tout est perdu, fors l'honneur." Mounet-Sully plays the part of *Francis I.* He is an actor of great merit, but he is very *inégal*, as we say: he is either excellent or very bad. There is in him something which makes him particularly fit for excessive parts, full of extravagance, of violence, of folly. He is an admirable *Hernani*, as *Hernani* is at times a raving maniac and at times a crazy lover; he is excellent in some plays drawn from antiquity, like "Œdipus," as there is in *Œdipus* a certain sort of fatality, of folly. As *Francis I.*, as King of France, Mounet-Sully is a complete failure; he acts like a drunken maniac, and not like a young king. How different was Worms in the part of *Charles V.* in "Hernani." Full of pride, of dignity, even in his fits of rage and passion, he looks like a man superior to all men. Mounet-Sully is only tolerable in the "Roi s'amuse" when he comes in disguise, dressed as a young student, to the house where lives the daughter of *Triboulet*. In his love-scenes he is almost perfect, as he is handsome, has a touching, rich, and harmonious voice, and has a certain want of intellect—not to use a less polite expression—which is not disagreeable in a young lover. He does not appear as well, in the fourth act, when he comes to the house of the brigand *Saltabadil*, and drinks and jests with *Maguelonne*, the sister. Poor *Maguelonne!* she is one of our cleverest actresses—Mme. Samary, the niece of the Brohans, the child, so to speak, of the Théâtre-Français, a true Parisienne. Her last success was in the "Monde où l'on s'ennuie" of Pailleron, where she played the part of a spoiled and *natural* child in the midst of artificial people. As *Maguelonne* she seemed almost ashamed of herself; the part would have been much better played by a handsome, stupid, and brutish woman, such as can represent to us the accomplice of a brigand of the fifteenth century.

The dramas of Victor Hugo are essentially operatic; they call for what goes under the general name of *mise-en-scène*. They are made to touch our senses as well as our intellects and our hearts. It is curious to see how well Verdi was inspired by this operatic tendency in his "Rigoletto": he translated, so to speak, the "Roi s'amuse" into music, softened its defects, and gave it the ideality which belongs to music. If I had the choice between seeing the "Roi s'amuse" at the Français and hearing "Rigoletto," I should prefer the latter. The situations are the same, but the coarseness of the drama, the absurdities of it, disappear—the characters assume a certain vagueness. When you read the drama, the lyrical part of it completely absorbs the dramatic part; when you hear "Rigoletto," a similar effect is produced—a certain sense of unreality seizes you, and you are in a land of dreams, not at the court of a real prince, with a real jester and real courtiers. M. Perrin felt the necessity of treating the "Roi s'amuse" a little like an opera. During the whole of the first act, while the King enjoys himself with his friends, an invisible orchestra is heard. In the third act we have a song, "Quand Bourbon vit Marseilles," to a real guitar. In the great act on the banks of the Seine, we see Notre Dame across the river, the houses on the quay, and here and there a light in the windows. We have a real storm while the King is in the house of *Saltabadil;* it rains, we hear the rain falling; the wind blows as fiercely as it does in a tempest. We can do all these things now by means of electricity and machinery. This realism has been much blamed; I should blame it myself in a piece of Corneille's or of Racine's. I cannot blame it in a drama of Victor Hugo's, for Victor Hugo does not captivate my mind so much that I cannot enjoy a little the material part of the representation. He speaks not to those higher thoughts which dwell above all material things;

with him, love, ambition, anger, all human passions seem more human; he only lifts me high in order to drag me down again. We must take him as he is, and treat him accordingly. He writes *libretti*, not tragedies in the old sense of the word. He is a Romantic, not a Classic; he is a demigod, not a god.

Correspondence.

THE CIVIL SERVICE AND THE LOCAL BOSSES.

To the Editor of The Nation:

Sir: We are so agreeably surprised by the prompt passage of the Senate Civil-Service Bill by the House of Representatives, that it seems almost ungracious even to wish it were better; but the shout of rejoicing in country neighborhoods would have been louder could we have a more direct share in the advantages of the bill. The great bosses will be crippled, but in those States which contain no large cities bossism will remain about what it is now; and a rural boss is just as offensive in a small way as a metropolitan boss. What we need is, that official fingers be kept out of the elections. There should have been a section forbidding postmasters and other Federal officials to meddle with local party politics. Postmasters will still be appointed for their services to Senators and Congressmen, and still manage the country politics and preside over the district conventions.

Respectfully yours, C. G. Howland.

Lawrence, Kansas, Jan. 8, 1883.

THE SUPPRESSION OF "CORNERS."

To the Editor of The Nation:

Sir: You seem to look with little favor or confidence on the movement to suppress "corners," and similar abuses of the Exchange, by act of the Legislature, and you feel inclined to scoff at the labors of the New York Senate Committee which is trying to learn wisdom from the kings of the Stock and Produce Exchanges. If the only object to be attained was the suppression of stock and produce gambling, you would undoubtedly be right: that can no more be suppressed by the power of the State than faro or keno—much less, indeed, for the "keepers" and "dealers" of the game at the Exchange are much richer and more influential than the men of the painted table or the "pegs," and proportionally more able to fight successfully the attempted enforcement of any law that might be levelled against them.

But a more modest end might be achieved. The courts of justice might be relieved of the ungrateful task of sitting as referees for gamblers. There should be an end to the disgraceful war of injunctions. The old English practice never allowed an arrest in an action for "goods bargained and sold," that is, in an action merely to enforce the fulfilment of a bad bargain. This is one good starting point. Let us allow no "provisional remedy" of any sort—injunction, attachment, etc.—in any suit growing out of options, selling short, future deliveries, etc. And, though contracts for the future delivery of produce may be, and often are, made for honest business purposes, those for the future delivery of stocks or bonds can never subserve any useful purpose, and should simply be ignored by the courts as null and void.

Generally, when a suit is brought for "differences," it is not brought by one better against the other, but by the broker who has made the outlays for the losing speculator—in good faith, of course; and it generally turns out that the greater part of these outlays represents the broker's own commissions. It was decided, as long ago as in the days of Lord Mansfield, in the case of Faikney *vs.* Reynous (4 Burrows, 2069), that such suits can be maintained, though the original transaction, the losses in which had been settled, were tainted with "stock-jobbing," and themselves unlawful. It would not be difficult to frame a legislative act to reverse this line of decisions, and put the keepers of bucket shops, big as well as little, upon the same footing as the keepers of faro banks.

The time of the court ought to be occupied with more serious business than the settlement of losses on 'Change. Respectfully,

L. N. D.

Louisville, Ky., December 31, 1882.

SOUTHERN HOMICIDE.

To the Editor of The Nation:

Sir: I have read with much interest your editorials and the communications in your columns on "Homicide in the South." I write merely to correct a statement which, by an omission, doubtless without malice, does the South an injustice. The error is in the communication of your correspondent, "X. Y. Z." By the laws of Alabama (see section 358 of code) farming tools to the amount of twenty-five dollars to each head of a family are exempt from taxation, and so are the tools of a mechanic of a like value. We have many more pistols and dirks than we need, and I wish they were not used so frequently; but we also have a sufficiency of farming and mechanical tools, and the valuation quoted by "X. Y. Z." represents only the valuation subject to taxation, and this is, of course, undervaluation of the taxable portion.

Wm. A. Davis.

Eufaula, Ala., January 8, 1883.

To the Editor of The Nation:

Sir: Home truths are very often disagreeable. Indeed, we of the South are very sensitive about some home truths which come very close to us. But the only true way is to look things square in the face, and if those things are evil and hurtful to us, we should oppose and end them. Let me confess that your strictures in regard to Southern homicide are justifiable. You are sustained in what you say by facts. Murders are occurring every day, south of Mason's and Dixon's line, which prove your words true. Wherefore deny them? The public prints teem with them. No candid man will excuse them, because there is no excuse for them; and, indeed, some of the excuses put forth by your indignant Southern correspondents are as bad as the murders themselves. The only thing to do is to acknowledge the fact, recognize the evil, and seek a remedy.

In the first place, why is it that homicide is prevalent in the South? To answer this question it is not necessary to review the habits and temperaments of our ancestors. They have enough to answer for without saddling upon them this sin, which pertains peculiarly to our own day and generation. Homicide was not half so prevalent in the South fifty years ago as it is to-day. It is a growth of recent date, comparatively speaking. But whether it is of recent date or not, whether it is the outgrowth of immemorial custom or not, matters little in the face of the fact that it is an evil present with us, around us, and among us. Our criminal laws are not in fault; they are stringent enough. Our juries, and the men who execute our laws, are largely responsible for the condition of things existing in the South. A widespread and mistaken idea that a man must avenge an insult or a wrong by taking the law into his own hands, has taken a strong hold upon the public mind; it has permeated to all classes and conditions of men. Why? Because the law is not properly executed, because at law men cannot obtain redress. Therefore, the men who execute the laws are largely and perhaps criminally responsible for the prevalence of the homicidal evil at the South.

Another reason is the habitual carrying of concealed weapons. The other day, at a trial before a justice of the peace, a witness testified that a man who was being tried for an assault was armed. The question was asked him, with what was he armed? He replied: "*With the arms we all carry.*" "What are they?" "*A pistol and a knife.*" When a witness in a court of justice can say with perfect coolness, and in a matter-of-fact tone, that he and all his neighbors habitually carry a pistol and a knife, and speak of it as nothing unusual or surprising, is it wonderful that murder should take place whenever two neighbors fall out about any matter of business or other thing? The people have become used to see murderers acquitted or lightly punished—so used to it, indeed, that they take it as a matter of course, and when men serve on juries who are in the habit of thinking about murder as not a very high crime, it is not surprising that they punish it lightly or not at all.

The remedy for the evil seems to me to be to discuss it freely and fearlessly as you have been doing. The people must be educated to think of murder as it really is. It must be robbed of its sentimental phases. Let it stand out before their eyes in its hideousness, and let them understand what a fearful crime it is. Let men of influence and standing among us boldly denounce it. Let us not undertake to justify it, for there is no justification possible. Let there be a reform in the execution of our laws. That reform will come; it may be slow, like all reforms, but it will be effective, and it will be realized. Let us hope that the seeds are already sown which will bring forth good fruit. I trust that the discussion going on in your columns will not end until the necessity for it ceases.—Very respectfully,

James Hay.

Madison C. H., Virginia.

To the Editor of The Nation:

Sir: The communication of "Old Subscriber" in your last issue (No. 915) determines me to do what I have been intending to do ever since you have been writing about "Southern homicides"—to testify, as a Southerner born and bred and an unrepentant "Rebel" of the bitterest sort, that you have written the truth, and only the truth, upon this subject, and to thank you for the entire absence of any malice or misrepresentation in your articles. I have just reread all these articles, with the replies of your correspondents and your own rejoinders, and confess that I am astonished at your fairness, calmness, and moderation. For ten years I have not missed reading a single number of the *Nation*; there is no consideration which could make me part with it. I have circulated it and extended its subscription among other ministers in a way I have never done for any religious journal. I now wish I could put a copy of it in the hands of every young Southerner of sufficient intelligence to appreciate it. It is with grief and mortification that I read the silly replies of some Southern newspapers to your articles—replies which in every instance confirmed your statements and inferences, for they proved that these editors were unaffected by and indifferent to the disgraceful events you were justly condemning. The daily in my own town made a characteristic reply, putting your articles in the category of Yankee "persistent and malicious misrepresentations"; yet the same issue published a news item of the kind described and

denounced; and in a day or two copied from a Georgia paper a communication of a column upon the pardon of the murderer Cox by Governor Stephens, in which Cox is made a hero of, the sympathies of the reader evidently appealed to in his behalf, and, to crown the whole infamous communication of an infamous transaction (Governor Stephens's pardon of him), the communication furthermore tells us that a son of Colonel Alston will probably feel called upon to avenge his father's death, now that his murderer is set free. Yet this daily paper of mine spoke no word of surprise or condemnation. As you have well said, this thing is a "damning spot" upon the character and name of the Southern people, and it is sadly corroborative of your position that the only papers which second your well-meant attempts to make the Southern people ashamed of this barbarous sentiment are those which, like the *News and Courier* and *Courier-Journal*, are the least sectional.

Another striking confirmation of what you have written on this subject is the fact that the Southern religious press is as reticent on this subject as the Northern religious press was about the wickedness and rascalities which, during the carpet-bag régime, were perpetrated among us in the name and with the approval of the whole Northern people. There is to me an interesting analogy between the way in which the Southern religious press ignores the existence of this sentiment among us, when it is its duty to denounce and seek to destroy it, and the way in which the Northern religious press either hounded on the Republican party to its foul and cowardly oppression of the South, or held up to youthful admiration and consequent imitation the greatest rascals that party vomited out upon the country. It shows how greatly a social or moral distemper can affect every class and calling of a nation or community so as to poison the very sources from which recovery alone can come. It is also interesting to note that, just as religious liberty was among the religious themselves what Diderot defined it to be, "the liberty of persecuting other religions than one's own," and became established mainly through the instrumentality of such irreligious men as Voltaire and Jefferson, so the only honest indignation manifested anywhere North against the wickedness the "Great Moral Party" was perpetrating in the South, was shown by the *Nation*. The Northern religious press was out-Heroding Herod in its execrations of the South, and using all its tremendous influence among the masses to support the damnable measures of the Radicals in oppressing the South, long after the *Nation* had denounced them and warned the Northern people that such a disregard of the principles of republican government could not be confined to the Southern section of the Union, but that they were preparing the way for the same scenes to be repeated at the North by accustoming themselves to the sight of a party in power setting aside the safeguards of constitutional government for party purposes.

I have read the *Nation* with gratitude as a Southerner, and I may say almost with reverence, when it alone was lifting up its voice against the corruption and meanness of the Republican party in its infamous doings at the South, and against the dishonesty of both parties in deranging the national finances; I have seen the published number of its subscribers diminish by thousands in a year because of its adherence to truth and principle and its championing the cause of the South; I have seen it ever displaying an integrity no secular or religious journal North or South has displayed. Therefore, when these articles on homicide began to appear, though I at first resented them as an attack upon my country, yet my confidence in the *Nation* brought me to consider the matter in a light I had not done before. I knew there was no sense in the *tu quoque* reply to the *Nation*, for no journal had ever been so outspoken in denouncing every form of social or political wrong-doing, North or South. I only wish I could send a copy of the *Nation* to every youth in our beloved South, that he might become educated out of his sectionalism into a broader and higher public sentiment.

A South Carolinian.

January 13, 1883.

To the Editor of The Nation:

Sir: I see in the Nashville *American* a denial, signed "X. Q. Z.," of the habit of carrying arms in the South. Your article in answer is just. Young men are ready at any time, sudden and unexpected, for themselves or their friends, to go into a fight. I endorse you emphatically in what you say. Say it as often as you feel like it.

B. F. S.

Hurricane, Tenn., Jan. 6, 1883.

THE EVOLUTION OF REPUDIATION IN TENNESSEE.

To the Editor of The Nation:

Sir: The Southern States especially, and the whole United States to a certain extent, are at this very moment mournful examples of the national corruption caused by familiarity with vice. The "spoils system," "political assessments," "machine politics," "influence," "the lobby," "jobs," "bossism," corruption in public and private life, breaches of confidence in the shape of defalcations, embezzlements, and misappropriation of trust funds, are all the progeny of an evolution of moral obliquity which has taken place so gradually that even observing men have scarcely noticed it. Now, at last, the public is awakening to find a state of things which seems unnatural and abnormal, as if some great moral cataclysm had suddenly wiped out of existence the race of good men, and introduced in its stead a new order of beings, between which and its predecessor there seems to be no connecting link.

The *Nation*, during several years and on many occasions, has sounded the note of warning and pointed out that *facilis est descensus*. No one of the evils above enumerated has escaped its argus eyes or been allowed to go unwhipped. But the warning of the watchman has been unheeded, or has been sneered at, as in the case of the "Southern homicides," which have been so truthfully and justly characterized as a blot upon the civilization of the people among whom they have occurred.

There is another form of moral degeneracy now threatening to sweep over the Southern States like a pestilence, against which every honest man ought to cry out in terms of uncompromising denunciation. At this very moment it is endangering the life of one of the largest and fairest and greatest of those States—Tennessee. When this moral disease affects the individual, and his neighbors suffer the loss of a few hundreds by his villany, it is called cheating, swindling, stealing, or some similar harsh term expressive of the most detestable conduct. But when a whole State, a great, sovereign body politic, is affected by it, and deliberately robs its creditors of millions of money, even the name *repudiation* is too harsh for the euphemistical orator of the political campaign: some less repulsive term must be found. In Louisiana it is called "scaling"; in Virginia, "readjusting"; and in Tennessee it rejoices in the high-sounding titles of "recognizing the equities," and "discrimination between the real and bonded debt of the State."

In whatever form it appears, and under whatsoever name known, it has been a disease of slow but steady growth. The writer is a Southerner born and bred, and has always lived in the South, and therefore writes from a knowledge gained by long observation and experience. He became a citizen of Tennessee five years ago, from a more Southern State. At that time it would have been difficult to find a man of intelligence and respectability in Tennessee who would have acknowledged that he was a "debt-scaler," "readjuster," or "discriminator"; and perhaps not a single citizen of the State would have consented to be called a repudiationist. Nearly four years ago, what was known as the 50–4 scheme for settling the debt was submitted to the popular vote. A large majority of the voters would have nothing to do with it—stayed away from the polls altogether—and a great many looked upon it as an insult to the State to consider such a proposition as a question of State policy.

Somewhat over two years ago, Hawkins, Wright, and Wilson made the race for Governor, Wilson being a "low-taxer" (another euphemism for repudiationist). He received just votes enough to split the Democratic party and put Hawkins, a Republican, in the gubernatorial chair, although Tennessee was known to be a Democratic State by nearly 40,000 majority.

Meantime, during these various campaigns and canvasses, the politicians and demagogues were "instructing" the people. The 50–4 scheme had been advocated by many able and some good men. The good men spoke in favor of it because it was understood that the bondholders would accept it as a definitive settlement of the debt, and because it was considered of such great importance to get the debt settled in some way, and thereby eliminate it from State politics. These advocates used many specious arguments—arguments known by the makers of them to be fallacious. But they were cunningly and skilfully put before the people, and the people were thereby much "instructed," and acquired many new ideas.

Mr. Wilson, the "low-taxer," too, and his friends taught the people, from one end of the State to the other, the new doctrine of paying a big debt with a small sum of money, which Mr. Lincoln once said it was so hard for him to see how to accomplish. And, finally, in the last campaign between Hawkins and Bate (Fussell and Beaseley were really not in the race), the apostles of the new doctrine were the leading men of the State—and their name was legion—and they proclaimed it from the stump in every county and every neighborhood of the State: among the gorges and mountains of East Tennessee; on the plateaux and plains of Middle Tennessee, and in the lowlands and swamps of the Mississippi bottom; and their preaching was with power, and the whole people were awakened and converted. So that the very same doctrine which in 1878 had been treated with contempt, which in 1880 had caused the defeat of the "low-taxer" Wilson, in 1882 had become a mighty tide which, taken at the flood, carried General Bate to success.

And now, Tennessee, with her fine geographical position; with her great and varied natural resources; with her vast extent and wealth; with her unlimited potentialities for greatness and prosperity; with her beautiful scenery and proud past history, is cursed with the dry-rot of repudiation, which is already slowly, yet surely, and soon will be swiftly, sapping the foundations of her social, moral, political, and material well-being. Now even the best of her citizens do not hesitate to advocate the 50–3 scheme for settling the debt. They advocate this scheme only in case the bondholders are humble and tractable, and indicate the utmost willingness to accept it. If the bondholders are not thus disposed,

"straight-out and complete repudiation" is almost universally threatened.

The reasons given by good men in justification of their repudiation principles are curious and interesting, as indicating how completely false views may take possession of a people when they are assiduously cultivated by designing demagogues. The seeds of corruption are skilfully disseminated; they then germinate, grow, and fructify so stealthily that even the best of men are often unaware that the clearness of their moral sight has become darkened by a crop of noxious weeds.

Some of the principal reasons given are as follows:

The bonded indebtedness of the State was contracted during the reconstruction period, when a majority of her citizens were disfranchised. They had no voice in the matter, and are therefore not responsible for it.

The bonds were issued for the benefit of the railroads of the State; therefore, let them settle with the bondholders.

The bonds were sold at prices ranging from much below 50 cents on the dollar to not much above that figure. Fifty cents is probably above the average cost of the bonds to the holders. Hence they ought to be satisfied to get that for them.

The bondholders are rich, and can afford to take 50 cents and 3 per cent. interest, while the people are poor and cannot afford to be taxed to pay more.

The bondholders themselves have consented to have the bonds scaled to 60–3–4–5 and 6, and once you begin to scale there is no moral difference whether you scale much or little. Therefore we will scale as much as we please.

Finally, in the last campaign, 50–3 was the broadest plank in the platform, and, standing on it, General Bate was overwhelmingly elected to the Governorship. Hence the people have spoken plainly in favor of 50–3, and *Vox populi vox Dei* is a fundamental principle of a republican form of government.

All of these reasons are considered incontrovertible.

In conclusion, let me say that it is melancholy to note some of the immediate results of the moral obliquity which has grown upon our people. What the ultimate consequences will surely be it is fearful to contemplate. Even now individuals are tainted and contaminated by it. In their public and private relationships men are losing that keen sense of honor and honesty which should always characterize an upright people. The lamentable defalcation of the State Treasurer of Tennessee, which has just brought shame and disgrace upon a name of which every Tennesseean has been so proud, is but a natural sequence to years of dallying with repudiation principles. These same principles, if they fasten themselves upon the people of the State, will destroy confidence, breed distrust, and upset all business relations. It is fearful to think how near we now are to the realization of these awful consequences. To be convinced that this is so, one needs but listen to conversations he can hear on the street corners, in the market-place, in the post-office, or anywhere where men gather together and discuss current events. The writer heard a business man of good standing in the community in which he lives remark, when the State Treasurer's crime was under discussion, "Oh! he is not to be blamed: a grab game is going on everywhere now; he had his chance and took advantage of it, and he did right." *O tempora, O mores!* † † †

TENNESSEE, Jan. 9, 1883.

[It has taken about forty years to make "repudiation," itself originally a euphemistic term for fraudulent bankruptcy, cacophemistic. Mississippi invented it, and Pennsylvania quickly adopted it. The dictionary-makers should not overlook this "rogue's progress" of the Queen's English.—ED. NATION.]

THE "NATURAL METHOD" OF TEACHING LATIN.

TO THE EDITOR OF THE NATION:

SIR: Although I doubt whether you would be willing to open the columns of your paper to a discussion of the various methods of teaching languages, I venture to ask for the necessary space for the following remarks, suggested by the correspondence in No. 913.

One of the greatest difficulties the followers of the "natural method" encounter is no doubt the explanation of the meaning of new words to the pupils without the use of English, and from what I have seen, heard, and read of the various practical methods, of older and more recent date, I have not been able to satisfy myself fully on this point. Now, your correspondent says (p. 552): "The meaning of new words is explained to them [a class of beginners] in Latin, by their derivation, or by synonyms, or opposites, or by explanations, so that the student is compelled to think in Latin." One or two illustrations of this method would be of such interest to me, and I know to many teachers besides myself, that I beg to ask for the explanation, according to the above method, *e. g.*, of the words italicized in these sentences from the first and second chapters of Cæsar's 'De Bello Gallico': "Belgæ ab extremis Galliæ finibus *oriuntur*." "Id hoc facilius *eis* persuasit, quod," etc. "His rebus *fiebat*, *ut* et minus late vagarentur," etc.

These examples are chosen at random, but they will answer the purpose as well as any. I confess I do not see any way of making the meaning of such words clear to beginners except by means of their English equivalents; therefore, I appeal to the advocates of a method which, it seems to me, has its serious drawbacks. The wonderful successes of men like Jacotot and Hamilton, and of other famous teachers before and after their time, as well as the unusual progress in linguistic studies of pupils like Montesquieu and Macaulay, are among the most interesting facts in the history of education; yet they are easily explained by circumstances not surrounding those for whose benefit they are so often cited.

I thoroughly believe in making the study of languages as practical as possible, and I do not say that the method spoken of by your correspondent is not a good one; but it seems very doubtful to me whether there is any need of a revolution in methods—whether the trouble does not rather lie in the faulty use of methods now in vogue, and in the inability of many teachers to give to their instruction that practical turn which presupposes a mastery of the foreign tongue on the part of the teacher. A so-called conversation-method in the hands of a teacher not well versed in the language would certainly lead to pitiful results.

I know of a class of adult beginners in German who met last summer for five weeks, and during that time read *intelligently* one act of a play in prose, and the first three books of Goethe's 'Hermann und Dorothea.' Of course, they had to study the grammar in connection with their reading lessons, or they could not have done the work. English was spoken in the class-room when a principle covering perhaps hundreds of cases could be explained in a minute, while an attempt to explain the same in German would probably have been entirely unsuccessful. German was spoken to a considerable extent. It is true, neither teacher nor students could boast of having spoken "no word of English in the class-room"; but what would that amount to in comparison with the scholarly knowledge actually gained by the class in so short a time?

There are so many opponents of, or lukewarm believers in, the study of the ancient languages to be found in the ranks of those who have once themselves been classical students, that it is evident they did not acquire a sufficiently thorough and extensive knowledge of Latin and Greek to "see the use of it." The more students are drawn into the classical studies without a reasonable prospect of their pursuing them long enough to derive real benefit and enjoyment from them, the more opposition to such studies there will be in the future. "Easy methods" may at first be enticing to many, but most of them will prove disappointing. "In colonial days, a boy, to be admitted to Harvard, had to be able to read Cicero and Tacitus at sight, and to speak the Latin language readily and correctly." Would it not be well, in order to avoid all suspicion of empiricism, to examine carefully into the methods by which, in former times, results were reached, and in other places are now reached, that would satisfy the most ambitious?

Very respectfully, A. LODEMAN.

YPSILANTI, MICH., Jan. 2, 1883.

A PROTEST.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me to inveigh in the strongest possible terms against the practice of the proprietors of *Littell's Living Age*? Without consent or any knowledge of mine, my last novel 'Robin,' although purchased from me for publication in the United States by Mr. Holt, of New York, was republished from *Temple Bar* by them and put through their magazine; added to which I find in their arrangements for 1883 my name advertised among their list of contributors.

As I have always received honorable treatment hitherto at the hands of American publishers, I think in fairness to those who pay, authors should protest against those who steal.—I am, sir, yours obediently, LOUISA PARR.

18 UPPER PHILLIMORE PLACE, KENSINGTON, W., January 2, 1883.

Notes.

J. B. LIPPINCOTT & Co. will be the American publishers of the 'Life of Sir William Rowan Hamilton,' by Robert Perceval Graves, of which the first volume has already been issued from the Dublin University Press.

'The Jews of Barnow,' stories by Karl Emil Franzos; 'Mrs. Lorimer, a Sketch in Black and White,' by Lucas Malet; and a new edition of 'The Virginia Comedians, or, Old Days in the Old Dominion,' by John Esten Cooke, will be published during the present month by D. Appleton & Co.

We are glad to learn that a second edition of Professor Harrison's 'French Syntax' will shortly be published by John E. Potter & Co., Philadelphia. Several important additions have been made to it, and notably a copious series of exercises.

Ten Brink's 'Early English Literature' (to Wyclif) has been translated by Prof. H. M. Kennedy, and will be published immediately by Henry Holt & Co. The same firm will also bring out at once 'Lyrical and Dramatic Poems,' by Robert Browning, selected and edited by Edward T. Mason.

T. Whittaker will issue immediately the Bohlen lectures for 1882, delivered by the Bishop of Michigan, Dr. Harris, on the "Relation of Christianity to Civil Authority." The same

publisher has in preparation 'Principles of Agnosticism applied to Evidences of Christianity,' by the Rev. J. Andrews Harris, D.D., of Philadelphia.

The English critics have fulfilled our prediction of the praise they were likely to bestow on the illustrations of *Harper's Christmas*, and the English public have responded by exhausting the edition for that country in a single day.

The most attractive exhibition catalogue yet produced in this country, so far as our recollection serves, is that of the First Annual Exhibition of the Philadelphia Society of Etchers. For some reason that city has taken the lead in organizing its etching talent, and is now enjoying a fine array of 1,070 etchings—not all produced by Philadelphians, of course, nor by Americans, but each from the designer's own hand ("painters' etchings"). Mr. S. R. Koehler supplies an introduction largely given up to practical directions for the art. Interspersed are eight of the American etchings, two of which have a special interest—Mr. Stephen J. Ferris's "Fortuny Dead," and Mr. Joseph Pennell's "Café des Exilés"; the last being one of six illustrating Mr. G. W. Cable's stories.

The new Harvard Catalogue (C. W. Sever) shows a remarkable uniformity in the numerical strength of the undergraduate classes, the Freshmen leading off, of course, with 263, and the Seniors, Juniors, and Sophomores numbering 203, 209, and 208, respectively. While there are 229 medical students, there are but 134 law and 27 divinity students.

The Rev. Sheldon Jackson's paper on "The Neglect of Education in Alaska," with its map and many woodcuts, is the most noticeable feature of the Bureau of Education's Circular of Information No. 2, just issued, containing the proceedings of the department of superintendence at the National Educational Association in Washington last March. The accompanying circular and tracts on the University of Bonn, National Pedagogic Congress of Spain, and High Schools for Girls in Sweden seem to us outside the proper scope of the Bureau, and of doubtful utility.

We notice that the Principal of the Lasell Seminary at Auburndale, Mass., has provided a course of four lectures for the young ladies of that institution, on the "Principles of the Common Law," to be delivered next month by Mr. Alfred Hemenway, of Boston. "The legal rights and independence lately given to women," says the announcement circular, "bring responsibilities for which there has often been no corresponding preparation."

The thirteenth volume of Transactions of the American Philological Association for the year 1882 has appeared (Cambridge). Of the papers printed in full, perhaps the one possessing most general interest is that by Dr. Isaac H. Hall, on the Greek New Testament, as published in America. Dr. Hall thinks the earliest Greek *book* printed in this country was Mathew Carey's edition of the 'Enchiridion' of Epictetus (1792). The first Greek Testament came from the press of Isaiah Thomas in Worcester, Mass. (1800). Seven editions (following three foreign originals) served for the next twenty years. From 1821 on, each year has seen at least one (and often many), except the years 1824, 1828, 1830, 1836, 1839, 1843, 1867, 1874.

The two volumes, 1881-82, of the Providence Library's *Monthly Reference Lists*, most tastefully bound, like those before us, are a welcome addition to the endless variety of indexes. They can be used in connection with any good public or private library. We would suggest to Mr. Foster that by italicising in his next volume-index the *current* topics, the page would exhibit at a glance the characteristics of the year.

Governor Begole, of Michigan, though making a clean sweep in other offices, has sensibly resisted the pressure on him for the removal of Mrs. Tenney, the excellent State Librarian (see *Nation*, vol. xxxv., p. 487). She was renominated, and promptly confirmed by the Senate. The State Library is safe now for two years.

Mr. Goldwin Smith's *Bystander*, revived as a quarterly (Toronto: Hunter, Rose & Co.), is a politico-literary review perhaps unique as the work of one hand. Its main object is to advocate what the editor considers the true interest of Canada—to develop and form relations, commercial and political, in accordance with and not in hostility to continental forces, as opposed to imperial ties and traditions. The large part, therefore, of his review which is devoted to Canadian politics is profitable reading for Americans, as of course are Mr. Smith's excursions when crossing the borders and commenting on the November elections and the defeat of woman suffrage in Nebraska. Mr. Smith's antipathy to the Jews crops out in treating of the settlement of Manitoba, while his pronounced Irish views are substantially reproduced from his recent article in the *Princeton Review*. Agnosticism continues to fill him with lively apprehension, and the revival of Mr. George Brown's shade in Mackenzie's 'Life and Speeches' justifies a renewal of plain-speaking concerning Mr. Smith's unscrupulous opponent. There is no one who cannot derive some instruction and entertainment from this characteristic *causerie*, of which the English style is almost a sufficient recompense.

Pach Bros., No. 841 Broadway, have made an excellent and very interesting photograph from life of Lieut. John W. Danenhower. The brave and unfortunate explorer wears his arctic costume, and the photographer's skill has furnished an appropriate background.

In *Le Français* for January 5 (Cambridge, Mass.), Mr. Jules Lévy makes a pleasant diversion in his editing by reprinting M. R. de Grilleau's timely article on "La France au Niger," to which a chart gives clearness. France and England in Madagascar, on the other hand, is the subject of a leading article in the *Nuova Antologia* for December 15, 1882 (New York: Christern). The author is A. Brunialti.

With the beginning of the new year, the *Athenæum Belge* turns monthly from the weekly that it has heretofore been. It is an excellent periodical, and would that there were more of it in quantity, as we presume would be the case if it had more support. A leading feature is the summary of the contents of periodicals, both Belgian and foreign.

More new periodicals call for mention: (1) *Museo Italiano di Antichità Classiche*, to be published at Florence, and edited by Comparetti, author of the 'Researches respecting the Book of Sindibâd' published by the Folk-Lore Society; and (2) *Deutsche Hochschule*, a weekly "organ of German students," to be published at Prague, as an offset to the division of the University into two, German and Czech, at Prague, "that ancient nursery of German science, that fortress, now menaced, of German culture." It undertakes "to defend with all the fire of university inspiration, with juvenile intrepidity, both the character of the German university at Prague and *akademisches Deutschthum* in general." Besides treating university subjects, it will have amusing articles, humorous feuilletons, and scientific essays. We fear that though its "juvenile intrepidity" may be occasionally amusing, it will be found, on the whole, like most university magazines, rather dull reading for the outside world.

The tenth edition of Berghaus's "Chart of the World" has been received by Westermann & Co. It is in eight sheets, arranged for mounting as one whole. The particularity of its annual revision extends even to definition of the arctic ice barriers, and in other respects it delineates all the new commercial routes by sea and land, the new telegraphic cables, the significant railway extensions, and presents the customary information concerning the physical features of the continents, the ocean currents, etc., etc. The Suez Canal, the Panama, Darien, Honduras, and Nicaragua routes, the Straits of Dover and of Sunda, the chief ports of the world, and so forth, are represented in numerous side-maps. The execution of this chart is characteristic of the house of Perthes at Gotha. The nomenclature is prevailingly English, but a glossary accompanies the map and gives the German equivalents.

Victor von Scheffel's 'Trompeter von Säckingen' has just reached its 100th edition (Stuttgart: Bonz & Co.).

It is becoming the fashion for German professors nowadays to write novels. Ebers's success every one knows. Professor Johann Scherr, whose history of English literature has lately been translated into our language, has just brought all the German critics about his ears by a novel in Rabelaisian style, 'Porkelès und Porkelessa: eine böse Geschichte.' The story is simply that of an adventurer who introduces himself into a Jewish family, and, with the assistance of a female Nihilist, of toxicological accomplishments, makes way with the whole family and enjoys their fortune. But the story is nothing; the satire, of the crudest sort and expressed in the most cynical manner, is everything. All the world is attacked—Wagner, Skobeleff, Stöcker, Auerbach, Sacher-Masoch, Treitschke—with a monotony of disapproval. Spielhagen will not find in Professor Scherr a proof of his theory of the superiority of German fiction.

The French have never been as fond of foreign fiction as the Americans or the Germans, but the chief series of exotic stories, the "Library of the Best Foreign Novels" (Bibliothèque des meilleurs Romans étrangers—Paris: Hachette; New York: F. W. Christern) now contains about three hundred volumes. As might be expected, the English novels freely permitted to that mysterious entity, the French *jeune fille*, are the most abundant of these translations. There are thirty-eight volumes of Miss Braddon, twenty-seven of Lord Lytton, twenty-nine of Dickens, seven of Mrs. Gaskell, nine of Thackeray, and sixteen of Wilkie Collins. The American contingent is sixteen volumes by seven authors, including Hawthorne, Longfellow, and Mrs. "Beecher-Stowe." There are only two volumes by Anthony Trollope, although there are three by his mother, one of which, however, is credited to him, and another is treated as anonymous.

Several years ago the *Nation* commented on the handsome volume of puppet-plays written by M. Lemercier de Neuville for his own Aristophanic *pupazzi*, as he chose to call the tiny comedians he handled in so skilful and amusing a manner. These earlier plays were full of "local hits," and were aimed at old heads. He has now prepared a little volume of slighter pieces intended to be acted by children and before children. Some of them are in prose, and some in the rhymed Alexandrines of French comedy. All are bright and excellently suited to their purpose. Especially to be commended in this volume, 'Les Pupazzi de l'Enfance' (Paris: Delagrave; New York: F. W. Christern) is the appendix giving an illustrated and detailed description of the internal mechanism of the puppet show, and of the ingenious devices by which M. Lemercier de Neuville has im-

proved it. The plays are adorned with many sketches by M. B. de Monvel.

Some Assyrian antiquities brought from Mosul by Father Ryllo, S.J., and given by him to the Vatican Library, which have remained forgotten there for thirty years, have just been brought to light again. Among them are inscriptions in the Hittite character, and it is hoped that some bilingual inscriptions, or at least fragments, may be found to give a clew to the lost language and throw some light upon the obscure history of early Syria.

—A considerable sum, exceeding £7,000, has been contributed by the friends and admirers of the late Francis M. Balfour to found at Cambridge, England, a scholarship in biology which should bear his name. The English committee, while they do not seek contributions in this country, yet hope that this memorial in honor of the most distinguished embryologist of Great Britain may excite some interest among the naturalists of the United States. An American committee, representing our principal colleges, has been formed, and it is hoped that the naturalists who knew Balfour only from his published works will join his personal friends in this testimonial to his rare personal character and brilliant intellectual powers. Prof. H. Newell Martin, of the Johns Hopkins University, has consented to act as secretary and treasurer of the committee.

—With a wise liberality, but without ostentation or extravagance, the city authorities of Boston have printed a new edition of the Proceedings at the rededication of the Old State House last July. Mr. W. H. Whitmore's capital address, curtailed in the delivery, is given at still greater length than in the pamphlet published immediately after the event, with revisions and additions, principally in the shape of notes and appendices. The public, to whom has unexpectedly been confided as a municipal monument a building second to no other in the country in historic importance and in preservation, needed not only the antiquarian's narrative of its vicissitudes, but the completest possible series of views showing the external changes which it has undergone since the present walls were erected in 1713. These have been inserted in the new volume, and will greatly help to stimulate popular interest in the cradle of Independence. The earliest view dates back to 1770, forming the background to the Boston Massacre as delineated in Paul Revere's contemporary engraving. Thanks to the intelligent restoration made under the auspices of the Bostonian Society, so much of the eastern front as is visible in Revere's print is identical with the corresponding portion of the actual front (as shown in the frontispiece), except that the sun-dial has not been put back in place of the clock. The next view is in 1785, and from that time nearly every decade is illustrated. Two views of Faneuil Hall, in demonstration of the much greater changes which have transformed that more modern but more famous edifice; views of other city halls than the Old State House; the city architect's plan of the second floor of the latter; and portraits of James Otis, Samuel Adams, Edmund Quincy, jr., John Hancock, Thomas Cushing, and James Bowdoin, still further anticipate the inquiries of a generation not too much addicted to historical research. In short, a more creditable American "city document" can hardly be named, and yet it has been assailed as a "job" and an "abuse" by a local newspaper which of all others is supposed to represent the blue blood and civic pride of Boston. Happily, the *Advertiser* includes in its condemnation the disinterested publications of the Record Commissioners, and thus betrays its animus too unmistakably to deceive anybody.

—The Cincinnati Public Library has abandoned its project of publishing the catalogue of its library in separate classes, and will now print immediately a catalogue of the whole library with short titles, after the manner of the Poole catalogue of 1871. The subject-lists already printed embrace the English, German, and French fiction (1876), and drama (1878), all of which are meritorious works, and the fiction-lists rank with the best. The fact is, that the library, although it is constructing a card catalogue, has no catalogue accessible to the public of the books obtained between 1871 and 1877, except the above and a few printed medical titles. The monthly bulletins began to be issued in 1877. For the period between '71 and '77 an applicant for a book must ask without knowing whether the library has it, and an attendant on the galleries makes a search with no assistance except her or his knowledge of the classes in the alcoves. This, of course, made delays and complaints unavoidable; and as no room has been provided for the card catalogue, the only resource, and a highly useful one, has been to print a new catalogue of the whole library. The monthly bulletins, which are continued, will henceforth enable the public to keep informed as to the library's accessions. It is curious to note that this library, with many others in the country, suffered in the last year (ending with June) a decrease of circulation—a loss of 55,453 in the use of books, and of 73,466 in periodicals. The greatest loss was in fiction, 40,618 less volumes having been circulated. The librarian, Mr. Merrill, assigns good times and the multiplication of cheap editions of popular books as, in part, the reason of this falling off, and partly local causes, such as the great heat of the summer of '81, which caused the library hours to be shortened, a smallpox excitement in the winter of '80–'81, and the closing of the Cumminsville branch of the library, through an unfortunate mistake of the Board of Education. The Columbia branch of the library still remains open.

—Among the recent bulletins issued by the Census Office, one of the most interesting and important is that relating to the illiteracy of the population. It gives the number in each State, of ten years of age and above, who cannot read and who cannot write. The latter class is also divided into "native whites," "foreign whites," and colored. In the whole country, out of a total population above ten years of age of 36,761,607, 4,923,431 were returned as unable to read and 6,239,958 as unable to write. The former is 13.4 per cent., the latter 17 per cent., which, contrasted with 16 and 20 per cent. (the proportions of the corresponding classes in 1870), shows a very decided gain in the direction of, at least, the rudiments of education. Of the whites above ten years of age, the "cannot writes" formed 9.4 per cent. The native whites, however, show a proportion of but 8.7 per cent., while foreign whites show 12 per cent. A very large proportion of the illiteracy of the country, and especially of the South, is seen to be among the colored population, where the "cannot writes" form 70 per cent. of all above ten years of age. The distribution of the illiterates is a very interesting question. Plotting the percentages of the "cannot reads" upon a map of the United States, one prominent fact which stands out in bold relief is, that most of the illiteracy of the country exists south of Mason and Dixon's line, the Ohio, and the south boundary of Missouri. North of it are New Jersey, with 4.5 per cent.; Pennsylvania, 4.6; Ohio, 3.6; Indiana, 4.8; Illinois, 4.3; Missouri, 8.9; and Kansas, 3.6. South of it are Delaware, 15.8; Maryland, 16; Virginia, 34; West Virginia, 12.1; Kentucky, 22.2; and Arkansas, 28.8. Further south the matter grows yet more serious, the States of South Carolina, Georgia, Alabama, Mississippi, and Louisiana ranging between 40 and 50 per cent. This is in great part due, of course, to the large proportion of the colored element; but, eliminating this, we still find a very marked difference upon the two sides of the line above traced. The white "cannot writes" north of this line range from 4.9 per cent. in Ohio to 10.5 per cent. in Missouri, while, bordering this line on the South, the percentages range from 8.1 in Maryland to 25 in Arkansas. The average of the States north of this line is between 5 and 6 per cent., while that of the southern group is between 17 and 18 per cent.

—Regarding the number of "cannot reads" as furnishing the measure of education in the community, Iowa is the "banner State," having out of its total population but 2.4 per cent. of illiterates. Then follows Nebraska, with but 2.5 per cent.; and Wyoming, with 2.6. The Northeastern States, including New England, on the whole, fall behind the Northern Central States, probably because of the large manufacturing interests, which have drawn to them the Irish, French Canadian, and similar classes of immigrants, while the German and Scandinavian elements, particularly the better portions of them, have gone to the Northern Central section. Turning to the other extreme, the greatest proportion of illiterates is found in South Carolina, where nearly one-half the population over ten years of age (48.2 per cent.) cannot read. Louisiana follows close behind, with 45.8 per cent.; Alabama, with 43.5; and Georgia, with 42.8 per cent. Considering the whites alone of this group of States, however, North Carolina is found to have the largest proportion, with Tennessee occupying the second rank, probably in virtue of their mountain population, which is proverbially ignorant. In the Western States and Territories the conditions are very diversified. In the greater part of this section the proportion of illiterates is low; California, with 7.1, and Nevada, with 7.3 per cent., having, with two exceptions, the highest. Arizona has 16.7 per cent., and New Mexico, 60.2. In these Territories, and especially the latter, a large proportion of the population is of Mexican descent, which is well known to be extremely ignorant. Moreover, a large number of Pueblo and Moquis Indians are here included in the population, in accordance with the treaty of Guadelupe Hidalgo.

—A comparison of these figures with corresponding ones from the Ninth Census makes a gratifying exhibit of our educational progress, at least as far as the rudiments are concerned. In the country at large, the percentage of the "cannot reads" has fallen from 16 to 13.4 per cent. This gain, too, has been widespread, only Maine, New Hampshire, California, Nevada, Oregon, Washington, Utah, and Montana showing a retrogression in this regard, while in many of the States the progress has been very great. These cases of retrogression have been apparent only, having been produced by a change in the population rather than by a decrease of education. In Maine and New Hampshire the influx of factory operatives, chiefly Irish and French Canadians, has lowered the average. In the Pacific States the Chinese have enacted the same rôle, assisted, to a considerable extent, by the importation of German and Welsh miners. The greatest steps toward a decrease of illiteracy, aside from one or two of the Territories where immigration from the East has been going on rapidly, have been taken in the South. Florida has decreased her percentage of illiteracy from

51 to 38; Mississippi, from 50 to 41.9; Georgia, from 50 to 42.8; Virginia, from 44 to 34; and Texas, from 33 to 24.1. In the first and last of these States much of the change is unquestionably due to immigration; still, it is to be borne in mind that nearly all the immigration to these States comes from other Southern States, and is not of a character to affect the average very markedly.

—"J." writes us from Cincinnati:

"I do not think that a child of the present generation, when his curiosity is aroused by the graceful youth who, in Raphael's 'Marriage of the Virgin,' 'breaks a stick across his knee,' receives the same explanation of the act that was given to 'D.,' of Menlo Park, fifty years ago. Now the child is bid to notice that St. Joseph there, as in many other pictures, carries a rod (stick) which has blossomed into lilies, and he is told the legend of how the Virgin, by her beauty and sweetness, won to herself many suitors besides the aged Joseph. The High Priest, unable to decide between their claims, bids them, after the manner of Aaron and the rebellious princes of Israel, lay up each his rod in the Temple; and, lo! the next morning, Joseph's rod, like Aaron's, had blossomed, and the miracle was received as a token that the Lord had chosen him to become the Virgin's husband. The graceful youth is one of the rejected suitors, and in despite breaks the rod which has done him such ill service. Such, at least, is the explanation given by Mrs. Jameson, in her 'Legends of the Madonna.'"

Likewise, as another correspondent reminds us, Muntz, the latest biographer of Raphael, describes Joseph's rivals in this picture as "manifestant leur dépit en brisant la baguette qui n'a point porté de fleurs" (p. 84).

—M. César Daly, in a late number of his *Revue Générale d'Architecture*, has advanced an interesting theory on the origin of the arch and vault and their introduction into Egyptian architecture. Like all modern theories, it is evolutionary—that is, it proceeds on the supposition that each new phenomenon resembles its predecessor in the main, that it differs in only a few particulars, and that the differences are the result of changed circumstances. When the early Egyptian, ten thousand years ago, wanted a more permanent habitation than the tent that had sheltered his wandering ancestors, he found at his command three substances: mud, reed, stone. With the last the kings and priests, who had great forces at their service, built pyramids and temples, and rich men constructed their dwellings in cities. But before that pitch of civilization there must have been a style of building which has continued by the side of the other in the dwellings of the fellahin down to this day, in which the first two materials are used together. A square hole dug in the ground is surmounted by four walls of mud and reeds, and a roof of cane covered by branches and grass, which is all that is needed in a rainless country. This is the simplest method that has survived to this day. But M. Daly, with the eye of theory, looks back into what may be called a pre-antiquarian time, and sees there a missing link. There must have been, he thinks, a construction with the first material alone. The peasant formed a heap of sand as large as he wished his hut to be, threw over it a layer of tenacious Nile mud, and, when the mud was dry, pulled out the sand through an opening which became his doorway. Here was the first dome. If he wanted a large hut, as the mud dome was not strong enough to be made of very great diameter, he made it oblong; the larger the hut wanted, the longer it became: here was the vault. When unbaked bricks were discovered, the vault was made of them, and in this form it is still to be seen in any Egyptian village; but the moulded house has centuries since gone out of use. The dome, the vault, and the arch (for the doorway was an arch) thus discovered at the very outset of building, instead of being, as has often been thought, the result of late conscious architectural thought, were used very sparingly in the stone architecture of the Egyptians. The priests avoided the arch in the temples, the rich used it rarely in their dwellings. It was left for the hut, the storehouse, and the tomb. For some reason or other the Egyptian regarded it with a distinct æsthetic aversion. The origin of this aversion M. Daly promises to discuss on some future occasion.

—A few months ago, we noticed the first volume of the 'Verfassung und Verwaltung des römischen Staates' of the veteran Danish scholar, J. N. Madvig. The second volume, completing the work, has made its appearance—not so speedily as was promised, nevertheless with remarkable promptness, in view of our usual experience in the continued works of German scholars. It consists of six chapters: "Die Theile des Reichs," "Das Rechtswesen," "Das Staatshaushalt," "Kriegswesen," "Gottesverehrung," and "Verschiedene Einrichtungen zum Besten des Staates und der Bürger," such as Education, Post, Hygiene, etc. The first volume was devoted to *Verfassung* (Constitution), this to *Verwaltung* (Administration). It will be seen that it embraces topics on which we are at present lamentably deficient in books of reference—the administration of justice, for example. Until we have some complete and scholarly work in English (of which we see no prospect), this will probably be found the best work for that large class of American students who, being sufficiently familiar with the German language, but not having either the time or the means, or the special training to make use of Mommsen and Marquardt or Lange, wish nevertheless to possess themselves of the latest results of scholarship in this field. The rule of limitation which has guided the author in the composition of the entire work is well enough indicated in his words with regard to the chapter on *Rechtswesen*: "the questions which a man well informed in political matters, and not destitute of some knowledge of the principles of law, but who was neither a lawyer nor a judge, would raise, and what he would desire to know if he had to take a survey of the condition and practice of law in a foreign country, in which this entire side of public life rested upon a different basis from that of his own country; and at the same time the needs of philologists in the treatment of literature." The first chapter, upon the municipal and colonial administration of the Republic and the Empire, will be found especially instructive, as this is a field in which the author has distinguished himself as an original investigator and discoverer.

—Steinway Hall was again crowded on Thursday by the admirers of Mr. Joseffy and Mr. Thomas. The concert began with a fine performance of Beethoven's "Coriolan" overture, which Wagner, who has written an admirable analysis of it, justly pronounces one of his most important compositions—the musical accompaniment, as it were, of a pantomimic representation which is present to the mind's eye, the music embodying the whole poetic language of the situation. The other orchestral selections were Schubert's "Reiter-Marsch," with Liszt's orchestration, and that wondrous epitome of the greatest of all music-dramas—the introduction and finale of Wagner's "Tristan und Isolde," in the interpretation of which Mr. Thomas and his orchestra again proved their ability to guide the lava stream of ever-increasing passion to that violent overflow which seems to signify the annihilation of a universe. Mr. Joseffy's contributions were a number of short solo pieces, of which Schumann's "Vogel als Prophet" was particularly well played, and two concertos: Chopin's First, in E minor, and one of his own, written in one movement. In the Chopin concerto the poetic significance of cantabile passages and sustained notes was not fully revealed, but the airy and graceful runs were executed with Mr. Joseffy's usual nimble and exquisite skill. Although Chopin, through want of practice, was not always at ease in his treatment of the orchestra, there are passages in the accompaniment to this concerto as remarkable for beauty of color as for originality of ideas. And it may be remarked here, in parenthesis, that Chopin's trio for piano, violin, and 'cello is beyond comparison the finest work of its kind ever written—a fact which utterly refutes the idea that Chopin could write only for the piano. Mr. Joseffy's own concerto, which has the merit of being short, will not secure him as prominent a place among composers as his execution of it assigns him among pianists. It is a work by a pianist for a pianist, and while it gives Mr. Joseffy ample opportunity to display his digital dexterity, it does not excite in the hearer any feeling beyond that of surprise. It is, however, ably scored, the treatment of the orchestra suggesting Liszt and Saint-Saëns, while the sudden introduction of cymbals and triangles in situations where they are not expected or called for is in accordance with the surprise method of Berlioz, which cannot be recommended for imitation, as the instrumentation ought to grow out of the idea, and not the idea out of the instrumentation. It need hardly be added that Mr. Joseffy's performance was, as usual, followed by demonstrative applause.

—The concert of the Symphony Society on Saturday evening was made memorable by the first appearance in this country of Mme. Albani since 1876. When it was known that, owing to her non-arrival on Friday, Miss Thursby had been engaged to take her place at the rehearsal, few probably expected to hear her at the concert. But she arrived on Friday evening, and courageously determined that the audience in the Academy should not be disappointed on the following evening. Quite at her best she could not show herself. In her first song she plainly betrayed the effects of the long sea voyage by singing a trifle below the pitch and with a want of mellowness and facility of execution. Bellini's "Casta Diva" was a poor selection to make for such an occasion, and it must be frankly stated that her singing of it was a decided disappointment. She was, however, repeatedly recalled, which showed that American audiences are not so cynical as they are sometimes said to be. In her second song—Haydn's "With Verdure Clad"—the defects just named almost entirely disappeared, showing her still possessed of that clear, rich, expressive voice which, coupled with her dramatic talent, has secured her so prominent a place among European *prime donne*. She is less at home among the fioriture of Italian composers than in cantabile and dramatic passages and in the German Lieder, of which she sang a few specimens by Brahms and Rubinstein. Her long connection with the poor opera companies of London has had the bad result of making her strive for cheap effect by exaggerated shading or an over-prolonged note. In this respect she could learn a good lesson from Patti. Mme. Albani has been pronounced the finest *Elsa* on the stage by no less an authority than Dr. Hans von Bülow. The expectation of seeing her in that rôle next spring is, however, very much marred by the knowledge that she will be heard amid those wretched surroundings which Mr. Mapleson habitually provides for the delectation of his audiences. The orchestral parts of the programme embraced Beethoven's "Corio-

lan" overture, Schumann's Fourth Symphony, a march by Schubert, orchestrated by Liszt, and the Vorspiel to Wagner's "Meistersinger." Of these the march and overture were most satisfactorily performed. The symphony was, with the exception of the finale, played in a tame and uninteresting manner. It requires massive effects of sound which cannot well be given except with a larger orchestra. The "Meistersinger" prelude would have been more impressive had the trombones displayed a greater amount of courage and emphasis in the march passage. On the whole, however, the orchestra played better than ever before, and it is gratifying to see how much Dr. Damrosch has accomplished with it within a few months.

POOLE'S INDEX.

An Index to Periodical Literature. By Wm. F. Poole. Third edition, brought down to January, 1882, with the assistance, as Associate-Editor, of Wm. I. Fletcher, and the coöperation of the American Library Association and the Library Association of the United Kingdom. Boston: J. R. Osgood & Co. 1882. Large 8vo, xxvii. and 1,442 pp.

THE first edition of this work, a mere pigmy by the side of the present, was eagerly seized upon by college students when it appeared in 1848, and doubled the use of periodicals in university libraries; the second edition, published five years later, has refuted the often-repeated fallacy that a printed catalogue is of no use, because it must be incomplete the very day after its publication. Poole's 'Index' has been incomplete for thirty years, becoming every month more and more deficient in the most important matters, and yet it has been more used in all the libraries that owned it than any other book except "the dictionary" and perhaps "the gazetteer." All subjects are treated now in periodicals, often by the best writers. No one can treat exhaustively of any topic without knowing what the periodicals have said or are saying about it. For a generation no bibliography has been thought complete which did not enumerate articles in periodicals as well as books. Considering this, it is a wonder that we could have done so long without a continuation, as it is that the world could have got along without the telegraph and the telephone. To be sure, there were some substitutes—the indexes published by serial magazines, and latterly the Q. P. Indexes. But these, though more minute in their references, and therefore not superseded by the new work, are unhandy for ordinary use.

It may be doubted, ho wever, whether student would have had this new time-saver, much as it was needed, without the aid of coöperation. To make the index of 1853 was no slight task; to have made it and never to have had any pay for it was not an encouragement to work on a new edition, and the longer it was delayed the more formidable did the work become, both for indexer and publisher. With the aid of fifty-one associates, it was not indeed easy, but possible. It is to be hoped that it will be also profitable, because public utility demands that it should be continued. The entries are already a year behind time; but it is the intention of the editors to issue an index for 1882 early in the spring; to follow this, if encouraged, with annual supplements, which will be consolidated, we suppose, every five or ten years, just as in Germany the classified lists of new publications, first issued every week, are combined quarterly, still in classified form, but with alphabetical indexes, and are again issued every three or four years in a single alphabet. If this is done, and if the projected index of essays not periodical is issued, the American schoolboy and schoolgirl will live in a paradise of ease, so far as theme-writing is concerned. More advanced readers and writers will find it not perhaps of so constant, but of greater, benefit, even when the libraries to which they have immediate access do not possess the volumes referred to. So many libraries nowadays allow their volumes to circulate beyond the limits of the cities where they are, that a country minister, doctor, lawyer, literary man can generally get any volume of which he has need. It is for his advantage, then, that his town library should contain the work which tells him where he can find articles that treat of the subject of his investigations. In the same way, the great catalogue of the Library of the Surgeon-General's Office at Washington is useful all over the country.

The plan of the new edition is substantially the same as that of the old. As the greater mass of material required, there are more cross-references, though perhaps not yet enough. The comfort of cross-references—guide-boards that set a man right when he has been upon the wrong path—is seldom sufficiently appreciated by indexers. A man must himself have been lost to appreciate them. They are also useful when they point out to the man who is right as far as he has gone, that other paths which of himself he would hardly have thought of entering upon will give him additional views of his subject. A new feature is a chronological conspectus of the magazines indexed, in which the volumes are numbered continuously from the first to the last, with an entire and justifiable disregard of the numerous "series" in which some of the periodicals have indulged, with no other results (whatever the intention may have been) than to exhibit their editors' inability to count correctly, and to perplex the unfortunate persons who had to consult or catalogue them. In this table the first volume published in each year is given, so that it will be easy for owners of periodicals to remember them in accordance with the list, which was followed throughout in making the references in the body of the 'Index.'

The abbreviations are easily understood. In the titles of articles the general effect would have been clearer, we think, if the editors had adopted the modern custom of using capitals for nothing but proper names and the first words of titles. The increased length of some articles has necessitated more careful subdivision than was required in the previous edition. References under such headings as England, France, Great Britain, United States, are thrown into groups, and these groups are in certain cases arranged chronologically, as is done in the best catalogues. For instance, under Great Britain, which fills seventeen columns, the political articles, which alone make four columns, are brought together; a few general articles lead off, and then follow "in 1806," "in 1807." When we come to 1830-34, the Reform period, the references are, of course, numerous. In the same way, England (thirteen columns) has a group "Antiquities," and another "History," five columns long, and chronologically sub-arranged.

We have said that the work might never have been issued without coöperation; but there are some disadvantages in the coöperative method. Even when indexing is done by one person, or when several work in the same place, consulting one another, or under the orders of a single head, there will be occasional inconsistencies, however careful all concerned may be; but when fifty persons are indexing at as many different places, unable to refer each difficulty as it arises to the editor, and perhaps not always with sufficient experience to know that there is a difficulty, they are sure to treat the same cases in very different ways, and the n mber of incongruities in the first draft must be many times greater; the editors would need a superhuman acuteness to detect them all. There is one pitfall to which the assistants are sure to lead their chief, and which he needs the most unsleeping vigilance always to avoid. When any subject or person has two names, one contributor may enter an article about it under the first, and another enter another article under the second. Unless the editor, when he comes to one entry, remembers the other, and so gets the two together, we shall find, to take an example from the book before us, entries both under Napoleon II. and Reichstadt, Duke of, and no cross-reference; and the reader who looks in either place will get only part of the literature of his subject. The only way to escape such misfortunes is for the editor to ask himself under every heading (there are at least 50,000 in the 'Index'), Is there any other word under which this subject can be spoken of? Was this person ever known by any other name or nickname? If he omits to do this, or if he does not know all the synonyms, or if he for the moment forgets one of them, he is lost; he may admit a serious error. His attention must not be relaxed for an instant; he must never be forgetful or confused or obtuse, however tired or hurried he may be. It is no disgrace to the present editors if, after rectifying scores of cases of double entry, a few yet remain. We find, for example, an article mentioned under Christina Leonora of Denmark, and two others under Leonora Christina, and no cross-reference either way; there are entries both under Decretals and False Decretals; under Duff, M. E. Grant-, and Grant-Duff; under De Maistre and Maistre, de; under d'Éon, Chevalier, and Éon de Beaumont, Chevalier d'; under Catalogues and Libraries, Catalogues of; under Classification and Libraries, Classification of; under Cataloguing and Libraries, Classification of Dictionary Catalogues; under College Libraries, and Libraries, College; under Kalb and De-Kalb; under Algiers and Barbary States, and no cross-references in any case. Nor is there any reference from Du Deffand (where French students would look for her) to Deffand, Mme. du, which is the heading chosen. Most of the references to the Pretender are put under Charles Edward; but there is one under Stuart, Charles Edward, and unluckily, in the latter place, by one of those accidents which will happen in the best regulated printing-offices, the heading Stuart, Gilbert, has been transposed, so that all his references are given to Stuart, Charles Edward.

There is another class of errors for which the editors are hardly responsible—viz., those which arise from the frequent practice among magazine writers of selecting fanciful, and therefore obscure or misleading titles, for their articles. The indexer does not notice that a real person is concealed under a metaphorical or allusive appellation; and the editor, not having the magazine in his hands, has no means of detecting the oversight. We have no doubt that in many cases instinct has suggested that something was wrong, and investigation has disclosed the truth; but not always. Nobody noticed, for instance, that "Who Invented the Sewing-Machine?" (*Galaxy*, 4: 471) is really a sketch of Walter Hunt, and so the man who is looking for something about him will hunt in vain; some one did not discover that by "A Cagliostro of the Second Century" Froude (in the *Nineteenth Century*) meant Abonoteichos, and he—or she—puts it under Cagliostro. So an article in the *Atlantic* on the Gaucho is not put under its real subject, Quiroga; nor Bayard Taylor's "Land of Paoli" (*Atlantic*) under Corsica. An article on Calvin and Servetus in

Scribner's appears under neither C nor S, but under Geneva, because its author called it "Use of Fagots at Geneva"; an article in the *Atlantic* on James Fazy, called "Story of a Swiss Ring Politician," is neither under Fazy nor Switzerland nor Geneva; another in the same magazine, by Bayard Taylor, called "The Republic of the Pyrenees," is neither under Andorra nor Pyrenees nor Republic; one by Howells on Parini, "An Obsolete Fine Gentleman," is not indexed at all. "A Curiosity of Literature" (*Atlantic*) is not under Arnim, Bettina von, nor under Bettina; indeed, we have not found it anywhere. "El Llanero" (*Atlantic*) is not under Paez. "The Jackdaw Author" (*St. Paul's* and *Liv. Age*) does not appear under St. Simon; "The First of the Stuarts" (*Quarterly* and *Liv. Age*) is not to be found under James I.; "The Chevalier's Conversion" (*St. Paul's* and *Liv. Age*) is not indexed at all.

A few articles appear to have been overlooked, or else the slips written were lost. There should be, but there are not, entries under Ahlefeldt, Countess (*Liv. Age*, v. 62), Bibracte (by Hamerton, *Atlantic*, v. 26), Eishausen mystery (*Liv. Age*, v. 60), Fellenberg, E. von (*Atlantic*, v. 31), Samoan Islands (*Atlantic*, v. 22). The only misprint of a proper name that we have noticed is Bokhum, H., for Bokum. We will only add that the series of articles by Gladstone on Achilles' shield in the *Contemporary*, mentioned as reprinted in the *Canadian Monthly*, was also reprinted in the *Living Age*. These are slight blemishes in a great and useful work. No intimation is given in the preface that corrections are desired, but we have no doubt that all sent to the editors will be gratefully received, and used either for the correction of the stereotype plates, or, where this is impossible, will be inserted in the next supplement published. In this way coöperation will perfect its work.

THE WINTHROP PAPERS.

Collections of the Massachusetts Historical Society. Vol. viii. Fifth Series. Boston: Published by the Society. 1882.

THE term "Winthrop Papers" applies to a mass of manuscripts collected or preserved by six generations of the Winthrop family in Connecticut, and which, in 1860, came into the possession of Mr. Robert C. Winthrop, President of the Massachusetts Historical Society. The new volume of the Collections is in reality the fourth volume of the Winthrop Papers, and is mainly made up of such letters of the sons and grandsons of the first Governor, John Winthrop, as have not hitherto appeared in print. The editors, Messrs. Charles C. Smith, George Dexter, and Robert C. Winthrop, jr., have furnished the necessary biographical and explanatory notes, and the last-named has borne the expense of printing the work. A portrait of John Winthrop, jr., forms the frontispiece.

It is appositely remarked by the editors, in their preface to the letters, that the writers "may be seen to have been amiable and genial men, good sons, affectionate husbands, devoted fathers and brothers, serviceable friends, not slothful in business, serving the Lord, given to hospitality, addicted to moderate amusement and scientific investigation, while perhaps singularly free from harshness and illiberality of word or deed"; and that their letters to each other were "helpful, straightforward, rarely digressing from the matter in hand, breathing a profound reliance on the will of God, and a spirit of devout resignation in sorrow and adversity." We are not inclined to say that the letters may be considered dull reading. They will come before only a small minority of the reading public, but that small minority will not fail to find in them an abundance of interesting matter. Four John Winthrops appear in the pages of this volume—namely, John Winthrop, the first Governor of Massachusetts; his son, John Winthrop, jr.; his grandson of the same name, known as Fitz-John, to distinguish him from his father and grandfather; and his great-grandson, styled by his descendants "John Winthrop, F.R.S.," although John, jr., and Fitz-John were equally entitled to add to their names these honorable initials. Later on there was another John Winthrop, F.R.S., one of Harvard's most illustrious professors, but he comes not within the scope of this work. It is doubtful if any other American family can present so many bright examples of what has been called "inherited ability."

The letters of John Winthrop, jr., take up nearly a third of the book. As many as twenty-two had already been printed in the 'Life and Letters of John Winthrop,' and a considerable number of others are to be found in previous volumes of the Collections and Proceedings of the Historical Society. This man was one of the most eminent of New England's worthies. He was educated at Trinity College, Dublin, and in 1631 followed his father to New England, where he became the founder of Ipswich, in Massachusetts, and New London, in Connecticut, and Governor of Connecticut from 1657 to his death in 1676. He practised the healing art extensively and gratuitously, and it is to be found in the 'Magnalia' that he was "furnished with noble medicines, which he most generously and charitably gave away upon all occasions, insomuch that wherever he came, still the diseased flocked about him, as if the healing angel of Bethesda had appeared in the place." It is mentioned that in 1640 he was possessed of a library of more than a thousand volumes. He was the friend and correspondent of many learned men, and his letters dealing with various subjects—philosophy, chemistry, agriculture, astronomy, politics, literature, etc.—are proofs that he was one of the most accomplished scholars of the age.

Letters from other sons of the elder Winthrop—from Henry, who was accidentally drowned July 2, 1630, the day following his arrival in the country; Forth, a graduate of Cambridge University, who also met his death in 1630; Stephen, who came with his father to New England, was Recorder of Boston and a representative, and, returning to England, became a member of one of Cromwell's Parliaments and a colonel in his army; Adam, Deane, and Samuel—occupy about ninety pages of the work. Samuel Winthrop, the youngest of the first Governor's sons who lived to grow up to manhood, was for some time a student at Harvard, although not long enough to take a degree. At the age of eighteen he left the country to seek his fortune abroad, and eventually established himself as a planter in the Antilles. His letters—five to his father and sixteen to his brother John—form an interesting portion of the group, and were written from Teneriffe, Barbadoes, St. Christopher, Fayal, Rotterdam (where he married a Dutch lady), and Antigua. They show us something of his struggles with adversity, and are filled with sentiments of the truest piety. He was a Quaker, and in an account of the sufferings of that sect in Antigua is mentioned as one of four who refused to take the oath of allegiance at the time of the conquest of the island by the French in 1666. The Governor (Clodare) had summoned the English inhabitants together and told them they were all prisoners of war and at his mercy; that all who would take an oath of allegiance to the King of France might remain and enjoy their estates, but such as refused he would carry away, prisoners of war, to France. The inhabitants generally submitted and took the oath—all but the four Quakers, and they boldly refused, "for that they could not swear, what suffering soever might follow." They would "freely promise not to fight against the King of France, nor for him, nor, indeed, against the King of England, nor for him," for, they said, "we can act no more for the one than the other in matter of war." Their firmness so impressed the Governor that he complimented them for their honesty, said that he was satisfied with their promise, and gave them their liberty. In the account from which we quote, Winthrop heads the list of sturdy Quakers, and appears to have been the spokesman. In 1671 he writes to his brother John:

"I have been much comforted to hear and read of thy tenderness to persecuted Friends in New England, who have taken up the cross and despised the shame, to give their testimony of the light and to reprove that which is evil, to declare against all buildings that are not set upon the rock, and have lost their lives for the testimony of Jesus."

It is recorded in 'New England Judged' that John Winthrop, jr., had labored with the Boston magistrates that they would not put the condemned Quakers to death, saying that he "would beg it of them on his bare knees that they would not do it." In 1672 Samuel recommends to the attentions of his brother "my friend Lewis Morris, who is among men known by the name of Col. Lewis Morris. By his brother Richard he made a considerable settlement at New York, whither he is going shortly (having received news of the death of his brother and his brother's wife) to look after his concerns there. I suppose thou mayest have heard of him (being a person very eminent), though not of his friendship towards me, which he hath in my lowest condition frankly continued, and still doth." Another of Winthrop's friends was George Fox, and the two had a "refreshing season" together in Barbadoes. In a letter to his brother (April 23, 1672), Samuel Winthrop gives a pathetic account of his endeavors to pay an obligation to William Bond, at Boston:

"When Ephraim Child desired me to pay that sixty-four pounds for him, I shipped in Saunders a great quantity of sugar, besides ten tons of lignum vitæ, then a very good commodity, but in both much more than would pay that sum. The said Saunders, as is supposed, foundered in the sea, being to this day unheard of, for aught I know. The second attempt I made in Captain Brookes, loading in his ship a parcel of choice sugar, which fell into De Ruyter's hands and was carried for Holland. A third time I sent sugar from hence to Nevis, to take freight for London."

Against this third shipment he drew bills of exchange in favor of William Bond, but the vessel carrying the bills, "after many weeks beating at sea, returned hither again and brought back said bills." A "fourth assay" to make the payment succeeded no better than the other three, and "once more" he makes a shipment of sugar and molasses, hoping thereby to "end this business." He continues: "Once William Bond wrote to me as if he thought I had forgotten, and sent me an abstract of my several letters to freshen my memory. Truly, brother, it hath proved a debt more dear to me than that I can so easily forget it." In a note introductory to his letters, it is stated that in 1688 he was Deputy Governor of Antigua. In other accounts he is named as the Governor, and it is certain that he was held in high esteem throughout the island. Among his descendants in the female line is Lord Lyons, long British Minister at Washington.

"It is the fate of man," says Cotton Mather, in his sermon at the funeral of Fitz-John Winthrop, "to be soon forgotten; he appears a very little while, and it is quickly forgotten that he was ever in the world." And then, a little further on, as if desiring to qualify the rule, he declares: "I say of this our Winthrop, he will be *ever* mentioned for his paternal, and patient, and generous administration of the public affairs."

A charge laid upon Fitz-John by his father, that if ever he had an opportunity to do any service for his country, he should do it with the greatest alacrity, he most faithfully fulfilled. He was for eight years the Governor of Connecticut, and for five years the colony's agent in England; he was a major in King Philip's war, and major-general and second in command of the expedition against Canada in 1690. When a young man he went to England, and served in the Parliamentary army with the rank of captain. He died in Boston, November 27, 1707, and was "buried with his fathers" in King's Chapel burying-ground. In view of three John Winthrops "together entombed in the same sleeping-place and sepulchre," his eulogist exclaims: "There is not such another Tomb to be seen in all America. One of the Seven Wonders of the World was a Tomb. This may be esteemed One of the American World." Most of Fitz-John Winthrop's printed letters are from rough drafts, or from copies kept by the writer. Presumably, many of his letters have been lost, for there are lapses of years in the correspondence—years very eventful in the history of the colonies. Those preserved run through a period of forty years—from 1660 to 1700.

Wait Still Winthrop (always mentioned as Wait Winthrop), younger brother of Fitz-John Winthrop, filled high stations in Massachusetts. He was Judge of the Court of Admiralty, Chief Justice of the Superior Court, Major-General of the Colonial Militia, member of the Executive Council, and acted a prominent part in the overthrow of Andros. He was one of the judges of the court which tried the Salem witches, and is reported to have been inclined to mercy, but none of his letters written in the year of those trials have been preserved. He died November 7, 1717, and had a funeral which, according to Sewell, cost the State £1,000, owing to the great parade of troops. This volume contains his letters from 1659 to 1699, the most of them being to his brother and largely taken up with family and business affairs. Writing to Sir Henry Ashurst, under date of July 25, 1698, he says:

"The places I have sustained since I have been concerned in the Government have hitherto been very expensive to me; and, indeed, I know no place that will yield a suitable recompense for my attendance on it, unless (as has been done of late and is not yet wholly laid aside) I shall eat up the poor as bread and squeeze them to death by virtue of an office; which is so contrary to my nature and inclinations that I had rather make one of them than mend my condition in that way. . . . I have not spent less than three thousand pounds while I have been concerned here, which I might have saved and added more than so much to it if I had neglected the public, and minded my private occasions; but if I have been any ways instrumental to serve the best interest here and keep this people from that slavery which they were groaning under and have almost forgot already, I am satisfied."

Massachusetts never had a more capable and faithful servant than Wait Winthrop.

John Winthrop, F.R.S., son of Wait Winthrop, graduated at Harvard in 1700. Only one of his letters is here given; but others from his hand, with those of Fitz-John and Wait Winthrop of a date later than 1700, will be printed in a forthcoming volume.

FRANCIS LIEBER.

The Life and Letters of Francis Lieber. Edited by Thomas Sergeant Perry. With portrait. Boston: J. R. Osgood & Co. 1882.

MR. PERRY has had no lack of materials for producing a biography of Dr. Lieber. He was probably, in fact, embarrassed by their abundance, as Dr. Lieber left behind him not only a large amount of legal, social, and political discussion, through which his mental life can be traced, but also a correspondence which gives us very fully his personal history. Mr. Perry, with true biographical tact, very wisely decided to keep law and politics at a distance whenever this was possible. He has not himself attempted to produce an original work, but allows the reader to make the acquaintance of Lieber through his letters, which show him as he appeared to his contemporaries, full of enthusiasm, intelligence, and generous impulse. He was really rather a practical reformer than a theorist. He can hardly be said to have had an original or even a consistent system. Those who have gone over his works since his death have not found in them any distinctly new contribution to human thought. His celebrated legal maxim, "No right without its duty; no duty without its right," is not now regarded as expressing what he might have called an actual jural fact, and the idea of the universal correlation of right and duty was not wholly new. Probably as time goes on it will turn out that, as a speculative writer, Lieber derived a large part of his reputation from the fact that the country possessed few speculative writers in his day, and was eager to magnify the importance of any "thinker" who made his home here. He was a recognized "thinker" among a people condemned for the most part to practical toil, but having a profound respect for thought, and a patriotic pride in any one, native or foreign-born, who increased the credit of the United States as a thinking country.

But when we come to see his character, as Mr. Perry successfully displays it in this volume, we perceive at once how it was that Lieber, as a man, produced a profound impression on his contemporaries. It is the fashion nowadays to associate enthusiasm with a lack of intellect. At the present day we are inclined to avoid, rather than to seek, the society of those who glow with feeling, and are fond of producing lofty and inspiring views of life, of human nature and the future of the race; not infrequently we are inclined to suspect them of having some personal end to gain.

When Lieber was a young man, it was not so. The air was full of enthusiasm, and the strongest and best men of the time were those who got most benefit from its bracing effect. We see it in careers of the most opposite type. Byron and Lieber, for instance, were both Philhellenes, and both went to Greece to fight for liberty. There was a firm conviction in the minds of both that the cause of most of the evils of the world was tyranny—the misgovernment and oppression of privileged classes; that human beings, if left to themselves, must act for the best, and that as soon as the shackles were knocked off, they would do so. With the modern conception of government as being a product of the civilization in which it arises, and therefore not to be regarded entirely as something imposed upon the community, the world in general was unfamiliar. This fact accounts for the mistakes, as it does for the triumphs, of the enthusiasts of the first quarter of the century. They looked upon the rising of the Greeks as they would have done upon the rising of the Germans or Italians, and overlooked altogether the vices of the Greek character which made successful self-government so difficult for them. It was one of the first fruits of Lieber's campaign in Greece that he discovered that the value of liberty depends upon the use to which its possessors are capable of putting it.

We can trace through his letters the effect of experience in tempering without chilling the natural enthusiasm of his youth. He had by no means an easy or pleasant life, although he gained troops of friends and was crowded with honors at the last. When he came over here he had a long and tedious struggle with poverty and adversity before he obtained any recognition of his merits. He had to teach swimming to boys. He had to provide articles covering the whole field of human knowledge for an encyclopædia. He had to exile himself in a Southern State, where he was obliged to keep his counsel as to the state of society in which he found himself, and at the same time to endure for his silence the risk of being considered among his friends at the North a renegade to his principles. It was not until he was a man of comparatively advanced years that he was able to secure that ease of mind and comfort without which successful intellectual labor is so difficult. In his old age he was afflicted by the division, caused by the war, in his family, one of his sons taking the Southern side. If through all his troubles he had preserved the illusions of his youth—the enthusiasm which sent the young "Colberger" to fight against Napoleon, and afterward to help the struggling Hellenes—we could hardly respect him as we do when we find that with advancing age he acquired a more and more practical turn, and saw the dangers of sweeping and sentimental views in politics. He saw in his time many sides of human life, and nothing that he saw soured his temper or diminished his desire to do what he could to serve his fellow-man and his adopted country. His usefulness certainly will long be remembered in this community. It is evident from his letters that toward the close of his life (he had been so often applied to for advice and instruction) he got into the way of volunteering it somewhat unnecessarily on every variety of subject, and in all quarters—now making suggestions to a professor in Germany about an international code, and now advising Mr. Lincoln to withdraw his name from the field as a candidate for the Presidency. This habit grew upon him, and we cannot help being amused by it in his letters. But at the same time we have a feeling that, at its worst, his correspondents were amused, too, rather than offended. His goodness of heart is, in fact, always so apparent that the idea of offence is out of the question.

Diddie, Dumps, and Tot; or, Plantation Child-Life. By Louise-Clarke Pyrnelle. Illustrated. Harper & Bros.

Uncle Gabe Tucker; or, Reflection, Song, and Sentiment in the Quarters. By J. A. Macon. Philadelphia: J. B. Lippincott & Co.

MRS. PYRNELLE'S little volume was advertised as a holiday book, but a book that is good for the holidays is good for all days, and, so far as the entertainment it will afford to children is concerned, the same may be said of the story of 'Diddie, Dumps, and Tot.' It also possesses interest for older folk as a faithful description of one phase of a system the literature of which is still comparatively meagre. In her preface, Mrs. Pyrnelle declares that she lays no claim to literary merit, and throughout the book there is a certain crudeness of style and various evidences of haste and awkwardness; but it sometimes happens that the literary art which is instinctive is as full of interest and information as that which is technical. Mrs. Pyrnelle's instinct has led her in the direction of simplicity, and the result is a book which is entertaining enough to be a great popular success.

Mr. Macon's book evidently has no purpose of any sort. It has no literary background or basis, no perspective, and no setting. It is unreasonably vague. Uncle Gabe Tucker, an alleged negro, is projected upon a typographical screen, and from this eminence—if it can be called such—he proceeds to give us brief essays on "Contentment," "Compensation," "Pa-

tience," "Culture," "Speculation," the arguments and the conclusions of which would do credit to a country lawyer. He sings us songs which, with one or two exceptions, are altogether lacking in the melodious inconsequence of genuine negro songs. One of the exceptions is called "Johnson Gals," and even this lacks the stalwart swing which a half-dozen verbal alterations would give it. It pleasantly suggests, however, an old Virginian negro song. After the songs, we have "aphorisms" and anecdotes, and in an appendix Mr. Macon has something to say of the negro dialect.

The moralizing of Uncle Gabe Tucker is shrewd, worldly-wise, sometimes witty, and nearly always ingenious; but it lacks humor—that peculiar humor which is the invariable result of a successful combination of the typical with the characteristic. We get Uncle Gabe's "views," but for all purposes of information they are worthless. Of Uncle Gabe, the man, the type, the character, there is not the slightest hint. Mr. Macon makes the common mistake of supposing that dialect is a mere matter of phonetics. A phonetical reproduction of pronunciation is a very simple affair. The blending of character with ideas, and the fitting of these to circumstances, are matters of both art and intuition. When Mrs. Pyrnelle puts into the mouth of an old negro woman the indignant exclamation, "Gwuf'm dar!" she paints, with one swift stroke, the character of the old Mammy that most Southern children have known. Mrs. Pyrnelle's phonetics, it should be said, are exceedingly awkward and inartistic, but, in spite of that, her dialect is almost perfect. A little while ago, a fugitive negro song went the rounds of the press. One line ran—

"Adam got stung wid a bummel-eye bee."

In "bummel-eye bee" not only have we negro character and idea, but we know the very attitude and expression of the particular negro supposed to be singing.

Mr. Macon, in his essay on the negro dialect, in which he gives us opinions that are clearly not the result of any careful study or observation, declares that "although the negroes are dispersed over a broad area, their dialect is almost exactly the same throughout all the Southern States." We have seen it stated somewhere that Mr. Macon is a Mississippian. If he would take the trouble to step over into Louisiana, and ask a Creole negro for the story of how the terrapin outran the deer, the negro would begin (according to Dr. Mercier) something like this: "Dan tan lé zote foi, compair Chivreil avé compair Torti té tou lé dé apé té lamou à Mamzel Calinda," and so on. Then, should Mr. Macon visit the seacoast of South Carolina and Georgia, and ask for the same story, the negro would begin thus: "Oona yerry 'bout da tam w'in B'er Deer un B'er Cooter is bin lub da sem noung leddy?"—an interrogation that would probably strike Mr. Macon dumb.

It remains to be said here that in Mrs. Pyrnelle's volume are to be found two or three thoroughly characteristic negro songs, the most noteworthy being a spirited version of that remarkable "spiritual," "Roll dat Jordan, Roll!" the music of which is given in 'Slave Songs of the United States.'

Dr. Grimshawe's Secret: a Romance. By Nathaniel Hawthorne. Edited, with Preface and Notes, by Julian Hawthorne. Boston: James R. Osgood & Co. 1883.

THE appearance of any new work of Hawthorne's is an important literary event; and an unfinished novel by him possesses almost as much interest as a finished one. When his note-books were published, some years ago, they were at once welcomed as a significant addition to our knowledge of him, both as a man and as an author. Whether such an addition ought or ought not to have been made is, as a mere literary question, of comparatively little consequence. Having been published, the note-books gave us so much more of Hawthorne than we had before; and, however doubtful we might be of the wisdom of the publication, we could not possibly shut our eyes to the light which it threw upon his life and labors. In the same way, we should be inclined, under ordinary circumstances, to say that 'Dr. Grimshawe's Secret,' being actually given to the public, it is idle to waste time in discussing the question whether it had better have been given or not. It is published, and the question is, what we think of it. But the circumstances which have attended the appearance of this novel are somewhat exceptional, and it differs from Hawthorne's previous posthumous works in having encountered at the outset a doubt as to its authenticity.

On what this doubt originally rested, it is hard to say. Mr. Keningale Cook has recently published a letter saying that he saw the manuscript of the story four years ago. It was lent him by Mr. Julian Hawthorne, who said he had copied it from his father's original manuscript, with much difficulty and labor, owing to the faintness of the ink and the character of the handwriting. He admitted, however, to Mr. Cook that he had not copied the whole, and that the original had been mislaid. Mr. Cook adds the following (we quote from his communication in the London *Athenæum*):

"If the children of letters were as wise in their generation as the children of science, certain expressions of doubt as to the true authorship of 'Dr. Grimshawe' would surely have been delayed until the appearance of the work. Prof. Owen, with two small bones before him, could specify the animals to which they belonged, and with two whole books side by side, the one by the elder, the other by the younger Hawthorne, any literary analyst could surely tell to which they appertained without looking at the title-page.

"Mr. Julian Hawthorne has an exceedingly robust style of his own, and the difference of his manner and method from that of his father has become more and more marked since the opening chapters were written of 'Bressant,' his first published work of fiction. In a single sentence the very rhythm will usually enable us to decide whether it is the father's work or the son's. The delicious dawdlings of Nathaniel Hawthorne; the agreeable digressions into by-ways of fancy into which he beguiles himself, and at the same time charms his reader into wandering—these and other quaint and rare characteristics form the bouquet of the wine of the older vintage; and no strength of the newer wine, however deftly blended, could be mistaken for the other, except by the dullest and furriest of literary palates."

A great deal of this would be very true in the case of an attempt at a Hawthorne forgery. If Mr. Julian Hawthorne were supposed capable of such an unnatural crime, it would no doubt be discovered, because the finished style of the author of 'The Scarlet Letter' is as individual as that of any writer who has ever used the language, and differs from that of his son in one respect which the latter would never be able to mask—we mean the exquisite taste and delicate, evanescent humor that pervades it. But if he had left preparatory studies for a story, and these had been pieced together by his son, it would seem to us to be out of the question to tell from internal evidence what part of the work had been done by the author and what by the editor.

Now, Mr. Hawthorne admits that he has "edited" the story to a certain extent in this way. The manuscript, he says, "presents various apparent inconsistencies"; and "in transcribing the work for the press, these inconsistent sentences and passages have been withdrawn from the text and inserted in the appendix, or, in a few unimportant instances, omitted altogether." But if we are to judge by the long passages from manuscript recently printed in the *Century*, Mr. Hawthorne is mistaken in calling these omissions "few" and "unimportant"; and in any case, to allow him to judge what is important, and what is unimportant, is a right that we can hardly concede to the editor of what he calls a "complete" story by Nathaniel Hawthorne. Mr. Julian Hawthorne also admits in his preface that "in the manuscript each person figures in the course of the narrative under from three to six different names," and that this difficulty has been met by bestowing on each of the characters "the name which last identified him to the author's mind." We must say that all this looks as if "complete" were a rather strong word to apply to the story as it originally stood.

Under these circumstances, whatever we may think of the doubts expressed before the volume appeared, we cannot but feel that Mr. Hawthorne's preface hardly tends to set them altogether at rest. The only way to have avoided this would have been to publish the manuscript, and the whole of it, exactly as it was left by his father. As to the story itself, while it abounds in passages marked by all the beauties of Hawthorne's best writing, it is as a whole crude and raw. That he would have published it as it stands, or even nearly as it stands, is inconceivable, and, therefore, it seems a waste of time to discuss the plot as such. In fact, the lover of Hawthorne will be glad to find in the fact that the book required "editing" a justification for declining to become interested in it, at least until he knows more precisely what the limits of the editor's labors were.

The Land and the Book; or, Biblical Illustrations drawn from the Manners and Customs, the Scenes and Scenery, of the Holy Land. *Central Palestine and Phœnicia.* By William M. Thomson, D.D., forty-five years a Missionary in Syria and Palestine. 130 illustrations and maps. Harper & Bros. 1882.

THIS new volume of 'The Land and the Book,' of which 'Central Palestine and Phœnicia' is, in fact, the principal title, forms an independent work, though completing by its contents the first two volumes, published twenty-three years ago, which treated of Southern Palestine. Like its predecessors, it will readily become a favorite household book among that class of the public for which it is written—the devout believers in the word of the Scriptures. Those who regard Palestine as "the divinely prepared tablet whereon God's messages to men have been graven in ever-living characters," must find a rich source of enjoyment, knowledge, and edification in such pen-pictures as are here presented. The author has seen so much of "the Land," has so minutely examined every point that can afford illustration for "the Book," and describes what he has seen so accurately and so vividly, that even the less devout reader who is tempted to reproach him with a lack of critical sense, with a proneness to discover too many traces of Biblical antiquity, and too many analogies between the hoary past and the present, cannot fail to draw abundant information from his pages, or to admire the charming naturalness of many of his off-hand sketches. The style is excellent throughout, and plain with very rare exceptions, when it assumes a pleasant tinge of poetry, as in the following:

"The young Jordan! type of this strange life of ours! Bright and beautiful in its cradle, laughing its very morning away through the flowery fields of the Hûleh; plunging with the recklessness of youth into the tangled brakes

and muddy marshes of Merom; hurrying thence, full-grown, like earnest manhood, with its noisy and bustling activities, it subsides into life's sober midday in the placid Lake of Gennesaret. When it goes forth again, it is down the inevitable declivity of old age, sinking deeper and deeper, in spite of doublings and windings innumerable, until it disappears for ever in that Sea of Death, that melancholy bourne from which there is neither escape nor return. . . . Must this type of life and immortality be swallowed up by the Dead Sea? Far from it. That is but the Jordan's highway to heaven. Purified from every gross and earthly alloy, it is called back to the skies by the all-attracting sun. . . ."

This ascension of the Jordan, by a process of evaporation, is to remind the reader of "that other resurrection, when Christ shall come in the clouds, and all the holy angels with him." "Nor is this the only lesson which this river has to teach the willing student of the Holy Writ." A brief statement, in Bible words, of the crossing of the stream under the lead of Joshua, serves to teach him the lesson of "all-conquering faith," such as "carried ten thousand times ten thousand of God's people in triumph through the Jordan of death to the Canaan of eternal rest." And this is followed by another glance at the Jordan's birthplace, the pool, or fountain, crowded with odd-looking buffaloes, with nothing but their noses above water. "Observe that their mouths are all turned up stream toward the fountain, and on a level with the surface, as if, like Job's behemoth, they trust that they could drink up a river, and can draw up Jordan into their mouths. . . . These black, hairless brutes are the modern representatives of that 'chief of the ways of God,' who 'eateth grass as an ox,' who 'lieth under the shady trees, in the covert of the reed and fens. The shady trees cover him with their shadow, the willows of the brook compass him about.'" Just so, under the covert of the reeds and willows of brooks creeping through the marsh of the Hûleh, do the buffaloes lie, wallowing in the mire. Our author carries out his retrospects and comparisons in an easy-going way, without regard to the facts that the Hebrews did not cross the Jordan under Joshua near its fountain-head, but near its mouth; that they found no rest in Canaan, but almost eternal strife and trouble; and that the behemoth of Job is, by the best expounders, identified, not with the buffalo, but with the hippopotamus. We find him also little exact in the chronology of the district containing the head waters of the Jordan when he says that Benhadad took the town of Dan "nearly a thousand years before Christ," and "Tiglath Pileser . . . all this region some two hundred years later," for there were almost exactly three hundred years between the two conquests, according to the chronology of "the Book." Whether his general map—certainly much inferior in execution to the numerous pictorial illustrations, after photographs taken by himself, which add life to his descriptions—is not equally inaccurate in the placing and naming of the volcanic tells facing the upper Jordan on the east, we do not venture to assert; but it strongly conflicts with Kiepert's map of Galilee and adjoining parts in Socin's "Palästina und Syrien" (Baedeker's publication of 1880), now recognized as the standard authority on these countries.

Dr. Thomson's diligence in research and examination is evinced most strikingly in points in the life of Christ demanding illustration or justification. Let the reader peruse with attention, for instance, his dissertation showing how, at Capernaum, "the paralytic, borne by four of his friends to the top of the house, was 'let down' from the roof, 'with his couch, into the midst before Jesus,' . . . without damage to the house or its occupants," though the bearers "are said not only to have 'uncovered the roof,' but 'they had broken it up.'" The houses of Capernaum, we are told, were, like those in modern villages of Galilee, "low, with flat roofs easily reached by a stairway from the yard or court. Jesus probably stood in the open lewân," or reception-room, "or he may have taken his stand in the covered court, in front of the house itself. . . . Those who carried the paralytic, not being able to 'come nigh unto him for the press,' ascended to the roof," which is only a few feet above the floor, and removed a part of it; "and by stooping down and holding the corners of the couch—merely a thickly-padded quilt, like those used at present in this region—the sick man could have been let down without any ropes or cords." In the same way the people of the country are still wont to let down grain, straw, and other articles from the roofs of their houses. "The only difficulty in this explanation is to understand how they could break up the roof without sending down such a shower of dust as to incommode our Lord and those around him." This last difficulty is removed by a description of the materials now employed in the construction of roofs: "beams placed about three feet apart, across which short sticks are arranged close together, and covered with a thickly-matted thorn-bush called bellân. Over this is spread a coat of stiff mortar, and above that marl or earth. . . . They had merely to scrape back the earth from a portion of the roof over the lewân, or court, take up the thorns or short sticks, and let down the couch between the beams at the very feet of Jesus." This explanation, we have no doubt, will prove perfectly satisfactory to most readers of the book.

Recollections of Dante Gabriel Rossetti. By T. Hall Caine. Boston: Roberts Bros. 1882.

MR. CAINE is a young man who knew Rossetti during the last four years of his life, mainly through correspondence, but in the months preceding his death more intimately as his constant companion. The reminiscences cover a narrow portion of the poet's career, and reveal him, we have no doubt, in his least admirable character. At the time when Rossetti's attention was first called to Mr. Caine, by a commendatory criticism sent by the latter, he had lived for several years in seclusion, in a large and lonely house, whose solitude was brightened only by the visits of intimate friends who came to cheer and comfort him. He had already passed through one severe physical crisis, during which he seems to have been overcome by the illusion, induced by hostile criticism, that there was a banded conspiracy to put him down, and to this hallucination he was still subject. Mr. Caine writes: "Rossetti was one of the most magnetic of men, but it was not more his genius than his unhappiness that held certain of his friends as by a spell." It is this unhappiness rather than his genius that the 'Recollections' set forth; they show us a broken man, a spirit in decline. It would be wrong, therefore, to accept the portrait as final, or as one really valuable. Furthermore, although the author's announced intention was to exhibit the poet's personality, his success in this regard is incomplete: he gives a very vivid account of Rossetti's surroundings and habits, interweaving with it remarks, criticism, and information, either his own or the poet's, which are valuable; but in the whole volume there is little to throw light on the relations between the poet's work and his personality. The reminiscences are largely of external things, and even in the letters there are remarkably few fine expressions of individuality; character is seldom clearly seen, and, we are sorry to add, when seen, is not noble.

To give at once an impression of the atmosphere that enveloped Rossetti, and overhangs this book as well, we will quote a few passages at length in description of the house in which he kept himself isolated:

"Rossetti's house had to me the appearance of a plain, Queen Anne erection, much mutilated by the introduction of unsightly bay-windows; the brickwork seemed to be falling into decay; the paint to be in serious need of renewal; the windows to be dull with the accumulation of the dust of years; the sills to bear the suspicion of cobwebs; the angles of the steps and the untrodden flags of the courtyard to be here and there overgrown with moss and weeds; and round the walls and up the reveals of doors and windows were creeping the tangled branches of the wildest ivy that ever grew untouched by shears."

With this exterior the poet's bedroom within harmonized as if in one of Poe's stories:

"The room was dark with heavy hangings around the walls as well as the bed, and thick velvet curtains before the windows, so that the candles in our hands seemed unable to light it, and our voices sounded thick and muffled. . . . In the middle, before a little couch, stood a small table, on which was a wire lantern containing a candle, which Rossetti lit from the open one in his hand—another candle meantime lying by its side. I remarked that he probably burned a light all night. He said that was so. 'My curse,' he added, 'is insomnia. Two or three hours hence (it was already 4 A. M.) I shall get up and lie on the couch, and, to pass away a weary hour, read this book.' . . . It did not escape me that on the table stood two bottles, sealed and labelled, together with a little measuring-glass. Without looking further at it, but with a terrible suspicion growing over me, I asked if that were his medicine. 'They say there is a skeleton in every cupboard,' he said in a low voice, 'and that's mine; it is chloral.'"

Mr. Caine's own apartment was even more heavy with gloom, and strewed with Oriental oddities, "left there, apparently, to scare the chambermaid," and threatening "to murder the innocent sleep." It is no wonder that when he left the door he felt that "outside the air breathed freely." From that time he was but little at the house until he came to make it his abode, when Rossetti, wholly subdued and physically broken by the chloral, was nearing his death.

The friendship was continued by letters, of which the topics are literary. They do not display any critical faculty on Rossetti's part, and Mr. Caine frankly acknowledges their weakness. They are about sonnets, ballads, prose-style, and the more or less obscure poets whom the coterie has made familiar by name, such as Wells, Jones, and Brown, and also the great poets, Keats, Milton, Wordsworth, and Coleridge. In the estimate placed on these men there is nothing for which the reader is not prepared by the published works of Rossetti's group; but as instances of their essential prejudice or at least exaggeration, here is a passage on Chatterton: "He is as great as any English poet whatever, and might absolutely, had he lived, have proved the only man in England's theatre of imagination who could have bandied parts with Shakspeare"; on Wordsworth, "Vital lyrical impulse was never fully developed in his muse." There are other judgments as one-sided, and none, we think, that are not wholly subjective. The value of the letters, considered from the literary point of view, lies simply in their expression of the poet's taste; as an expression of his nature, they had better have been left unpublished. It is enough to say that while the sight of a disciple burning incense and an idol dispensing grace is at least harmless, the anxiety of Rossetti for praise, his keen sensitiveness to the most indirect and contingent blame, are oppressive, and would lower one's estimate of his character were it not for the certainty that, in this intense form, they were due to his physical condition. In other respects, too, Mr. Caine has hardly been the judicious

friend. Devoted and tender as he shows himself to the poet, his worst fault can be called only an excessive frankness; but what need was there of his saying, "He was a man of so much impulse—impulse often as violent as lawless—that to oppose him merely provoked anger to no good purpose"; or, "Irresolution was indubitably his most noticeable quality at the time; . . . irresolution and melancholy lay at the basis of his nature"? This was the fact undoubtedly during these last exhausted years, but the account given by his lifelong friends is very different, and to perpetuate the memory of a man in his worst days is practical injustice.

There is a goodly amount of minute and curious information interspersed with these larger matters: the dates of the poems, the best of them being written before the poet was twenty-five; the details of the burial of his MS. book of sonnets ('The House of Life') in the coffin of his dead wife; the fact that "The Blessed Damozel" was suggested by Poe's "Raven," the one being the grief of the heavenly spirit, as the other was of the earthly lover; Rossetti's habit of composition —"I lie on the couch, the racked and tortured medium, never permitted an instant's surcease of agony until the thing on hand is finished"—and other like details. Among them is a story, interesting to Americans, with which we conclude this notice of an interesting, if somewhat morbid and indiscreet, book:

"Longfellow had called upon him while he was painting the 'Dante's Dream.' The old poet was courteous and complimentary to the last degree; he seemed, however, to know little or nothing about painting as an art, and also to have fallen into the error of thinking that Rossetti, the painter, and Rossetti, the poet, were different men—in short, that the Dante of that name was the painter, and the William the poet. Upon leaving the house Longfellow had said: 'I have been glad to meet you, and should like to have met your brother; pray tell him how much I admire his beautiful poem, "The Blessed Damozel."' Rossetti answered, 'I will tell him.'"

Edward III. By Rev. W. Warburton, M. A. [Epochs of Modern History.] With three maps. Charles Scribner's Sons. Pp. 293.

Mr. Warburton's 'Edward III.' covers one of the most important and most familiar periods of the Middle Ages. It has the merits of all the series to which it belongs, and is among the best as regards vividness of narration, while in certain points of detail there is some inaccuracy. It is hardly correct (p. 46) to speak of the Court of Champagne as one of the great feudatories who rendered to the King hardly more than a nominal allegiance; for Champagne was at this time, to all intents and purposes, under the direct authority of the King, although it was not formally annexed to the crown until 1361. Nor is it correct to say (p. 158) that Edward III. claimed the crown of France "as eldest grandson of Philip IV.," but rather (as is stated on p. 36) as "nearest male in blood to the deceased sovereign," Charles IV. From this it follows that his title, whatever its value, was not affected by the birth, in 1332, of Charles the Bad; for Edward was nephew of Charles IV., while Charles the Bad was only his great-nephew. Edward certainly had a better title than Charles the Bad, while the validity of his claim against Philip of Valois depended upon the Salic law alone. Now, here again Mr. Warburton is mistaken in the statement (p. 35) that in France "the succession had been from time immemorial regulated by the Salic law." There had been no opportunity for the application of that law for four hundred and fifty years, for which time—from Robert the Strong to Louis X. —the Capetian line had never suffered a break in the descent from father to son. This law was in point of fact first established by Philip V., in his own behalf, on the death of the infant John I.

The maps are good, as in all the books of this series, but in the map of Europe at the beginning of the book Sicily is so colored as to give the impression that it was united with Naples: at this period it was an independent kingdom.

Simplified Grammar of the Hungarian Language. By Ignatius Singer. London. 1882.

This little book forms a part of 'Trübner's Collection of Simplified Grammars of the Principal Asiatic and European Languages,' edited by the late lamented Prof. E. H. Palmer. It is the third Hungarian grammar published in English, the first two being Wékey's (London, 1852) and Csink's (London, 1853). The simplification is less noticeable in brevity and conciseness of style, and in the omission of rules needful only to writers in the language, than in the absence of translating exercises and the paucity of examples. It is not an easy task to study a new tongue, and especially one so totally different in its structure from all our Occidental idioms, with the aid of a condensed manual like this, but it offers an easy perspective to the curious dilletante in comparative linguistics. Mr. Singer has done his work with diligence and care, including the proof-reading, which in Magyar books, on account of the frequent and multifarious accents, is not an easy task. Slips occur, however, here and there. Thus we notice "leeset" for "*leesett*," and "háztol" for "*háztól*" (page 23); "húszadik" and "huszad" (p. 28); "húszanegy" and "huszonegyszer" (p. 29); "réám," "réád," etc., for "*reám*," etc. (p. 38); and "mennyí, amennyí" for "*mennyi, amennyi*" (p. 44). The passive "változtatott" (p. 23) is, unfortunately for the honor of the rich Hungarian verb, still short of two t's; it ought to be *változtattatott*. In the main verbal paradigm, "varni, to sow," both the Magyar and English are *wrong throughout*, "var" standing for *varr*, and "sow," "sowed," "sown," for *sew* and *sewed*.

WALKER'S

Political Economy.

By Francis A. Walker, President of the Massachusetts Institute of Technology, late Superintendent of the Census. (Volume V. of The American Science Series.) 8vo, $2 25.

President Walker's economical works on 'The Wages Question' and on 'Money,' not to speak of his great statistical Atlas of the United States, have given him a prominent position on both sides of the Atlantic. In contributing the present work to the "American Science Series," he brings to bear not only the powers shown in his former writings, but the experience of many years as teacher of political economy in the chair he occupied at Yale before accepting the presidency of the Massachusetts Institute of Technology.

NEW YORK, THURSDAY, JANUARY 25, 1883.

The Week.

BILLS adapting the Civil-Service Reform Act, recently passed by Congress and approved by the President, to the requirements of the State Government, have been introduced in both houses of the Pennsylvania Legislature. Mr. J. Wilton Brooks offered a resolution looking to the same end in the Assembly of this State. A bill providing for the appointment of a commission to examine into the condition of the State service and report to what classes of officers and employees civil-service rules would be applicable, was introduced in the same body by Mr. Miller some time ago. Another carefully-prepared bill, providing for the introduction of such rules in the State offices, and also opening the way to their introduction in the municipal governments of our largest cities, is likely to be offered at an early day. We are informed that a good many of the Democratic members of our Legislature are rather demonstratively displaying their opposition to such a movement, seeking to create the impression that no measure of the kind can pass. The friends of civil-service reform at Albany should not permit themselves to be discouraged by such demonstrations. If the Democrats want to take the responsibility of defeating a movement for civil-service reform in this State, let them by all means have an opportunity to do so by their votes. Some of them will think differently when the time comes, as a good many did in Congress as soon as the question bluntly confronted them.

From Pennsylvania comes a very interesting story, which will delight Mr. Jay Hubbell's heart. Last summer, when the struggle between the Republican Independents and the Cameron Machine was impending, the postmaster at Steelton, near Harrisburg, Pa., an Independent, was removed to make room for a Stalwart, Mr. Augustus Nebinger. This gentleman was committed to the Dauphin County Jail last Saturday on the charge of having begun embezzling money belonging to the money-order department, soon after his accession to office. The amount is stated at $1,200. Mr. Nebinger now says that he appropriated a great part of this sum for his country's good. Believing in the doctrine that a public officer is appointed not only to do his duty to the community, but also to his party, and that the party has a right to levy upon the compensation paid by the Government to its servants for the benefit of the campaign-chest, Mr. Nebinger thought he might just as well defray his party assessment, as well as some other campaign expenses—for instance, the cost of a supper and drinks for political friends—directly out of the public fund. He evidently did his duty to the party according to the moral notions which the assessment system had developed in his mind. Now that he is in jail for it, Mr. Hubbell and Senator Cameron should make an effort to help him out and to protect him against the unfortunate consequences of his excessive zeal. It is a fair question whether Mr. Nebinger was able to satisfy the demands of the party out of his own means, and whether, as the party managers would not take no for an answer, he could satisfy them in any other way than by stealing.

There has been, during the week, a general advance in prices of breadstuffs in all markets, domestic and foreign, in consequence of the general realization that the crops of 1882 had been everywhere overestimated, and that the world's surplus of wheat and other grains was not more than sufficient to keep up stocks in store until new crops should be distributed next summer. The very unfavorable condition and small area of wheat planted throughout Europe last autumn also indicate short crops there next summer. Exports of all articles of domestic production are larger than at this time last year, and on the exchange of commodities alone the balance of foreign trade would be in our favor, and therefore in favor of a movement of specie this way from Europe. The growing ease of money here, however, has induced the payment of a good many sterling loans. Moreover, for some weeks past the United States Mortgage Company has been returning a large part of its capital to England to take up the six per cent. mortgage bonds which were the means by which its capital was raised there for loan in this country. The company finds that it cannot loan the capital in this country on real-estate mortgages, even at the West, for more than 6 per cent., and hence must have the capital at lower rates of interest. There has also been some selling of American stocks by foreign holders during the past week. All these features have helped to make a demand for foreign exchange which has kept up the rates.

The course of the stock market has been disappointing to almost every one interested. During the first half of last week, and until Friday, it gradually advanced, and there was an increase of business, which for a time assumed the appearance of the usual general advance resulting from the increase of money at this season of the year. But on Friday the market was less confident, and from that time until Tuesday there was a break in first one stock and then another, until on Tuesday afternoon there was a general decline, measured by the fall in Denver from 51¼ to 46⅞. The cause of this reaction and decline seems to be a feeling that there must be a further liquidation in the stock market before the basis is reached for a healthy upward reaction. The earnings of the railroads were never larger than they were in December, and (aside from the obstruction to business by heavy snows at the West) the prospect for a continuance of a larger business than ever before was never so good. The general commercial situation also has been improved very much in the last three weeks. There is now a prevailing confidence that the worst has been realized, and that any change that may come will be for the better.

The reëlection of Mr. Hoar to the Senate will, after a survey of the availabilities in the field against him, be generally accepted as the most satisfactory thing that could have happened. Undoubtedly Mr. Hoar has, by his course on several important questions, incurred the disfavor of many of his constituents, while he was at the same time fiercely assailed by the Stalwart element in Massachusetts. It is not improbable that the opposition he met with among the more liberal and progressive elements of his party, as well as the discussion which the contest called forth in the press, must have convinced him that his vote for the River and Harbor Bill, his narrow-minded attitude on the tariff question, and the demonstrations of an acrid partisan spirit, of which he sometimes was guilty, came very near proving fatal to his political career, and that some reflection on these things on his part, now that he is reëlected, would be wholesome with a view to the future. The rumor about the forging of a telegraphic message, as an agency in carrying the decisive number of votes to his side, was promptly disproved. Such rumors could not have touched his character anyhow.

Governor Butler has passed most of his political life in making "charges," and has, as a general rule, got them widely circulated. Probably no Governor's message was ever more widely circulated and read than the one he delivered to the Massachusetts Legislature the other day. No paper in the State failed to produce it in full, and it contained little besides charges. The nearly successful effort of his friends in the Legislature, therefore, to get 10,000 copies of it, instead of 2,000, the usual number, printed at the expense of the State, seems unworthy of the man and the occasion. It would not bring the message to the notice of a single human being, probably, who had not already read it, and would give the printer some of the taxpayers' money, for which better uses might be found. It looked, in fact, extremely like a job, and nothing is more melancholy than to see a reform administration begin with a job. It is also depressing to find a Governor who began his official life by going round to see if the public offices were open punctually in the morning, leaving the State himself to attend to his private business in Washington. But Governor Butler's great function in politics has, after all, been to make fun for "the boys," and this he performs, even when he is most disappointing as a reformer.

The decision of the Supreme Court of this district, in the railroad mandamus proceedings begun by the Attorney-General last summer, is carefully limited by Judge Davis to the precise facts presented. The case, as stated by him, is this: A class of "skilled workmen" (*i. e.*, freight-handlers), in the employ of the Central and Erie Roads, "refused to work un-

less their wages were increased three cents an hour"; the companies "refused to grant the increase of wages demanded"; the workmen then struck; and "the companies thereafter did not or could not perform their duties to the public." These facts, he says, are all that are presented by "the papers," and they reduce the question before the Court to this: "Can railway companies refuse or neglect to perform their public duties upon a controversy with their employees over the cost of doing them?"—and the answer given by the Court is: "The excuse has in law no validity. The duties imposed must be performed at whatever cost. The companies cannot abandon their public duties without the express consent of the State." Consequently, the decision of Judge Haight below, that no relief could be had, was overruled.

At the same time, however, it is suggested that cases may arise to which this rule would not apply: "If it had been shown that the strikes had been caused or compelled by some illegal combination, which had sought to force its will upon the companies, and that the companies had refused to obey unjust and illegal dictation, and had made the best efforts to employ other workmen, a very different case for the exercise of the discretion of the Court would have been presented." A reference is made in another portion of the opinion to the entire absence of any evidence of "violence, or riot, or interference with the other employees of the companies." From all this we may infer that in cases like that of the interference with the traffic on the Pennsylvania Railroad during the Pittsburgh riots of 1877, or, in general, where transportation of freight becomes an impossibility, the remedy by mandamus will not be enforced. The sum and substance of the decision is that a railroad company, by accepting its charter, undertakes a public duty, with all the ordinary risks attendant upon it, including that of strikes, and that the public at large has an interest in the performance of this duty which may be enforced summarily by the courts. The general current of judicial decision, indeed, in this country and in England left no escape from this conclusion. It will be seen from the opinion that the right to mandamus will always depend, to a great extent, upon the circumstances of each case as it arises. The freight-handlers' strike is long since over, and the chief importance of the decision lies in the establishment of a rule for the future. The rule, as we understand it, is that railroad companies in this State may be compelled to perform their ordinary duty as common carriers, notwithstanding a strike, when they do not show that it is an impossibility, or cannot show that they have made their best efforts, to employ other workmen.

We print elsewhere a letter, on the homicide question at the South, which has been addressed to and published in the Richmond *State* by one of the gentlemen, Professor Hoge, of the Hampden-Sidney College, whose anonymous contributions to our own columns brought on them the unmeasured denunciation of that journal. Professor Hoge had simply acknowledged the truth of our charges and deplored it, and for this was threatened with some kind of social ostracism, as a "slanderer of his people." His admirable letter to the *State*, which it very honorably prints, is a review of the controversy, in which all its main points are presented with great clearness and force. We are glad to see it appear in a Southern paper, because it may prove the beginning of a Southern agitation on the subject. Professor Hoge suggests that if the Southern press would take it up, probably the *Nation* would be willing to leave it in its hands. We can assure him that nothing would please us better than to hand the matter over completely to Southern writers and orators determined to assert within the South the right to "utter and to argue freely" on all social questions, and determined through utterance and argument to rid Southern society of the great stain of unpunished homicide.

The *Standard of the Cross*, published at Cleveland, O., and the *Southern Churchman*, of Richmond, Va., both organs of the Episcopal Church, have been discussing Southern homicide. Nothing can be better than the temper in which the *Churchman* deals with the subject, and in which it speaks of our own share in the discussion. But it seeks to meet the strictures of the *Standard of the Cross* by statistics of crime taken from the *Telegram* of this city, which go to show that the North surpasses the South both in the number of murders and in the number of unpunished murders in proportion to population. As several Southern papers have produced these same figures, taken either from the *Telegram* or the New York *Tribune*, in answer to our charges, we must here observe, once for all, that we have instituted inquiries into their source, and that we believe it to be simply chance clipping from newspapers, made, we do not know when or by whom, and that they have absolutely no weight or authority, and that it is absurd to cite them or talk of them as statistics. Mr. Redfield's book was, on the contrary, made up with care, and in large part from official records, and its authority has never, to our knowledge, been successfully impugned.

A correspondent and subscriber writes to us from Virginia that the ball in Bedford County, in that State, described in our last issue, at which one Clayton had his throat cut on the spot for speaking tartly to one of the "débutantes," Miss Idelle Read, was "a mere gathering of the lowest order of negroes." We need hardly say we are delighted to hear this, because it takes the case out of the category of social homicides. But we must call attention to the highly praiseworthy conduct of the assassin, Mr. Armistead Barksdale, in shooting himself the next day. That this poor negro should have perceived so clearly and so promptly that this world was no place for a brutal murderer, and have taken himself out of it without any expense to the county, must bring a blush to the cheek of many a white man whose hands are stained with unpunished bloodshedding.

The Richmond (Va.) *State* has the following fierce little retort:

"The New York *Nation* said lately, in defence of its bitter, South-hating articles, that it once took the part of the South when it cost something to do so. We suppose that it now attacks the South because it pays to do so. The *Nation* is evidently seeking to retrieve its losses."

If we were near the editor, who is evidently very angry, he would probably riddle us with buckshot, or "cut" us with a butcher-knife; but this being impossible, he says the most bitter things that occur to him. The notion that if you remonstrate with people for trying to kill each other, it must be because you expect to make money by it, is characteristic in its truly savage simplicity. It is an explanation that would suggest itself to nobody but a barbarian, and a gloomy barbarian at that. A cheerful, humorous barbarian would never think of such a thing.

Lord Granville's circular to the Powers, giving an account of what England has done, and proposes to do, in Egypt, contains the proposal that the Suez Canal shall be placed under the protection of international law as an arm of the sea, open to all vessels, and no fighting to be allowed within it, or, we presume, within a marine league of either end. Of course, however, this plan assumes that the banks are to be properly policed in the interest of neutrals, for the owners of Egypt might otherwise block it. The *Spectator*, commenting on it, says with much simplicity: "If we are at war, we have an unbroken, open waterway from Southampton to Bombay, and can fight in any part of it except the Canal." It must be satisfactory to the British voter to know that his fighting privileges are not to be curtailed, and that he will, no matter what disposition is made of the Canal, still be able to fight all the way from Southampton to Suez on this side, and all the way from Suez to Bombay on the other. We suspect this is really also the view which the British Foreign Office takes of Mr. Blaine's Panama Canal. It is quite willing to let him do what he pleases on the Canal, as long as it retains the privilege of fighting outside, because it is shrewd enough to know that an interoceanic canal, which you cannot leave because an enemy holds the sea outside, is for practical purposes a useless piece of property. It may afford fine opportunities for picnics and excursions in steam launches, but for commerce it would be worth very little. A funnier operation than fortifying its banks—which, we believe, is one of the things Mr. Blaine wants to do—could under such circumstances hardly be conceived, because you would also have the forts entirely to yourself, and their value would be wholly ornamental. Any canal can be blocked to a hostile vessel by the cheap expedient of sinking in it a barge full of stones.

The superiority of the Repression Act, as a means of stopping assassination and outrage in Ireland, over Mr. Forster's Coercion Act is daily becoming more manifest. The change of venue in criminal cases from the county towns to Dublin, and the trial before a city jury, has secured conviction in several of the worst cases, and these convictions have so demoralized the criminal class, which really seems to be a small one after all, that inform-

ers are now offering themselves in abundance. An association of assassins somewhat like the Pennsylvania Molly Maguires seems to have existed in Dublin for some time, and there is little doubt that such murders as that of Lord Mountmorres and that of the Joyce family were executed under the direction of emissaries sent out by it, while the Phœnix Park murders, and the attack on Field, the juror, were executed by the head men themselves in Dublin. Of course, the difficulty such men have in keeping faith with each other is enormous. Convictions of murderers shake the nerves of murderers still undetected who have had accomplices, and large rewards, such as have been offered in the Field and Cavendish cases, greatly increase the temptation to each man to get rid of his anxiety and get the money, by making a clean breast of it, especially as he does not know the day he will be anticipated by one of his confederates. The strain on the nerves of these Dublin wretches for some months back must have been terrible, and it is no wonder that some of them have now found it unbearable. Unhappily those who made the attack on the juror Field cannot be hanged, as he has survived his injuries, but the assassins of Lord Frederick Cavendish are apparently in sight, and not very far off.

At the same time, it must be said that, if we are to judge from a recent speech of Lord Hartington's, his wing of the Liberals is likely, when Mr. Gladstone is out of the way, to mix up the question of Irish Home Rule and Irish crime and outrage in the old hodge-podge of which the results have been so bitter for both England and Ireland. The plan on which the government of Ireland has been conducted for two centuries is to treat the lawlessness produced by grievances as a reason why grievances should not be redressed, although assassination, brigandage, and sympathy with criminals have been always the world over, and not in Ireland only, the consequences and accompaniments of misgovernment. Lord Hartington now says that Home Rule is not to be thought of. If this view should be put forward prominently by the Liberal party, the result will probably be that Home Rule will be thought of more than ever in Ireland, the only place in which thinking of it does any harm, and will drive all moderate Irish members out of public life, and return so large a body of Home-Rulers to the next Parliament that they will hold the balance of power, and make legislation impossible without a coalition of the two English parties. If there be any plain inference deducible from Irish political history, it is that Irish discontent has a tenacity fully as great as that of English power, and that, no matter how much cool persistence Englishmen may have, they will find their match among Irish traitors. The contest has lasted now so long, with nothing but sorrow and damage on both sides, that there is something pitiful in hearing Englishmen like Lord Derby and Lord Hartington gravely advising that it be kept up.

The Fenians in this city and elsewhere are now trying to repudiate connection with the Dublin assassins, and probably can truly say that the Fenian organization does not preach or countenance assassination. But it does preach and exist for the promotion of outrages which are always close on assassination, such as explosions, burnings, and so forth, and which the bulk of its ignorant members do not distinguish from assassination, and which can rarely be carried out without the destruction of life, and which its rascally chiefs, though they call these "war," can hardly be dunderheaded enough to consider "war" themselves. Moreover, although they have had numerous opportunities of denouncing the Irish murderers, and separating themselves from them, the Fenians have never done so. They have, on the contrary, made common cause with them in the eyes of the civilized world, and disgraced the Irish name by denouncing and vituperating the magistrates, police, judges, jury, and everybody concerned in bringing these wretches to justice. In fact, they seem to be engaged in making the sympathy of the civilized world with the Irish cause dependent on their winning it over to the belief that assassination is a good and praiseworthy thing. Finally, although it is true that all Fenians are not Irish assassins, it is very certain that there is no Irish assassin who is not a Fenian.

Lord Dufferin has made another step in advance with the Egyptian question by drawing up a scheme of government which is to contain some of the features of the parliamentary system. The Khedive is to have a council of twelve "responsible ministers," and then there is to be a Legislative Council of fourteen, half nominated by the Khedive and half chosen by some system of double election which is not described in the despatches, beyond saying that "abundant precedents for it exist in the American Constitution and others." Besides these, there is to be an elective Assembly of forty-four members, to be occasionally convened to discuss certain subjects. This last one is not to take part in legislation, but simply "to give voice to classes hitherto inarticulate." In case the Ministerial Council and the Legislative Council do not agree, the Khedive is to decide. There is evidently some mystification, however, about the term "responsible ministry." All ministers, under every form of government, are responsible to somebody. In fact, the term "minister" implies responsibility. Under the worst despotisms the ministers are responsible, but as they are only responsible to the despot, it does the people no good. Ministerial responsibility is considered valuable in a modern state only if it is responsibility to a representative legislature. It does not appear that the proposed Egyptian responsibility is to be of this kind. If the Ministers differ with the Legislative Council, they are not to go out of office. The Khedive is to decide between them, which means, of course, that they are to be responsible to the Khedive, inasmuch as if he decides in their favor they are to have their way. But the old Egyptian Ministers were responsible to the Khedive, so that under this head the country will gain nothing by the new constitution.

It is difficult to say what the Legislative Council will amount to in practice, but it cannot amount to very much, inasmuch as the Khedive is to nominate half of its members, and they will be naturally made of just the same materials as the Ministry. Against both the Ministry and these seven, the remaining seven, who are to be chosen by double election, are not likely to have much weight, even if they ever attempt any opposition or criticism at all. About the body which is to "give voice to classes hitherto inarticulate," perhaps the less said the better. The inarticulate classes in Egypt are subject to the bastinado for every variety of offence—for not paying their taxes, for not paying their debts, for being saucy to public functionaries, for being late at forced labor; and they take it without any consciousness of disgrace or oppression. It will evidently need a good deal of moral and mental elevation to give inarticulate persons of this kind much desire to make themselves heard in the way of complaint. One might feel hopeful about this scheme, complicated as it is, by considering it as the beginning of genuine parliamentary institutions, if the Khedive were the kind of man who could be expected to nurse it into vigor and maturity. But all that is known of him warrants the belief that he has little if any force of character, and that he is likely to be hereafter what he has been heretofore—the weak and vacillating tool of those who surround him, with but little interest in institutions of any kind, so that the new constitution, if adopted, will probably have just as much vigor as English influence and support give it. If England chooses to stand by and see that the Legislative Council has legitimate influence, and that the members of the Assembly of Forty-four are not flogged when they get home for giving tongue too freely, it may grow into something like self-government.

The French Ministry has resolved to expel Prince Napoleon, but not to take up any position with regard to the members of other dynastic families, and to remain neutral as to the Floquet bill. This bill will probably not pass, as its operation would undoubtedly be both cruel and unjust to the Orleans princes, who are living in a very quiet and inoffensive way, and some of whom are serving in the Army. The propriety of expelling even Prince Napoleon is very doubtful. There is no place in which he will be so harmless as in France. The situation is being made a little more theatrical by the reported discovery of a great Legitimist and Catholic conspiracy for the beginning of a civil war in the west of France, under the command of Charette, a fanatical Monarchist politician. The Legitimists have been growing increasingly bold of late, under the good-natured indifference with which the Government regarded them, and they have at some of their banquets talked very plainly of the necessity of taking up arms to suppress the Republican iniquity. It is not unlikely that these threats and disturbances will now multiply. The Republic has just reached the period in its life when all French Governments find the ground under their feet become unsteady. The task before it is to outlive the twentieth year, which, since 1793, no régime has ever surpassed.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 17, 1883, to TUESDAY, January 23, 1883, inclusive.]

DOMESTIC.

ON Monday the United States Supreme Court rendered a decision that Section 5519 of the Revised Statutes, relating to conspiracy to deprive any person of equal protection of the laws, is unconstitutional. The ground of the decision is that the law infringes upon the reserved rights of the States; that there is nothing in the Thirteenth and Fourteenth Amendments to the Constitution that confers authority upon Congress to enact such a law; that if Congress had jurisdiction sufficient to punish private persons for the commission of one class of crimes in a State, by virtue of the same authority it would have the power to legislate as to all crimes in a State. The decision is believed to affect a vital part of the Civil Rights Law.

Senatorial election contests have proceeded during the week in a number of States with peculiar and persistent stubbornness. In Massachusetts two ballots were taken on Wednesday with no result, Senator Hoar gaining two votes on the second, and being within eight votes of an election. On the first ballot, Thursday morning, Senator Hoar was re-elected, receiving 148 votes, nine more than a majority. All but two of the Crapo men voted for him. This gave rise to a rumor that the change had been effected through a forged despatch, purporting to be from Mr. Crapo, requesting his supporters to vote for Mr. Hoar. A thorough sifting of the report shows that no underhand methods were used to secure the Crapo votes. Governor Cullom, of Illinois, was elected Senator by the Republicans on Wednesday, and Senator Plumb, of Kansas, was renominated unanimously by the Republicans of the Kansas Legislature. Deadlocks on the election of Senators still continue in the Legislatures of Minnesota, Michigan, Nebraska, and Colorado. On Tuesday Senator McPherson (Dem.) was reëlected by both houses of the N. J. Legislature, John E. Kenna (Dem.) was elected by the West Virginia Legislature, and Senator Coke (Dem.) reëlected in Texas. Joint sessions have yet to ratify the first two.

In the Senate, on Wednesday, a bill was introduced by Mr. Edmunds, of Vermont, providing for the appointment of a commission to investigate the subject of railroad transportation. The Post-office Appropriation Bill was further considered, an animated debate resulting on the paragraph appropriating $185,000 for special mail facilities on trunk lines. It was passed on Thursday. After a long debate on a motion, during the consideration of the Tariff Bill, reducing the duty from 60 to 50 per cent. *ad valorem* on china, porcelain, parian, and bisque ware, it was defeated by a close vote. The Senate continued to debate the Tariff and Post-office Appropriation Bills on Friday. The latter was passed on Saturday. It contains a provision for two-cent letter postage after July 1, 1883. On Monday there was an effort to hasten the Tariff Bill by a resolution for night sessions, but no agreement was reached. There was a sensation during the debate caused by the production of letters written by Mr. Kenner, of the Tariff Commission, showing the strong bias for protection to certain interests with which he did his work in the Commission. On Monday, during the Tariff debate, an amendment was carried to put all lumber and timber, except what is in a finished state, upon the free list. Tuesday was spent in debate on the metal schedule.

In the House of Representatives on Friday a bill was reported which proposes an important change in the methods of paying for expedition on Star-routes, and amends the existing law, under which Star-route frauds became possible. On Saturday the House considered the Naval Appropriation Bill in Committee of the Whole, and continued the debate on Monday.

A caucus of the Republican Representatives in Congress was held on Friday afternoon at which, on motion of Speaker Keifer, it was resolved that the Republicans would proceed to consider the Tariff Bill in the House on Tuesday, immediately after the Naval Appropriation Bill had been disposed of, and that it should have preference over all other legislation, excepting appropriation bills. Mr. Haskell, of Kansas, made a statement in regard to the Ways and Means Committee's bill. He estimated the total reductions on the basis of last year's importations as follows: Sugar, $12,000,000 to $15,000,000; wool and woollen goods, $3,000,000; silk, $3,000,000; metals, $2,000,000, nearly.

The House Committee on Public Buildings has recommended the purchase of the house in Washington in which President Lincoln died, for a sum not exceeding $12,000.

On Wednesday the National Republican Committee met in Washington, delegates being present from most of the States and Territories. Mr. Dorsey's resignation as Secretary was accepted, and Mr. Martin, of Kansas, was elected to fill the place. Mr. Wm. E. Chandler presented the report of a special committee appointed to prepare a plan for the choice of delegates to the next National Republican Convention. He submitted a number of plans to be voted on seriatim. Senator Logan moved as a substitute for all the new propositions that the basis of representation shall remain as heretofore, and his motion was adopted by a vote of 23 to 15. This makes the Convention consist of two delegates for each Senator, two for each member of Congress, two delegates for each Territory, and two for the District of Columbia. The four delegates-at-large for each State are to be chosen by a popular delegate State Convention, and those representing the Congressional districts by either separate district conventions, or by subdivisions of the State Convention. The next meeting of the Committee will be held on December 12, when the date of the National Republican Convention will be settled.

Considerable talk has resulted in Washington from the fact that Richard J. Hinton, late proprietor of a newspaper in that city which published the Garfield-Dorsey correspondence, has been appointed a Special Agent of the Treasury Department, and has gone to the Mexican border to investigate a supposed extensive system of smuggling.

An indictment was found on Wednesday, by the Grand Jury of the District of Columbia, against Frank H. Fall, charging him with endeavoring corruptly to control the vote of Juror Brown in the first Star-route trial. Frank E. Shaw was indicted on Friday on a similar charge.

Ex-United States Senator Spencer, who is a fugitive witness of the Star-route trial, has sailed from Halifax for England.

Representative John W. Shackleford, of the Third North Carolina District, died in Washington, on Thursday, at the age of thirty-nine.

The General Term of the Supreme Court of this State has reversed Judge Haight's decision denying peremptory writs of mandamus to compel certain railroad companies to receive and transport freight with all convenient speed. This litigation grew out of the freight-handlers' strike last summer. The Supreme Court grants the motions asked for in each case. This is a point gained for the merchants who brought the suit.

A bill to prohibit the sale of State lands in the Adirondack region, in order to preserve the forests, passed the State Senate at Albany on Tuesday. On Thursday, in executive session, the Senate voted to postpone final action on the Governor's nominations for Railroad Commissioners until January 26, in order that specific charges might be presented against Mr. O'Donnell.

The prohibitory amendment to the Constitution of Iowa, adopted by the popular vote last June, was declared invalid by the State Supreme Court on Thursday, because the record of the House of the Eighteenth Assembly failed to show that it had passed, and the House measure differed from the amendment as passed by the Senate; further, because subsequent action in the Nineteenth Assembly could not correct the carelessness of the Eighteenth Assembly.

Judges Lowell and Nelson, of the United States Circuit Court, granted in Boston, on Friday, the injunction prayed for by Theodore Thomas, which restrains Joseph G. Lennon from performing Gounod's "Redemption" in that city. The order, however, allows of the performance of the trilogy with organ and pianoforte accompaniment, and it will be so given.

The past week has been marked by a series of terrible accidents, which have been unusually destructive of life. On Wednesday the steamer *Josephine* blew up in Port Susan Bay, near Seattle, W. T., killing six or more of the passengers and crew. A panic was caused in the Grand Opera-House, Milwaukee, on Thursday night, during a performance of "The Lights o' London," by the explosion of calcium-light apparatus on the stage. Five of the stage hands were hurt, two fatally. Order was soon restored in the audience. The Quincy House, one of the largest hotels in Quincy, Ill., was burned on Friday morning. Many of the guests were still asleep, though some were at breakfast. All escaped, but lost everything. A wreck occurred on the Central Pacific Railroad near Colfax, California, on Friday, and several persons were killed and injured. The latest estimate places the loss of life by the Milwaukee Hotel fire at fifty-nine. Scheller, the bar-keeper, has been arrested, charged with setting fire to the building, and the evidence against him is strong. The brig *Mariposa* was run down by a steamer off Fisher's Island on Saturday, and all but one of the crew were drowned.

The overland express train which left San Francisco by the Southern Pacific Railroad at 9:30 A. M. on Saturday, stopped near Tehichipa station to cut out an extra engine taken on to assist in pulling up the Tehichipa grade. While making the change the train started back northward down a grade of 129 feet to the mile. The train gathered headway quickly, and was soon dashing down the grade at the rate of a mile a minute. At a sharp curve the coach and smoker, which were ahead, broke the coupling and separated from the rest of the train, making the turn safely. The sleepers and the mail, express, and baggage-cars were dashed against a high bank and then thrown back, rolling down an embankment. The lamps and stoves at once set fire to the wreck, which was instantly in a blaze. A search for the dead showed that fourteen persons had perished.

On Sunday afternoon, at 4 o'clock, a number of terrific explosions occurred at the Giant Powder Works, at Point Clement, near San Francisco, destroying the mixing house and six packing houses. Eight tons of powder exploded, killing about thirty Chinese workmen. The assistant superintendent was also killed. All houses within a radius of half a mile were wrecked. The loss by the explosion is about $100,000. A fierce fire followed, which was with difficulty extinguished. The cause of the explosions is a mystery.

On Monday morning a boiler at the *Ledger* paper mills, near Elkton, Md., exploded, wrecking half of the immense building, killing two men and injuring eight others.

A great snow-storm, followed by very cold weather, prevailed in the West on Friday and Saturday. The cold wave reached the East on Sunday night.

News was received in Washington on Thursday that the Alaskan Indian Aneguin, of the *Jeannette* crew, who was saved with

Melville's party, had died of smallpox in Siberia, with Ensign Hunt's party.

Henry Kip, of Buffalo, Vice-President of the United States Express Company, died in New York on Wednesday.

It is reported that a gift of $250,000 has been made by the citizens of Cambridge, Mass., to Harvard College, to be disposed of in the erection of new dormitories, in which the rent of each room shall not exceed $50 a year.

FOREIGN.

After Prince Napoleon's arrest in Paris on January 16 he explained in an interview that he did not aim at personal power, but asserted that he believed a parliamentary régime was only practicable under a constitutional monarchy. In the Chamber of Deputies M. Floquet, Vice-President, immediately brought forward a motion prohibiting the presence in France or Algeria of any members of former French dynasties. Urgency was voted for it by a large majority. The press of Paris ridiculed this motion as extreme. On Saturday the French Ministerial Bill dealing with the pretenders was introduced in the Chamber of Deputies. It authorizes the President of the Republic, by a decree given in Council, to expel members of the former reigning families whose presence in France compromises the safety of the State, those returning to be liable to five years in prison. The princes who now serve in the army are to be placed on the retired list. This last clause caused an uproar in the Chamber. Another bill has been introduced modifying the Press Laws of 1881. It provides for the punishment of outrages against the Republic, and makes the offenders amenable to the Correctional Tribunals. A vote of urgency was also adopted for these measures.

The Paris newspapers of Friday and Saturday published details of an alleged organization of civil war in the west of France, with the help of Catholic workmen's clubs. It was said that a great Legitimist conspiracy called the "Catholic Alliance" had been discovered, forming a vast association, directed by Baron de Charette. Thirty-two legions, of 1,000 men each, had been organized from Finistère to Tours, and six hundred horses had been purchased as a nucleus for insurgent cavalry. It was said that the conspirators had $3,000,000 in London banks. Some newspapers asserted that this report was circulated in order to push M. Floquet's extreme proposal in the Chamber of Deputies.

The Paris Bourse was subjected to a slight panic on Monday, owing to the revolutionary rumors. On Tuesday, reports were abroad that the Cabinet had resigned. The result of the elections in the bureaux of the Chamber of Deputies on that day for members of the committee on the bills dealing with the pretenders to the throne was four in favor of the Government bills with certain restrictions, six in favor of M. Floquet's bill, and one in favor of M. Ballue's. A Cabinet crisis is imminent.

At the trial of the Anarchists in Lyons, France, on Friday, Prince Krapotkine, MM. Émile Gautier, Bernard, and Bordat were found guilty and sentenced each to five years' imprisonment and to pay $400 fine, to ten years' police supervision, and to five years' deprivation of civil rights. Thirty-nine others were given lighter sentences, and four were acquitted. The condemned will probably appeal.

Gustave Doré, the famous French painter and designer, died suddenly in Paris on Tuesday, at the age of fifty. It is said that his designs number 45,000.

The Hamburg-American steamship *Cimbria*, while on her way from Hamburg to Havre, was run into, Friday morning, during a dense fog, by the British steamship *Sultan*. The *Cimbria* sank in a few minutes. The disaster occurred in the German ocean, off the Island of Borkum, twenty-six miles northwest of Emden. The *Cimbria* left Hamburg on Thursday, with twenty-three cabin passengers, 362 steerage, and a crew numbering ninety-two. She ran aground before leaving the Elbe, but got off with the flood tide, with the assistance of the *Hansa*, without having received damage, and she put to sea at 2:30 o'clock in the afternoon. On Friday morning she came in collision with the steamer *Sultan*. A boat with thirty-nine passengers arrived at Cuxhaven Friday night. Seventeen other persons were saved by the steamer *Diamant*, and another vessel landed eleven. The officers did all in their power to save lives at the time of the collision, but the vessel sank too soon. It is estimated that fully 400 lives were lost. The passengers were mostly emigrants from East Prussia. The *Cimbria* was a vessel of 3,025 tons burden. She had seven water-tight compartments.

The ship *Vorwarts* was sunk on the Baltic on Monday, and eight persons were drowned.

In the German Reichstag the reception of large sums of money from America for the flood sufferers has been announced during the week, and thanks have been enthusiastically voted.

Prince Frederick Charles Alexander, brother of the Emperor of Germany, died in Berlin on Sunday, at the age of eighty-two. The Emperor and Empress partook of the sacrament with him only a half-hour before his death. His last words were, "Long live the Emperor." Prince Charles entered the German Army at an early age, and made the artillery his favorite branch of the service. For many years past he has been chief of the whole Prussian artillery force. His only son is the famous "Red Prince" of the Franco-Prussian war. In 1881 Prince Charles celebrated a jubilee on the occasion of the seventieth anniversary of his appointment as an officer of the Prussian Army.

At a sitting of the Provincial Committee in Strassburg, Germany, on Thursday, 17 Deputies out of 56 protested against the exclusion of the use of the French language in the proceedings of that body.

A Governmental scheme, formulated by the Egyptian Ministry, approved by Lord Dufferin, and transmitted to the British Foreign Office for approval, proposes that the Khedive of Egypt shall have a Council of twelve responsible Ministers, and that a Legislative Council of fourteen members shall be formed, one-half to be nominated by the Khedive and half to be chosen by a system of double election. There is also a provision for an elective Assembly of forty-four members, to be convened occasionally to discuss special subjects. Legislation is to be initiated by the Council of Ministers, but before becoming law it must be submitted to the Legislative Council. The Khedive will decide in case of differences between these two bodies.

A fight has occurred between a body of 500 Egyptian troops and the forces of the False Prophet in the Sudan. Two hundred and forty of the former were killed and the rest were taken prisoners.

The Marquis of Hartington, British Secretary of State for War, in a speech at Bacup, England, on Friday evening, referring to Irish affairs, said that the Irish problem could only be met by firm determination. He did not think the matter was hopeless. The law must be strengthened to meet the exceptional condition of the country. The Government meant to show that murder would meet its just reward. Home Rule, he said, could never be permitted in Ireland. It had been suggested that the Government should find funds to establish peasant proprietary in Ireland, but he strongly condemned the idea of paying out the hard-earned funds in the English exchequer for such a purpose, unless it could be shown that the people were capable and willing to work. Although he could not say that crime had been eradicated, there were clearly good results from the exceptional legislation in regard to Ireland

The twenty-one persons recently arrested in Dublin, charged with conspiracy to murder officials, were before the police court in that city on Saturday. Startling revelations were made by an informer named Farrell. He swore that several of the prisoners, including Mr. Carey, a member of the municipality, were present at a Fenian meeting where the informer was asked to join the inner circle formed for the assassination of officers. He acknowledged having taken part in a plot to assassinate a juror. He swore that one of the prisoners, named Hanlon, informed him that he had taken part in the attempt to murder Field; that Brady stabbed Field, and that Kelly also participated in the affair. Farrell also testified that the city had been marked into districts, and military inspections were held occasionally, at which most of the accused men were present. The organization, he said, had existed for several years. Farrell said picked men formed an assassination committee. They were ignorant of each other. Daniel Curley gave him (Farrell) a revolver, and told him to stop Mr. Forster's carriage opposite Ellis Quay, when Jim Kelly and Joe Brady would do the remainder. The plot failed through a mistake. On the day of the Phœnix Park murders, the witness met Brady in a public house in Georges Street, with McCaffrey. Brady asked the witness when he would be done with his work. He said at 7 o'clock. Brady said that that would be too late. On being cross-examined, witness said that no order for assassination was ever received from the Fenian Society. The orders used to be given from the Assassination Society. The prisoners were all remanded for one week. The appearance of three of them exactly corresponds with the description of the three murderers of Lord Frederick Cavendish and Mr. Burke.

Mr. Michael Davitt appeared on Thursday before the Queen's Bench Division in Dublin to defend himself against the charge of inciting to lawlessness in a recent speech at Navan. He urged that the principles which he advocated did not interfere with the administration or the observance of the law. Mr. Healy made a similar defence. The court reserved its decision.

Mr. Gladstone, with several members of his family, went to France on Wednesday for recuperation.

Mr. George Darwin, son of the late Charles Darwin, has been elected Professor of Astronomy and Experimental Philosophy in Cambridge University, England.

A great strike is in progress among the workmen of the Caledonia Railway in Scotland.

The largest gasometer in Glasgow, Scotland, exploded on Saturday night. Eight persons were injured. A shed belonging to the Caledonian Railway Company was also blown up. Fenians are supposed to have originated the explosions.

Three terrific explosions of gunpowder in the town of Muiden, Holland, on Friday, unroofed nearly all the houses there, and damaged neighboring towns and villages. About a score of lives were lost.

A great part of the city of Kherson, in South Russia, was burned on January 16.

A great landslide occurred on Thursday, in the valley of Faverges, Switzerland, destroying the village of Marais. The inhabitants were able to escape.

There have been numerous destructive earthquake shocks in Murcia, Spain, recently.

A bloody battle took place near Tehuantepec, Mexico, the latter part of last week, between the Tehuantepec Indians and the Seventh Battalion of Mexican troops. Fifty of the latter and eighty of the former were killed and many wounded. The Indians were defeated.

Cetewayo, the Zulu chief, has been enthusiastically received in South Africa on his way to Ulundi.

THE FORCE BILL IN THE SUPREME COURT.

THE section of the Revised Statutes which the Supreme Court on Monday decided to be unconstitutional (U. S. R. S. 5519) is a part of the Ku-Klux Act of 1871. It reads thus:

"If two or more persons in any State or Territory conspire, or go in disguise on the highway or on the premises of another, for the purpose of depriving, either directly or indirectly, any person or class of persons of the equal protection of the laws, or of equal privileges and immunities under the laws, or for the purpose of preventing or hindering the constituted authorities of any State or Territory from giving or securing to all persons within such State or Territory the equal protection of the laws, each of such persons shall be punished by a fine of not less than $500 nor more than $5,000, or by imprisonment, with or without hard labor, not less than six months nor more than six years, or by both such fine and imprisonment."

The act was passed by Congress for the purpose of protecting the negroes and loyal whites in the South from a secret, oath-bound society of white men, organized for the purpose of committing outrages. As a sample of the appeals for aid from the South at the time, which led to this legislation, the Governor of North Carolina, Mr. Holden, wrote to the President in 1870 as follows: "There exists in this State a secret, oath-bound, armed organization, which is hostile to the State government and to the Government of the United States. Bands of these armed men ride at night through various neighborhoods, whipping and maltreating peaceable citizens, hanging some," etc., etc. "These outrages are almost invariably committed on persons, white and colored, who are most devoted in their feelings and conduct to the Government of the United States." Next year what was supposed to be permanent legal provision was made for such cases. The act was very long and elaborate; it contained, besides the section quoted above, numerous others, designed to prevent interference with United States process, and with the exercise of the Federal franchise, and the performance of their duties by Federal officials. These provisions must not be confounded with Section 5519; many of them are probably open to no constitutional objection, certainly not to the objections which have proved fatal to this one. The military features of the act were those which attracted most attention at the time, but they are not involved in the present case.

We ventured to urge in these columns, at the time of the passage of the bill, that the general method of legislating against "conspiracies" in it was unconstitutional, and even involved an idea subversive of our very system of government. The bill provides, we said (*Nation*, April 20, 1871),

"under many artful involutions of language, that conspiracies and combinations for the purpose of depriving persons of their rights and privileges, or of the equal protection of the laws, shall be crime against the United States, punishable by its tribunals";

involving the monstrous conclusion that

"the ordinary crimes of violence committed throughout the States . . . are justiciable in the national tribunals. The extreme care with which the word conspiracy is everywhere used does not change this result. A conspiracy is in no way essentially different from an offence done by one or by many, without concert. . . . There is no legal magic in the word conspiracy, no power to confer jurisdiction, and no strength is added to the statute by its use. If valid now, it would have been equally valid had its penalties been applied in terms to acts of violence done by single persons."

With regard to the idea that such legislation could derive any validity from the Fourteenth Amendment, forbidding any State to "make or enforce any law" abridging the privileges and immunities of citizens of the United States, or to "deny to any person" the "equal protection of the laws," we said that this prohibition was on its face directed against *State* action, and that if every private crime committed in a State involved a denial to the person injured of the protection of the laws, then the amendment gave the United States courts jurisdiction in the case of every murder, theft, burglary, libel, and assault and battery throughout the Union. Either this, or the act was so far mere waste paper. For this "disloyal" view of the subject, we were severely criticised at the time by those who, like the late Mr. Sumner, thought that what the country wanted was "the Centralism of Liberty" and the "Imperialism of Equal Rights;" nevertheless, the view we advanced is precisely that now laid down by the Supreme Court.

The facts in the Harris case, which brought the clause in question before the Supreme Court, were these. Some time in 1877 a Tennessee deputy sheriff, named Tucker, arrested four men (whether white or black does not appear in the record) to answer certain criminal charges not set forth. While in custody of this State officer, the four men were attacked by an armed body, of whom the defendant Harris was one, and so beaten and maltreated that one of them died. The Grand Jury indicted the assailants under Section 5519, and the defendants demurred to the indictment, or, in other words, admitted the facts charged, but denied that they could be punished, on the ground that the Constitution did not give Congress jurisdiction over the offence.

The Supreme Court does not seem to have had much difficulty in deciding that the section is utterly invalid. The authority for it must be found, the Court says—and none of its advocates ever claimed anything more than this—either in the Thirteenth, Fourteenth, or Fifteenth Amendments. Now, the Thirteenth Amendment merely abolishes slavery, and the Fifteenth forbids denial of the right to vote on account of race, color, or previous condition of servitude. It is impossible to see how these provisions confer upon Congress the right to punish for violence upon the highway, or a conspiracy to commit such violence. As to the provisions of the Fourteenth Amendment—"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws"—the Court says:

"The section in controversy cannot be based on the Fourteenth Amendment, since that has reference to State action exclusively and not to any action of private individuals. The language of the amendment does not leave this subject in doubt. When the State has been guilty of no violation of its provisions, when it has not made or enforced any law abridging the privileges or immunities of citizens of the United States, when no one of its departments has deprived any person of life, liberty, or property without due process of law, or denied to any person within its jurisdiction the equal protection of the laws; when, on the contrary, the laws of the State as enacted by its legislative, construed by its judicial, and administered by its executive departments, recognize and protect the rights of all persons, the amendment imposes no duty and confers no power upon Congress."

In the indictment in this case, the Court continues, there is no intimation that the State of Tennessee, by act of its legislative or judicial divisions, or through its Executive, has done anything in contravention of the Fourteenth Amendment. On the contrary, the acts on which it is based are crimes of private individuals. These are within the ordinary criminal jurisdiction of the State, which is not transferred to the United States by the Fourteenth or any other amendment.

The decision settles the point forever that the Fourteenth Amendment merely adds new limitations upon State action to those already existing in the Constitution (*e. g.*, the clause forbidding States to impair the obligation of contracts), and does not change in any way the fundamental structure of the Government.

ENFORCEMENT OF STATE DEBTS.

MR. MOORE, of Tennessee, proposes to introduce at an early day in the House a constitutional amendment, repealing the existing Eleventh Amendment, and giving the creditors of a State the right to sue it in the State courts. This has doubtless been suggested to him by the recent scandalous proceedings in his own State, and the enormous defaults made by counties, cities, and towns all over the West. In 1879 thirty counties in Missouri, besides many towns and cities, were in default. Kansas had somewhat the same story to tell. Judgments were obtained against some of them, but we suspect very little money was ever recovered from them by process of law, so difficult is it to force a whole community to be honest. In most cases the creditors compromised, or let their claims lie, to avoid fresh vexation and expense. Daniel Webster was consulted over forty years ago as to the power of American States to contract loans, and their obligation to repay them, and he gave a very emphatic opinion to the effect that they were abundantly competent to borrow, and were bound in honor to repay; but only in honor. He evidently did not think that they were exposed to any compulsory process.

The Eleventh Amendment was undoubtedly intended to protect them against this process on the part of individuals. Recently, under the influence of the scandalous conduct of some of the States, the question has been raised whether the claims of an individual against a State cannot be assigned to his own State, and whether it cannot then sue on them. The experiment is now being tried by the State of New York, which has accepted an assignment of individual claims against the State of Louisiana, and has authorized the Attorney-General to sue on them. The case is before the Supreme Court, which has heard the argument and will probably soon give judgment. Should it decide that it has jurisdiction of the controversy, and can issue execution against a State on a debt, we shall, however, have reached the most interesting stage of the proceedings, and the one which has received least consideration. How would the court execute a judgment against a State, supposing

there was no money in the Treasury which could be seized? It could not compel an unwilling Legislature to levy a tax for the purpose of satisfying a judgment. A Legislature cannot be constrained by any process. It may be dispersed or disregarded, but not coerced, as the officers of a defaulting county or city can be.

It is said that the courts could, in case of need, themselves appoint officers to levy a tax on a delinquent and recalcitrant county. But would it go so far as to undertake through its officers the taxation of an entire State, and would the Army and Navy be employed to support them in levying on a hostile population? This would, of course, be tantamount to taking military possession of the State during the period necessary to satisfy the judgment, and would be an undertaking of great difficulty and delicacy. The theory on which this power is claimed for the general Government is that on entering into the Union the States gave up the right of making war on their own account, and therefore the Union is bound to do for them by law whatever they could themselves have done by armed force, in asserting claims or redressing wrongs. On the other hand, the right or expediency of going to war to enforce payment of money lent to a state by private citizens is now repudiated by all modern states, and has not been resorted to in any recent case against an independent power. War on behalf of money-lenders is justly regarded with increasing horror.

There is another consideration in this matter, of considerable weight, which is not to be overlooked. An undertaking on the part of the National Government to satisfy judgments for debt issued from its courts against States would really be equivalent to a Federal guarantee of all State liabilities. It would, in other words, constitute itself an agent for the collection of all State debts, and an agent, too, who could not afford to fail in his self-imposed duty. The guarantee would cover the debts contracted by State Legislatures over whose doings the Federal Government has neither control nor supervision.

That this would enormously improve State credit is obvious; but is it desirable to improve State credit by any agencies except the growth of the State population in industry, order, legality, and integrity? Would it be well to announce to money-lenders all over the world that in lending money to an American State hereafter they need not consider the character of the men who rule it, or its financial history, or the habits of its people, or its natural resources; that the National Government would see them paid, no matter what the State Government was?

All these are matters to be weighed in attempting any legislation on this subject. The problem is not one by any means to be disposed of by the adoption of a constitutional amendment giving the Supreme Court jurisdiction of State debts. Such an amendment would have to be followed by legislation making full and minute provision for executing the process of the court.

Such contingencies as the refusal of State Legislatures to levy a tax in obedience to the judgment would have to be provided for in minutest detail, because in such cases the Legislature would probably be supported by the people. The general Government would then have on its hands the very serious task of levying a tax on a hostile population—a task to which hardly any government in the world has ever found itself equal, and for which the American Government is less fitted than most others. It has to be borne in mind that thus far in our history the general Government has never undertaken to coerce a State as such. It has put down rebellion among the people of a State, and has treated the State Government as abolished or destroyed by the fact of such rebellion, and it has withheld certain rights or privileges from States—such as admission to the Union, or full representation—until it complied with certain prescribed conditions. But it has never said to a State, in good and regular standing within the Union, that its Legislature must pass a certain act or appropriation, on pain of deposition or military execution. In attempting such coercion on behalf of State creditors, therefore, we should be attempting a wholly new thing, and one which would radically change the relations of the States to the Federal Government. Hitherto the Federal Government has acted on persons in its administration and legislation, and kept the States within constitutional limits by nullifying such of their laws as infringed the Constitution. If the Union took charge of their debts, it would enter on a new path, and undertake to prescribe to them not simply what they should not do, but what they should do.

THE LEGITIMIST REVIVAL.

THERE has been no odder piece of news from France since Sedan than the discovery of a plan of armed insurrection on the part of the Legitimists, by organizing "thirty-two legions of 1,000 men each," with a cavalry "nucleus" of 600 horses (the troopers, apparently, not being yet ready), and $3,000,000 in bank in London as sinews of war. It is almost more ridiculous than the Duchesse de Berri's rising in La Vendée in 1832, which ended in her concealing herself from the gendarmes in a chimney. After that period the Legitimists of the extreme divine-right school may be said to have wholly disappeared from politics until 1870. They lived in their country houses and farmed, made little pilgrimages to Germany to pay their respects to the Comte de Chambord on his birthday, and heard the Mass of the Holy Ghost in little chapels on the anniversary of Louis Sixteenth's death. Those who were rich enough passed the winter in Paris in a social coterie which neither foreigners nor Republicans ever entered, and in which even Orleanists were ill at ease, or else came up for a few weeks to little hôtels on the left bank of the Seine, in which the landlord was pious and "the King" was talked of familiarly at the table d'hôte. A few, but very few—one of the Larochejacqueleins was among them—gave in their adhesion to the Empire and took service under it, but they suffered for it socially. Many enlisted in the curious body called "the Pontifical Zouaves," and served as the Pope's contribution to the garrison of Rome during the French occupation, and were supposed, on account of their piety, to be worth three times the number of wicked Frenchmen or Italians. At one time they had the famous Lamoricière at their head, and under him actually tried to stop the entrance of the Piedmontese into the States of the Church, in 1859, by the use of carnal weapons, but were badly beaten at Castelfidardo, and had to break up and go home, the Pope being after this unable to support them.

For the next ten years the Legitimist world was a very dull world. There was nothing going on in it. After Sedan, however, there came what appeared to be the dawning of a new day. The French Army was almost annihilated, and all men in office were thoroughly discredited and disheartened. When the Assembly was elected which was to make peace, and erect a new framework of government on the bloody ruins with which France was covered, the voters, for want of anything better, dug out all the Legitimist country gentlemen they could lay hands on, most of whom had never been heard of in politics by any of the existing generation, and were probably amazed by the call on them, and sent them to the Assembly. This apparently gave the legitimate monarchy a chance of restoration which no man in France ever expected to see again. The majority, led by dukes and marquises, were satisfied that their first duty was to bring back the King. When they found M. Thiers opposed to it they got rid of him, and put Marshal MacMahon in his place. At this juncture they might possibly have brought Henry V. back and proclaimed him if he had been the right sort of man. They are said to have had the carriages prepared for the royal entry to Paris, and the acquiescence of the military chiefs was certain, and judges and functionaries would have been willing enough, when the King's obstinacy ruined the whole scheme. He resolutely refused to hoist the tricolor, and his most ardent supporters confessed sorrowfully that he could not come back to France under the white flag. So they had to postpone everything to that unknown period when, to use their own phrase, "God's hour will strike."

Since then they have been gradually expelled from both houses of the Legislature, until they have only a small minority. They have also been, to a very large extent, removed or have retired from the judicial and administrative offices which they managed to get hold of during the five or six years following the fall of the Empire. They lately tried to gratify their newly-acquired taste for movement and activity, and procure the means of power in the modern world which they so much despise, by stock speculation, and for this purpose got up the Union Générale, with the Pope's blessing as part of the capital. The disastrous result is well known. Its managers have gone to jail, or are to go if they can be caught, and many owners of the finest names in France have had to undergo the humiliation of not being able to pay their "differences," just like any unlucky American speculator, who never goes to church, and lets his daughters run about alone. Probably the horrible quiet which followed

on the "Krach" of last year has proved a hell to the quick bosoms of the party, and they have begun their little military preparations as a sort of distraction, and doubtless with that belief which ardent desire so often generates, that everything is on their side—that the Army is ready to join them, and that the people are tired of the godless Republic. They will hardly be undeceived within the present century. There is nothing more enduring in the land of dreams than the fanaticism of loyalty, especially when, as in the case of the French Legitimists, the cause of the King and that of the Church seem so closely united by all the circumstances of the age.

INTELLECT AND EDUCATION IN ENGLISH POLITICS.

LONDON, Dec. 30, 1882.

AN amusing little controversy arose here not long ago as to which it is of our two great political parties that can claim a superiority in intelligence and education. Formerly the Tories were deemed to be the stupid party—the phrase is attributed to Mr. J. S. Mill—and did not much object to the description, because rank and wealth used to have in England a way of looking down on intellect as plebeian, so that to be great without being intellectual meant that one was possessed of other and more respectable elements of power. But Lord Carnarvon, who is honorably distinguished among the nobility by having not only a really old and dignified lineage (a very rare thing in the upstart peerage of England), but by his scholarship and general mental culture, lately claimed for the Tory party that it included three-fourths of the men who are intellectually eminent, and whose opinions on politics are therefore presumably better than those of the crowd. Some Liberal who was stung by this, wrote to the newspapers, giving a list of men of letters and science whom he asserted to be Liberals; and our journals discussed the point for a while, of course with no result, for many of the persons cited as Liberals were not really so, and in a matter of this kind the mere accumulation of well-known names goes for very little: it is the amount of a man's intellect and the extent to which his attention has been given to politics that make his opinion valuable, and entitle it to outweigh that of ordinary people.

However, just when the controversy was dying away, it was revived by another event. One of the seats in Parliament for the University of Cambridge became vacant by the retirement of Mr. Walpole, and the contest which took place for the vacancy excited some attention, because a University seat is regarded as a specially honorable one, reserved for politicians of distinction. For this seat the Tories put forward Mr. Cecil Raikes, a politician of some experience, who was, under the Government of Beaconsfield, Chairman of Committees in the House of Commons, and so enjoys a good standing in that assembly as an authority on matters of procedure. He was already member for Preston, but resigned the representation of that town in order to win the more dignified place. He is only a moderately good speaker, and not a man of any particular cultivation, without any claims to eminence either in literature or science, and no special knowledge of educational questions. The Liberal candidate run against him was Mr. James Stuart, Fellow of Trinity College, and Professor of Applied Mechanics in the University—a man who had distinguished himself by his ardor and skill in teaching, and still more, perhaps, by his exertions in founding systems of local lectures by University graduates in the great towns of the middle and north of England. He had never taken any part in politics, and so far might be thought to stand at a disadvantage, but as respects what are called "academical qualifications," he was much superior to his rival, who had no more aptitude for representing a university than any other Conservative member. However, when the voting took place, Mr. Raikes was returned by an enormous majority, having received more than 3,000 votes, as against Mr. Stuart's 1,300. This result was welcomed by the Tory organs as another evidence that educated men were on their side, while the Liberals endeavored to explain it away as they best might. It surprised no one who has attended to such matters, for in both Oxford and Cambridge the large majority of graduates are clergymen of the Church of England, nearly all of whom are Conservatives, and it was ridiculous to expect that people would vote for a candidate who represented opinions they condemn merely because he was eminent as a teacher of science. The teachers resident at Cambridge, the professors of the University, and tutors of the colleges, were no doubt mostly on Mr. Stuart's side, but they are a drop in the bucket (not over three hundred) compared with the whole constituency. In Oxford the victory of a Tory candidate would have been at least as complete; in the universities of Scotland, Liberal as Scotland is, the Tories secured one of the two seats by a large majority at the last general election, and were defeated by a very small majority only in the contest for the other. In Ireland the Conservatives always hold the two University seats. There is not the slightest doubt that, if all the graduates in the United Kingdom were polled, the number of Tories would prove to be at least double that of Liberals. So far, then, education is on the Tory side. Nor would the result be different if the great professions were to be taken. The medical practitioners are more frequently Conservatives than Liberals. The bar is still more decidedly Conservative.

How is this phenomenon to be explained, and what significance or weight does it possess? How far may it fairly be allowed to tell in favor of Conservatism as a policy? Does it justify Lord Carnarvon's statement that intellect is on the Tory side?

It is due partly to the accidental association of the practice of college graduates with certain classes in the community, and in so far has little or no political consequence; partly to a certain state of mind and temper among educated people generally in England, which is really significant, and therefore worth examining. The English universities are, more conspicuously than the universities of any other country, institutions for the education of the upper classes. Of the sixteen or seventeen hundred youths who annually graduate at Oxford and Cambridge, the large majority either belong to what would be called the wealthier classes, the landed gentry, the great merchants and manufacturers, the successful professional men, or else become clergymen of the Church of England. Now, both the clergy of the Church of England and the wealthier classes—more especially, of course, the landowning gentry—belong to the Conservative party. The Nonconformists, who are nearly all Liberals, are only beginning to acquire the habit of resorting to Oxford and Cambridge, from which, till eleven years ago, they were practically excluded. Thus the graduates are naturally Conservatives, not because they are graduates, but because they belong to sections of the population which are Conservative. Their University education, it may certainly be urged, does not break through and overpower the tendency to Conservative opinions which they derive from their birth, their profession (if clergymen), and the sentiment of those they associate with. But neither can it fairly be said that it is this University education which makes them Conservatives, for the other causes are quite sufficient to account for that fact.

However, the question has really very little interest so far as it relates to University graduates, because they are not necessarily a highly-educated class. More than half, probably quite two-thirds, of our youth leave Oxford and Cambridge without having received any considerable intellectual impulse. They are in so far the better for having been there that they have lived in a society larger and more varied than they could otherwise have seen, and have formed agreeable, and even improving, friendships. But they may get their degree without having gained much knowledge or training, and may be no better fitted to form a political opinion than any sensible man who reads the newspapers. A little classics and mathematics does not go far toward political insight. It is more important to inquire why many men of real intellectual power or extended knowledge, who would probably have been Liberals forty or fifty years ago, are Conservatives now. It used to be the presumption that our eminent literary or scientific man was a Liberal; this presumption does not now exist. Perhaps it is even a little the other way, if one may reckon as Conservatives those who, while calling themselves Whigs, are really opposed to Mr. Gladstone and the policy he represents. Liberalism used to be far stronger than Toryism in our press; now it is not stronger in London, though no doubt still stronger in the provinces, where nearly all the best-written papers are Gladstonite. The great historians of the last generation, Hallam, Macaulay, Milman, Grote, were all Liberals. Now some of our best historical names, such as those of Stubbs and Gardiner and Merivale, cannot be classed on that side. It is the same with the poets, with the philosophers (so far as we have any), with the men of science. The disposition among men of superior powers used to be to advocate and welcome political changes; now it is quite as much a disposition to fear and deprecate them, preferring the arrangements under which society actually works.

The reason of this may be found in the difference between the condition of England now and its condition fifty years ago. Then a great number of abuses existed which had to be swept away, which obviously interfered with the freedom and happiness of the individual, and which could not be justified upon principle. Nothing could be said for them except that they existed and maintained the power of the then governing class. Against these abuses men of active and penetrating minds naturally rebelled. They ranged themselves on the side of reason against prejudice, of progress against stagnation. They were successful. These abuses were swept away; the most crying faults of our social and economical system were cured, the greatest gaps in our administration filled up by the creation of new departments, such as the Education Department. Considerable changes were made in the distribution of political power which satisfied that sympathy with the claims of the masses which possessed so many of our best minds. The best illustration of the then dominant tendency of intellectual opinion is furnished by the free-trade controversy. The advantages of free trade for England were argued by Richard Cobden and his coadjutors as a matter of economic science. They were opposed partly by mere ignorance and dulness, partly by appeals to the supposed material interests of the agricultural class. Hence men of intelligence, men who

could understand scientific reasonings and felt that they ought to prevail, naturally took the side of free trade, and became hostile to the Tory and protectionist party because it was the party of obscurantism. The same thing happened, though less conspicuously, in the struggle over elementary education against the pretensions of the Church of England clergy, and in the contest for opening the universities to Nonconformists. Here, also, the Tory party was the ecclesiastical party, and might be branded as the party of obscurantism and exclusion, while the Liberals fought for the extension of education, the admission of all classes and sects equally to its benefits, the dethronement of the clergy and clericalism. All these controversies are now practically over. The principles of free trade, despite the attempts lately made to set up an agitation for reciprocity—attempts which failed before they had taken any hold on the nation—are accepted by Conservative as well as by Liberal statesmen, and are no longer, so to speak, part of the peculiar stock-in-trade of the Liberal party. Clericalism has been defeated all along the line; elementary education is unsectarian, and so are the universities. Here, therefore, also the Liberals have lost their old advantage. The questions which now divide the two parties are not questions on which it can be said that lovers of light ought to array themselves on one side, and lovers of darkness on the other. A man who is eager, hopeful, filled with sympathy for the humbler classes, persuaded that their impulses will be generally toward what is good, and that they may therefore be trusted with more power than they yet possess, will enlist on the Liberal side. A man who is cautious, cool-headed, averse to sentimental arguments, penetrated by a feeling of the difficulties which attend the working of democratic institutions, will tend toward Conservatism. So, too, will he who is well satisfied with things as they are, and, while admitting that they might be improved, conceives that as the crying grievances of the working-class and of the Irish have been redressed, the time has come to pause. Now, a person of intellectual power and culture may just as well belong to either of these latter classes as to the former; and the differences of nature which dispose men to be Conservatives or Liberals are rather differences of temperament and of sympathy than of mere intelligence. It is for this reason that Mr. Gladstone's wonderful intellectual gifts do not gain him so much support from literary or scientific men as the sentimental or emotional quality of his character excites distrust from those men of culture who pique themselves on trying everything by the dry light of reason.

Perhaps one may carry this line of observation a step further. There is a tendency among philosophers and historians to be always in opposition to the prevailing political tendencies of their time, just because they are the keenest to perceive the faults and dangers of those tendencies. Plato and Thucydides were the most acute critics of the Athenian democracy, while the great thinkers and poets who have lived under despotic governments have usually been apostles of freedom. Since 1832, the popular party has been generally in the ascendant in Great Britain, and seems to many to be on the eve of attempting large constitutional changes. It is natural, therefore, and not only natural, but wholesome, that there should be an active literary opposition to the democratic movement of our time; and that opposition would doubtless be far stronger were it not that the Conservatism of the upper classes, which often finds expression in an arrogant and selfish assertion of their own interests, repels some of the literary and philosophic talent of the time, and drives it into the Liberal camp. This, however, is exceptional. On the whole, the influence of the richer classes tells strongly for Conservatism among the men of education and culture. If there were any exciting issues before the country, such men would take sides according to their views of what reason and history taught; but in a time like the present, when the issues are not exciting, and when reason and history cannot be claimed for either side exclusively, mere social influences count for a great deal, and draw into the Tory ranks many persons who do not by extraction or wealth belong to the upper class. We shall soon have an opportunity of judging what the literary fighting power of the Tory party is, for some of its leaders—prominent among whom is Lord Carnarvon—announce that they are establishing a new review or magazine for the express and sole purpose of advocating Conservative principles. Though it is to deal not only with politics, but also with literary and artistic topics—with religion, philosophy, history, manners, agriculture—all these subjects are to be dealt with in a strictly Conservative spirit and exclusively, it would seem, by Conservative writers. This is a new departure in our magazine journalism, and excites much curiosity. Its promoters say that there is a great deal of "dormant talent" in the Conservative ranks which they desire to evoke, and that Radicalism has hitherto been allowed to have too much of its own way in the magazines. But it need hardly be said that the whole thing is a question of money. No Conservative talent need have lain dormant a day longer than it pleased, because our editors want good writing only, and do not care on which side it is employed: they have no political aims, and if they insert more Liberal than Conservative articles, it can only be either because more are sent to them or because they are better written.

Y.

THE "SALVATION ARMY" AS AN INDEX OF ENGLISH OPINION.

LONDON, December 28, 1882.

MY purpose in this letter is not to praise, to blame, or even to criticise the movement of which the Salvation Army is the embodiment, but simply to call the attention of your readers to the curious light thrown both by the movement itself, and still more by the attitude of the English people toward it, upon the condition of belief, opinion, or sentiment in England.

The very existence, in the first place, and still more the extraordinary success, of the Salvation Army throw doubt on the truth of the view often expressed and still oftener entertained, that the present age is, in England at least, an era of unbounded scepticism and of very prevalent religious incredulity. If, indeed, a reader confines his attention (as most of us do) to the books and periodicals which have the greatest vogue among the well-to-do portion of the community, and assumes that such writers as Matthew Arnold, as the author of 'Supernatural Religion,' as the Rev. Stopford Brooke, or even Professor Seeley, or that such writings as the *Fortnightly Review*, the *Nineteenth Century*, or the *Pall Mall Gazette* represent the ordinary beliefs or disbeliefs of the British public, he may fairly enough conclude that what is technically called religious faith is undermined throughout the whole country. Whether such an inference could rightly be drawn even as regards the convictions of the classes to whom the writers or periodicals I have mentioned mainly appeal, is, in my judgment, a very doubtful question. No one is less prone than I am to underrate the importance of that general disintegration of beliefs which, being a result of the unparalleled freedom of discussion that has existed in England for more than a generation, is the most striking and impressive phenomenon of the day; but it is, I am convinced, an error to identify a condition of feeling which affects all forms of belief, whether political, historical, or social, with religious scepticism, which, if it exists, is simply one specimen of the break-up of dogmatic systems.

Still, if any one maintains that among wealthy Englishmen there exists an amount of avowed theological scepticism such as has not existed, or at any rate been apparent, in any other age, he will find many arguments to urge in favor of his opinion. What I am concerned to notice is, that assertions as to the religious scepticism of the present age must, if they are to correspond with facts, be restricted to particular classes of Englishmen. The Salvation Army is a perfectly natural outgrowth of the condition of English society; it is a plant born of the soil—it is not an exotic, it has not been fostered into growth by any artificial culture. General Booth and his friends have appealed, and have appealed with great success, to the ordinary beliefs of orthodox English Protestants. The very basis on which the existence of the Army rests is the enthusiastic conviction of General, officers, and soldiers that the dogmas of Christianity, as understood by English Protestants, are true. The success of the campaign on which the Army has entered depends in great measure on the fact that thousands of men and women, whose lives fall far short of the Christian or any other standard of duty, are in their hearts convinced that the dogmas of Christianity are true, and can, therefore, by strenuous and sincere appeals to their consciences, be roused, for a time at least, to the attempt of acting up to their own convictions. How would it be possible to collect an army for the object of preaching salvation through Christ among men having no belief in Christianity; or to terrify with fears of eternal punishment listeners who had ceased to believe in the existence of hell? Secularism, I shall be told, prevails among the artisans; the influence of Mr. Bradlaugh must be balanced against the authority of General Booth. The train of thought thus suggested undoubtedly deserves consideration. Mr. Bradlaugh, General Booth, and Cardinal Manning are each signs of the times. The characteristic of the age is that all forms of belief or disbelief grow up and flourish side by side. This, however, does not affect the fact, which is beyond dispute, that the power with the public of General Booth is infinitely greater than that of any secularist in the country. In any contested election, the active friendship of the General would be of infinite value to a candidate. Few were the would-be M.P.'s who, in 1880, would not have been glad to have in their pockets a letter of recommendation from Mr. Spurgeon. The friendship of Mr. Bradlaugh might possibly (though this is very doubtful) benefit a candidate who wished to represent Northampton; in any other borough throughout England Mr. Bradlaugh's patronage would be fatal to the success of even a popular candidate. Few are the men who, when trying to get into Parliament, would boast of being supported by the *National Reformer*.

The success and influence of the Salvation Army is, it should be noted, no isolated phenomenon. If the artisans of England are deeply imbued with secularism or agnosticism, it is very strange that the borough elections should in hundreds of cases be practically decided by the Nonconformists. Neither Dissenting ministers nor the congregations who hear and support them are supposed to be free-thinkers. When Mr. John Morley, to the great regret of all readers who value manly honesty of

thought and outspoken vigor of expression, recently retired from the editorship of the *Fortnightly Review*, he expressed in his farewell address a doubt whether scepticism or free thought (I do not profess to quote his words) had made great progress in England. It were hardly possible to call a more competent or unbiassed witness to the truth of the observation which I press upon your readers—namely, that the existence of the Salvation Army, combined with other circumstances, is hardly consistent with the belief that religious incredulity is in any sense a characteristic of the majority of the English people. We may probably go a good deal further than this, and infer with justice that the English are still, as a body, not only sincere Christians, but also strict Protestants. For the last forty years Romanists, Puseyites, Ritualists, Anglicans of every form and color, have attacked English Protestantism on every side on which it is, or is supposed to be, assailable. The assailants have had in the Church of England a fortress or vantage-ground from which to attack all forms of thorough-going Protestantism. Among certain classes, at any rate, the cause which, for want of a better term, one may call the cause of Sacerdotal Christianity, has made progress. But the sudden rise of a religious movement like that of the Salvation Army, led by laymen, and grounded apparently on the ideas which have always been the basis of Puritan Low Church, Evangelical, or (speaking generally) Protestant forms of Christianity in England, suggests the idea, confirmed by many other facts, that neither Roman Catholicism nor any form of Anglicanism exerts, or is likely to exert, permanent influence over the great body of the English people. Cardinal Manning is a popular representative of Romanism. He is liked, respected, and admired by a large number of wealthy and educated Englishmen, and Englishmen who are not, and are not likely to be, carried over to Rome. But if you tested his influence by the rough-and-ready criterion by which I have tested the influence of Mr. Bradlaugh, you would probably find that the Cardinal had hardly more weight with ordinary Englishmen than has the secularist lecturer. If it were not for the Irish vote, no candidate for an English constituency would care to come before the electors as the friend or follower of Cardinal Manning.

The criticism, in the second place, passed by liberal-minded writers on the proceedings of the Salvation Army exhibits in a marked way one of the most singular and least satisfactory features in the moral and intellectual attitude of educated Englishmen. The one point which these critics have not in general cared to deal with is the truth or falsehood of the theological doctrines preached by General Booth and his officers. Much candor has been shown in appreciating the good side of the General's efforts. Much has been said, both with candor and with truth, of the objection to vulgarizing religious worship and of attempting to arouse attention at the cost of impairing the sentiment of reverence. What appears at any rate odd, or rather would have appeared odd at any other period of English history, is that persons, some of whom cannot be supposed to agree in the fundamental dogmas on which the religious teaching of the Salvationists depends, write as though the zeal and good intentions of the Army and its leaders dispensed a sympathetic critic from the necessity of saying, or perhaps even of making up his own mind, whether the doctrines preached by the Salvationists, or the facts, or alleged facts, on which these doctrines ultimately depend, were true or false. It will and may be urged that the practical admonitions addressed by General Booth to crowds sunk in lives of sin and misery are of value, and may command our sympathy and respect even though we are not able to believe the dogmas which give force to his preaching. The same argument would, it should be noted, justify a sympathetic criticism of the pilgrimages to Lourdes on the part of critics who, like myself, believe the visionary young woman at Lourdes to have supported a false doctrine by statements which, if not delusions, were as knowingly false as any of the hundred lies told by the Claimant. The train of reasoning or feeling, in short, which justifies sympathetic criticism of religious doctrines in which you do not yourself believe, rests at bottom on the idea, to which modern writers occasionally give definite expression, that, in matters of religion, edification is of far greater consequence than truth.

The conduct, in the last place, of the public, and I fear I must add of the Government, in respect of the attacks made by roughs on the Salvationists, betrays singular indifference to the duty of insuring to all citizens the free exercise of their legal rights. On this matter facts speak for themselves. General Booth and his followers are not, it should be noted, by any means unpopular, either with the well-to-do and so-called respectable classes, or, as far as appears, with the great mass of the people. There are, however, to be found in every large town numbers of roughs who, particularly when instigated by the publicans, are willing enough to break up by force meetings which, though perfectly legal, are offensive to the tastes or prejudices of the kind of persons who form "skeleton armies." There are, in short, in every part of the country, lots of ruffians prepared to deal with General Booth much as Mr. Dempster and his friends tried to deal with Mr. Tryan. One would have supposed that the violence of a disreputable mob bent on interfering with the right of public meeting would have aroused the indignation of respectable men of all classes. The general feeling of the public seems, however, to have been one of apathy. The Salvation Army and the Skeleton Army, the Saints and the Roughs, ought to be allowed to battle their quarrel out together; in any case, persons who sympathize with neither force ought not, according to the prevailing view, to be disturbed. If the blackguards of Little Pedlington objected to the hymns and sermons of General Booth, and threatened to dissolve the General's prayer-meetings by force, then the General and his friends, it was argued, were causing a breach of the peace, and the duty of respectable magistrates was to hinder a meeting which, though perfectly legal, was likely to excite the anger of ruffians and to prompt the said ruffians to break the law. To put the matter in the plainest terms, the popular view (which was to a certain extent countenanced by the Government) is that assemblies otherwise perfectly legal become unlawful if they are held in places where they are likely to offend the feeling of the populace. The law courts have happily corrected the monstrous delusion that the exercise of their legal rights by peaceable citizens could be limited or hindered according to the will or the caprice of a lawless mob. The judges have performed their duty, and have done the best they could to impress upon the nation the simple, and one would have thought obvious, principle that if Jones has a right to meet his friends and sing hymns or preach in an orderly manner, his right to do so cannot be affected either by the fact that Bill Sykes and a lot of scoundrels threaten to punch Jones's head, or by the fact that a muddle-headed bench of magistrates hold that anything must be unlawful on Jones's part which leads Bill Sykes to break the peace.

The courts have done their duty. It is not, however, certain whether even now the people or the executive have realized the justice and the necessity of insuring to the members of the Salvation Army, as to all other citizens, the free enjoyment of their lawful rights. Here, as in the conduct of the House of Commons with regard to Mr. Bradlaugh, may be perceived a symptom of one of the most threatening dangers of the day. This danger is the growth of a feeling that the practical exercise of legal rights ought to be dependent upon the popularity of the class or person who claims to exercise them. The majority of the House of Commons were unable to see that the question of Mr. Bradlaugh's admission to his seat was not a question of morals, but of law. Hosts of Englishmen appear unable to perceive, or rather to feel, that violent interference by ruffians with the Salvation Army compromises the whole right of public meeting. Assume, in the face of all evidence, that the Salvationists are a body of canting hypocrites; assume, what has certainly not yet been proved, that the proceedings of the Army are so conducted as to be a nuisance to quiet people, and therefore ought to be put down by legal means: these assumptions, even if true, do not go one step toward lessening the danger and the inexpediency of allowing violent mobs to take the law into their own hands. The cause of General Booth is, in this matter, the cause of every Roman Catholic, Secularist, Quaker, or Jew throughout the land. It is, in fact, the cause of every man who is or may be the advocate of an unpopular cause. The mob who attack the Salvationists to-day may burn a Roman Catholic chapel to-morrow, or may take a fancy a week hence to wreck a Jewish synagogue. Recent experience does not justify the conviction that the principles of toleration and justice are so firmly grounded in the conscience of Europe that English mobs can be allowed to play at persecution.

Your readers must forgive me for having bored them with the commonplaces of political morality. The thing to be noted is, that these commonplaces, obvious as they are, have not as yet impressed themselves firmly on the minds of the English public. One circumstance to a slight extent explains, though it does not justify, the obtuseness of popular sentiment with regard to the Salvation Army. It is clearly just and expedient that the Salvationists should enjoy undisturbed all the legal rights of citizens; it is clear that among these rights must be included the unrestricted right of meeting in public, in a lawful manner, for the promotion of any lawful purpose. It is not, however, quite so clear—the matter is one on which I have no intention of pronouncing any opinion whatever—that the Government ought not to possess the power by law of occasionally restricting, on grounds of general policy, the unlimited right of public meeting. The English people, at any rate, it may be suspected, feel that, in politics no less than in religion, things may be lawful which are not expedient, and therefore are apathetic in duly supporting the exercise of rights which common sense suggests it is, under certain circumstances, inexpedient to exercise.

A. V. Dicey.

GRUCKER'S LITERARY DEVELOPMENT OF GERMANY.—I.

Paris, January 6, 1883.

German literature is distinguished by the part which critical science — the theoretical study of literary and of æsthetic principles—plays in it. The critic comes before the poet, and sometimes inspires him. The most famous poetical inventors and writers—Lessing, Klopstock, Goethe, Schiller, Novalis — have been

MALDEN PUBLIC LIBRARY

philosophers; they have all been, to use the German terminology, objective and subjective at the same time. Boerne says that "the Germans always start from principles. Is it necessary to take out a spot in a coat? they first begin by studying chemistry, and they study it so well and so long that meanwhile the coat has fallen to pieces." M. Grucker, an Alsatian by birth, now Professor of Foreign Literature in the Faculty of Letters at Nancy, has just given us an excellent 'History of Literary and Æsthetic Doctrine in Germany.' It is full of the most valuable information. He shows us how weak, how divided and barren Germany was left after the Thirty Years' War. "Modern German literature," he says, "from Opitz to Gottsched, taken in the whole, is not the product of the free expansion of the national and popular genius; it is the result of a slow and difficult work of imitation, of artificial reproduction, aided, provoked by the study of rules, of poetics, of models borrowed from abroad." Herder says the same thing: "We came too late, and as we came too late, we imitated others. We imitated the French, the Spaniards, the Italians, the English; we hardly knew why. Our venerable Opitz was an imitator more than a poet, and in Weckherlin almost everything is borrowed from abroad."

In the middle of the eighteenth century German literature first becomes original; but the work of inspiration continues to be always accompanied and helped by the work of criticism. Criticism, in fact, becomes then a real science; it has a depth, an importance, unknown in other countries; it becomes a branch of philosophy, of literature, of history. The marriage, the close connection, which is established between literature and philosophy is the characteristic trait of German development. Every literary reform is caused by a philosophical reform. The philosophy of Wolf acts on Gottsched, the philosophy of Leibnitz on Lessing, the philosophy of Kant on Schiller, the philosophy of Fichte and the philosophy of Schelling on the Romantic school. Such a connection has existed in other countries: it is, for instance, impossible not to feel the influence of Descartes on the great French writers of the century of Louis XIV.; it is impossible not to see how the sensualism of the eighteenth century acted on Voltaire and his contemporaries. But the connection is nowhere so close, so complete as in Germany. Ritter has justly said: "More than any other, our literature is impregnated with philosophical ideas. Our greatest philosophers have in themselves something of the poet, and, as for most of our poets, it is difficult to say if they are poets rather than philosophers."

M. Grucker begins by giving a very graphic picture of German literature in the sixteenth century. This literature was essentially popular, but already Germany looked for models abroad. The powerful satirist Fischart was an imitator of Rabelais. There were two schools independent of each other: on one side, a neo-Latin literature, learned, but without life; on the other, a popular literature, trivial, coarse, represented by Sebastian Brant, by Hans Sachs. The legend of Faust, which was then created, combined, as it were, in its impersonality the popular inspirations with the boundless love of science and of intellectual domination which was already felt.

German had not even found a definitive language. Luther had used the Misnian dialect of Upper Saxony, which became the official *Kanzeleisprache* of the Emperor; it soon triumphed over all the other local dialects. But after Luther, the language which he had formed was invaded by all sorts of Greek and Latin locutions. "German words," says Rückert, "were only there like servants who carry the train of a gown." The new Latin movement was fatal to the language, and it is a marvel that the work of Luther was not entirely lost, especially when the French language, already formed, so elegant and so precise, became the social language in all the courts and circles of Germany.

After the horrors of the Thirty Years' War, the German spirit seemed completely dead. All the Princes became imitators of Louis XIV.: they all had their Versailles, their Marly. The first reaction against the invasion of foreign words and ideas was the modest creation of societies which called themselves *Sprachgesellschaften*. M. Grucker gives their history. The most important had been established at the beginning of the war, in 1617, at Weimar—the *Fruchtbringende Gesellschaft*. The founders were Ludwig and J. Casimir of Anhalt, Ernst, Friedrich, and Wilhelm, Dukes of Saxe-Weimar, and a few gentlemen. The object of the society was "respect in its integrity and in its true spirit for the noble maternal tongue, and its employment in their speeches and writings." The society was essentially aristocratic, but it admitted professors, poets, and writers. It lasted during the Thirty Years' War; some of its members were on the Protestant side, some on the side of the Emperor. It died only toward 1767, at the beginning of the wars against Louis XIV. M. Grucker mentions other societies less known — the *Aufrichtige Tannengesellschaft*, established in Strasbourg in 1633, the *Deutschgesinnte Genossenchaft*, founded in 1643 at Hamburg by Philip von Zesen and Dietrich Petersen. These last were German in the extreme; Zesen called Venus "Weidinne," Vulcan "Gluthfang," Aurora "Röthinne," and so forth. In his eyes, Latin and Greek were dialects of German, and he believed that there were Germans at the siege of Troy. His attempt fell into ridicule, and it became an insult to be called a *Zesianer*. There is not much to be said of the *Gekrönte Blumenorden* established in 1641 at Nuremberg. The school of Nuremberg, as it is sometimes called, was devoted to allegory, to emblems, to bucolics; its members wore the classic names of shepherds —Damon, Floridor, etc.

The work of all these societies was less important than the work of a single man, Opitz, who first gave to German poetry rules, models, and principles. Opitz, it is true, unfaithful to the national and popular poetry, inspired himself with classic antiquity; he was, nevertheless, the reformer and the father of modern German literature. He played the part of Boileau: he was a sort of literary regent, the founder of criticism, a master of style and of prosody. Opitz was born in Silesia; at the age of twenty, when he was a mere student, he attempted a defence of the German language in his "Aristarchus sive de contemptu linguæ teutonicæ." It was a bold attempt, in an unknown young man, to protest against the abandonment of the national idiom, and to claim for it an honorable place by the Greek and Latin languages. His book, 'Von der deutschen Poeterey,' is a complete German 'Ars poetica.' This book has great analogies with the 'Illustration de la Langue française' of J. Du Bellay. Opitz was a great admirer of Du Bellay and of all the poets of the French Pleiad. But while Du Bellay wished to force as much Latin as possible into the French language, Opitz aimed to bring back the German language to its original purity; his reform was more rational than the reform of Du Bellay and of Ronsard, and therefore it was more successful. Opitz had his defects, as he was, in his private life, very selfish, cowardly, and worldly, and, in his own poetical attempts, dry, didactic, and sententious. He had no passion; he tries to defend poetry from the utilitarian point of view; in the various forms of poetry he sees chiefly the exterior and material parts. Still, his "reform" was of great use, as he really founded the laws of German prosody; his was the first serious attempt toward the constitution of a purely national literature. He became very popular in his lifetime, and was called "the prince of the German lyre." During the second part of the seventeenth century and the first part of the eighteenth the name of Opitz remained in Germany as the personification of true literary principles. He is the centre round which gravitate Paul Fleming, the best poet of his time, the author of fine sonnets and psalms, the epigrammatic Friedrich von Logau, the satirical Rachel, the religious Simon Dach, etc. Philip Harsdoerfer and his school, called the school of Nuremberg, also attempted the regeneration of German national poetry, but their work had not the same character as that of Opitz: they were more artificial, they applied themselves to what may be called the artifices of poetry, of rhythm and style; their influence was not permanent.

The work of reform found a powerful ally in Leibnitz. His writings on the German language had a very powerful influence. Leibnitz was one of those powerful minds which embrace all the science of an age; his principle was the independent and innate activity of all things, and their universal harmony. A language was, in his eyes, an organism which had its own laws of development. He was a great admirer of France, which in his time was at the head of civilization; but he was also a patriot, and his patriotism embraced the whole of Germany. He admired sincerely the German language, and he wrote two pamphlets, entitled 'Ermahnung an die Teutschen ihren Verstand und Sprache besser zu gesinnen, über samt beigefügtem Vorschlag einer Teutsch-Gesellschaft,' and 'Unvorgreifliche Gedanken betreffend die Ausübung und Verbesserung der teutschen Sprache.' It is only recently that the German work of Leibnitz has been properly valued; his patriotism had been unjustly put in doubt—people only saw in him the philosopher, the diplomat, the cosmopolitan. He was obliged to use constantly the French and Latin languages, but he wrote often in German, and he truly appreciated the Teutonic language. He fully esteemed the efforts of the "language societies," but he thought they had devoted themselves too much to frivolous objects and to poetry. He desired that German should be employed on serious and substantial objects. The decadence of the German language seemed to him to be the outward form of the decadence of the nation. "There is between the language and the character of a people the same relation as between the moon and the sea." Leibnitz desired warmly the establishment of a German academy for the German language. He hoped to see his wish realized in the Academy of Berlin, founded in 1701, thanks to the influence of his pupil, the Queen Sophia-Charlotte. But French was the official language of this Academy, and scientific work soon became its exclusive preoccupation. Even at this hour, the Academy of Berlin is essentially an academy of sciences.

Leibnitz found an ally in the person of Christian Thomasius, the son of his own master, Jacob Thomasius, the apologist of Descartes. Thomasius the son was himself a Cartesian; he separated jurisprudence from theology; he did the same for morals, regarded as an independent science. He delivered his lectures at Leipzig in German, and he founded the first German periodical, under the somewhat compendious title of *Freimüthige, lustige und ernsthafte jedoch vernunft- und gezetzmässige Gedanken,*

oder Monatsgespräche über Alles, fürnehmlich aber neue Bücher. His profession of faith is condensed in a pamphlet called 'Von der Nachahmung der Franzosen,' the programme of the intellectual emancipation of Germany. Thomasius does full justice to the French, to their best qualities; but his admiration is not blind. He may be considered as the founder of the *Popularphilosophie.* He was one of the chief promoters of the use of the German language in every department of social and intellectual life.

Correspondence.

THE *NATION* AND PROHIBITION.

To the Editor of The Nation:

Sir: Some, at least, of the readers of your journal read, in the issue of Jan. 11, your answer to the letter of Mr. Turnbull on prohibition with some surprise and more pleasure. Its positions, if consistently and firmly applied in their own spirit, can hardly fail to result in all the action that the sober advocates of prohibition are asking. Notwithstanding the variety of opinion and practice on the subject of temperance, you believe, if we understand you, in a law that shall repress intemperance, and look to its ultimate extinction in prohibition, and that this end is to be reached as rapidly as law supported by public opinion can be made to perform its function of repression. Prohibitionists might wish to alter somewhat the emphasis of your response, but would hardly desire to modify its fundamental principle. The fact that "a great majority of moralists, legislators, and teachers approve of or do not sharply condemn" the daily use of intoxicating drinks, is a reason neither with you nor with the prohibitionist against the use of law as an adjunct of public opinion, in overcoming a social evil rooted in social sentiment. In this relation of its work to public sentiment, the temperance reform does but follow in the steps of the anti-slavery movement. This one principle contains, we apprehend, for the sound mind, the entire temperance programme. Every other question becomes ultimately a question of facts under it. Honest majorities are entitled to shape the law to the ends of restriction and prohibition, provided they shape it wisely and execute it firmly. Majorities are won on this subject, as on all subjects, by effort; and the power to execute a law lies in the same direction with the ability to secure the law, and is attained by the same means. A "good license law" will no more enact itself or care for itself than a prohibitory law. Indeed, it has less power to care for itself than a prohibitory law, as it keeps good the seeds of mischief, and implies a weaker and more wavering social sentiment.

If we add to this first truth another principle contained in another portion of the same issue of your journal—"no punishment prevents all crime, and the object of punishment is always to diminish the amount of crime; and if it does this, it is efficacious, even if much crime is still committed"—we shall see that the entire question between the *Nation* and the prohibitionist is one of the interpretation of existing facts. The prohibitionist would say that the facts, in Maine for instance, under the above principle, fully justify prohibition. The law is so thoroughly sustained by public sentiment, and so widely enforced, as greatly to reduce intemperance, as powerfully to aid moral means in the formation of public sentiment, and as steadily to prepare the way for still better results. It thus sufficiently, if not fully, sustains its dignity as law, and is kept for the purposes of execution, and not for those of expression.

John Bascom.

University of Wisconsin, Madison,
January 20, 1883.

[It would be difficult for us to conceive of two agitations so dissimilar as to their objective point than the anti-slavery and prohibitionist agitations. The one aimed at the protection of certain individuals from wholesale robbery — *i. e.*, the deprivation of all civil rights at the hands of certain other individuals; the other aims at a compulsory change in the private personal habits of some persons, in order to set a good example to other persons. Your duties to your neighbor, in all outward relations to him, have hitherto been enforced by all systems of legislation. They all compel you to refrain from violence to him, to refrain from slandering or provoking him, and to pay him what you owe him, in money or goods. The anti-slavery agitation sought to give the negro the benefit of the Ten Commandments. The prohibitionist agitation, on the other hand, seeks to impose self-denial on each man in the regulation of his own life in his own house, so that others whom he never saw may not be led into temptation. This may be a good kind of legislation, but it is a new kind, and enormously difficult of enforcement; and it is a good objection to a law, always has been, and always will be in every rational community which does not play at lawmaking, that it cannot be enforced, or can be enforced only with great difficulty, which always means, only in a small number of cases.

The prohibitory movement does not therefore follow in the steps of the anti-slavery movement. It opens up an absolutely new path of its own. It aims at converting a moral duty, and hitherto a self-regarding duty, into a public and legal duty, and tries to get legislation which it admits cannot be enforced, on the plea that if it gets time it will create public sentiment enough to enforce it. The wildest and most fantastic legislation might be justified in the same way. There is in this field no limit to absurdity. The proposition that "the power to execute a law lies in the same direction with the ability to secure the law, and is attained by the same means," we do not fully understand. If it means that you can always execute any law you can get passed, it is notoriously untrue. If it means that you are entitled to have any law passed that you would like to see passed, because your motives are good, it is simple nonsense. As to the experiment in Maine, the prohibitionist who would say that it justified prohibition under any principle we have laid down would, in our estimation, say what was not true, and give a wholly deceptive impression of its working. The law is openly and systematically violated, to our personal knowledge, in a way that no other law on the statute-book is or could be. These misrepresentations and delusions are a very bad feature in the agitation. A considerable number of sumptuary laws, intended to regulate the private lives of citizens, have been passed before now in the New England States and other countries, but public opinion did not grow up to them, and they have been abandoned. They were doubtless in some degree obeyed. We do not say this will be the case with the prohibitory laws, but we do say that the friends of prohibition seriously injure their cause by their exaggerations, perversions, and evasions.—Ed. Nation.]

CO-EDUCATION IN WISCONSIN.

To the Editor of The Nation:

Sir: The remarks in your review of 'Towhead,' as to the degree of importance to be attributed to its picture of life at the "University of the Three Lakes," are perfectly just. I should never have given any thought to what is obviously a novelist's license in placing fictitious characters and occurrences in a real locality, but that I see some Eastern periodicals have taken the fiction for good earnest, and are crying out in alarm at the dangers of co-education. I do not intend to deny that the incidents described in this book *might* possibly have taken place here, where Miss McLean spent a few months, just as they might have taken place at Mt. Holyoke, where she also spent some time, and just as we know for a certainty they do take place in society with young girls who are not attending any school at all. But this is certainly no truthful picture of the relation of the sexes under co-education. I think that any unprejudiced observer would agree, first, that improprieties of conduct are far less common here than in society at large; secondly, that they have been steadily diminishing during the ten years or so that the system has been in operation. The great majority of our students, especially the girls, come here to work, not to flirt; and I have never known a more industrious, better-behaved, and more lady-like set of girls than those in our class-rooms. Those who do not care to study find themselves out of their element very soon, and go somewhere else. Anybody who chooses to consult the first chapter of 'Cape Cod Folks'—a book of genuine humor and descriptive power, which I read with the greatest enjoyment—will find a candid statement of the reasons why the authoress left one school after another, I have no doubt this University among them. I enclose an extract from a review of the book in our students' paper, which shows how it is regarded by the students themselves; and the remark made to me once, in perfectly good faith, by one of our young-lady students, that she understood the girls in Eastern schools often behaved with great impropriety, shows how easy it is to see the bad side of things in other communities and other kinds of institutions.

RELIGIOUS DISCIPLINE AT HARVARD.

To the Editor of The Nation:

Sir: Harvard College has long had the reputation of being the most liberal university in this country. That this reputation is a just one in most respects I do not at all dispute. But as far as her attitude on the subject of religious training is concerned, the Cambridge university is as far from liberal as the most orthodox and strict of her sister colleges of the West. Her position is at once illogical and childish. According to the present arrangement, every student is compelled to go to chapel exercises four mornings in every week. All members of the three lower classes are required to attend some designated church every Sunday in the college year with the exception of six. Seniors, however, are allowed to use their own discretion in

regard to their attendance at church. In chapel the presence or absence of a student is marked by a special monitor. As far as church attendance is concerned, the matter is left entirely to each student's honor; he is required only to sign a paper at the end of the year stating that he has attended the church to which he had been assigned every Sunday in the year, except when specially excused. That this whole system is a ridiculous one is perfectly obvious. It simply offers a premium on dishonesty. Men who would scorn to tell an untruth, and consider their word sacred in all other matters, do not scruple to tell the most barefaced lies when the matter of attendance at church or chapel is in question.

Every other Tuesday morning the names of dozens of students are posted as having been fortunate enough to have their petitions granted. Most of the petitions are requests to be excused for absence from church or chapel on such trivial grounds as sore throat or a cold. As morning prayers do not come until a quarter before nine, it is hard to see how a cold can prevent a man's going to chapel at that time, when he is obliged to go out just as early to get his breakfast, and probably attends a nine-o'clock recitation. With the same reckless disregard for the truth, men will sign a paper at the end of the year stating that they have attended church on every Sunday in the year, when they have not seen the inside of a church for years. Indeed, it is quite a common boast for a man to say when he graduates that he has never been in church since he entered college, four years before. Such regard for the truth does Harvard's system of religious training inculcate in its victims! And yet President Eliot, in his last report, makes the remark that "the service [that at morning prayers is referred to] is impressive, edifying, and interesting, and he who can attend it for years without sometimes being touched by it and moved to better living, must be a very insensible and earth-bound person." President Eliot forgets that when a man is compelled to listen to anything, the subject is apt to become very distasteful, however interesting it may be under other circumstances. As a matter of fact, this service, "impressive, edifying, and interesting" as it is, inspires most students with a vindictive and life-long hatred of all the forms and associations connected with it. Many a student has vowed that after he left college he would never enter a church again.

The statistics in regard to the various religious beliefs entertained by the students that were taken a year or so ago were most imperfect and unreliable, as they were taken with the express intention of deceiving. At that time, the members of one religious sect in college desired to be allowed to build a chapel in the grounds. To influence the authorities, a zealous member of the society, through one of the papers—an organ of his—attempted to show that the members of that sect were in the majority. To do this, the returns were falsified to a large extent. Men who were known to belong to other sects were often not approached, but put down as "not visited." Many men would put themselves down as belonging to that particular church to humor the canvasser. Known sceptics were not visited at all. In one class in college in which there were, to my certain knowledge and among my acquaintance, at least a dozen "agnostics," but three agnostics were given. None of my acquaintance saw the canvasser at all. The list was drawn up for a purpose, and the designers did not scruple at any means to bring about the desired end. As a result, the public have the opinion that Harvard is more religious than she really is. The fact is, that there are many men here with no avowed religion who are driven into radical scepticism by the odious system of religious training in vogue. Forced religious training will always make men antagonistic to religious orthodoxy. They know that the Faculty and Corporation are fully aware of the number of lies that are told, and the apparent unconcern with which these lies are received makes students suspicious of men who can countenance a system that allows such evils.

It is not hard to show how illogical the system is. If seniors are allowed to exercise their own judgment in regard to church attendance, why should they not have the same privilege in the case of morning prayers? And if seniors are to decide for themselves on the plea of more advanced age, why should not the parents of the under-class men decide for them? The bad logic of the regulations is as plain as a pikestaff, and no amount of preaching and praying will atone for the evil the system does.

This is the system that caused a college paper last year to remind Harvard graduates about to vote for overseers that these overseers were the men who, in spite of the expressed desire of the Faculty, kept this system fastened upon us, and to call upon the graduates to depose all opponents of voluntary prayers. So, in the same way, I, in the name of the students of Harvard University, call upon every alumnus to oppose the election of any man to be an overseer in that University who is not in favor of voluntary prayers and common sense. A STUDENT.

CAMBRIDGE, MASS., Jan. 16, 1883.

THE INTERESTS OF AMERICAN ART.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to be so rude as to suggest, through your columns, that an "American Artist," who writes in the *Nation* for December 14 a very lame defence of the protective policy, so far as art goes, is thinking more of his pocket (and mistakenly, at that) than of the good of art and its cultivation in America? He don't see the subject fairly.

The patronage of art is peculiar in its relation to political economy. Articles of an already created necessity will come in or be made at home, and the question of a protection to the home manufacture is one which can be supported by plausible arguments, although even here I hope it will be seen before many years that the protective policy is one of making water run up hill—it always costs more in the end to the nation at large than it comes to, and should never be resorted to except when it relates to articles whose home production is necessary to our independence and safety. But a protective tariff on works of art is a double fallacy. It is only the seeing of pictures which induces purchasing them, and therefore the more good pictures people see the more they are induced to purchase. The importation of pictures is in the main of two classes: good pictures by European masters, and cheap pictures which come in as furniture. The former do not compete with the pictures of our native artists, as they are high-priced and bought for their reputation or surpassing excellence *in their kind* by people who can afford to buy everything they fancy strongly in this way. Their introduction should be encouraged in every possible way, firstly, for their refining influence on public taste; secondly, as affording a school of art at home which gives a better training to our own painters; and thirdly, because the effect of a development of taste leads to the more bountiful patronage of the home art so improved. Every true artist will pray for the introduction of as much good art as possible, and without any hindrance of the tariff; the artists (?) who live by painting pictures which a cultivation of the public taste would render unsalable are not entitled to consideration, and ought to be encouraged to adopt some other profession or trade.

Now, as to the bad pictures—*i. e.*, the cheap, trashy things which are turned out at small prices by poorly-paid hack painters—they also interfere with no good art, as no one buys them who knows what art is, but people who want something cheap to decorate their walls with; and if they don't take these they take chromos of the same character. They are not obliged to have pictures as they are to have books, and making these poor canvases as dear as the work of our own painters of repute would only prevent them buying anything, while, on the contrary, beginning with these as cheap objects, their ambition rises with cultivation, and they will presently have something better in their best room. But as a rule, people buy pictures of favorite artists if they care for art, and cheapness is no recommendation any more than it would be for diamonds.

The "*art interests* of the whole people," of which an "American Artist" so patriotically talks, demand the best art to be diffused as widely as possible, and that art shall not be raised in its cost to the people without regard to its true value by any artificial restriction. They demand the art education of the whole people as well as of the particular artist who is to do the work for the people, we will hope, by and by. Our legislation makes a partial and absurd provision for the supposed interest of artists, as against those of art, by exempting from duty the works of American artists residing abroad; but on what grounds should a painter or sculptor especially be exempted from paying taxes on his work because he lives and labors abroad, where he can exist and work more cheaply than at home, and pay no taxes of any kind, any more than an American shipbuilder who builds his ships in a foreign dock-yard? The sculptor abroad employs foreign labor to as great an extent as the shipbuilder—all the practical work is done by men whose labor is as taxable as that of the workmen in electro-plated ware or shipbuilding. Why is this, but to aid in the education of our artists—not certainly to enable them to live abroad (which for native art is the worst of all policies); and if to aid that education, why not logically carry it further and let pictures come in to educate us? The protection of books does come logically into our illogical system of political economy, because the capital and labor involved in the production of books are pure trade interests, and, combined with our systematic piracy of foreign brains, the tariff on books probably does not make books dearer or discourage their production, for the books which without the tariff would be printed abroad are now printed at home, but the pictures will not be painted at home even if our tariff should be prohibitory. Men who paint great pictures at Paris would not be induced to come to New York to paint them by the imposition of a duty, which is the case, *mutatis mutandis*, with books; and when we have a native Bastien-Lepage painting in New York he will command as high prices as he who now paints in Paris. *Cæteris paribus*, a native art will always be preferred by all people who love art, because the motive will have a stronger appeal than a foreign motive would. The law of supply and demand has no bearing, for the rule is reversed—the supply creates the demand, and the demand increases with the supply. Within certain limits, not yet reached with us, the production of good pictures as a general thing stimulates purchase.

Our protective system is a gross absurdity from beginning to end, but the absurdity bursts into blossom in the art department. We tax ancient art, which we need for study, so heavily that it amounts to prohibition, though protection is out

of the question, and we don't need the trivial revenue we get from it. We have no old art to protect, and the tax on it only tends to keep it out of the country, while our art education calls for it with an increasing persistency. We encourage our artists to go abroad, again, when we ought, from æsthetic as well as economical reasons, to make it for their interest to stay at home: living abroad cheaply, they pay no taxes, and get assistant labor cheaply; living at home, they pay taxes and employ dear labor if they employ any. Therefore we take off the tax from the former category and thereby handicap the latter. I belong to the former, but it does not prevent my seeing the absurdity of the system. If I am any judge of the merits of the question, what we want in the interests of art and the artists is exemption of all purely artistic work from any duty whatever, and equally so of all applied art or articles of ornament and household decoration produced more than a century ago—*i. e.*, bric-à-brac, furniture, etc., etc., in which utility is the secondary consideration.—Yours truly,

ANOTHER AMERICAN ARTIST.

FLORENCE, December 29, 1882.

SOUTHERN HOMICIDE.

TO THE EDITOR OF THE NATION:

SIR: To offset that "Old Subscriber" in Richmond whom you have so recently lost, I enclose $3, for which you will please send the *Nation* for '83 to a new subscriber, likewise in Richmond. I hope he may make a better use of it than the one you have lost, and may concern himself far more about seeking a remedy for this plague-spot on the civilization of the South than about your motives in probing it.

ANOTHER OLD SUBSCRIBER.

[The following letter, which appeared in the Richmond *State* of January 18, is an important contribution to the discussion so long carried on in these columns.—ED. NATION.]

"*To the Editor of The State:*

"In your editorial of December 28, headed 'Why We Are Slandered?' you took the New York *Nation* most severely to task for its malice toward the South, as exhibited in its recent articles on Southern homicide. Your concluding paragraph was as follows:

"'So plausible and so cunningly contrived has been the *Post-Nation's* trickery, that it has recently published letters of commendation from two individuals in Virginia—one of them writing from Richmond—who were either fools or knaves, being either too silly to detect the injury that paper is doing our people, or too treacherous to refrain from endorsing slanders against their own friends and neighbors. Their affected "liberalism," however, is made naught by the exposure of the *Post-Nation's* over-zeal in its foul work of abuse, and these two writers from Virginia, if they be real and known, should not fail to suffer the penalty of their treachery, and be forced, as the slanderers of their own people, to remain forever renegades from society, unworthy of the trust of honest men.'

"One of these writers, Mr. Editor, is as 'real' as people usually are, is 'known' by some few people in Richmond and elsewhere, and, without any 'affectation' in the matter, he sees that it would be plainly illiberal to take umbrage at the terms used, seeing that editors of daily papers have to write in great haste, often, too, in the heat of political controversy, and that in this case the words were directed against some anonymous writer, the spirit of whose article you misunderstood. Everything personal being thus buried out of sight, I gladly avail myself of your courteous offer to let me defend in the columns of your paper the article in the *Nation* of December 21, over the signature of 'X. Q. Z.,' an article prompted, I assure you, by a devoted love for our common country. I do it the more cheerfully, as I fully recognize the noble work the *State* has done in striving to uphold the cause of honesty in opposition to the spirit of repudiation that has been so prevalent in our land.

"The charges of the *Nation* may be briefly stated thus:

"1st. That the South is characterized by a barbarous homicidal spirit pervading it to an extent unknown in any other civilized community.

"2d. That the homicides by which the South is thus peculiarly disgraced take place among its better class of citizens, and occur in settlement of social or business disputes. With the murders committed by ruffians it has nothing to do.

"3d. That the Southern sense of the sacredness of human life is so greatly weakened that these homicides are rarely punished. This last point is perhaps the one on which it lays the greatest stress. It has offered its columns to any Southerner who will send reports of the hanging of the men guilty of these 'social and business homicides,' but not one has yet been published.

"In an editorial some time ago the *Nation* took the ground that this lawless spirit has much to do with retarding the influx of immigration and capital into the South.

"I leave you, Mr. Editor, to tell your readers whether I have fairly stated the *Nation's* position.

"The rebukes of this journal have sometimes been so stingingly severe as to make any true friend of the South writhe with mortification and pain, and feel his blood boil. Many Southerners deny the charges altogether, and attribute them to sheer malice on the part of the *Nation*. But of one thing I have become convinced, after much discussion and careful attention to the matter, that, whatever may be the motive that actuates this Northern archer, his terrible shafts inflict such keen pain because they are barbed with too much truth, and I am earnestly anxious to see the South I love roused to a right view of the matter. I therefore wrote a brief article for the *Nation*, taking the ground that the wise course for its Southern readers was to give their main attention to determining whether the charge is in any fair degree true of us; and if so—'and many devoted Southerners,' I said, 'lament that it is only too true'—to do all in their power to correct the evil.

"I base my patriotism, Mr. Editor, upon this principle: 'Righteousness exalteth a nation, but sin is a reproach to any people.' The fact is manifest that we in the South are too greatly chargeable with the sin of which the *Nation* accuses us. I know men who fought for the South during the war, and no doubt are as true patriots now as then, who say that the charge in the main is true. I know three Virginia editors who in private will say the same thing.

"The Louisville *Courier-Journal* (as quoted by the *Nation* of January 11) says of Polk's defalcation: 'If he had killed a man in heat and passion, or if he had coldly assassinated him, the effect would have been different, and his condemnation much less certain. In the Southern States we can find it in our hearts to forgive a murderer, but the crime of theft we punish more rigidly when we catch the thief.' The Charleston (S. C.) *News and Courier*, also quoted by the *Nation*, admits the frequency of these brutal street-fights in the South, attributing them to a general public sentiment that lacks the 'finer courage' which would resort to the law for the redress of private wrongs. In 1880 a South Carolina judge, in his charge to the Grand Jury respecting the carrying of concealed weapons, said in substance that South Carolina was red with the blood of its sons shed by the hands of their brothers.

"As to the hanging of these murderers, who of us ever hears of it? Isn't it almost an impossible thing to get a white man hung in the South? A few days ago I read in a Lynchburg paper that in the first eight weeks of his Governorship Alexander H. Stephens pardoned forty-nine convicts out of the penitentiary, twelve of them being murderers!

"As to the animus of the *Nation*, I have this to say, that while I myself prefer to believe it to be honest in disclaiming any malice toward us, yet in this state of affairs we cannot afford to attend to that. A man returning home at night and told that his house is on fire, does not bother himself with the animus of his informant. In such a crisis he would hardly stop to notice this; and yet, if he were thus enabled to rescue those dearest to him, he would hold himself, in a certain measure, indebted to his informant, even if the latter showed great glee in giving the tidings.

"Now, Mr. Editor, what shall those of us do who desire to see this blot removed from the reputation of our beloved South? I know of a Southern journal that took up the matter some years ago, but now is content to let it rest, because it met so much criticism and misrepresentation at the hands of Southerners. If we try to do a little good by addressing the *Nation's* Southern readers, our motives are misunderstood and violently assailed. Will you not, Mr. Editor, throw your influence on the side of right and of law, and induce other Southern journals to do the same? Perhaps the *Nation* will then retire from the discussion, and the *State* will have the proud distinction of again battling in a righteous cause, in spite of the violent prejudice it will encounter. But if our own papers will not do this, then I say—and I say it boldly, and because I love the South—I bid the *Nation* Godspeed in its work of stirring up the Southern conscience, and trust it will calmly hold on its way till this crying evil is abated.

"I thank you, Mr. Editor, for your kindness in allowing me so much of your valuable space to maintain views with which you, perhaps, do not altogether sympathize.—Yours, respectfully,

"ADDISON HOGE.

"HAMPDEN-SIDNEY COLLEGE, PRINCE EDWARD COUNTY, VA."

"P. S.—Since I wrote the above I have received the *Dispatch* of Friday, with an account of a typical Southern murder, such as the *Nation* charges against us. It was a street murder, one count in the *Nation's* indictment; murderer and victim were both 'prominent men,' second count; it was a 'business homicide,' as the *Nation* calls it, the dispute being about a sum of money owed by one to the other, third count; the 'concealed weapon' was on hand, fourth count; and, finally, the tragedy is 'deeply deplored,' fifth count. Now, remember, indignant Southerners, that the *Nation* offers its columns to any of you who will report a case where one of these 'terrible tragedies' is so 'deeply deplored' as to result in the hanging of the manslayer. The files of the *State* and *Dispatch* for the last few months could, no doubt, show a dozen or more similar murders, but I have never yet read of a hanging, though I do read of acquittals and pardons. Now let us watch and see whether the authorities of Monroe, La., will visit any fitting punishment on McClain.

"I hear people say, 'Why don't the *Nation* correct the sins of the North? It could find plenty of work to do.' I reply: Do our own papers render this needless by their own endeavors to correct such a gigantic evil? In a paper which I have taken for years I remember several rather recent (I think) editorials taking the New York dailies to task for their immense conceit in supposing that New York is the whole country. But, as far as I recollect, I have never yet seen it lift a finger toward educating its thousands of readers in the only right view of this matter—certainly not in the last few months since the *Nation* took the matter up. A. H."

THE DATING OF BOOKS.

TO THE EDITOR OF THE NATION:

SIR: Another practice which cannot meet with too severe condemnation seems to be gaining ground among publishers. I allude to the habit of placing *no date* on published books. Perhaps this is less reprehensible, from a strict moral standpoint, than giving a false date, but it is certainly very annoying.

For example, the latest edition of Perry's 'Elements of Political Economy' was published by Charles Scribner's Sons in 1879 or 1880, but no date whatever appears on the title-page. The edition is merely called a "new" edition, and the number of the edition even omitted, so that readers are at a loss to tell how new it really is.

TRUE DATE.

MILWAUKEE, January 7, 1883.

Notes.

HOUGHTON, MIFFLIN & CO. have brought out Dr. Holmes's 'The Poet at the Breakfast Table,' in the style of its elegant companion volume, 'The Autocrat,' issued just before Christmas. The old Holmes mansion in Cambridge is represented in the frontispiece. With 'Twice-Told Tales' and 'Mosses from an Old Manse,' the same publishers begin a Riverside Edition of Hawthorne's works in twelve volumes, crown octavo, including in an appendix 'The Ancestral Footstep.' Each volume is to contain a brief introduction by Mr. George P. Lathrop, and an original etching, and by midsummer the edition will be complete. The two before us are quiet specimens of tasteful bookmaking, and Mr. La-

throp's prefatory notes are correspondingly direct and business-like. They give the necessary information concerning the circumstances out of which each composition grew. Two references to the "eleventh volume" of this edition, while no numbering appears upon either cover or title-page of the initial reprints, are explained by the easily overlooked bastard title.

A commendable anonymous translation of such parts of Plato as reveal the personality of his master was published some five years ago by Charles Scribner's Sons, under the title 'Socrates.' This has now been reissued in a cheaper, pamphlet form.

The Maine Historical Society have reprinted the newspaper reports, which had become unprocurable, of their proceedings in celebration of Longfellow's seventy-fifth birthday, February 27, 1882. The result is a handsome volume, containing a steel portrait of the poet, and views of the Stephenson house, in which he was born, and of the Longfellow house proper (Portland: Hoyt, Fogg & Donham).

A second edition of Sachs's 'Text-book of Botany, Morphological and Physiological,' could not be made after the lapse of seven years without some modifications. The Clarendon Press intrusted these to Mr. Sydney H. Vines, of Christ's College, Cambridge, and they consist in a rewriting of the first thirty-two pages, in sundry corrections and additions in the text and notes, and in an appendix. This beautiful and authoritative work is therefore prepared for at least another half decade of usefulness (New York: Macmillan & Co.).

We have received two additional volumes of the Clarendon Press Series: (1) 'Æschylus: Agamemnon,' by A. Sidgwick, known to Americans as the author of two works on Greek Prose Composition, adapted for use in this country by Professor White, of Harvard, and as one of those minutely accurate scholars who regard a false quantity as something analogous to the unpardonable sin, and an ingenious conjectural emendation of the text of a Greek play as a masterpiece of high art. He has certainly given us a very scholarly and useful edition of the 'Agamemnon.' The critical apparatus accompanying the text is unusually full and carefully selected. Of the convenience, the typographical neatness, and general excellence of these editions of the classics, we have before repeatedly spoken. (2) 'Uniplanar Kinematics of Solids and Fluids, with Applications to the Distribution and Flow of Electricity,' by George M. Minchin, Professor of Applied Mathematics in the Royal Indian Engineering College, is a purely mathematical treatise on the laws of motion where the motion is confined to one plane, or planes parallel to one plane. It takes us at once into the domain of the differential and integral calculus, which, in the end, is really the shortest and only scientific and satisfactory manner of treating the subject. To get the full benefit of the work, it is advisable to have at hand the 'Treatise on Statics' by the same author, one of the volumes of the same series.

A second edition of Mr. Henry C. Lea's 'Studies in Church History' is now passing through the press.

Roberts Brothers, Boston, have reprinted the 'Autobiography of Mrs. Fletcher,' which we noticed upon its first appearance. This confirms the correctness of our opinion that the book would have a place of its own for the sake of its testimony to the general spirit of the times, in spite of its lack of novel or specially interesting incidents.

The Rev. J. B. Harrison's letters on "The Condition of Niagara Falls," contributed to the New York *Evening Post* and *Tribune* and Boston *Advertiser*, have been gathered into a pamphlet, and may be had of the writer (whose address is Franklin Falls, New Hampshire) by those who are desirous of joining the good work of redeeming a continental pleasure-ground from disfigurement and desecration. Petitions accompany the pamphlet.

William S. Gottsberger has in press and will shortly issue a translation of Dr. Georg Ebers's new romance, 'Ein Wort.'

'A Life of Adoniram Judson,' the famous pioneer missionary to Burmah, by his son, the Rev. Edward Judson, is in the press of A. D. F. Randolph & Co.

John W. Lovell Co. have arranged with the Rev. R. Heber Newton to publish the sermons, now in course of delivery, on "The Right and Wrong Uses of the Bible," in one volume.

A limited number of copies of the late Richard D. Webb's 'Life of John Brown'—the very last of the Dublin edition (not made from plates)—has been sent to this country by Mr. Alfred Webb, to be sold for the benefit of Mrs. Brown. They can be procured at the office of the *Woman's Journal* in Boston, the price being $2. This is the standard biography of John Brown, and the photographic portrait which accompanies it is also the best that has been published. The book, from its scarcity, already commands an advanced price.

The '*Tribune* Almanac' for 1883, edited by Mr. Edward McPherson, is now obtainable. Every editor and most politicians know its utility; but any citizen will find it valuable for reference. Besides electoral statistics, it gives abstracts of recent acts of Congress and of party platforms; constitutional amendments; tables of trade, banking, revenue, public debt, illiteracy; lists of public and State officers, etc., etc.

We can recommend for brevity, intelligibility, and general soundness Dr. B. C. Faust's 'Laws of Health,' which has been translated and prepared for school use by the publisher (Brooklyn, N. Y.: Hermann Kopp & Co.). Some dogmatism will be detected, as in teaching that "the head should rest on a pillow *a hand's breadth* in height"; and the instruction in the appendix about diluting and otherwise correcting cow's milk for infancy we believe to be antiquated.

Miss Hewins continues, in the January *Bulletin* of the Hartford Library Association, her good offices to the young by printing a full list of works on English and American History for children, thus anticipating a portion of her forthcoming 'Books for the Young,' which will be published by F. Leypoldt.

Some belated but still available "Reading Notes on Herbert Spencer and his works" appear in the January *Bulletin* of the Philadelphia Mercantile Library, prepared by Mr. John Edmands.

The Bridgeport (Conn.) Public Library has just had the good fortune to be made heir to a fine building, valued at $90,000, admirably suited to its needs. The legacy was contained in the will of Mrs. Pettengill, widow of a former editor of the Bridgeport *Standard*.

The seventeenth annual report of the Commissioners on Inland Fisheries (Boston, 1883) indicates by its very title the lead which Massachusetts has taken in pisciculture. It appears that four years were lost by an experiment with California salmon, which were found not to thrive on the Atlantic coast. The distribution of German carp has not produced such results as might have been expected, owing to the negligence of the recipients in protecting them against other fish, etc.

There has recently been published in England a little book which all lovers of books would like to read, but which no lover of books ought to read if he has any respect for his eyes. 'The Book-Lover's Enchiridion: Thoughts on the Solace and Companionship of Books, Selected and Chronologically Arranged by Philobiblos' (New York: Scribner & Welford) is its title, and its form is a tiny 32mo or 48mo, printed in diamond type. To read its 237 pages is almost impossible without the use of a strong glass and of stronger language than is becoming in a book-lover. The matter of the book is worthy of a better setting; it is a collection—not altogether exhaustive or highly critical—of the wise things said by sages of all times and climes in praise of books, beginning with Solomon and ending with the quotation of Longfellow's sonnet on his books. The compiler is of a more catholic taste and of a wider reading than most of his fellow-Englishmen, as is proved by the abundant quotation from American writers, such as Irving, Emerson, Alcott, Holmes, and Beecher. But the compiler does not seem to have met with the books on reading prepared by Bishop Potter, President Porter, and Mr. F. B. Perkins. The little book is vilely bound in a white linen, covered with some palpable white color in fraudulent imitation of the purity of vellum.

The thirty-first volume of *L'Art* (J. W. Bouton) is rather overweighted with the long series of inedited designs by Jean Cousin for Imbert d'Anlezy's 'Liber Fortunæ.' No other feature is so marked. The old masters treated are Rubens (his works in the Louvre), Lucas van Leyden, Luca della Robbia, and Jacob Jordaens—all more or less fully illustrated. The English school are described with numerous portraits and specimens—Madox Brown, Burne Jones, Millais, Leighton, T. Faed, F. Holl, Kate Greenaway, etc. The Salon of 1882 and the Union Centrale des Arts Décoratifs are still further reviewed; and several chapters are devoted to the Museum of Cologne. There are several interesting examples of the Chaldean antiquities in the Louvre, and of the Bulak Museum. M. Plon vindicates Benvenuto Cellini for his importunities in the matter of pay for his "Perseus." Champfleury returns to a subject he had already touched with a light hand in *Le Livre*—the types and manner of the designers of the Romantic vignettes. Most interesting is a newly-discovered head of Henri IV. at twenty, among the portraits in the National Library. As usual, the volume is lavishly provided with full-page etchings. A human as well as an artistic interest attaches to the domestic scene entitled "Camille Desmoulins."

It is pleasant to see in a French work such faultless spelling of English proper names as may be seen in Prof. W. F. Allen's review of American historical productions in the September-October number of the *Revue Historique* (Paris: Germer Baillière et Cie.)

Apropos of the recent troubles about Parliamentary oaths in Italy, Prof. R. Bonghi has a learned article in the *Nuova Antologia* for December 15. He reviews the cases that have arisen under the English Constitution, including Mr. Bradlaugh's, and in an appendix collects the oaths of various constitutional countries. Though the United States is represented, our "iron-clad oath" is not recorded.

Most annual necrologies will bear correction, and our last was no exception to the rule. It was not Luigi Palmieri, of the Vesuvius Station, who died, but Marino Palmieri, Professor of Physics at Naples.

—The Librarian of the Cincinnati Public Library writes us:

"There are two misstatements of fact in the paragraph in this week's *Nation* upon this Library which you may or not think of sufficient importance to correct. First, the Library has not *abandoned* its plan of publishing class-lists; it has only temporarily *suspended* their issue. Second, the catalogue now being printed is not a dictionary catalogue like the Poole catalogue of 1871. It is called a finding-list, and is more

nearly like that of the Chicago Public Library, issued by Mr. Poole. That is to say, it is a classified list of books, with only the authors, short titles, and numbers given in most cases. The arrangement is by subjects, and about 300 pages are now in print."

—A correspondent writes us, with reference to a recent communication:

"The following is the only example of the use of the word 'lie' with the meaning referred to by 'H. W. H.' that I remember in my reading. In the 'Life of Bishop Wilberforce' there is a letter from the present Bishop of Ely (Dr. Woodford) describing Bishop Wilberforce's examinations for Ordination in which this sentence occurs: 'Hence, in sketching to the candidates, on the first morning, what he called the *lie* "of the day," he always put foremost the hours of prayer and medication' (vol. i., p. 332). The italics of the word 'lie' and the remembrance of the particular phrase show that such a use of the word is uncommon."

—Apropos of the letters we have recently published on archæological exploration in Greece, Mr. William Hyde Appleton writes us from Swarthmore, Pa.:

"But be it observed, with regard to Olympia, that it is not yet two years since the Germans left the place. The antiquities are for the most part housed and on exhibition. I visited Olympia last May, and feel amply rewarded for some little inconvenience suffered on the journey. I received from Mr. Demetriades, the Curator of the museums, a most cordial reception, though a stranger to him and unprovided with a single letter of introduction. During the two or three days of my stay he gave me every attention, and furnished me with every facility in his power for the prosecution of my studies. As regards the deficiencies at Olympia and elsewhere, I agree with your correspondent that 'it is less the will to remedy this state of things that is wanting to the Society than the resources, where there is so much to do.' These resources, too, may at any moment be augmented, for a long chapter might be written upon the benefactions of wealthy Greeks to their country. Indeed, I was told at Olympia that money either had already been given, or was about to be given, by a private individual for the very object in question—the erection at that place of a suitable museum building."

—The *Atlantic* for February contains an article on "Stage Rosalinds," by Mr. Richard Grant White, which those who are interested in the Shaksperian stage, including Mrs. Langtry and her critics, will find well worth reading. *Rosalind* is a part which every well-advertised female star takes as a matter of course, just as every male star takes *Hamlet*. There is, however, a vast deal more latitude allowed actors in the way of putting *Hamlet* on the stage than actresses appear to have in *Rosalind*. Indeed, every new actor is at liberty to get up, as far as he has ingenuity for such a task, a *Hamlet* of his own. Booth's *Hamlet* differs widely from McCullough's, and Fechter's was different from both. A great part of the entertainment in the case of any new actor who takes the part consists, at least for old play-goers, in the fact that the performance is sure to be full of surprises to them, both as to conception of the character, the text, and finally the make-up and dress. In "As You Like It," however, notwithstanding its great popularity, all actresses still perform and dress the part of *Rosalind* very much alike, and Mr. White declares that they dress it all wrong. To put his criticism in a very few words, *Rosalind* is a woman passing herself off as a young man, and for a considerable period of time, and under a variety of circumstances, completely deceiving a man madly in love with her as to her identity and sex. The stage *Rosalind*, as we know her, however, dresses so that the most casual observer sees at once that she is a woman masquerading in male attire. She ought, according to Mr. White, to be dressed as men were in Shakspere's time—*i. e.*, in a doublet and trunk hose; the doublet being a short jacket, and the hose being stuffed out, as we see in pictures of the time, so as to entirely destroy the outline of the figure below the waist. With high boots, a coarse russet cloak, and a black felt hat with a feather, *Rosalind* could easily make up so as to deceive *Orlando*. According to the text, she should also "smirch" her face with "a kind of umber," and, at any rate, she ought to use some preparation for making it masculine and unrecognizable to *Orlando*. But Mr. White perceives clearly enough why it is that his suggestions are not likely to find much favor on the stage. *Rosalind* has become a popular part for pretty actresses, in great measure because it gives them a chance of exhibiting their personal attractions of face and figure as few other parts do. But if they had to disguise both during the greater part of the play, what would there be left? Nothing but an opportunity for good acting of a beautiful play, which, insinuates our critic, is not what our leading actresses care about, or the public cares to have them care about. Prof. G. L. Woodberry has an article on Landor, and he gives a very intelligible explanation of some of the reasons why he is a favorite with critics, and anything but a favorite with the public at large. The second part of Longfellow's "Michael Angelo" and another instalment of "The Ancestral Footstep" lend considerable literary interest to the February *Atlantic*.

—The "Midwinter" *Century* has an article on the "Evils of our Land Policy," by Mr. Edward T. Peters, who endeavors to show that the railroad land-grant system, supplemented by the "bonanza" farm system, is stimulating an unhealthy agricultural development in the far West, and in some of his facts he is corroborated by Mr. E. V. Smalley in a paper on "Features of the New Northwest." Mr. Smalley's list of "queer names" in Northwestern geography, including such designations as Needy, Glad Tidings, Sublimity, Hardscrabble, Humbug, Louse Creek, Whiskytown, Jump-off-Joe Creek, shows that the reaction against the classical system which gave us in this State Rome, Utica, Syracuse, Troy, and so on, has gone to the extreme of naturalism, and, indeed, from a case like that of Eltopia (said to be a euphemism for an earlier "Hell-to-Pay") a tendency toward a reaction of a certain sort may be inferred. In defence of the land monopolist or "bonanza" farmer, of whom both Mr. Peters and Mr. Smalley fall foul, it may be said that, for the rapid settlement of the public lands, the concentration of large tracts in single hands was a necessity; that if it had been prevented, the process must have been very slow, and to go back now is out of the question; and also that the large holdings will inevitably be broken up into smaller farms as fast as cultivation on a smaller scale becomes profitable. The whole development of the Northwest, as shown by Mr. Smalley himself, reverses what we are accustomed to regard as the order of nature. Roads are made not to provide for the necessities of an existing population, but before there is any population to use them; towns do not grow up from a previous development of the country at large, but are created in advance of the rural population or the appearance of a diversified industry. In the same way the "bonanza" farmer appears first, and opens the way for the small capitalist, the honest yeoman, who in theory ought to precede him, if not prevent his appearance. Miss Emma Lazurus writes on the "Jewish Problem," and strongly advocates the return of the Jews to Palestine, or some national reëstablishment of that sort. The Palestine scheme, however, seems to be entirely abandoned for the present, and we know of no practical plan that has taken its place. Anything which would save the Jews from such persecution as they are still subjected to in many parts of the world, would be gladly welcomed by most Christians; but the idea of a people of the Jews' very cosmopolitan habits and pursuits being gathered together in any one place, and settling there to build up a country, is a difficult one to conceive of as actually practicable. Mr. Cushing's interesting "Adventures in Zuñi" are continued, with some curious illustrations of Zuñi religious performances, and Mr. Howells begins a new novel, called "A Woman's Reason," the opening chapters of which are very pleasant reading. The illustrated articles are all well worth looking at, and the poetry is better than the average. "A Reception by President Lincoln," by C. Van Santvoord, is one of those pictures of the *curia Presidentis* in the time of the Rebellion which now have a real historical value. Mr. Stedman, by the way, has a poem called "The Constant Heart," in which he defies spelling reform.

—In *Harper's*, Mr. Herbert Tuttle has an article on "German Political Leaders." Being illustrated, it shows us what sort of faces many politicians have with whose names we enjoy a cable acquaintance, besides giving some account of their careers and opinions. To the average Anglo-Saxon reader the article will be an awful revelation of his complete ignorance of German politics, and suggest what a godsend Bismarck has been in making him feel for the time as if he were really quite at home in them. Mr. John Fiske writes instructively about "Maryland and the far South in the Colonial Period," and Mr. Robinson, the author of 'Under the Sun,' which was reviewed in these columns not long ago, contributes an article on "Our Birds and Poets," in which he maintains that American poetry, in its treatment of birds, "is characterized by a tenderness that in the same degree is quite foreign to the poets of the Old World." This he attributes to several causes—among others unfamiliarity with "classical fancies" and prejudices on the subject of birds, and a national intolerance of prejudice of all kinds. He seems to assume it as proved that the world before the rise of American literature was "down" on birds. While we sympathize with them as they ought to be sympathized with, we should doubt very much whether the influences which Mr. Robinson mentions as having produced a tenderness for birds in this country have not exerted fully as much force in England. If, however, our poets are more sympathetic with birds than their congeners on the other side of the water, it may be perhaps owing to the same general cause that has made our artists take so kindly to landscape painting, and this is probably very difficult to ascertain. That the American imagination in general does turn with a delicate sympathy to nature in all its aspects is, we fancy, true; certainly many pages from Emerson, Hawthorne, Whittier, Lowell, Bryant, and Longfellow might be produced to prove it. A general tendency of this sort would make a sympathetic treatment of birds as one manifestation of it seem antecedently probable. The second part of "Artist Strolls in Holland," by Mr. Boughton, and "The Local Associations of Whittier's Poems," by Mr. George M. White, are illustrated articles of some permanent value, and the latter contains some entertaining specimens of Whittier's conversation. There is not apt to be much critical discussion in *Harper's*, outside of the "Easy Chair," in which post of observation Mr. Curtis this month draws a lesson from Anthony Trollope's career. It is one which the literary Bohemian never likes to hear, for it tells him that Bohemianism is not only, as it always has been, unprofitable and disreputable, but that it is "played out"; that literature has

become a regular profession in which, to succeed, you must work steadily and with regularity, just as you would if you were a physician or a lawyer. We may suggest, in addition to what he says on this subject, that as long as most literary men were Bohemians, and lived from hand to mouth, success was determined purely by talent or genius; but now that writers are able by steady occupation to earn a respectable livelihood, the man of genius or talent may provide himself for his struggle with his rivals with a little capital; and a man of middling talent, with capital and the sense of confidence that capital gives, will often beat a seedy Bohemian of genius hard pressed by creditors and other natural enemies. This at least is a view that Darwinians may take of the subject.

—The annual report of President Eliot of Harvard for the year 1881–82 does not lack the customary interest which these documents possess for other similar institutions and for the public at large. Parents everywhere are concerned to know that the graduates of other colleges are coming in increasing numbers to Harvard to obtain the degree of A.B., and are welcomed and considerately treated; that special students who have had no regular college training are likewise on the increase, owing to the facilities extended to them and the rank and honors allowed them according to their merit, and that the President is anxious to have scholarships provided for them; and that recent concessions enable students to shorten the college term one year by more thorough previous preparation. So every college faculty must feel the force of Harvard's example in assuming "for the first time a direct responsibility for the character and extent" of athletic exercises, prohibiting games with professional clubs, allowing no student to engage in an athletic contest except upon a certificate of the director of the gymnasium, or to belong to a boat's crew unless he knows how to swim, etc. Nor will the experiment of morning prayers *after* breakfast be overlooked, especially since the President vouches for the present service as being "impressive, edifying, and interesting," whereas the superseded service in the early morning before breakfast was notoriously the reverse. Then, again, the Divinity School is to turn away all candidates not bachelors of arts or capable of passing a satisfactory examination in the Greek and Latin classics and the Greek of the Gospels; and its professional equipment and instruction tend toward enabling young men to "study theology as they do metaphysics, political economy, or zoölogy," without first binding themselves to any theory or creed. The Corporation and Board of Overseers have shown themselves during the year less liberal than the College Faculty—the one having rejected a proposal to make attendance at prayers voluntary, the other having sided with the Medical Faculty in postponing, if not disapproving, an attempt to secure medical instruction for women by means of a fund raised outside the University. As usual, every department would be thankful for larger endowments; but the Bussey Institution and the Dental School are almost pathetic instances of neglect, and are maintained solely by faith and self-abnegation on the part of the instructors.

—Some months ago Dr. George J. Romanes, F.R.S., published an article on "The Scientific Evidences of Organic Evolution" in the *Fortnightly Review*, which was fully endorsed as an epitome of his theories by the late Mr. Darwin, who urged the writer to give it a more permanent form. It has accordingly been issued by Macmillan & Co. as one of the "Nature Series" of scientific treatises, with some additions and alterations, and may now be said to be one of the best, if not the best, summary of the modern scientific gospel accessible to the reader who lacks time to read more extensive works, but who wishes to know what are the beliefs of the best-informed naturalists of the day and the principal reasons for their beliefs. The evidence for the evolution of higher from lower forms of life is cumulative. The sciences of geology, morphology, zoölogical topography, embryology, etc., each provide strong support for Darwin's general theory, but together they present a body of proof irresistible to an educated mind. Mr. Romanes devotes a brief chapter to each of these sciences; and besides naming some of the positive considerations, he strengthens his cause by showing, negatively, how the old theory of special creations ends in contradictions, complications, and constant *reductio ad absurdum*. "To withhold assent," he says in conclusion, "from so vast a body of evidence is token not of intellectual prudence, but of intellectual incapacity. With Professor Huxley, therefore, I exclaim, 'Choose your hypothesis; I have chosen mine,' and 'I refuse to run the risk of insulting any sane man by supposing that he seriously holds such a notion' as that of special creation."

—We spoke the other day, on the authority of M. Ulbach, of the improvements made lately in Amsterdam. Mlle. Marguerite Van de Wiele has written a letter from Brussels recording the changes which her native city has undergone. In her girlhood it was a city of gardens. Even in the business quarters, even in the most crowded streets, one might come across great shady stretches of green, often the relics of old convents; for in the Middle Ages almost the whole city seems to have belonged to convents, monasteries, nunneries, of Carmelites, Bogards, Benedictines, Visitandines, Béguines, Ursulines. Their lands occupied whole blocks, when cross-streets were further apart than they are now; but they have gradually been cut up and parcelled out. The National Bank has taken one, business houses have extended over others, and now the last one is to disappear to give place to a Palace of the Thousand and One Nights, something like the Parisian Edens, apparently, a theatre devoted to "leg" pieces, where magnificent shows and a *corps de ballet* of ravishing beauty will render good acting quite unnecessary. If it is so, the gardens will be revenged some time, for the Palace will certainly burn down, as the Alhambra did the other night. It is pleasant to hear that with these new buildings Brussels is not losing all the charm of antiquity. There is a certain antiquarian spirit there which is very proud of the Flemish houses, each with its façade ornamented with the form of some animal—fox, wolf, stag, lion, as it may be. They care so much for the architectural beauty of the city that the authorities some time ago, during the building of the new boulevards, offered a prize of $4,000 for the most artistic façade that should be erected—something of a contrast to American building committees, who appear to expect to get good designs for a statue, a monument, or a public building by offering prizes of two or three hundred dollars. The successful façade at Brussels is one of the boasts of the city. Its animal is the cat, and its motto, "Hier is't in den kater en de kat."

—M. Louis Olivier describes in the *Revue Scientifique* for December 23 Professor Marey's modification of the method of instantaneous photography, which renders the process more easily applicable to the study of animal locomotion. The principal objection to the use of the camera as employed by Muybridge is the expense, since it is necessary to have a separate instrument for every attitude to be photographed. In Professor Marey's method, a disc with a slot in the edge rotates in front of a single camera. The figure to be photographed, clothed entirely in white, moves in front of a black background, toward which the camera is directed. Whenever the slot in the revolving disc comes opposite the lens of the camera, a picture of the moving object is obtained. The plate thus shows a series of figures representing successive attitudes of the man or animal passing in front of the camera. If the figure simply alters its attitude without locomotion, as in the case of a man boxing or fencing, it is of course necessary to give the plate a lateral movement in order to prevent the superposition of the successive pictures. The black background necessary for these experiments is secured by means of a screen, sloping toward the back and painted black on its lower surface, the ground under it being also covered with a black carpet. A piece of chalk thrown through the air in front of this dark cavity leaves its impression as a white line on the sensitive plate of a camera directed toward it. It is not improbable that astronomers may employ this method in studying the flight of meteors.

—A more enjoyable concert has not been heard in this city for a long time than that which was given at Steinway Hall on Thursday afternoon as the third of Mr. Tretbar's popular matinées. The audience was much larger than on the two previous occasions, which tends to show that if these matinées are only continued long enough, they will in course of time become as great a necessity and as popular as the Philharmonic concerts. Dvořák's new overture, "My Home," Wagner's "Siegfried Idyl," and the ballet music from one of Rubinstein's operas, were the orchestral pieces executed under Mr. Thomas's direction. The Dvořák overture, which is fresh from the press, is based on two Bohemian folk-songs, one of which, "Kde domóv muj?" (Where is my home?) has furnished the title for the piece. The themes are interesting, well developed and contrasted, and effectively orchestrated. As far as our experience goes, it seems to us to be the best of the sixty-two works hitherto published by Dvořák. The "Siegfried Idyl" is well known here, but it may not be generally known that its leading theme, which recurs again and again, is taken from the third act of "Siegfried," where it forms part of the long duet between *Siegfried* and *Brünnhilde*. Its treatment there and in the "Idyl" gives evidence of Wagner's marvellous skill in presenting a theme from every possible point of view, and in a kaleidoscopic variety of colors. It was well received by the audience, as was also the ballet music from one of Rubinstein's operas, surely the loveliest ballet music that has ever been written.

BANCROFT'S CENTRAL AMERICA.

The Works of Hubert Howe Bancroft. Volume Sixth. *History of Central America.* Vol. i., 1501–1530. San Francisco: A. L. Bancroft & Co. 1882.

Mr. Morison, in his clever estimate of Macaulay, in the series of "English Men of Letters," says that "it is perhaps a low-minded objection to Macaulay's conception of history to remark that its application to lengthy periods is a physical impossibility. . . . If his plan had been carried out, it would have required fifty volumes, if not more." Evidently such an objection as this has caused no anxiety to Mr. Bancroft, when he first thought of "throwing himself into the arduous but fascinating tasks of authorship." His gigantic scheme of literary labor contemplates the production of not less than *thirty-nine* volumes, of which the six that have already ap-

peared average fully seven hundred pages each. We shudder at the prospect before the "world of readers" of the next generation on the Pacific slope; for it is not "an encyclopædia"—which was Mr. Bancroft's first idea—but "history which he has seated himself to write": 'A History of the Pacific States of North America.' Hitherto such portentous collections of volumes have been styled "materials," or "memoirs," or "documents for the service" of the historian, in whose deep abysses he is supposed to mine for the precious ore which is to be wrought into a harmonious and beautiful work of art. But this is not Mr. Bancroft's idea of a history. Evidently he prides himself upon his condensation within the limits of thirty-nine volumes, as he says, "it would have been far easier and cheaper to have sent a hundred volumes through the press."

Plainly he could have had nobody but himself in mind when he penned these words. Where, may we venture to inquire, does he expect to find readers in this brief life, or purchasers of his costly volumes in "this working-day world"? The method by which he has undertaken to produce such an enormous quantity of printed matter he has explained very lucidly. It may be compared in some respects to the manner of obtaining and tabulating information practised by "commercial agencies," with whose processes, doubtless, the author is more familiar than with the training and mental habitudes of historical students. It is by "the employment of assistants to bring together, by indices, references, and other devices, all existing testimony on each topic to be treated." To be sure, he admits that "completeness of evidence by no means insures a wise decision." But from the manner in which the hosts of "authorities" are marshalled by this joint-stock literary enterprise, it would appear that for them "A book's a book, although there's nothing in't." To us it appears very much as if a desire to gain some of the "cheap notoriety" which Mr. Bancroft courteously imputes as a motive to those whose judgment happens to differ from his own respecting the credibility of the early Spanish chroniclers, inspired the printing of the list of "authorities quoted"—some fifty pages in length. If his object were, as he says, "to impart a certain bibliographic value to his work," why is no notice taken of the only bibliography of the subject that has ever been attempted? We refer to the modest, but accurate and sensible, 'Notes on the Bibliography of Yucatan and Central America,' by Mr. Bandelier, published in the Proceedings of the American Antiquarian Society for October, 1880. Yet a slight comparison of the two lists reveals many deficiencies in the portentous array of thirty thousand volumes given by Mr. Bancroft, among which figure such "authorities" as Captain Marryatt's veracious 'Narrative of the Travels of Mons. Violet,' by the side of every speech ever made in Congress upon the Mexican boundary question, and the learned tomes of *Graham's*, *Harper's*, and *Scribner's* magazines. Long as the list is, an habitual searching of ordinary sale catalogues of "Americana" would supply many a missing volume. But the writers most "conspicuous by their absence" from his library are the recent and contemporary workers in the field of early American history, ethnology, and antiquities. We miss the names of Morgan and Powell, of Bandelier and Valentini, of Rau and Putnam, of Short and Brinton, among Americans, as well as of Bastian and Léon de Rosny and Lucien Adam, in Europe—to say nothing of the scholars of Mexico and Yucatan. Does Mr. Bancroft regard such writers as these as "knowing little either of the Mexicans or their conquerors," worthy of being classed, to use his own civil language, "among those who seek fame through foolishness"? It is plain that something more than negligence or oversight has occasioned such hiatuses in a literary apparatus made at a cost of half-a-million of dollars. It is evidence of a set purpose to ignore the opinions and conclusions of the men who have labored to do away with the reproach that has so long attached to the phrase "American archæology." But it is an ostrich-like sagacity that supposes such writers as these are not read, even if their names are not to be found upon a list of "authorities quoted."

Nevertheless, we do not mean to imply that this volume and its predecessors upon 'The Native Races of the Pacific States' do not possess many and great merits; and we cannot express too strongly our admiration for the man who has seriously taken in hand such an unprecedented task. With no special preparation or aptitude for this work, and with merely the training which a successful career in business had given him, he has manifested such a love of knowledge for its own sake, such a spirit of self-sacrifice for the future benefit of the community in which he has lived and accumulated his fortune, such energy and pluck and persistency, as justly entitle him to the respect and gratitude of his contemporaries, and insure his perpetual remembrance by posterity. Single-handed, he has attempted and has accomplished a feat which the oldest historical society in the land, with its lifetime of nearly a century, and its membership embracing the most scholarly and industrious workers of each generation, would be proud to have achieved. Alone he has amassed the library, gathered the manuscript material, and erected the building to preserve for posterity the muniments of the history of a large section of our common country. But all this public spirit and energy, with all its attendant success, do not necessarily afford any assurance of his fitness for the task of writing history; and we believe he will never find an imitator of his truly original device of seeing with other men's eyes, and thinking with other men's minds, as a special preparation for historical investigation.

But we will let our author describe for himself some of the feelings with which he has approached his herculean task, merely premising that, so far as our knowledge extends, their like has never before been exhibited except by certain compilers of American town and county histories:

"We of this new Western development are not disposed to exalt brute battling over-much." "Events pure and simple are by no means more important than the institutionary development which they cause or accompany." "We hear much of the philosophy of history, of the science and signification of history; but there is only one way to write anything, which is to tell the truth plainly and concisely." "The exact historian [must not forget that] the actions of men are governed by proximate states of mind, and these are generated both from antecedent states of mind and antecedent states of body, influenced by social and natural environments." "As to the relative importance of early history here and elsewhere, it is premature for any now living to judge." "It is historical barbarism, of which the Homeric poems and Carlovingian tales not alone are guilty, to throw the masses into the background, or wholly to ignore them." "The historian should be able to analyze and to generalize; yet his path leads not alone through the enticing fields of speculation, nor is it his only province to pluck the fruits and flowers of philosophy, or to blow brain-bubbles and weave theorems."

This is not precisely the tone of thought or style of language of "Macaulay and Motley, Froude, Freeman, Prescott, and Irving," whose works Mr. Bancroft acknowledges to be "wonderful in their way," which his readers will find to be a very different way from his own. But it evidently is a crude echo of the half-comprehended thoughts of the "scientific school" of historians of the present century. Of them it has been well said that their principles teach that "the past ought to be examined, not for artistic purposes, in order to compose graceful narratives; not for political purposes, in order to find materials for party warfare; not for theoretical purposes, in order to construct specious, but ephemeral, philosophies of history; but simply for accurate and verifiable knowledge." For them, "simple, unornate statements of the results obtained is the only style of treatment consonant with the dignity of genuine inquiry." Judged by such standards as these, we are forced to pronounce the results of our author's labors not altogether a success. We do not always find the knowledge "accurate and verifiable," and his "style of treatment" can scarcely be called "simple and unornate." Such flowers of rhetoric as—"slowly rattles along the dim present, well-nigh buried in its own dust," or, "a varied experience arising from a nearer contact with progressional events," or, "societies formed on one skeleton, a most earthy, red, and ignoble one," "self-begettings of enlightenment," "wavy grain supplanting the tangled wild-wood," and "gardens materialized from the mirage," are scattered through the work with far too lavish a hand. Why the author should wander back through the ages to inform his readers that to the right of sanctuary is to be "attributed in a measure the existence, or at least the importance of Athens and Thebes," after he had traversed in his own fashion the whole field of sixteenth-century civilization and sociology in his introductory chapter, we fail to comprehend. As for his literary judgments pronounced upon the merits and qualities of the eminent writers who have treated of the same period of history, they seem to us as remarkable specimens of the "impudently absurd" as any *jugement saugrenu* noted by Matthew Arnold:

"Mr. Irving has been praised for his genial manner, his gentleness of thought, and his charming style. . . . Among these is found his highest merit; and yet one would sometimes wish him not quite so meritorious. Elegance and grace eternal tire by their very faultlessness. He is too wordy; his details too long-drawn." . . . "Prescott was a more exact writer than Irving, though Prescott was not wholly above the amiable weakness of his time. In the main he stated the truth, and he stated it fairly, though he did not always tell the whole truth. He would fain please the Catholics, if it did not cost him too much."

What Mr. Bancroft's estimate of Mr. Helps may be, we are not informed; but of Robertson we are told that "although his statements are full of errors, intensified by dogmatism, but for which he cannot always be blamed, all who have come after him have profited by his writings." It would be fortunate if as much could be said of all historians, our author included.

Yet, despite such faults of temper and treatment, which may be accounted for, if not condoned, by reason of his antecedents and his surroundings, and making fair allowance for the state of mental isolation from criticism and suggestion in which the work has been produced, we must pronounce our judgment to be that Mr. Bancroft has given to the world a very valuable repertory of information, a most useful assistance for all who would attempt to master the details of the history of the period it covers. We wish, however, most sincerely that he had been content to confine himself to the laborious task of gathering and preserving the materials of history, leaving it for his successors to embody in a literary form the fruits of his toil. But it would seem as if such continence were scarcely possible for human nature, so prone are men to attempt tasks beyond their powers,

as has been more than once manifested in the kindred field of classical archæology.

The grave fault of the work is, that it endeavors to perpetuate erroneous ideas about the condition of the inhabitants of this continent at the time of the Spanish Conquest. The author has deliberately chosen to adopt the "romances" of the old chroniclers and the "dreams" of Stephens, in the very face of all the evidence of modern criticism and of recent exploration. He still stands out stoutly for an "Aztec empire" and a "Maya civilization," with the easy credulity of an earlier age. On this point he must be allowed to speak for himself:

"There was little in the social or political systems of Europe of which the counterpart could not be found in America, . . . and there were institutions then existing in America at whose feet Europe might have sat with benefit. . . . Every quality and grade of government presents itself, until full-blown monarchy is attained, where a sole sovereign becomes an emperor of nations with a state and severity equal to that of the most enlightened. . . . Like their cousins of Spain and England, the sovereigns of Mexico had their elaborate palaces with magnificent surroundings, their country residence, and their hunting-grounds, their botanical and zoölogical gardens. . . . There were aristocratic and knightly orders, nobles, plebeians, and slaves, pontiffs and priesthoods, land tenures and taxation, seminaries of learning and systems of education, . . . laws and law courts of various grades, and councils and tribunals of various kinds; military orders, with drill, engineer corps, arms, and fortifications; commerce, caravans, markets, merchants, peddlers, and commercial fairs, with a credit system and express and postal facilities. . . . Their medical faculty and systems of surgery they had; . . . also their literati, scholars, orators, and poets; with an arithmetical system, a calendar, a knowledge of astronomy, hieroglyphic books, chronological records, public libraries, and national archives."

All this we are gravely asked to believe of a race who possessed no written language or what can properly be styled an alphabet; who were still in the period of transition from the "stone" to the "bronze" age, not having yet even learned the use of beasts of burden; and whose fabulous "Seven Cities of Cibola" have been plainly identified with the Zuñi pueblos, whose mysteries and traditions we are in a fair way of penetrating through the self-sacrificing devotion to science of Mr. Cushing and his wife. But this is far from being all that Mr. Bancroft has to tell us about the "Aztec civilization." "The conquerors, when they entered the country, examined with admiration the manufactures of gold, silver, copper, tin, and lead, wrought to exquisite patterns with surprising skill." But he has nothing to say about "iron," which is generally regarded as the keystone of modern civilization. "They gazed with astonishment on huge architectural piles, on monumental remains speaking louder than words; on temples, causeways, fountains, aqueducts, and lighthouses, surrounded as they were with statues and intricate and costly stone carvings." Pray, what has become of all these marvels of a civilization worthy to be compared with that of Europe, over which the chroniclers so gloat? Where are to be found the ruins of these "architectural piles"? After the lapse of more than two thousand years, we still have the exquisite productions of the ancient Greek goldsmiths, preserved in the grave-mounds of the semi-civilized monarchs of the Thracian Chersonesus, to delight our eyes in the Museum of the Hermitage at St. Petersburg. What Spanish museum or collection, what monastery or palace has its specimens to show of the pretended equally marvellous workmanship of the Mexican jewellers? Does any one believe that such wonders of skill and beauty and costliness as the chroniclers prate about would not have been transmitted to their sovereigns by the conquerors, as the surest possible means of winning or retaining their favor? Where are all those marvels now? Have they all vanished in less than four centuries? Why does the soil of Mexico now never give up something worthy of its "ancient civilization," as well as that of Greece, or of Turkey, or of Africa? Who has ever seen anything that can properly be called a work of art that was indigenous to this continent? After all that has been said, the vaunted carvings and statues, the "Chac-Mool" and the "Indio Triste," are nothing more than the uncouth, realistic work of half-barbarians. What is their architecture more than a piling up of stones shaped by mere "rule of thumb"? We could scarcely hope to have better proof of the relative position of the ancient Mexicans in the scale of humanity than is afforded by the truthful portraits of them that have lately been disinterred, moulded upon their rude vessels of clay. He must be a very prejudiced partisan who can discover in these any higher type of race than was presented by the faces of the Zuñi chiefs whom we have so recently seen. No; it is all a myth that is told about an ancient Aztec "civilization," if the word be understood in any legitimate signification.

Mr. Bancroft is a stickler for facts. He believes that "the highest delight of a healthy mind, of a mind not diseased either by education or affection, is in receiving the truth." We wish he had been willing to manifest a little more of this spirit by admitting facts like these, which ought to be perfectly well known to him, after the years he has spent in the study of the remains of "the native races." But he prefers to pin his faith upon the exaggerated descriptions, the extravagances, and the wholesale fabrications of the Spanish chroniclers, whose impossibilities and inconsistencies have been so often pointed out in wearisome detail. We recommend to his careful consideration Bacon's favorite maxim of Heraclitus, the Profound, "The dry light is the best soul."

MRS. CHILD'S LETTERS.

Letters of Lydia Maria Child. With a Biographical Introduction by John G. Whittier, and an Appendix by Wendell Phillips. Boston: Houghton, Mifflin & Co.

THE opening letter in this collection, written at the age of fifteen, at once introduces the reader to a mind of unusual precocity. From few girls of that age do we expect such facility of expression (to say no more) as is displayed in the following lines from Miss Francis to her brother Convers (June 5, 1817):

"I have been busily engaged in reading 'Paradise Lost.' Homer hurried me along with rapid impetuosity; every passion that he portrayed I felt: I loved, hated, and resented just as he inspired me! But when I read Milton, I felt elevated 'above this visible diurnal sphere.' I could not but admire such astonishing grandeur of description, such heavenly sublimity of style. I never read a poem that displayed a more prolific fancy, or a more vigorous genius. But don't you think that Milton asserts the superiority of his own sex in rather too lordly a manner? Thus, when Eve is conversing with Adam, she is made to say—

"'My author and disposer, what thou bid'st,'" etc.

In another respect this letter is as characteristic of the writer as any in the book. It shows the intensity of her attractions, and her extraordinary capacity for sympathizing with that which for the time being absorbed her. Her correspondence abounds in superlative judgments on men who excited her admiration, beginning with her future husband. Thus, in her journal: "January 26, 1825. Saw Mr. Child at Mr. Curtis's. He is the most gallant man that has lived since the sixteenth century, and needs nothing but helmet shield, and chain armor to make him a complete knight of chivalry." So of Theodore Parker, and others. The young girl whose passions were so played upon by the blind bard is as susceptible as ever (without having forgot her Milton) at fifty-four:

"The outrage upon Charles Sumner [1856] made me literally ill for several days. It brought on nervous headache and painful suffocations about the heart. If I could only have done something, it would have loosened that tight ligature that seemed to stop the flowing of my blood. But I never was one who knew how to serve the Lord by standing and waiting; and to stand and wait then! It almost drove me mad."

And at fifty-eight (Sept 20, 1860):

"It seems as if slavery would be the death of me. If all I suffer on the subject counts as vicarious atonement for the slaveholders, they are in a hopeful way. My indignation rises higher than it used to in my younger days. According to the general rule, I ought to grow calmer, but I do not. If the monster had one head, assuredly I should be a Charlotte Corday."

Her husband's opinion of her—"David thinks I am preëminently distinguished for the supremacy of heart over head; that I am almost ridiculously a woman in my affections"—was perfectly just. The heartiness of Mrs. Child, in actual intercourse as in these letters, was more conspicuous than intellectual superiority, which nevertheless cannot be denied her, even if she could not lay claim to great originality. It is impossible not to warm to a nature like that displayed in her unaffected accounts of her endless labors in behalf of the poor, the oppressed, the repentant. Now it is a story that must be written for bleeding Kansas, and that being off her hands she feels bound to "stir up the women here to do something" for the emigrants in that distracted Territory; so begs a piece of cheap calico of Charles Hovey, "he himself deeming that money and energy had better be expended on the immediate abolition of slavery, and dissolution of the Union if that could not be soon brought about," but she not thinking it best to wait for either of these events before she made up the cloth, as cold weather was coming on. At the same time, "it seemed as if my heart would burst if I could not do something to help on the election [of Fremont]. But all I could do was to write a song for the Free-Soil men. . . . I have been told that the Boston *Post* was down upon me for the verse about President Pierce. I couldn't help it. His name would not rhyme to anything but curse!" Later we see her ransoming the fugitive Sims by her own efforts, obtaining the required sum of U. S. Marshal (afterward Major-General and Attorney-General) Devens, who had executed Sims's return to slavery. In the early days of the war she prompts Whittier to write an abolition song for an army not yet consciously one of liberation; then betakes herself to knitting for the army, and giving lavishly of her scanty means for the "contrabands." After the draft riots in New York, she turns back a gift of two hundred dollars, that it may swell the fund for the relief of the colored victims of that ferocity. In her will she leaves an annuity to the aged drunkard whom she reformed (herself being seventy-two) and took into her service as her "man Friday."

We get glimpses of her love of music, of pictures, of flowers, of the rainbow. We see the merry twinkle in her eye when she retorts to Mrs. Senator Mason, of Virginia: "I have never known an instance where the 'pangs of maternity' did not meet with the requisite assistance; and here at the North, after we have helped the mothers, *we do not sell the babies.*" Or when she quotes Edmund Quincy's ready reply to her saying (1863) she had never "seen the hand of Providence so signally manifested as in the events of

this war [of the Rebellion]," "Well, Mrs. Child, when the job is done up, I hope it will prove creditable to Providence." A woman who worked hard and cheerfully with her own hands, Mrs. Child could leave her work "in the midst," and sit down "with a dirty gown and hands somewhat grimmed," and be "high up in the blue in fifteen minutes" with a Transcendentalist clergyman. "I defy all the powers of earth and hell," she says, "to make me [*i. e.*, 'the case containing me'] scour floors and feed pigs, if I choose meanwhile to be off conversing with the angels." And again, at sixty:

"I have a great many questions laid up to ask Plato when I see him. He has been at the high school so long, he must know a great deal. . . . My soul goes about 'pervading' all departments of the universe, 'wanting to know'; and the only answer I get is, 'Go about your business.' So I go about it. I have just done fifteen pair of mittens and three pair of socks for the Kansas troops. I can trust them never to surrender a fugitive slave; so I work for them with a will."

The revolt of woman indicated in our first extract does not furnish the keynote of Mrs. Child's correspondence. Hardly more than once does it recur, even incidentally, and then in a sober letter to Senator Sumner contending for woman suffrage. Her great cause was abolition. Still, her private thought was ever by choice on matters spiritual, and her most representative work is perhaps not her famous 'Appeal in behalf of that class of Americans called Africans' (1833), but her more voluminous and laborious 'Progress of Religious Ideas' (1855). She was nearly, as her 'Letters from New York' (not, of course, included in the present collection) show, a convert to Swedenborgianism, and never quite lost her drawing toward it as toward Fourierism. She longed to her latest day for a creed, and could never bind herself to any. Some of the most forcible passages in the letters now published relate to the subject of religion:

"Did you see Mr. H——'s sermon, preached soon after his return from Palestine? He thinks the truth of the Bible is proved by the fact that Jordan is still flowing, and the Mount of Olives still standing. He says his faith was greatly strengthened by a sight of them. By the same token he ought to consider Grecian mythology proved because Olympus and Parnassus are still standing; and a sight of them ought to strengthen his faith in Jupiter and the Muses" (1856, p. 93).

"I opine that we have nothing to do with the question whether the views that seem to us true can meet the wants of the 'ignorant, silly, sensuous, suffering masses.' . . . The Italian peasant woman is doubtless comforted by praying to a doll dressed up in tinsel, which she worships as the 'Mother of God.' I would not, if I had the power, make it illegal for her to comfort herself in that way; but shall I refrain from philosophic utterance lest it should make her doll fall out of its shrine? The doll will not and cannot fall so long as the 'ignorant, sensuous, suffering masses' have need of her. The work that needs to be done is to bring the world into such a state of order that there will be no 'ignorant, sensuous, suffering masses,' and consequently no further use for consecrated dolls" (1873, p. 214).

It cannot be said that with these letters added to the long list of her published works there is any need of a further memorial of Mrs. Child. At the same time, some defects in the editing, which was purely a labor of love, make the work before us, in spite of Mr. Whittier's introduction, an unnecessarily disconnected biography, and even diminish somewhat its value as a contribution to American history. There are apparently a few errors in the dating of letters, and certainly some misplacing, and the time of year, though ascertainable from the context, is not always set down or observed in the arrangement. Some initials have not been explained and are not connected in the index with the full names to which they belong. Certain contemporary allusions, as to 'Sartor Resartus,' the invention of the daguerreotype, the visit of Fanny Elssler, Perfectionism, etc., might have been improved for entertaining foot-notes. Most of all, this work fails to throw light on the problem why so exceptionally gifted a couple as David Lee and Lydia Maria Child did not make more of themselves—if this expression serves to convey the reader's sense of an anti-climax in their public careers. He was a scholar, a classical teacher, a journalist, an able lawyer, at one time a member of the Massachusetts Legislature, an indefatigable writer, who rendered infinite service in unmasking the pro slavery conspiracy which fomented the revolt and subsequent annexation of Texas. She bid fair to be the most popular authoress in America, and her recorded publications show a continuous production of books and pamphlets from 1824 to 1878, ranging from works of the imagination to cookery-books, from New England history to the history of religions, from juvenile periodicals (the first ever established) to political tracts. It is well known that her open association with the abolitionists, following her husband's example, cost her her literary popularity at one blow, and made literary ambition seem despicable to her, though it may be thought strange that the author of 'Hobomok,' 'The Rebels,' and 'Philothea' was not led to produce an anti-slavery romance anticipating 'Uncle Tom's Cabin.' This book gives also abundant evidence of straitened circumstances and unrepining toil. It does not show clearly or account for the pause in Mrs. Child's anti-slavery activity between the date of her residence in New York, where she was editing the *National Anti-Slavery Standard*, and the beginning of the civil war on the plains of Kansas, or for Mr. Child's complete withdrawal from an agitation in whose beginning he bore so conspicuous a part. Doubtless his temperament was unpractical in a way in which his wife's, however strong its propensity to "pervade the universe," could never be. They were a very devoted and loving pair, and Mrs. Child's expressions of tenderness for her "mate," from whom she endured long separation without a murmur, are among the pathetic passages in a book generally full of cheer and courage and hopefulness.

Françoise de Rimini dans la légende et dans l'histoire. Par Charles Yriarte. Paris: J. Rothschild. 1 vol. 8vo.

CHARLES YRIARTE has illustrated Italy so charmingly and artistically, that any work of his deserves consideration. The small book before us with the above title, bound in vellum, with illuminated capitals, a vignette of the first design of Ary Scheffer for his famous painting of Francesca di Rimini, and three sketches by Ingres of the tragic episode, looks very inviting, and yet we see no justification for it. When Dante ended this historical episode with the famous line, "Quel giorno più non vi leggemmo avante" ("That day no further did we read therein"), he had said all that needed to be said on the subject. Any further research or hunting up of family records could not add one iota to the historical fact; it could only bring to light the prosaic details of a painful and fatal event to gratify the morbid taste of scandal-lovers.

The story of Francesca di Rimini is so well known that we need not repeat it here. Dante was a contemporary, already a recognized young poet; he may even have known personally Paolo "the handsome" (*il bello*), as all the chroniclers style him, when, in 1283, he was Captain of the People in Florence. Seven years later (1290), when Dante was twenty-five years old, at the very time when he was bewailing the loss of his Beatrice, the tragedy took place, and the report of it spread over Italy. One can imagine the powerful impression it must have left on the mind of Dante, whose sympathy, like that of all other Italian lovers, was entirely with the betrayed girl. During his exile, after wandering for fourteen years from court to court among the Ghibelline chiefs of Italy, Dante was finally invited and received as a guest at Ravenna by the nephew of Francesca, Guido Novello da Polenta, lord of the town, a scholar and a poet, who gave him a house and support for the rest of his life, and, when he died, five years after, buried him with public honors and delivered a long oration over his tomb. Dante, therefore, must have known all the intimate details of the tragic event; he may have heard them from the lips of Guido himself and other members of the family; he may have been shown the very rooms where Francesca was born, where she played as a child, where she married the "handsome" Paolo Malatesta as proxy for his lame, hunchback, one-eyed brother Gianciotto. (Neither M. Yriarte, by the way, nor any of the commentators, have noted this additional physical defect of Gianciotto, nor his cruel, treacherous nature as described in the passage of the xxviiith canto of the 'Inferno,' v. 76–90. "That traitor, who sees with only one eye," therein mentioned, is Gianciotto, the husband of Francesca, though most of the commentators make him a younger brother, Malatestino, which is an error.) Who could imagine, however, that mention of such a scandalous and tragic event would be the poet's way of repaying the hospitality received at the hands of the nearest relative of the murdered girl? Dante, in this episode, showed a poetic daring unexampled in the history of literature; with a touch of his magic wand he exalted the sinner into an ethereal atmosphere of beauty and pathos, yet used the blackness of hell for a background, so as to bring out more vividly the lovely form, "like a lily in the mouth of Tartarus," as Leigh Hunt says. What is still more wonderful, Dante does not in the least deviate from historical truth, but, although mourning with the deepest and most heartfelt sorrow the fate of Francesca, does not excuse her offence, and she is placed among the lost: only divine justice allows her the everlasting companionship of her fellow-sinner, as a compensation for the deception practised upon her and her forced marriage with the cruel and deformed Gianciotto.

There the figures stand. What has M. Yriarte done for them by his historical researches? Nothing authentic that in any way adds to Dante's Francesca, except to bring her down from a lovely poetical figure to the prosaic erring woman we knew before, and whom Dante did not in the least exonerate. *Cui bono*, therefore, to strive to get at the details, and, after all, with the most indifferent success? M. Yriarte begins with a chapter on the political state of Italy, which, though historically interesting, is too large a vestibule for this domestic tragedy, which concerns only two petty lords of small towns, whom history would have forgotten but for the fact that one perpetrated the murder and the other gave hospitality to the poet who immortalized it. He then institutes a minute inquiry into the ages and relationship of the several members of the family, comparing the historical records, none of which, however, add anything of importance to the simple narrative of Dante or Boccaccio. There follows a long discussion as to whether Boccaccio's statement that there had been imprudence, but not criminality, in the intercourse between Francesca and Paolo is historical or not. Boccaccio wrote some eighty years after the event; his authority, therefore, is no better than that of the other chroniclers who related what they had learned from tradition. Silvio Pellico, and after him every other

author who has written a tragedy or libretto of Francesca di Rimini, have followed Boccaccio, changing, however, the character of Gianciotto from that of a cruel and treacherous man into a sort of Italian Othello. The inquiry, therefore, has no positive result. It is also of very little consequence whether the tragedy took place at Rimini or Pesaro—a question to which M. Yriarte devotes unnecessary space. His conclusion is that, "after all, it is in vain that we pile up documents and go back to the original sources to learn whether she was more unfortunate than culpable, and whether she expiated an imprudence or a crime: it is the great poet who remains the great historian." If the poet is the great historian, why not leave the subject where he left it with such admirable delicacy?

Anatomical Technology as Applied to the Domestic Cat. By Burt G. Wilder and Simon H. Gage. A. S. Barnes & Co.

THIS large volume, by two professors of Cornell University, is a valuable addition to the list of scientific text-books. Its principal object is to give careful accounts of the methods most useful in anatomical work, and their application to the cat, as the material supplied to the students for initiatory practice. This topic takes up the bulk of the volume, and is dealt with accurately, thoroughly, and in a sufficiently complete manner. The book contains the best collection of practical descriptions of the manner of preparing bones, preserving soft parts, making injections, etc., with which we are acquainted. The directions for studying the anatomy of the cat are explicit and well arranged. A student who worked through the book, according to the author's intention, in the laboratory, would have a good foundation for more extended study.

In turning over the leaves, one is first struck by the coarseness of the illustrations, which are, however, accurate, and for the most part new. The majority have been manufactured by one of the cheapest and poorest processes now in use, and are marred by singularly awkward lettering. The names are placed directly upon the parts—in itself a good plan, but in these figures unfortunately executed; thus, in carefully-shaded drawings of the muscles, great white blotches are left, upon which the names are inscribed in coarse, misshapen letters. In many cases these blemishes appear like constituent parts of the object, and so confuse the picture that the eye hardly understands it. (See, for instance, fig. 127, of the ear.)

One's attention is also immediately caught by the very numerous new words, *termini technici*, the number and frequency of which give to the book one of its most obvious peculiarities. Many of these terms are entirely new, and a good proportion are odd abbreviations of old terms; thus, *vena cava posterior* has become *post-cava*. The wisdom of coining all these new words to supplant names already familiar to all the scientific world appears to us questionable. The authors seem to have overlooked the sanction of universal usage, for they endeavor to demonstrate the necessity for terminological reform by cataloguing terms not generally accepted, but used by single writers, often little known. There is an ample series of designations which are employed alike by nearly all writers, and it can hardly be considered desirable to cast aside such sanction in order to introduce new or forgotten sets of syllables. Why introduce *meson* and *mesal*, instead of median, when *meson* (in its various combinations) is already used to refer to the middle germ layer, but never to the median plane? We cannot prefer *cephalad* to headwards. In fact, there is a suggestion of pedantry throughout in the tendency to a somewhat Latinized style. "Lay the cat on its back" would have been preferable to the oft-reiterated direction, "Place the cat in a dorsicumbent posture." On the other side, we have to say that a number of useful and commendable terms are proposed, such as *ectal*, *ental*, and others, which might well come into general use.

The chief contents of the volume are gathered into an introduction and eleven chapters. The introduction is strongly flavored with oddity; it deals with the method of reference to publications, the decimal system, zoölogical classification (one page), terminology (twelve pages), definition of terms, the slip system of notes, has two pages of aphorisms, and finally states the authors' reasons for choosing the cat. This is nearly all good, save that it needs great abbreviation. The aphorisms are surprising, to say the least: "Technical terms are the tools of thought" (p. 12); "Correct methods are the keys of knowledge" (p. 52); "Carpenters and tailors do not learn their trades upon rosewood and cloth of gold"; "Fat is the anatomist's worst enemy" (p. 198). The authors have collected three pages of these epigrammatic attempts—we have counted up 65. A livelier sense of humor would have suppressed them. Of the eleven remaining chapters, the first describes the general outfit in apparatus and material; the second gives a general description of the skeleton; the third is devoted to accounts of important methods, which are well selected and written; the fourth returns to osteology in detail; the fifth is myological; the sixth takes up the viscera, and the subsequent chapters the remaining organic systems in succession. The main purpose of the authors is never lost sight of, but, throughout, the text is arranged to train the student how to do anatomical work. The authors are to be congratulated upon the good results of their evident painstaking. The volume bears the unmistakable marks of prolonged personal experience, which has secured uncommon accuracy.

The cat has been already twice the subject of extended treatises—once, many years ago, by the French anatomist Straus-Durckheim, and again, more recently, by St. George Mivart. The former is a classical investigation; the latter is a bulky student's text-book, and is therefore naturally to be compared with the work of the Cornell professors. Mivart deals with the cat from every point of view: gives a full account of its anatomy and the physiology of all its parts; describes its embryology; and discusses its psychology, relationships, geographical distribution, pedigree, etc., thus forming a very thorough introduction to the study of vertebrates; but his book gives no special directions for laboratory work. Messrs. Wilder and Gage have adopted a different plan, giving, as their title indicates, much attention to methods of dissecting. Moreover, they announce as being in preparation two similar volumes, one on 'Microscopical,' another on 'Physiological Technology.' When completed, they will form a whole to be criticised as such. Even then, if the plan of the present volume is continued, there will be wanting those wider views which, in Mivart's book, extend the knowledge gained from the cat by comparisons with other animals, thus rendering the study fruitful. To our mind, the chief defect of the volume we are reviewing is the tendency it has, in common with all of its class, to mislead students into thinking that practical work—the mere dissecting out of a muscle, for instance, and seeing it—is the end of the study. Teachers and examiners in biology are only too familiar with this result of "practical" work, by their contact with students who have only seen a schedule variety of objects and phenomena without grasping the ideas of which that variety should be only the exemplification. We think that the addition of much more comparative anatomy would have greatly increased the value and usefulness of this manual, while it would have avoided the very serious danger to which we have just alluded.

The volume closes with an extensive and, in some respects, excellent bibliography, which is, however, remarkable for certain omissions: there is no mention of Tomes's 'Dental Anatomy,' nor of the two manuals of comparative anatomy by Siebold and Stannius, and by Wiedersheim, which, with Gegenbaur's (cited), are the accepted highest standards. Only the first, and not the second, edition of Flower's 'Osteology' is referred to, and there are a number of special papers which ought to be added, such as Hertwig's on the teeth and skull, Gegenbaur's on the limbs, etc. Some of the titles, on the other hand, lengthen the list without really enhancing its value. The book has a good index.

Soldier Life in the Army of Northern Virginia. 1861-5. By Carlton McCarthy. Richmond: Carlton McCarthy & Co.

WE think we cannot be mistaken in saying (what is no small praise) that this book gives an insight quite unique into the domestic economy of a private in the field. It is written with much humor, intelligence, and shrewdness of observation by one who performed the rare feat of remaining in the ranks through the war. It has preserved so largely the flavor of twenty years ago that it must be much indebted to notes then taken. It continues the old fictions, gathered from rumor, of Northern numbers, cowardice, deceit, and meanness, with frank recognition of instances of the opposite qualities that came within the author's personal experience. But it is not a book which challenges serious refutation, and these opinions will no doubt be an agreeable spice to the readers for whom it was intended, while they add to its reality to us who think them caricatures. Leaving out these sectional touches, the life it describes is nearly as true of the Northern, especially the Western, troops as of the Southern.

The general reader of military history looks upon the movements of troops as of chessmen, and considers the statistics of losses with the same indifference as the stumpage of a pine forest. If he tries to recall that a soldier is a man, with human feelings and wishes, he probably considers that his condition is one of habitual misery, with occasional crises of fury and perhaps agony; that his fare varies from the usual simple sufficiency of regular rations to temporary want and meals of rats and old boots. This book shows, what experience abundantly confirms, that ordinary life in the field is free from extremes of hardship and mortal peril. The outdoor life, the fresh sleep *sous les belles étoiles*, the regular exercise, the simple fare, the constant variety, the occasional excitement, the exhilarating gratification of the gregarious instinct, have in them a charm, like that of the youth which was associated with them, which brightens as the past recedes. The rhapsodies of the author are not exaggerations of the delights of an undisturbed night, a "square meal," a leaf or moss bed, a camp-fire in the woods at night, with its lights and shadows and its thin, blue, fragrant smoke, and the talking, singing, smoking, and declaiming around it; the letters from home, and the luxury of clean clothes.

The author describes minutely the impedimenta of the Confederate soldier, which were reduced to the unprecedented lightness of a musket without bayonet, rubber and woollen blanket, and haversack; and sometimes even the last was omitted. Overcoats were generally discarded as not worth their weight, cartridge and cap boxes

were not needed when their contents could be carried in the pocket, and bayonets were seldom useful. Some of the observations will recall, to many, feelings once familiar. On the march "men of sense suffered greatly from a feeling of helpless ignorance of where they were and whither bound — whether to battle or camp." After the surrender, "a horrid feeling of vacuity oppressed the soldier and introduced him to the new sensations of liberty of choice, freedom of action, full responsibility." An imaginary battle is described with considerable skill in conveying the vagueness of the knowledge of its general cause those engaged in it would generally have. In the pursuit that follows: "Stuart, with a twinkle in his eye, his lips puckered as if to whistle a merry lay, is on their flanks, in their rear, and in their front." It only needs mention of this dashing cavalryman's awkward carriage and screech-owl voice to bring him vividly before us. "A large proportion of the eating of the army was done in the houses and at the tables of the people, not by the use of force, but by the wish and invitation of the people." This, of course, was impossible for the Northern troops, and is only one instance of the advantage of campaigning within the borders. This involves knowledge of the country, guides, secret-service information, defensive battles, and the spirit of resisting invasion. "No man can exactly define the cause for which the Confederate soldier fought." A large element in this cause was plunder: arms, ammunition, clothes, food, shoes, tobacco—everything coveted by the soldier was to be won by a successful battle. "Nearly every overcoat in the army in the latter years was one of Uncle Sam's, captured from his boys." We think this object had more to do with encouraging our opponents than the religious enthusiasm or fanaticism which our author claims for them. He says, "Discipline, the cold master of our enemies, never caught up with the gallant devotion of our Christian soldiers, and the science of war quailed before the majesty of an army singing hymns." There was never a superfluity of discipline on our side, but such as it was it certainly did catch up with the Christian soldiers. It was not our science of war that finally quailed, and we never had an opportunity to feel the majesty of an army singing hymns, unless "the Rebel yell" be regarded as such. A day or two after the parole at Appomatox, the author, with his comrades, on their weary way home to Richmond, saw General Lee on a lonely road riding entirely alone, erect, dignified, calm, and peaceful. It must have been a moving sight to them to see their old leader—one of the great generals of the century—his famous army transformed into a swarm of hungry tramps, riding without attendants, occupation, or country, from the field where he had just laid down his command, and with it his dream of being a second Washington of a great North American Republic. At the end of the book is a good colored print of the Confederate battle-flag, and a narration of its origin. Nothing is added, however, to what was already known on the subject.

BOOKS OF THE WEEK.

Berghaus, H. Chart of the World. 10th ed. Gotha: Justus Perthes; New York: Westermann. $4 80.
Düntzer, H. Goethe's Werke. Illustrirt. Parts 13-18. Stuttgart: E. Hallberger; New York: Westermann.
Hawthorne, N. Twice-Told Tales. Boston: Houghton, Mifflin & Co. $2.
Hawthorne, N. Mosses from an Old Manse. Boston: Houghton, Mifflin & Co. $2.
Hélène, M. Les Nouvelles Routes du Globe. Paris: G. Masson; New York: Westermann.
Hoffman, F. Basil and Adelbert; or, Each in His Own Way. Philadelphia: Lutheran Publication Society. 70 cents.
Hoose, J. H. First-Year Arithmetic. [The Pestalozzian Series.] Syracuse: C. W. Bardeen.

HAVE JUST PUBLISHED:

WALKER'S

Political Economy.

By Francis A. Walker, President Massachusetts Institute of Technology, late Superintendent of the Census, etc. Large 12mo, American Science Series, $2 25.

"Americans have needed this volume. . . . It is not a volume to excite controversy, but it will enlighten the public in reference to economic questions that are invariably discussed with narrowness and intolerance. . . . May be heartily recommended to all readers and students who aim to instruct themselves in the fundamental principles of this greatest of the modern sciences. It is a thoroughly useful work, which ought naturally to raise economic discussion in the United States to a higher level of intelligence."—*N. Y. Tribune.*

TEN BRINK'S

Early English Literature.

Early English Literature (to Wiclif). By Bernhard Ten Brink. Translated by H. M. Kennedy, Professor of German, Brooklyn Polytechnic Institute. Large 12mo, $2 25.

"We commend it most heartily to the earnest study of every lover of English literature. The perusal of a single chapter will convince the most careless reader that the writer is a master of his subject, and holds all the details in a firm grasp. For the first time since we have had a literature we are able to read its primal history in a coherent and intelligible shape."—*Nation.*

Lyrical and Dramatic Poems

Selected from the Works of Robert Browning. By Edward T. Mason. Square 12mo, $2.

UNMOUNTED PHOTOGRAPHS

Of ANCIENT and MODERN WORKS of ART, embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1 50 per doz. Send 6-cent stamp for catalogue and supplement of 3,700 subjects. SOULE PHOTOGRAPH CO. (successors to John P. Soule), Publishers, 338 Washington St., Boston, Mass.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 1, 1883.

The Week.

SOME time ago one of our Western contemporaries accused us of a desire to "drive silver out of circulation." We advise it and all those who are still dreaming the dream of the great bles ings which the coinage of silver dollars will shower upon this country, to give their sober and serious consideration to a letter addressed on Friday by the Secretary of the Treasury to the Speaker of the House of Representatives. He sets forth that there are now 94,016,842 standard silver dollars and $26,521,692 in fractional silver currency piled up in the Treasury; that the vaults are crammed full; and that unless the law providing for the coinage of $2,000,000 in silver every month be promptly repealed, new storage room must necessarily be provided for this year's coinage. It is plain that this vast amount of silver, stowed away in such fashion, with confirmed stubbornness refuses to go out and cannot be forced into circulation; that it cannot be used in our foreign commerce; that it does no good to anybody; that we hold it at a loss of interest and a further loss caused by depreciation; that its accumulation can have no other effect than, in the course of time, disastrously to disturb our currency; and that the policy of purchasing $24,000,000 worth of silver bullion a year for the purpose of merely swelling this idle and expensive pile is an outrageous absurdity, disgraceful to an intelligent people. We have not the least doubt that Secretary Folger thinks so too.

There has been continued progress toward a better condition of trade generally during the last seven days. The foreign demand for breadstuffs has not slackened, and the foreign markets still show an upward tendency. In the cotton trade there is a better feeling. The London *Economist* of January 13, commenting on the fact that cotton is now lower than at any time since the War—except temporarily in the panic of 1873—expresses the general belief that any change in the cotton market can only be to higher prices. The prospect of a ready market for these two most important items of our exports is an encouraging feature in the general trade situation. At the West there has been active speculation in both wheat and corn in view of the good foreign demand, and corn has experienced some violent fluctuations as the result of the manipulations of the contending speculators on either side of the market. The dry-goods trade has shown some improvement in the interior, in parts of the country where traffic has not been interrupted by heavy snows, but the coal and iron trades continue dull. The influx of money seeking investment has been apparent during the week, and rates of interest for call and temporary loans have declined. There has been a growing disposition to invest in good railroad mortgages. Railway stocks, however, have been but little affected by the larger supplies of money. The average decline in stocks in the last five months has been from 13 to 14 per cent. on the market prices of, say, September 1. At this decline the market is very dull, but seems strong. The belief gains ground that stocks are reasonably safe to buy at present prices, but it has not become general enough yet to cause any improvement in the market. As compared with a week ago—say with January 23—prices of stocks generally are about 3⅜ per cent. lower. The greatest decline, however, has been in a few stocks, viz.: Union Pacific 3⅝, Lake Shore 1¾, Denver and Rio Grande 1¾, Canada Southern 1¼, Jersey Central 1⅞, Northwest 2⅝, St. Paul and Omaha 2¾, Texas and Pacific 1¾, and Delaware, Lackawanna and Western 2¼.

Interest in the fate of the Shipping Bill has fallen off because it was passed by the House of Representatives in a shape which satisfied neither side of the controversy. The policy of free ships was defeated. So was that of subsidies. When it went to the Senate it was referred to the Committee on Commerce, a subcommittee of which, Messrs. Conger, Vest, and Miller—who were also members of the joint investigating committee—now has charge of it. Senator Conger wishes to restore the bounty clause, Senator Vest desires to add a free-ship provision, and it is believed that Senator Miller would probably not be unwilling to report it in its present form. It seems likely, therefore, that the sub-committee will be unable to agree. If the Senate should finish the tariff debate in time to amend the bill, it would have to go back to the House, and that body, judging from the course of the discussion already had, would probably fail to adopt a more positive measure, and the whole question would be left where it was before the meeting of Congress. This conclusion would be regretted, because, while the bill does little or nothing to revive the carrying trade, some of its provisions, such as that relating to advance wages, would promote the welfare of such American sailors as still survive.

There were signs in the State Assembly on Wednesday, in the debate on the civil-service reform resolutions, that the Democrats are still, as the Republicans used to be, in favor of civil-service reform, but against "this particular measure." They cannot bear to endorse the Pendleton bill. Nor do they see why (although nobody is fonder of this reform than they are) it could not have come a little later, when they had had a little of the abuses which the Republicans have been enjoying for twenty years. They would like reform some time when each party had had its fair share of the spoils. They resemble on this point the Continental peace men in Europe, who desire peace very much, but do not want it till they have had another war in which they can give all the enemies of peace a good dressing. They like to have civil-service reform, also, to put in the platforms. What will the platform be, they say, without a civil-service-reform plank? And, of course, if civil-service reform is embodied in a law, it cannot be put in the platform, which is the best, and, in fact, the only fit place for it. We would remind them, apropos of all this, however, of the 196,000 majority at the last election. They cannot keep this majority by civil-service reform in the platform, or by putting it off till the Democratic "boys" have had time to warm their toes. The majority cares nothing about "the boys," or their toes, and are not troubled because either party has not had a fair share. The question for the Democrats now, and the sole one, is, Which do you prefer—power without spoils, or no power and no spoils?

The St. Louis papers are publishing, to the intense amusement of their readers, some letters which the late Republican boss of Missouri, Mr. Chauncey I. Filley, after General Garfield's election, addressed to a prominent politician there, requesting the latter to recommend him, Filley, for a place in General Garfield's Cabinet. The letter contains a draft of the desired recommendation, made by Filley himself, in which he sets forth all his extraordinary virtues and excellences of character and ability. Thus, he says of himself that he "combines a superior order of business talent, practical information and acquaintance with systematic methods, and fertile originations and quiet execution." But that is not all. "Unyielding in principle and unswerving in the execution of trusts, he has never been questioned in the faithful execution of whatever has devolved upon him, and has never sacrificed the public interest or political interests to self, but, on the contrary, self for them." This sublime disinterestedness must strike the people of Missouri, who know Mr. Filley so well, very amusingly. But he has still more to say of himself: "He is a great planner." So it appears. Of course he has won all the Republican successes ever achieved in Missouri, by his own personal ability and effort, and he opens in his self-recommendation an unbounded vista of future achievements if President Garfield will only take him into the Cabinet. It has long been known that Mr. Filley was very clever in getting up complimentary dinners and other testimonials of public esteem for himself, but this letter is probably his greatest effort. It has undoubtedly finished him, for everybody is laughing, and a St. Louis paper is moved to remark that Mr. Filley is "essentially a self-made man."

Governor Pattison, of Pennsylvania, who, to the delight of some people, promised a return to the simplicity of the early days of the Republic by declining an inauguration escort tendered by a voluntary military company, has not given so much satisfaction since he went into office. He did not, like Thomas Jefferson, according to the homely story, ride on horseback to the Capitol, and hitch his horse to the fence with his own hands, preparatory to taking the oath, but he rode quietly in a

car, unaccompanied by pomp and splendor—and then he appointed Mr. Cassidy Attorney-General. This selection disappointed the better class of Democrats and the Independents, because the favor extended to a man who had been the attorney of corporate monopolies, and had been conspicuous in "local politics" of an unsavory sort, was not a good beginning for a reform administration. The only persons pleased were the regular Republicans, who would like nothing so well as the failure of the movement for better government which resulted in the overthrow of the Machine last November. The Governor's nomination of Mr. Page for Comptroller and Mr. Smith for Recorder of Philadelphia tended further to estrange members of his own party, and to weaken the support which might have been secured from the Independents. On the other hand, Mr. Pattison has taken another step toward the simple manners of the Fathers. When his private secretary, the Rev. Mr. Everett, appeared in the Senate and announced that he had to present "a communication from the Governor," a friend suggested that he had forgotten to say "his Excellency"; but the secretary said he had made no mistake, and that the Governor wished the vain and empty title to be dispensed with. There is no objection to this; but, as the absence of the innocent militia company on Inauguration Day did not excuse unwise appointments to important offices, so dispensing with the harmless title of "his Excellency" will not content the people to dispense with more substantial reforms in the Administration. Governor Pattison, however, is just beginning, and after he has amused himself with these conspicuous displays of official austerity, it is to be hoped he will turn with better judgment to the practical business of the State.

The "State Trades' Assembly," which held a meeting the other day at Albany, took up the old subject of convict labor in prisons, and a bill was reported which, it is believed, will be pushed in the Legislature this winter. Its main object is to prevent the employment of convicts in the trades in competition with free labor, on the ground that such employment seriously affects the rate of wages. This idea is perpetually being brought up before legislatures and State conventions with an earnestness which shows that a great deal of importance is attached to it by some reformers. Their feeling about it resembles that of the Pacific Coast reformer toward "Chinese cheap labor." The substitute proposed for the convict contract system is very inadequate. The bill provides that all convicts shall be employed on "State account"; that no more than fifty shall be employed in any one trade; that they shall produce no articles of "American manufacture" except for State supplies; that the Sing Sing prisoners—these constitute the bulk of the entire convict body—shall be employed in the lime quarries, and those at Clinton in the iron mines. The prisons of this State are now self-supporting, the contract system having resulted in a surplus during the last year of $6,257 58, and the proposed plan is admirably adapted to destroy this surplus and create a deficiency. But for the purpose of preventing any competition at all between convict and free labor, something much more comprehensive and sweeping is needed. A convict employed on "State account," to produce supplies needed by the State, is so far competing with non-convict labor, which would otherwise have to be employed for this purpose. Moreover, if the clause with regard to "American manufacture" means, as it probably does, that convicts ought not to produce anything at all except for State supply, still, if the State is going to put the product to any use, the free laborer is not perfectly protected.

If there is anything in the theory of the labor reformers on the subject of convict employment, there is only one sure and complete remedy. The convicts, it is admitted, must be kept at work. Hard labor in the prisons has been the settled policy of the State for many years, and nobody proposes that convicts shall be kept idle. The problem is how to keep them constantly at work, and yet prevent their labor from coming into competition with non-convict labor. The only way to do this effectively is to destroy what they produce as fast as they produce it. Keep them at work in Sing Sing, Auburn, and Clinton, making boots, shoes, harness, etc., etc., just as at present, but as fast as the product of their labor accumulates collect it all together in some public place, and have it burnt up by a public officer under the supervision of a trade committee to see that the work is thoroughly done. The State would then, of course, derive no revenue from the prisons. These would have to be supported by taxation, while the regular destruction, at stated intervals, of all the product of convict labor, would make it perfectly clear that the general rate of wages was not being lowered by cheap convict labor.

Mr. Field again brought the Civil Code to the attention of the public on Tuesday, in an address delivered before the Law Reform Society, and the annual attempt will no doubt soon be made to get it through the Legislature. The principal argument he advanced in favor of codification was the necessity of simplifying the law, and reducing the volume of judicial decisions which pours forth from the press every year in the shape of reports. It is a curious fact that many eminent lawyers of the last generation were fond of dwelling on the necessity of certainty in the law as an argument against, not in favor of, codification. A correspondent, whose efforts greatly contributed to the defeat of the proposed "Civil Code" last winter, calls our attention to the following extract from a letter of the late Judge Curtis to Mr. George Ticknor, written in 1836:

"Perhaps, however, there will be no common law when you come back; for among other wild theories with which the Legislature now in session are bitten is an idea of codifying the common law. You remember that the statute law of the Commonwealth was undergoing revision when you left Massachusetts. Having got well through with that, the Legislature are so much encouraged that many of them imagine that the whole body of the law may now be reduced to a pocket volume, so that any man may carry about with him his own lawyer. It does not occur to them that a good system of law must be at the same time so extensive as to apply to and govern all the existing relations between men in society, so stable and fixed in all important principles as to furnish *a certain* guide, and so flexible as to be capable of adaptation to the ever-changing forms into which property is thrown by the unwearied enterprise and all-absorbing love of gain which distinguish our people."

If Judge Curtis were writing now, he might point to the experience of this State as a proof that what codification does is to make law uncertain. The more codes we have, the more litigation arises over their meaning and the more necessity for continual judicial interpretation, or, in other words, for more volumes of reports to be consulted. The Code of Procedure produces more new law in a year than the Massachusetts Practice Act does in ten. The Civil Code will not do away with the common law, but will be a new statute, to discover the meaning of which the judges will have to resort to the common law whenever doubt arises—*i. e.*, every day in the week. Indeed, we may say that the objection to our code is not so much that there will be "no common law" when it is passed as that there will be more than we can stand. It ought to be called a bill to promote the multiplication of law reports and to increase the uncertainty and expense of law.

There was a peculiarly bad social homicide at State Mills, Rappahannock County, Va., the other day, between two brothers-in-law, named Brown and Taylor respectively, prominent business men of the place. It arose out of a dog fight. Their dogs had a fight in front of Mr. Taylor's house, and, the Taylor dog getting the worst of it, young Mr. Taylor struck the Brown dog, from which there resulted "hot words." Thereupon Mr. Taylor, senior, appeared on the scene with an axe, and he and his son assailed Mr. Brown with vigor. Mr. Brown for a while defended himself successfully against the axe with an ice-hook, but a reinforcement arriving to the Taylors in the shape of another son with a heavy revolver, the fortunes of the day were soon decided. The unhappy Brown received three shots in the lower back, and died on the field. His little daughter was present during this pleasing scene, but was not hurt. We need hardly say that Mr. Brown was "a popular and brave man," and that his fate is much deplored in the neighborhood.

In the Star-route trial last week the testimony of the witness Moore with regard to Dorsey was corroborated by Mr. Boone, the contractor. Boone testified that he recommended Moore to Dorsey as a good man for his purpose, and that he got up bids through postmasters under Dorsey's direction. This lets in what is known as the Clendenning correspondence, with which the public is already familiar. Clendenning was Postmaster at Fort Smith, and we find Dorsey writing to him in 1877 forwarding bonds which he desires "made for a friend," and begging him to let no one know from whom they came. Clendenning, in reply, called Dorsey's attention to the fact that he was asking him to commit a misdemeanor, upon which Dorsey said that he knew nothing about the matter, and that he merely asked it as a favor to Boone. This evidence was not ad-

mitted on the former trial, and does not tend to improve Dorsey's case.

The New York County Medical Society held a meeting on Monday to discuss the new "Code of Ethics" adopted by the State Society. This code was the cause of much discussion last year, as it permits consultations between homœopathists and regulars, under the following rule: "Members of the Medical Society of the State of New York, and of the medical societies in affiliation therewith, may meet in consultation legally qualified practitioners of medicine; emergencies may occur in which all restrictions should, in the judgment of the practitioner, yield to the demands of humanity." A resolution to approve the code was adopted by a vote of 147 to 60, and it is hard to see how sixty physicians could have been found to vote against it. It is simply permissive, compels no regular physician to do anything that he does not like to do, and is placed solely on the ground of humanity. When we think that the "emergencies" referred to mean often nothing more nor less than the life or death of the patient, the case seems a pretty clear one, and it is not surprising that the minority gave no solid reasons for their position with regard to the matter.

The friends of the higher education of women are to present their petition to Columbia College on the 5th of February, asking not for "co-education," but for the extension to women, under suitable regulations, of the educational advantages now enjoyed by men. Columbia College is probably less able to resist this movement than any other in the country, because it has large and increasing means, and because it is situated in a great city, within reach of hundreds of young women desirous of a high education, who could take it without leaving their homes. In fact, there is no argument against the demand of the petitioners which has any weight in our day except want of money. Against co-education much may be said, but co-education is not asked for here, probably to the chagrin of many good conservatives, to whose horns a proposal to congregate the two sexes in the same lecture-rooms and laboratories, at the same hours, always offers some delightful tossing.

Mr. George Munro, the eminent pirate, whose efforts in behalf of cheap books have attracted world-wide attention, has given another proof of his public spirit and zeal in the cause of learning in endowing three tutorships in a Canadian college at Dalhousie, at $1,000 a year each. How much more sensible this employment of the money made in his business is than the use the old pirate put his to in paying what he called an *honorarium* to the foreign author! The ill-conditioned fellows who got that were never satisfied; on the contrary, they were always complaining that they were not given enough, and even treating the payment of what *was* paid as a recognition of their "rights," and consequently as an argument for an international copyright law. No man can pretend that the Munro system suggests the idea of "rights" of any description, except, of course, the right to cheap books. By the way, what has become of the copyright treaty in the negotiation of which the old pirates were so much interested? We were assured at first that if we would only keep silent about its terms, it would be all right. Everybody has been silent about them now for some time, yet we do not hear of its having been signed. Have the wicked foreign publishers killed it?

A discussion has been going on in England, with regard to bankrupt legislation, which has led to an examination of the French law on the subject, and its stringent provisions with regard to bookkeeping. In France the law forces the trader to keep books, prescribes the kind of books he shall keep, and the entries he shall make. There has also to be an annual inventory, and all letters have to be filed and kept. The *Times* wants some such provision inserted in the Lowell bill, and thinks that the great difficulty with bankruptcy laws in this country has always been that they have not done enough to promote commercial morality. The French regulations on the subject of bookkeeping are, however, a very good illustration of the difference between the French and the English or American ways of looking at such subjects. Judge Lowell did not attempt to introduce governmental regulation as to bookkeeping in his bill, probably because he felt sure that it would kill the bill. To prescribe in advance what sort of books he shall keep, and what he shall do with his letters, is something which the business man in this country will probably never let the Government do.

O'Donovan Rossa has let it be so generally known that he is at war with England that the announcement of his intention to "strike her in five or six different places in one night" will take nobody by surprise. It is by just such sudden and heavy blows as this that the greatest victories in war have always been achieved. To strike them, of course, money is needed, and he says that $2,500 is needed, or about $500 for each blow. He rather discourages subscribers, however, by announcing as part of his programme that "anything is fair in war." When this maxim is applied to the funds furnished it has a disheartening effect on the spirit even of the most determined people.

The election of the extremely extreme O'Brien, editor of the blood-and-thunder *United Ireland*, at Mallow on Wednesday, over the Liberal Naish, to fill the place of the Liberal Johnson, raised to the bench, is a sign, and a very ominous one, of what will happen in Ireland at the next election. Mallow is a small and easily manageable constituency, polling about 250 votes, and yet O'Brien carried it by a majority of seventy-two, his predecessor having been a Ministerialist. This means, beyond doubt, that there will be but few if any Irish Liberals in the next Parliament. Davitt, Healy, and Quinn have been convicted without a jury, in the Queen's Bench in Dublin, of inciting to civil war by wild speeches, and sentenced to find security for their good behavior or go to jail for six months, all of which is so much political capital for them, and no punishment at all.

An emergency ministry has been formed in France, on the resignation of MM. Duclerc, Billot, and Jauréguiberry, with M. Fallières at its head. The Duclerc Ministry having been brought into being for the purpose of bridging over a gap, the only thing expected of it was that it should have and show as little as possible any will of its own, and that in its whole conduct it should simply be controlled by the influences prevailing in the Chambers. On the whole, the Duclerc Ministry performed its mission in that respect. It had no strong individuality in its composition, and no definite political programme to carry out. It drifted along, as it was expected to do, until in an unfortunate hour it was struck by an opportunity, as it thought, for making a demonstration of energy, which in fact, however, turned into a demonstration of weakness, not to say imbecility. The new Cabinet, of course, is but a fresh symptom of helplessness, as it proposes to know no policy but that of the Chambers, and accepts the proscriptive measures which its predecessor went to pieces in trying to resist. There is therefore nothing to hinder the punishment of the Orleans Princes by exile and expulsion from the Army, not because they have committed any offence, but because the folly of another man makes some people think they might become dangerous to the state.

The crisis is evidently one for which the proper remedy is dissolution. The Radicals, who are turning Prince Napoleon's escapade into an excuse for attacking the Orleans family, ought to be sent back to their constituents to find out what they think about this disturbance. In fact, it is time that the constituents were consulted on the general question whether there has not been reform enough for the present, and whether what the country needs is not rest. The condition of the finances is bringing French property-holders — a very timid class—to the perception that there have of late been too many public improvements, and that too many reforms are now pending, and that there are, in short, too many bees in the legislative bonnet. The unruly and unparliamentary condition of the Radical wing of the present Chamber is illustrated by the fact that they, with the assistance of the Extreme Right, passed a bill over the heads of the Ministry in the last session, making the judges elective, as their contribution to the "reform of the magistracy." It is well known, however, that an attempt to carry out such a law would ruin any Ministry, and perhaps ruin the Republic, so much horror would it excite among the voters. The Right supported it simply to bring the Government into contempt and alarm the constituencies, well knowing that it could not get through the Senate. The Left, however, had so little sense of its duty and responsibility as a majority, that it accepted their aid, apparently caring no more than the Legitimists or Bonapartists in what condition it left the Republican Cabinet.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 24, to TUESDAY, January 30, 1883, inclusive.]

DOMESTIC.

THE Republican Senators have held conferences to unite in their action on the Tariff Bill, at the second of which, on Thursday, a proposition to take a recess each day at 6 o'clock was voted down, only three or four Senators voting in the affirmative. A second proposition, that the Senate should prolong its sessions so long as a quorum could be kept in the Chamber, was adopted unanimously. This, if followed, will annul the resolution adopted a few days ago to adjourn each day at 6 o'clock. Before the conference separated it came to be pretty well understood that the free-lumber amendment would be defeated.

The Senate continued the tariff debate on Wednesday. A motion by Mr. Vance to amend so as to make the duty on steel railway bars and railway bars made in part of steel, weighing more than twenty-five pounds to the yard, 7-10 instead of 8-10 of a cent, was adopted by a vote of 25 to 21. On Thursday the session was spent in listening to speeches on the life and character of the late Senator B. H. Hill, of Georgia. The usual resolutions were adopted, and the Senate adjourned early as a further mark of respect. The tariff debate was continued on Friday, and further reductions made in the iron schedule. Taggert iron was the only kind on which the duty was not lowered. On iron or steel T-rails the rate was made 8-10 of a cent a pound instead of 1¼ cents per pound as at present. On Saturday reductions were made from the rates fixed by the Finance Committee on hoop, band, and scroll iron, on chains, and on fence and wire rods. On Monday the reductions in the iron schedule were continued.

The House on Wednesday went into Committee of the Whole on the Naval Appropriation Bill. All the amendments to the bill were adopted except that providing that the chiefs of bureaus shall receive no additional pay, and that relating to the appropriation for torpedoes. On Thursday the Naval Appropriation Bill was passed and the Tariff Bill taken up, but the House adjourned early out of respect for the late Senator Hill. On Friday and Saturday and Monday the House went into Committee of the Whole on the Tariff Bill.

On Tuesday the Senate completed the metal schedule and began the consideration of the sugar schedule.

In the House, the chemical schedule being under consideration, the Democrats took up most of the day with filibustering proceedings.

Secretary Folger has addressed a letter to the Speaker of the House setting forth the necessity of providing additional vaults for the storage of standard silver dollars, or of discontinuing the coinage required by law of $2,000,000 monthly. The vaults recently built are now practically full, and the Treasury has on hand $94,016,842 in standard dollars and $26,521,692 in fractional currency, making a total of $120,538,534, weighing about 3,500 tons. The Secretary says that unless the law is repealed before Congress adjourns, provision must be made for storing this year's coinage, which is estimated at $27,000,000, less the amount put in circulation.

The plan submitted by Gen. F. A. Walker to the Senate Special Committee to ascertain the results of the Tenth Census contemplates a reduction of the volume of the reports upon special topics from 11,000 to about 8,000 pages. This reduction will be accomplished by the compression of such parts of the reports as are general in their character, though the scope of the completed work, according to General Walker, will remain practically the same as originally planned. General Walker says that the work of the Census is not in as confused a condition as recent reports would indicate. Mr. Seaton, in charge of the work, is incapacitated by mental and bodily illness.

The Kansas Legislature in joint session on Wednesday reëlected Mr. Plumb United States Senator. The New Jersey Legislature reelected Senator McPherson on the same day. He received forty-three votes to thirty-six for Hobart. On Saturday the Colorado Legislature in joint session elected Thomas M. Bowen Senator for the long term, and H. A. W. Taber for the short term.

The Senatorial deadlocks in Minnesota and Michigan continue. Windom's chances of reëlection have been growing steadily poorer. In Nebraska, General Charles F. Manderson has succeeded in uniting the Republican caucus, and will be elected.

On Monday the United States Supreme Court handed down two decisions of interest. A Kentucky statute excluding colored citizens, because of their race, from service on grand juries was declared unconstitutional; and a law of Alabama prohibiting miscegenation was held to be not in conflict with the Fourteenth Amendment or with the civil-rights legislation founded on it, for the reason that it applies the same punishment to both white and black offenders without discrimination.

The Smithsonian Institution has transferred to the Harvard College Observatory the work of collecting astronomical information in this country. This was done at the request of a union of foreign observatories, which includes all the larger observatories, some fifty in number, on the European Continent, and makes the Harvard Observatory the centre of astronomical information for the United States.

A meeting of bondholders of the Southern States which have repudiated their bonds, was held on Monday, at the New York Clearing-house. Resolutions were adopted calling for the repeal of the Eleventh Amendment to the Constitution, which prohibits a citizen from suing a State, and approving the joint resolutions introduced into Congress by Mr. Moore, of Tennessee, providing for the repeal of the Eleventh Amendment, and for the legal enforcement of the obligation of contracts entered into by any of the States of the Union; and a resolution was also adopted appointing a committee, to include in its list of members the holders of bonds of every State that has repudiated its debt, and the president of a bank or a private banker of every large city in the Union, to coöperate in securing the passage of Mr. Moore's resolutions.

The Massachusetts Legislative Committee on Woman Suffrage has decided to report a bill in favor of municipal suffrage for women. In the Senate on Thursday the first reply to Governor Butler's recommendations in his annual message came in the form of a report of the Committee on Election Laws against making election day a legal holiday.

An important point for the Star-route prosecution was gained on Thursday, when Judge Wylie allowed the introduction of Dorsey's letters to Postmaster Clendenning, which he excluded at the former trial. He said that at the first trial he had supposed that the letters were offered to prove some official misconduct on the part of Senator Dorsey while in the Senate, but now it appeared that he had overlooked the other question, whether or not they tended to show the connection between Senator Dorsey and the other defendants as having existed even from the beginning of the bidding. That was a point of great importance, and the former decision had not taken it into account, either because it had not been presented or because he had overlooked it. The letters were requests from Dorsey to have bogus bonds prepared and sent to him. He said: "I ask you to do it as a special favor to me. Under no circumstances allow anybody to know that I have written on this subject."

The Grand Jury at Washington on Friday presented an indictment against William Dickson, foreman of the first Star-route jury, charging him with having "corruptly endeavored to influence jurymen."

The unidentified victims of the Newhall House fire were buried in Milwaukee on Thursday with impressive ceremonies. Pursuant to an agreement of the clergy of all sects, twenty-three bodies were given to the Protestants and twenty to the Catholics. Nearly all the business houses and all the city and county departments were closed.

In the Newhall House inquiry at Milwaukee on Wednesday Mr. Delaney, the night clerk, said he thought the fire originated in the bar-room; that the hose in the halls had not been used or examined for the last two years; that he could have called the guests if he had not been engaged upon matters which he considered more important than alarming guests; that he had twenty-five minutes' time between the discovery of the fire and the time when he knew the hotel was doomed; that he could have run through every hall in the hotel and alarmed every guest in that length of time, but that he had to attend to office duties—saving papers and valuables, knowing the safe to be useless in case of a fire.

The Female College of Milwaukee was damaged to the extent of $10,000 by fire early Friday morning. Sixty young women slept on the premises, and were for a time in great danger, but were all safely rescued by the firemen and police.

The people living in the northeastern part of the city of Wilkesbarre, Penn., were startled early Wednesday morning by a loud report resembling that which accompanies an earthquake. Numerous gaps from three to eight inches in width were found in the streets, and the foundations of many houses were unsettled thereby. The wooden props in an old disused mine had rotted and were giving way. People living over the mine have removed their effects.

Mr. A. A. Sargent, United States Minister to Germany, has made to the State Department, under date of Berlin, January 1, an official report with regard to the threatened exclusion from that country of American pork products. Mr. Sargent says: "A very strong feeling of opposition has been aroused in Berlin and other German cities, as well as in the manufacturing districts generally, against the threatened exclusion of American pork products. Strong protests are being sent in to the Bundesrath, and committees of merchants and others have visited the capital to protest against the measure."

The Secretary of the American Iron and Steel Association reports that the production of Bessemer-steel ingots in the United States in the last year was 1,696,450 tons, an increase of 10 per cent. over the production in 1881. The quantity of Bessemer-steel rails produced in 1882 by the fourteen completed works was 1,334,349 tons, an increase of 6 per cent. as compared with 1881.

The Princess Louise, having decided to spend the next few months in the Bermudas and not in Charleston, embarked at Charleston for those islands on Wednesday. An immense throng witnessed her departure.

FOREIGN.

The condition of political affairs in France has continued to excite some anxiety. The Empress Eugénie left Paris for London on Wednesday. There were various rumors as to the cause of her departure, some saying that she had been requested to leave by the authorities; but the Imperialists declared that this was not true, and that she left only because she feared the marks of sympathy which she received might develop into a political demonstration and compromise her friends. The Ministry held conferences with the Committee of the Chamber of Deputies on Wednesday and Thursday over the proposed expulsion of the Orleans Princes. On Thursday the Committee adopted a bill excluding from French territory and the colonies all members of families which have reigned in

France, depriving them of political rights as citizens, declaring them ineligible for any office, and preventing them from belonging to the Army. The Government was strongly opposed to the measure. An effort was made on Saturday to agree to some compromise, but it was unsuccessful, and on Sunday the Ministers tendered their resignations to President Grévy, which were accepted.

President Grévy on Monday asked M. Jules Ferry to undertake the formation of a Cabinet, but he declined, and it was then resolved to resort to a combination Ministry, under the Presidency of M. Fallières, all of the late Ministers, except M. Duclerc, General Billot, and Admiral Jauréguiberry, retaining their portfolios. M. Tirard will be Minister of Foreign Affairs, M. de Mahy Minister of Marine ad interim, and General Campenon Minister of War. In the Chamber of Deputies on Monday M. Fallières explained the divergence of views which had led to the resignation of the Ministry. He said though the new Ministry was not completely formed, it placed itself at the disposal of the Chamber, as the interests of the country required that the question raised should be promptly settled. The Chamber decided to begin the debate forthwith. In the course of it M. Ribot congratulated the outgoing Ministers on their attitude. The only danger to the republic, he said, was perpetual crises, which raised doubts as to the stability of the republican institutions, and it behooved the Chamber to strengthen the republic by a temperate and tranquillizing course.

While speaking in defence of the compromise bill of M. Fabre proscribing pretenders to the throne, in the Chamber of Deputies on Tuesday, M. Fallières became suddenly ill and fainted, but no serious results are feared.

The Paris *Union*, the organ of the Comte de Chambord, said on Monday: "We have too much respect for the truth to deny the existence of a monarchical conspiracy. We have encouraged it by speech and writing, and salute the development of it with joy."

The seals on Gambetta's papers in Ville d'Avray and Paris have been removed. The papers are said to contain copious notes on the subject of a reorganization of the Army.

The London Foreign Office has published the reply of Lord Granville, Foreign Secretary, to a despatch of M. Duclerc, the late French Minister of Foreign Affairs, questioning the right of England and Egypt to withdraw or modify the Joint Control. Lord Granville says the British Government is unable to see anything which can be considered an engagement by the Khedive that the Control should be perpetually maintained. The result of the military insurrection virtually abrogated the Control, and it cannot be contended that former arrangements are still obligatory.

The Egyptian *Official Gazette* has published a decree of the Khedive prolonging the powers of the International Tribunal until February, 1884.

The Porte has sent a circular note to the Powers, pointing out that the English note concerning Egypt is at variance with Turkey's admitted rights over the latter country. The Porte has also requested the Turkish Ministers abroad to call attention to the absolute necessity of a strict observance of the sovereign rights of the Porte. Germany has advised the Sultan to accept the English proposals, as they are in the interest of Turkey itself.

M. de Giers, the Russian Foreign Minister, paid a visit to the Emperor of Austria on Thursday, and the Austrian as well as other Continental newspapers have since been busily engaged in discussing the significance of the visit. In addition to his interview with the Emperor, M. de Giers has had interviews with Count Kálnoky, the Austro-Hungarian Foreign Minister, the German Ambassador at Vienna, and other prominent men in Vienna. One of the Berlin correspondents says M. de Giers's visit to Vienna has resulted in a complete understanding between Russia and Austria on the leading political questions, and also in the arrangement of the differences in regard to the navigation of the Danube; and a majority of the despatches from the Continent to the London newspapers state the prevailing opinion to be that whatever was conceded by Count Kálnoky to M. de Giers was conceded with the full concurrence and approval of Germany.

A placard was recently posted in a public garden in St. Petersburg warning the people to avoid places frequented by the court, lest they should be hurt by anything that might happen.

The text of a letter, dated December 22, from the Emperor of Germany to the Pope has been published, in which the former says he hopes the satisfaction of the Pope at the re-establishment of the Prussian Legation at the Vatican will afford grounds for His Holiness to reciprocate by similar advances. The Emperor also says, were he convinced that his desire for an understanding were reciprocated, he would be able to concede that the Diet should reconsider the May laws, which are not permanently required for the maintenance of peaceful relations with the Vatican. A despatch from Rome says that the publication of the contents of this letter has caused displeasure at the Vatican, as it was supposed its contents would have been kept secret for a while.

The funeral of the late Prince Charles took place at Berlin on Wednesday. The Emperor and Empress, members of the royal family, and a crowd of distinguished persons were present. The services were imposing, and the Emperor is said to have been much affected.

Prince Charles, by his will, left 27,000,000 marks, apportioned as follows: Twelve millions to his son, Prince Frederick Charles; 6,000,000 to each of his two daughters; 1,000,000 to the Order of St. John of Jerusalem, of which order the late Prince was Grand Master, to be employed in founding a home for convalescents; 1,000,000 to other charities; and the 1,000,000 remaining to be at the disposal of the Emperor William.

More than 3,000 congratulatory letters and telegrams were received by the Crown Prince and Princess of Germany on the occasion of the celebration of their silver wedding on Thursday. The Emperor presented a massive silver tea-service, the Queen of England a marble statue of herself, ten of the chief towns of Prussia a suite of dining-room furniture valued at $19,000, and the city of Berlin $29,500 for the foundation of a sanitary school. The sum of $200,000, collected throughout Germany, was received for benevolent purposes.

Messrs. Davitt, Healy, and Quinn, charged with inciting to lawlessness, were ordered on Wednesday to find securities for their good behavior or go to prison for six months. The Lord Chief Justice of the Queen's Bench Division, in giving judgment, held that the language of the defendants was distinctly seditious, and an incitement to civil war. Judge Lawson added that he had never read more blasphemous language than that of Mr. Davitt. Messrs. Davitt, Healy, and Quinn have declared their intention of refusing to give bail, and will go to prison. Some of the men who were arraigned in the Police Court on Saturday, the 20th, on the charge of conspiracy to murder Government officers, were reëxamined on Saturday. The alleged murderers of Field, the juror, were completely identified in the course of the proceedings. Some interesting disclosures were made in regard to the methods of the conspirators. One of the informers testified that after the murder of Detective Cox the old Vigilance Committee was broken up, and each of the nine "centres" selected two men from the rank and file of the Fenian Brotherhood, who were sworn in as a new Vigilance Committee, and were bound to obey and carry out the decree of a body called the Directory, of which Joseph Mullett, one of the prisoners, was chairman. Another examination will be held on next Saturday, and the London *Times* says it believes the Government is in possession of information which will bring home complicity in the Phœnix Park murders to at least two of the prisoners.

Mr. Davitt, in a speech at a meeting of the National League in Dublin on Sunday, said he could not help feeling that the most godlike act a man could perform would be to complete the crushing of the hideous power of landlordism. If Mr. Gladstone could give a legislative blow to landlordism, his name would be revered by every generation of the liberated victims. To wage increasing strife against Irish poverty, misery, and crime, Mr. Davitt said, seemed to him an irresistibly imperative duty. In conclusion, he asserted that Irish landlordism and Castle rule were being beaten inch by inch.

The contest at Mallow, County Cork, Ireland, for the seat in Parliament made vacant by the election of the Right Hon. William Johnson to a Judgeship in the Queen's Bench Division, resulted in the election of Mr. O'Brien, editor of the *United Ireland*, over the Government candidate, Mr. John Naish, by a vote of 161 to 89. This is looked upon in England as a confirmation of the fears that at the next general election the ranks of the Home Rulers in Parliament will be formidably reinforced.

There was a great storm in England on Sunday and Monday, and great injury was done to shipping. Many lives were lost. The heaviest floods that have occurred in the British Lake Districts for twenty years prevail.

Sir Alexander Galt, High Commissioner for Canada, in a speech at Edinburgh, Scotland, on Friday, referring to the relations of the British colonies to the Empire, said it was doubtful whether or not, as the colonies increased in material power, they would continue satisfied. Their present position of separation, he said, was neither necessary nor desirable. He suggested the possibility of cementing the whole Empire by a scheme of imperial federation.

The members of the party of the Spanish Dynastic Left in the Cortes have issued a circular ordering the formation of committees in the towns and villages of Spain, and declaring that the Liberals desire the constitution of two great parties of Liberals and Conservatives, which shall promote the interests of Spain, assure prosperity, and close the era of revolutions.

A despatch from Madrid says the West Indian members of the Cortes have asked for explanations of the intentions of the new Cabinet regarding the regulations in Cuba permitting the use of irons in the corporal punishment of negroes, and have protested against the Cuban Treasury being burdened with the expense of Spanish legations and consulates in America. The autonomists intend to press for reforms of the tariff and in the condition of the negroes.

The Brazilian loan of £4,000,000 at 4½ per cent., put upon the market by the Messrs. Rothschild at 89, has been more than fully subscribed.

Switzerland has rejected the naturalization treaty proposed by the United States, according to which nationality is forfeited by residence for a certain period abroad, on the ground that this clause of the treaty is contrary to Swiss law.

Bulgaria has given notice to the British diplomatic agent at Sofia, demanding admission to the London Conference on the Danubian question.

A winter carnival has been in progress in Montreal during the week, which was attended by a great number of people from the United States. Winter sports of all kinds and an ice palace were the principal attractions.

NATIONAL AID TO COMMON SCHOOLS.

THE two bills before Congress, one in the Senate and one in the House of Representatives, granting money from the National Treasury for the support of common schools in the States which have more than a certain proportion of illiterate inhabitants, have to be judged from two points of view entirely distinct and different. The first question is, whether a condition of things exists which would in any way suggest the desirability of national interference with the subject of popular education in the several States. In this respect the census of 1880 has made some startling exhibits. We have one State—South Carolina—in which an absolute majority, nearly fifty-two per cent. of all persons entitled to vote, cannot write. In Mississippi the proportion of illiterate voters is over 46, in Louisiana over 47, in Georgia over 45, in Tennessee and in Virginia over 39, in North Carolina over 42, in Florida over 38, in Alabama over 46, in Arkansas over 30, in Kentucky 26, in Texas over 24, in Maryland over 19, in Delaware over 17, in West Virginia over 16, and in Missouri 11 per cent. Of course a large majority of the illiterate population in the late slave States—nearly 70 per cent.—are colored people, 30 per cent. being poor whites. It will strike every one that if the success of free government is to rest upon the educated intelligence of those who have the right to participate in it, most of the Southern States are in a very unsafe condition.

The reflection will also suggest itself, that while in the South there has always been a larger proportion of illiterate voters than in the more active and progressive Northern States, the emancipation of the slaves and their endowment with the right of suffrage suddenly injected into the body politic a mass of ignorance fearful to contemplate. At the same time it was perhaps not unnatural that immediately after the war the white people of the South should have shown little alacrity in improving the new order of things, which had been forced upon them much against their taste, by the prompt introduction of efficient systems of popular education. And although the spirit of sullen resistance faded away to a great extent after a few years, most of the Southern States found themselves too much impoverished by the war to spend much money in the establishment and conduct of public schools. The result is that while the necessity of an efficient system of popular education is far more pressing in the South than anywhere else in the country, the amount of money raised annually for school purposes in all the late slaveholding States combined is not as large as that expended for the same purpose by the State of New York alone.

Now, this argument is made: The condition of things which precipitated upon the South this tremendous mass of ignorance armed with political power, was imposed upon that section of the country by the Government of the United States, at that time virtually representing only the Northern people. Thus we emancipated the slaves and made voters of them. Should we not now, when the dangerous consequences of the last of these measures become so apparent, do all in our power to mitigate them? Should we not, after having made the late slaves voters, contribute our share toward making them intelligent and well-educated voters? Nobody will deny that this argument is a strong one, and that people of a fair-minded and humane way of thinking must be much impressed with it.

Nor does the opposition to the measures in question deny the weight of this argument, but it reasons from an entirely different point of view. The matter of popular education has always been subject exclusively to State management. The General Government has never interfered with it except by granting lands to new Territories and States, to form a school fund, and by establishing a bureau merely for the dissemination of educational information. But a direct grant of money to the States for the support of their school systems—money to be raised by taxation and then to be taken out of the Treasury of the United States, for a purpose which is certainly not among those for which the Constitution authorizes the Congress of the United States to impose Federal taxes—is in itself a very questionable thing. The object in view is undoubtedly an excellent one. But if we take money out of the Treasury for it, are there not a good many other objects, in themselves very good and neither more nor less contemplated by the Constitution as among those for the promotion of which taxes should be laid than this, which will also apply for appropriations and find equally zealous advocates? Is not this policy in the line of those who want constantly to find new objects for expenditure to drain the Treasury, and thus to furnish reasons for keeping up the present pernicious systems of taxation, war tariff and all? And if such a policy be adopted, will it not do more to demoralize our politics than the extension of the school system in the South, as far as the appropriation contemplated would effect it, would do to stem that demoralization?

It will not be denied that this argument, too, is entitled to very serious consideration, and that, before going forward in the line of large appropriations by Congress for even so uncommonly good an object as the promotion of popular education in the South, we should carefully inquire whether the same purpose cannot be served by methods less dangerous in their probable consequences. We reserve other phases of the subject for future discussion.

THE DIPLOMA INDUSTRY IN MASSACHUSETTS.

A RECENT decision of the United States Commissioner at Boston has brought into unpleasant prominence the position of Massachusetts with reference to medical education. The case, briefly, was as follows: An institution calling itself the Bellevue Medical College, incorporated under the statutes of Massachusetts, after a preliminary correspondence by mail arranging the bargain, sold to a fictitious person, for the sum of one hundred and fifty dollars, its diploma conferring upon him the degree of Doctor of Medicine. Included in the same bargain were a certificate of matriculation and lecture tickets, showing that such person had attended a course of lectures. The certificate of matriculation and lecture tickets were sent by mail; the diploma by express, C. O. D. The parties implicated were arrested and tried upon a complaint, under the United States Revised Statutes, Section 5480, for using the mails for the purpose of defrauding. The evidence clearly established the fact that the matriculation certificate and lecture tickets, and the correspondence arranging the bargain, had been sent through the mails; also, the sale of the diploma to a person who had never attended the "college," and whose spelling and grammar showed him to be absolutely illiterate. The Commissioner discharged the prisoners, ruling that under the laws of Massachusetts there was nothing to prevent the founding of such schools and their issuing their diplomas to whomsoever they pleased—in a word, that the laws of Massachusetts sanctioned just such practices. Such seems to be the lamentable fact.

The night before the whole transaction was exposed in a daily paper, a reporter called at the "college," which, by the way, was the house of the "Dean." After a short, very short, beating about the bush, he came to the point by asking if he could not get the Bellevue diploma within six or eight weeks. The affable "Dean," who, it may be said incidentally, is a graduate of his own college, assured him that it could be easily arranged, observing cheerfully that the main thing to be acquired was "doctoral conduct." He assured the aspirant for medical honors that, armed with the Bellevue diploma, and putting on a bold front, he could easily take away business from the old fogies who had acquired their credentials to practice by the antiquated and musty method of study. Of these unfortunates the astute "Dean" remarked: "They carry no medicine except two or three ordinary powders." The Bellevue diploma was shown to the reporter. It was in Latin, for the correctness of which the learned "Dean" pledged his word. The whole transaction was thoroughly exposed in the newspapers. The "President," it is true, said that the case which came before the United States Commissioner was the only one which had occurred; but the business-like way in which the application was answered, the subsequent correspondence, and the reporter's interview with the "Dean," made even the most charitable question this assertion. One suggestion of the ingenuous President is worthy of note. In one of his letters he tells the applicant for the diploma to call speedily at the express office, and take away the precious parchment, for "the longer a thing lays in an express office, the more time there is for thought and gossip about it."

The ruling of the Commissioner is undoubtedly correct. Under the laws of Massachusetts to-day, a medical college can be formed by any seven persons. There is nothing to prevent boot-blacks or prize-fighters, many of whom now enjoy the title of "professor," from being its founders. No capital is required. The only necessary expense is the ink required to fill out the blanks gratuitously furnished by the Commissioner of Corporations, and the fee of five dollars for certifying to and recording the papers. Any name may be assumed "not previously in use by an existing corporation"—*i. e.*, ex-

isting in Massachusetts. The "Bellevue Medical College" is already formed and flourishing under this law. There is no reason why we should not soon have the "Dartmouth" and "Yale"; nay, for aught that appears in the statutes, we may soon have a new "Harvard Medical College," or "Harvard Medical Academy." Neither name is the same as "Medical School of Harvard University," but "'t is enough, 't will serve," and the diplomas would doubtless bring a good price at a distance from Boston. The papers, it is true, pass through the hands of the Commissioner of Corporations, and he certifies his approval upon them before the corporation can be formed. Still, it would seem that his supervision is merely to the point whether the statute requirements and prescribed formalities have been complied with. Apparently if a name is selected not previously in use, and not identical with that of an existing corporation, the Commissioner strictly would have no discretion in the matter. The college once formed, no proper supervision is prescribed by the State, no requirement that the instructors shall be physicians or even educated persons. No course or time of study is prescribed. True, there is no provision expressly authorizing these colleges to confer diplomas; *but there is nothing to prevent their doing so.* The boast of one of the "Bellevue" faculty, that they could issue diplomas to whom they pleased, seems to be but too true.

The ease with which these colleges can be formed, together with the absence of all statute requirements as to medical education and practice, brings about this discreditable state of things. The latter element is, of course, the more important. It might be argued that the easier it is to found schools and colleges, the better. Indeed, with strict provisions of law as to study and examinations at these colleges, and a watchful supervision by competent persons, the facility of formation might not be a very serious objection. At the same time, medical colleges may well be put in a separate category, and not included, as now, in a sort of omnibus chapter, applying indifferently to charitable societies; associations for encouraging athletic exercises and yachting; associations for encouraging the raising of choice breeds of domestic animals and poultry; Free Masons, Odd-Fellows, and Knights of Pythias associations, and several others. It would certainly be proper that some more stringent provisions as to the character of the founders of the college, the name and purpose of the institution, and its probable stability and genuineness of purpose should be required. If a school gets into ill odor for a time, there is nothing to prevent the formation of a new one with a spick and span new name.

The root of the whole evil, however, is the entire absence of any statute requirement as to the medical education and character of instructors, or the proper supervision of these schools. There would be no *raison d'être* for fraudulent medical schools were it not for these causes. The facility of organization merely furnishes an easy, cheap, and expeditious means of carrying out the schemes of their founders, as has already been exemplified in the case of the "Bellevue." That institution has shown the way, and there is nothing, as the law now stands, to prevent Massachusetts from becoming the principal seat of diploma manufacture for the whole country. The previous reputation of Massachusetts in connection with education in general gives her peculiar advantages in this respect. It is sometimes argued that the State has no right to prevent any one from practising the healing art. In Massachusetts to-day any one may assume that much-abused title of "doctor," may administer doses, and collect fees. Attempts to restrict this are, and always have been, bitterly opposed by the persons interested, with the sympathy of many of the people. This may be difficult to change; but surely no argument or sophistry can make it appear right that Massachusetts should allow these colleges to issue their fraudulent diplomas. If a man has no diploma, well and good. His status is defined. If a college, incorporated under the laws of the State, confers a diploma, let the State see to it that such diploma is a genuine and substantial credential for the practice of medicine, or else expressly forbid its issue. When once formed in accordance with the statutes, these schools are, in effect, just as fully authorized as any regularly chartered medical college. Massachusetts allows them to exist, and she is responsible for their conduct. She is to-day, in effect, encouraging the manufacture of fraudulent diplomas by schools which have assumed, or may assume, the names of long-established schools of other States. To put it on no higher ground, Massachusetts should not thus violate the plainest rules of fairness and honor in trade by tacitly permitting such base and colorable imitations to be sold.

THE MANNERS OF AMERICANS IN EUROPE.

A CORRESPONDENT of the *Sun*, apparently a Frenchwoman, writes a long letter on the tuft-hunting, title-worshipping extravagance, and social gullibility, and bad manners, and want of what may be called national self-respect of Americans in Europe, and the consequently wretched impression they make on the best circles of foreign society. The picture, like all such pictures, is too highly colored, and the story is now a somewhat old one. There is, however, a large amount of truth in it. It nevertheless is not the whole truth, because it gives the impression that these gaudy and ill-behaved Americans go where they are not wanted, and into scenes not prepared for them, or, in other words, that there is no European demand for such people. Unhappily there is a considerable demand for them. It began in France when Louis Napoleon set up his court thirty years ago, and organized it on what may be called a basis of pleasure. The courtiers were a queer lot, many of them with doubtful antecedents, but they had got hold of the French Treasury, after years of penury, and were intent on having plenty of fun. The other European courts were either very exclusive, like the Austrian, where nobody can cut capers unless he or she can show four quarterings at least (we are not sure that it is not eight); or like the Prussian, which was serious, military, and hard-working; or like the Italian, which was shy, sporting, and pious; or like the English, which was extremely domestic and æsthetic and philanthropic. The French started something new in the shape of a jolly court, where expense was no object, and where everybody who dressed well and was amusing was welcome, and few or no questions asked.

It was this which first started in American breasts the passion for court life and court company, which has since had such far-reaching effects. It came just as steam was making communication with Europe more easy and stimulating the habit among rich Americans of residing abroad, and when large fortunes were multiplying at the North. It lasted till the downfall of the Empire, and produced the extremely well-dressed American girl, and the sort of Gallo-Roman American man, who lived in Paris because of the Tuileries balls, and because he was so "well valeted," and got such good dinners there, and the streets were so clean, and finally concluded that an empire was what we needed in New York. The New York youth of that period, who had risen in his pleasures above the three-quarter wagon, fast trotter, and large diamond pin, was always modelled on the French type. He dressed like a Frenchman, inclined to fencing as his chief exercise, wore tight-fitting boots, and used French phrases freely in conversation, and, when he went to Europe, went straight to Paris.

This lasted till the battle of Sedan. The change worked by that fatal field is commonly supposed to have been felt only in Europe. It transferred the European hegemony, as the jurists say, from France to Germany, made Germany the great power of the West, and for the first time in two hundred years deprived France of all her terrors to her neighbors. But its obscurer and remoter effects on this continent were hardly less important. It made London instead of Paris the Mecca of the Americans who were bent on fun and fashion. By that time Prince Albert was dead; the Queen had retired from society; the Prince of Wales had come forward with a court of his own, modelled on that of the Tuileries, in so far as to offer a welcome to everybody who could furnish entertainment, without regard, in the noble language of the American Constitution, "to race, color, or previous condition of servitude." Moreover, in being an English-speaking court, it had very great advantages to Americans over the French court. It was very difficult for an American to be really droll in a way agreeable to himself at the Tuileries, owing to the difference of language. We doubt if either the Emperor or Empress ever really grasped "American humor," or knew how funny a "sassy" American girl, with plenty of "snap," can be.

Under the new régime, however, in London, a field was really opened, in which every variety of American talent in the way of social amusement found a ready welcome, and in which no defects of education or manners were an impediment. The pleasure class in England to-day would make itself ridiculous if it undertook to criticise the manners, morals, or aims of their American friends. The latter are, on the whole, sprightlier, more entertaining than their

foreign associates, and fully as well dressed and well educated, and have about as high aims in life. Their misfortune is that they have no country behind them to give them real self-confidence and self-respect. The most worthless and ignorant English sporting-man has roots in the soil of his own land, and commands a certain amount, at least, of the sympathy and admiration of his countrymen, and feels himself a part of a great state, a sharer in its glories and its hopes. His American companion has no such aids to mental repose, does not feel that the United States are at his back, is not an acknowledged product of the soil, and is ashamed of his countrymen, and timid about their future. But it is a gross slander of him to say that he does not do the business he is engaged in in England as well as his English companions, or to say that the American girl does not do it far better. She does not lose by comparison in manners, and she is pre-eminent in dress and amusingness.

THE DIFFICULTIES OF FLOWER REFORM.

We have received from all sides suggestions with regard to the movement against bouquets, which are gratifying as showing the interest taken in the subject, but some of which lead us to think that the full magnitude of the task of effecting a permanent flower reform is not appreciated. Inquiries among the florists of the city show that thus far they do not perceive any change of feeling in the flower market except with regard to funerals, and though experience shows that people can be deterred by public advertisement from making death more painful by contributions of floral "emblems," this proves little or nothing with regard to bouquets. The friends and relatives of a deceased person have the field entirely to themselves, and if they advertise that they do not wish to have flowers sent, they are free to have their own way. But everybody knows that in the United States friends and relatives have no control over a live girl, and that if she wishes to have bouquets sent her, the opposition of her father and mother will count for nothing. She will look upon them as "old fogies," and will tell her friends in confidence how much trouble the old people give her.

Again, the permanence of the "floral-trophy" business at the theatre and opera shows how difficult it is to introduce any reform wherever there is a live woman to thwart the reformer's efforts. A shower of bouquets falling at the feet of a favorite actress or singer amid a storm of applause would be, no doubt, a pretty sight, if we ever saw it; but a floral ship or anchor, solemnly conveyed at a preconcerted signal down the middle aisle, and handed up to the stage by the leader of the orchestra, to be carried off by a "supe," and then, it seems, to be taken down stairs and made over into a floral harp or bird-cage for the next act, does not suggest spontaneous admiration or delight. Managers, we believe, would like reform here. The only explanation we have ever seen given of our curious theatrical floral customs is that, if left to themselves, actresses and singers (who are not even under the restraints imposed by tradition upon the "society girl") make private arrangements, when they can afford it, to have flowers thrown at them by admirers retained for the occasion, which introduces jealousy and ill-feeling into the company. To avoid this, managers resort to the curious floral-trophy system, for they well know that they can no more cut off a star from flowers altogether than they could a confirmed toper from his daily dram. To most people the cure in this case seems worse than the disease. Managers of germans would never be able to introduce such a custom at balls, for they have no such control over star girls as enables them to enforce rules and regulations with regard to their public appearances.

We may mention here that we have been requested by one correspondent, who, it is needless to say, is not a bachelor, not to overlook the married man's flower grievance. A married man, he says, who dances the german has, in the first place, to send a bouquet to his partner, like any other man. But in addition to this, if his wife does not dance, or is not asked in advance, he must, for the sake of appearances and domestic peace, provide her with a bouquet fully as large as that which he gives his partner — very prudent husbands, he adds, make sure that they are a little larger. This custom, however, cannot be said to stand on an independent footing. It is clearly an outgrowth of the general bouquet habit, and, in fact, is merely a symptom of the bouquet habit as aggravated by marriage, and to attempt to cure one without the other would be folly.

There are two general difficulties which stand in the way of a permanent flower reform, which are curiously like those the reformer often meets with in matters of no interest to "society circles." Every girl will easily perceive that the changes the reformers have at heart will have to be introduced in practice by those who are interested in the perpetuation of the very abuse they desire to get rid of— which makes the case not unlike that of civil-service reform. The mothers and aunts and elder sisters occupy to the Girls who manage society a relation analogous to that which the "schoolmasters" and doctrinaires and theorists and the press generally do to the Boys who run the political machine. Their position is, indeed, weaker, for there is no electoral social body to which they can appeal, and on whose trust and confidence the power of the Girl depends. You can frighten the worst Boy into favoring civil-service legislation by voting, and getting those who sympathize with you to vote, against his "ticket." But the Girl's power is not dependent on any social primaries or conventions. The only ticket which she is concerned with is a dancing ticket, which no rival or reformer can scratch after she has once "slated" the candidates. Her social power and authority being derived entirely from herself, she can bid defiance to everybody, including the very parents and guardians who supply her with money for her career. The Girl is in fact the only absolutely independent and autocratic type in modern society. The political Boy, who resembles her at some points, is a slave of public opinion compared with her. Now, with the girl, business is business, and if she has six bouquets for the german, she will not, we may be sure, give up carrying them without knowing why.

If this difficulty resembles those which the civil-service reformer encounters, in another aspect the movement is hampered by an obstacle which reminds the observer of the struggle for free trade. Not only are the persons interested in the continuance of the abuse those by whom reform must be introduced, but those who are the natural agitators for it are inevitably charged with interested motives. These are, of course, the girls who do not get bouquets in advance, and the men. A man who announces that he thinks it far better not to send bouquets, has not only to endure the unpopularity which is sure to be the lot of any one who desires to effect social improvement, but to encounter the odious imputation of hiding a mean desire for economy under the mask of reform. The free-trader's case shows us how hard it is for a reformer to meet such imputations with success. He may empty his pockets and show that there is no "British gold" in them; he may prove by indisputable evidence that he is not interested in the wicked business of importing foreign goods; but the suspicion of a sinister interest clings to him. If he cannot escape calumny, what chance is there for the male bouquet reformer? The very sensitiveness of nature which leads him to appreciate the unquestionable necessity of reform will make him shrink from the idea of meeting the cool, penetrating gaze of a girl whom he has invited to dance the german, and to whom he has knowingly and wilfully neglected to send a bouquet. He might be willing to be thought old-fashioned or "queer," but to get a reputation of being "real mean," and a hypocrite besides, is what no young man can be expected to endure for the sake of bringing about an improvement in girls which it will take years to effect, and the full benefit of which will not be reaped by his generation of german dancers.

All this shows that reform is out of the question, unless the intellect of the Girl herself can be touched. What the reformers will have to do will be to convince her mind that it is for her interest, from a purely business point of view, to encourage the growth of what she is accustomed to hear her mother and father talk of as Sentiment; that of sentiment in connection with a german bouquet there is really no more than there would be in a bag of potatoes or a barrel of flour, and that the display of them suggests to the spectators only comical ideas. If the Girl's mind can once be convinced of this, the desire for reform will spring up in her breast; but for this purpose she must be caught very young.

IMPRESSION OF GAMBETTA'S DEATH IN ENGLAND AND ON THE CONTINENT.

London, January 9, 1883.

The impression produced in England by the death of Léon Gambetta has been quite independent of any political feeling. If he had never shown any hostility to us, neither had he shown in his public conduct any specially friendly feeling; and it was in fact chiefly he and his adherents who had disliked our isolated action in Egypt, and were protesting most loudly against what they considered the exclusion of

France from future influence there. Nor did his position as the great antagonist of clericalism and champion of advanced democratic ideas make him conspicuously acceptable to one party in England, or conspicuously condemned by the other. The French Monarchists have so played their cards as to have lost such sympathy as they might have counted on both in England and in Germany. Here we have ever since 1871 assumed the Republic to be firmly established in France, and been able to look with calmness on the struggles of the different parties, desiring to see the present form of government maintain itself because it is the present form, and therefore most likely to preserve order at home and keep the peace abroad. The general regret, therefore, excited by the news of Gambetta's death is rather a tribute to his eminence as a man than an expression of agreement with his policy. A brilliant career has been suddenly cut short; a striking individuality extinguished; an eloquent and passionate voice stilled for ever. It is not in human nature not to be moved by such an event, and not to lament in it the instability of human fortunes and the disappointment of cherished hopes. Gambetta's was the one figure and name in France which had become familiar to all Europe. His energy, his patriotism, his hopefulness, had made him seem from 1870 onward the man of the future; the political tact and judgment which he showed in maintaining the struggle against the Reactionists under MacMahon's Presidency, the more statesmanlike tone of his opinions, and the growing sobriety with which he expressed them, gave foreign observers the impression that he was the likeliest person to exercise a moral ascendancy in a country which has scarcely yet learned to work constitutional forms as they are worked in America or England. These expectations had been damped by the ill-success of his ministry in the beginning of last year. It was plain that he had excited much jealousy; and many things were said, not so much to his own discredit as to that of the group which surrounded him. However, he continued, in the popular eye, to overtop all other French politicians. Men compared his position to that of Mr. Gladstone in England, or of Prince Bismarck in Germany, great and obvious as the differences were. He possessed that force, that potent personality, which more than anything else impresses the popular imagination. What, however, will be the political consequences of his removal is a question on which opinion here, as well as in the rest of Europe, is greatly divided.

Two views are put forward. One, which seems to prevail in Germany, is that he was an element of danger to the peace of the Continent; that in him the passion for revenge, which the Germans continue to attribute to the French people, was personified; that he cherished the traditions of French glory and French extensions of territory both in Europe and through the rest of the world; that his personal tastes led him to an ambitious foreign policy of which he should be the director. However small the likelihood of an attack by France upon Germany may seem at present, while Bismarck and Moltke live, it is always a possible event, especially if the anti-German feeling in Russia should increase; and Gambetta would have been the man to seize a favorable occasion for precipitating the conflict, would have roused France to recover Alsace and Lorraine as perhaps no other man could. There are also those who doubt whether the presence in France of such a man was not a menace to the permanence of her republican government. In a country long used to personal rule, there must remain a tendency to prefer the person to the system, to lean too much on him, to intrust him with powers too wide for the public safety. Gambetta himself could hardly be suspected of aiming at a dictatorship. There is every reason to think that he was, although personally ambitious, and fond of pomp and fame as well as of the reality of power, an honest and sincere republican. But circumstances might have almost forced a dictatorship on him; and whether he had used such a position well or ill, the result would have been almost equally unfortunate for France. In the republics of ancient Greece, when a man became too conspicuous, even by his services, he was sometimes exiled, by the process the Athenians called ostracism; exiled not as a punishment, but merely as a precaution required in the interests of the republic. Any overshadowing personality is dangerous to a state whose idea is equality as well as liberty. If the Republic is fit to stand, it is sure to find men capable of filling its offices; it is, indeed, the merit of a republic that, resting on public opinion, it can go on comparatively little shaken by the loss of its most eminent citizens.

The opposite view, which regards his death as a serious blow to France as a power and to the Republic as a system, finds many advocates both in Italy and in England. In France itself, the Royalist papers are, of course, the first to proclaim that the Republic has fallen with its most famous chief. No one cares much for opinions which policy as well as hope suggests. But there are wise and cool heads among the French Republicans who regret Gambetta, not as a prop to the Republic, but as a valuable link, or rather a middle term, between the Conservative Republicans, such as those who have composed most of the ministries under President Grévy, and that revolutionary party whose more moderate wing is represented by M. Clémenceau, while its more extreme section is communist and anarchist. Not only Gambetta's services in 1871, but the vehemence of his denunciations of imperialism in the days of Louis Napoleon, and the skill with which he led the resistance to M. de Fourtou and M. de Broglie in the Presidency of Marshal MacMahon, had given him a great hold on the masses, and made them believe in him as a politician of a thoroughly popular and democratic type. Hence he had a restraining power over them which the more conservative Republicans lacked. His opportunism was not taken, except by the fierce Revolutionaries, as denoting a want of genuine democratic sentiment; it was merely the prudence of a man who sees that everything cannot be done at once. His death, consequently, leaves the rank and file of those advanced Republicans who are yet short of being anarchists without the controlling and restraining, if not guiding, force they formerly felt. It therefore makes the republic seem a more dangerous form of government to the timid and undecided part of the nation, because they now begin to fear far more the carrying out of a thoroughly radical, anti-clerical, and anti-property programme. Gambetta had marked to them a kind of limit beyond which executive power would not go. He was an advanced democrat, yet he had held power and exercised it with a sense of responsibility and a respect for existing rights. He had been President of the Chamber. He was not a man to throw the reins on the neck of the mob; so he might be trusted with power again. But beyond him all seemed chaos; and, as his removal may be thought to bring the representatives of chaos nearer, it is calculated to alarm that part of the bourgeoisie and peasantry which, while accepting the existing republic, is very sensitive on the subject of communism, and has no wish to see the Catholic Church further interfered with. Add to this that, after all, he was one of the great forces of the country; that great forces are useful in a crisis, because they may be able to dominate the passions of opposing parties and avert a civil war; and that no one can tell how soon some crisis may arrive in France—and it may fairly be concluded that on the whole his death is an injury both to the present constitution and to France herself. Nations have often suffered by the death of eminent men; they have very seldom gained, even when the man seemed a source of danger, for the danger that threatened from him usually begins to threaten from some one else, while it does not equally often happen that when a hero perishes some other hero of like merit is found to arise.

On the whole, the tendency of the other countries of Europe, of Germany, Italy, and England, seems to be to exaggerate the political importance of the event, doubtless because Gambetta had made a great impression on foreigners, who knew his name much better than they have known that of any other Frenchman since Thiers; whereas in France itself his influence had been seriously shaken by the collapse of his Ministry in February last, and the public, being familiar with the other parliamentary leaders, did not assign to him the same conspicuous isolation. To us in England, gathering French opinions not from newspapers only, but also through other channels, it does not appear that the French think the political situation materially altered. Cool and judicious observers there believe that the Republic will hold its ground, not so much from its own merits as from the weakness of its enemies. The Assembly grows more and more uncertain and wavering; its tone, and that of political life altogether, is far from high; it splits up into sections whose dissensions prevent the establishment of a strong ministry. But the Count of Chambord is an "impossible person," so that while he lives a Royalist restoration need hardly be feared. The Bonapartists are without a head, and every year that passes weakens them by removing the old leaders of the faction, while new ones do not naturally arise in their place. Hence no monarchical revolution need be feared. Though there is always a wish that the energetic Republican masses of the towns may drive the Assembly on to measures which by disgusting the bourgeoisie and the peasantry will provoke a reaction, this reaction can scarcely go the length of changing the form of government back to one which is likely to be even less stable than the present. As regards foreign war, all we hear in France goes to show that the great bulk of the nation have abandoned the idea of an attack on Germany. They hate the conscription and all that it involves; they were so much disgusted with their little war in Tunis as to have refused to interfere by arms in Egypt; they remember too plainly the miseries of 1870, and the loss of so many of their relatives then, to desire to provoke a war. There is no decline of national spirit, but a more rational view of the respective evils and gains which war may bring. Therefore, not even Gambetta, had he recovered his ascendancy, would have been likely to persuade the mass of the people to challenge Germany afresh; and his death does not substantially confirm peace, because peace was not threatened before.

This seems to be the French view—the view, that is, of impartial Republican observers in France herself. But neither Germany nor Italy shares it. The German press has with one voice expressed the relief of their countrymen that an element of danger had departed, and some have felicitated Prince Bismarck on the death of Gambetta, whom they deemed the great foe of Germany in the West, as they did a few months ago on the death of General Skobeleff, the dar-

ling of the Russian Army, and most active champion of that Panslavist party which threatens Germany from the East. In Italy, though the Liberals had much sympathy with Gambetta, both on the score of blood (for his father was a Genoese) and because he was the embodiment of the anti-clerical spirit, there are many who regard his departure as a piece of good fortune. There is a deep jealousy of France among the Italians. They think her their most dangerous neighbor, and have gone on strengthening their fleet chiefly in order to be able to hold their own against her in the Mediterranean. Her seizure of Tunis, where Italy has many subjects settled, and in which she claimed divers rights, incensed them; nor was their irritation lessened by the cool and somewhat arrogant attitude France has assumed. Contemplating a war with France as a possibility, they are well pleased to see France fully occupied at home, divided by struggling factions, tending to a policy of peace and non-intervention, instead of under the guidance of one resolute will, ambitious of glory in the field of general European politics.

To the relations of England with France the event makes no difference. The fashion of some writers is to speak of England and France as in a special sense allies, and compare the tie which unites them with that which binds Austria and the Germanic Empire. But this is a misconception. Between ourselves and France there has been almost uninterrupted good-will since the Republic was established, but there has never been the intention of going beyond good-will and forming a league directed against any other powers. We have no interest whatever in any question affecting the Continent of Europe, except as respects Belgium, nor in any Mediterranean question, except as respects the Suez Canal and Egypt. In neither case do the interests of France coincide in any peculiar sense with our own; nor can those of any other European power be said to be opposed to our own. There exists, therefore, no ground for our contracting on the Continent any such offensive and defensive alliance as that which Germany and Austria have formed, and which is at present the main diplomatic fact of Europe. And, indeed, the English have during the last two or three years seemed to care less and less for questions of foreign policy. That Government will best please the people which most leaves them alone, and which so conducts the settlement of Egypt in particular as to give the fewest occasions for diplomatic dealings in future. But this is not always understood abroad, and the German newspapers in particular amuse us by their speculations as to the disposition of England now to accept, now to refuse the German alliance, now to cool and now to grow warmer in her friendship for France. We regret in Gambetta a brilliant and interesting figure, but that is all. Y.

THE PRUSSIAN RAILWAY SERVICE.

BERLIN, January 4, 1883.

IN consequence of a debate in the German Reichstag in relation to the so-called Imperial railroads of Alsace-Lorraine and their alleged unprofitableness, some leading English, French, and Italian papers have been led into the mistake that the Prussian railroads, ever since they have been subjected to state management and control, have not been able to pay the interest on their indebtedness, and that on the whole they are a heavy burden on the taxpayers. Some of these foreign papers even went so far as to assert that the state management did not give satisfaction to the public, and to draw from it conclusions against the correctness of the principle of railroad ownership by the state. I do not know whether your press has, in this respect, also followed in the track of the European journals, but, apart from general economical principles, the question in itself is important enough to be fully and impartially stated to the American reader, the more so as the success or failure of the Prussian attempt must influence the railroad problem in other countries too. I need not repeat the reasons for and against railroad ownership by the Government, as I have tried to explain them in my former letters. I can, therefore, confine myself to some new statistical facts and figures, leaving you to draw the consequences yourself.

The Prussian budget for the fiscal year 1883–1884 (April 1 to March 31) contains some very interesting particulars. According to them, the whole length of railroad owned by the Government was 15,403 kilometres (1.61 km. = one English mile). To this must be added 2,306 kilometres of private roads which are under state management exclusively, and 1,395 Alsace-Lorraine roads (*Reichsbahnen*) alluded to in the beginning of this letter, making in all 19,104 kilometres which are administered by the Prussian Minister of Public Works, while the whole length of all German railroads amounts to a little over 34,000 kilometres. The greater part, however, of the remaining 15,000 (in round numbers) kilometres does not belong to private companies, but has been built and is run by the Governments of the kingdoms of Bavaria, Saxony, Würtemberg, as well as that of the Grand Duchy of Baden, so that the principle of German railroad administration is nearly the same all over the country.

The indebtedness of the Prussian Government for its railroad property up to April 1, 1883, amounts on the whole to 2,691,644,489 marks, or about $673,000,000, the yearly interest on which requires the sum of 109,457,679 marks, or about $27,000,000. The receipts for 1882–1883 were 390,151,609 marks, and for 1883–1884 they are estimated at 514,722,261 marks. The expenses—interest, of course, included—for the corresponding periods were: In 1882–83, 281,944,333 marks, and as estimated for 1883–84, 384,576,286 marks. Thus the surplus in 1882–83 was 108,207,276 marks, and for 1883–84 it is estimated at 230,151,975 marks. The great discrepancy in the receipts and expenses of more than 100,000,000 in two years is explained by the fact that in the first year the Government owned several thousand kilometres of roads less than at present.

The law of March 27, 1882, prescribes that out of the receipts there shall be paid, first, the interest on the railroad indebtedness; second, 2,200,000 marks for general Government purposes, or for covering an eventual deficit in the regular budget, while the balance must be employed for the sinking fund of railroad indebtedness. Thus for this purpose the amount of 18,458,296 marks has been set apart for the year 1883-84. The state railroad running shows a yearly increasing surplus. Over and above all costs, expenses, and interest there were cleared in 1878-79 7,640,000 marks; in 1879-80, 13,600,000 marks, in 1880-81, 38,300,000 marks (five quarters), and in 1881-82, 31,450,000 marks. For 1883-84 the surplus very moderately is estimated at only 18,000,000 marks, while it will amount to at least 32,000,000 marks. The great difference in the receipts of 1880 and 1881 is chiefly caused by the purchase of some 6,000 new kilometres of private railroads. If ever a deficiency should occur, it must be paid by a state loan. Among the regular expenses there are large amounts for the equipment and partial renovation of the roads. Thus, for the next fiscal year the funds are provided for 177 new locomotives, for 240 passenger cars, and for 1,637 baggage and freight cars.

Moreover, the budget will every year be relieved of at least one million of marks for the payment of the salaries and pensions of those officers and clerks who, having been appointed by the private companies, did not enter into the Government's service, or of the fees of the directors of such companies as have not yet been dissolved. A still larger item with which the Government railroads are charged is the gratuitous service which they are obliged to render to the Post-office Department. The old private roads could only obtain a charter on condition that they bound themselves to attend without charge to the royal mails, with at least one post-office car on each mail train, and to forward gratis all parcels and packages of less than ten pounds' weight. The Government, in purchasing the roads, was, of course, also subject to these terms. At present the costs for extra cars and for forwarding packages heavier than ten pounds are estimated at 2,250,000 marks, which, of course, the Post-office Department has to reimburse, and which form part of the regular receipts; and, on the other hand, the latter yearly saves 14,000,000 marks by the gratuitous service of the Railroad Department. As far as I know, Germany has the cheapest and best mail service, for which to a great extent she is indebted to the gratuitous coöperation of the railroads.

In my opinion there is no doubt that the efficiency of the railroad service will still increase, while the costs of its management must decrease. Thus, the luxury of half-a-dozen or more costly depots in one city, where one would suffice, of hundreds of superfluous officers and clerks, and the nuisance of deadheadism have already been done away with by the Government. Free or complimentary tickets are not even issued to the Minister of Public Works and his subordinates; the ministerial councillors and assessors have to pay just as well as any private citizen. For their official trips they can charge the ordinary fare. The squandering of large sums for rich buildings and private offices has been stopped, but the comfort and the ease of the travelling public have rather been enhanced. I have, therefore, never heard of any well-founded complaint; on the contrary, the present system gives full satisfaction as far as the wants of the traveller and of transportation are concerned. The service is prompt and regular, the treatment of the passengers polite and respectful, the forwarding of the freight punctual and strict, while the accommodations, instead of having been curtailed, have been largely extended on the Government roads. Thus all apprehensions of a parsimony injurious to the public have proved idle, and continue to be so, the more as it is in the interest of the Government, as well as that of any other common carrier, fully to do its duty by attending to the wants of its customers.

The natural development of the Prussian railroad system of course lies in the acquisition of the remaining private roads by the Government, and it will not be long before they are purchased. The most important lines which control the traffic of the country are already in its possession. It therefore can afford to proceed at an easier rate and consult its general financial condition. According to the newspapers, the Minister of Public Works will again apply to the Prussian Landtag, at its present session, for the purchase of several first and second-class roads. I have no official information on that subject, but so much is certain, that negotiations are pending between the Government and the Berlin-Hamburg Railroad Company for the purchase of that important link between the German capital and the seacoast.

As far as I can judge, the system works well. Instead of having centralized the whole business

of the Government roads, it has decentralized it. Thus the Berlin central railroad department has been relieved of many embarrassing details and a great number of annoying minutiæ of the service. The whole Prussian railroad service is now attended to by ten large departments (formerly twenty-one smaller ones), created in the several provinces—viz., at Bromberg, Breslau, Berlin, Magdeburg, Erfurt, Frankfort-on-the-Main, Cologne (two head offices, one of which is for the railroads on the eastern and the other for those on the western side of the Rhine), Elberfeld, and Hanover, which are all independent of the Minister, and need only refer to him in doubtful matters, while all the wants and complaints of the local roads are administered and remedied by the respective provincial departments.

Thus, in theory and in practice, the Prussian Government shows its sound judgment in expediting business and in its dealings with the public; but where it is blamable is in the assuming way in which it treats the still surviving small private companies, the infallible superiority with which it answers their demands and complaints, and the arrogant tutelage with which it interferes in their affairs. Personally these royal ministers and councillors are perfect gentlemen, able administrators, and obliging officers. The same man, however, who in his private affairs exhibits the strictest scrupulosity and integrity, will never hesitate to follow up the position of his Government to gain an undue advantage, and will always have a legion of shallow reasons at his disposal to justify his conduct. The Prussian law subjects the private roads to the superintendence of the Minister of Public Works. His ratification is necessary for every cent that is to be spent for improvements, for every sale of goods which has become advisable or necessary, and even for the change of any train. There occur daily instances of ministerial interference which come near Turkish justice. One of the smaller eastern roads wished to sell a few locomotives, because they were too heavy for the sandy plain through which they had to pass, and because it could realize a handsome profit by such sale. The Minister, who had previously forced the company to buy these locomotives, refused his consent, as at perhaps not too distant a day they might be used for the transport of troops and heavy ordnance in a war with Russia. The Government collects its taxes and imposts from a railroad company just as from any other private citizen; nevertheless it demands pecuniary sacrifices from it. In another case the Minister refused to pay to a railroad company a certain sum which had been stipulated for a lease which he had given up before its expiration. He pleaded that the company had suffered no actual damages by his breaking the contract, and that he had to save the money due to the company, in the interest of the tax-paying public. The indignation at this outrageous plea was so great that the matter was finally hushed up. Still another case: A large railroad company proposed to buy a smaller line within its territory. The Minister refused his approval, for the reason that competition was the soul of business, and that, consequently, both lines were necessary. A short time after, he himself bought the large company, but now he bleeds the smaller line to death, by withdrawing from it the greater part of its business. While in case of a sale the shareholders would have got at least twenty-five per cent., if not more, of their capital, they now lose everything.

Happily this state of things will not last long, as in a few years the present transitory condition of the remaining private roads will come to an end; but the fiscal greediness which is one of the ugliest traits of our administrative organs, will remain, as it is rooted in the political development of Prussia, and as it directly flows from some of our best institutions. "The fisc" (the state in its quality as owner and claimant of private property and rights) is to all independent people the most hated corporation. As mean, as hungry, as contemptible as the fisc, is a common saying. The judges, with rare exceptions, are happy when they can render judgment against the fisc. It finds its only explanation and excuse in the gradual development of Prussia out of small and scanty beginnings, and will finally be swept away by the growing wealth and independence of the people. † † †

ELEMENTS OF DISCORD IN ITALY.

VENETIA, Jan. 9, 1883.

WHEN I wrote, anent the new Reform Bill, that the granting of the suffrage was a leap in the dark, I was so far right. I may now add that, like a mist, it has left the weather as it found it. Yesterday the supplementary elections took place, and even these have brought no change in the situation. It was believed by many that the masses admitted to the urn (about three millions) would gladly have availed themselves of a privilege which in England is so highly esteemed that the working classes will even practise economy and subject their families to actual privation, in order to qualify themselves for the vote. Not so here. The Italian working classes, and a considerable portion of the middle classes, hope so little from parliamentary institutions that they cannot even be induced to go to the urn to register their vote. Under the old régime, 56 per cent. of the electors was the maximum that availed themselves of their electoral rights; this year 49 per cent. have done so. This indifference has ever existed in Italy. In the famous proclamation of Moncalieri, in 1849, when King Victor Emmanuel, after the defeat of Novara, finding that the majority of the members of the Chamber of Deputies declined to ratify the treaty of peace, dissolved the House, and threatened to abolish the statute, he reproached the electors "because scarcely one-third of them availed themselves of their privilege."

The situation of parties remains unchanged in the Chambers. The old Conservative party, called Moderates, numbers barely a hundred; the Extreme Left, or Ultra-Radicals, about fifty; the Progressists, as they call themselves, three hundred; and now Depretis is doing his utmost to unite Conservatives and Progressists, in order to deprive the Radicals of any influence in the decisions of the House. His first victory was effected on the oath question. Deputy Fallaroni having refused to take the oath, the Government brought in a bill declaring the seat of any member-elect who refuses to take the oath to be vacant within two months, the same penalty to be inflicted should a member fail to present himself in the House itself. This is a most reactionary measure. Italy is still ruled by the old statute granted by Charles Albert in 1848, although in the plébiscite of Lombardy, annexing that province to Piedmont, it was expressly stipulated that the population should be summoned to elect a constituent assembly, whence should issue the new constitution. This formula was omitted from all the other plébiscites, the populations being called to vote for or against their union under Victor Emmanuel and his heirs. But it stands to reason that a statute granted by the King of a small province, just emerged from despotism, cannot suffice for a population of nearly thirty millions, especially considering that certain provinces, such as Venetian Lombardy and Tuscany, were in possession of far more enlightened codes.

And yet this same statute merely provides that "senators and deputies, before being admitted to the exercise of their functions, shall swear to be faithful to the King, to observe the statute and the laws of the state, and exercise their functions in view of the inseparable welfare of the King and of the country." There is no penalty annexed, nor does any later law provide for the vacation of a seat. In 1867, Count Crotti, one of the stanch supporters of the Pope and the temporal power, being summoned to take the oath (which the Speaker reads aloud), instead of simply answering, "Giuro" (I swear), made answer, "I swear to be faithful to the King and to the statute, *salvo* divine and ecclesiastical laws"; on which the President admonished him that the statute permits neither restrictions nor reserves. After long discussion, and when a considerable time had passed, the House voted the following order of the day: "The College of Verres is declared vacant." And now, after fifteen years have elapsed, another deputy refuses to swear. Why in his case was not the same decision applied? In the present instance, Deputy Ceneri proposed the abolition of the oath, but was only supported by twenty-six Ultra-Radicals; whereas, while the majority voted with Depretis for his illiberal measure, sixty-eight voted against it, and Signor Bonghi, the main pillar of the moderate Church, in an elaborate article, demonstrates that the new law is at one and the same time unjust and unnecessary. It is a significant fact, however, that the first measure voted by a House elected, one might almost say, by universal suffrage, should be of a reactionary nature.

The democratic party, nevertheless, is daily increasing in force and in numbers outside the House. Its counsels are by no means revolutionary, in the strict sense of the word, as the first article of its creed is respect for the will of the nation and deprecation of any violent attempts to change the present order of things. Its chief efforts are directed against the evils of centralization. A country like Italy, divided hitherto into seven provinces, each ruled from a separate centre, suffers exceptionally from the ridiculous attempt to regulate its every movement from Rome. Take the late inundations. In the bad old days of despotism, the great rivers Adige and Po were regulated by the local authorities, hydraulic engineers expressly educated for their special functions being resident in the chief towns along the banks. The rivers could not rise the hundredth part of an inch without the alarm being given all along the line. Immense magazines were kept stored with sacks of earth, faggots, cradles, huge stones, and other material necessary for heightening the embankments or strengthening the outworks. Now nothing can be done save by direct orders from Rome, transmitted through the hierarchy of public servants. In the recent instances, a number of citizens who rushed to the places threatened, and actually prevented a catastrophe, were menaced with condign punishment for their services. Again, it being deemed necessary to cut one of the embankments, in order to allow the floods free exit to the sea, while awaiting the necessary orders from Rome the river burst its embankment in five places, carrying death and destruction in its course; and at the present moment, in midwinter, thousands of families are houseless and homeless, huddled in barns, granaries, and unhealthy churches, where diarrhœa and diphtheria are decimating their numbers. The sums collected by private charity or sent by the Government are doled out by the syndics in the form of black bread, a shakedown of straw, and a horse-cloth,

It is natural enough that the adversaries of existing institutions should contrast the Polesine, inundated and left to rot, with Chicago burned down and rebuilt in six months.

At the present moment the Oberdank agitation bids fair to assume serious proportions. Unlike the "unredeemed Italy" agitation of 1880, promoted and fostered by political agitators, the present movement is a spontaneous outburst of popular hatred for the very name of Austria. It is not so much that the Italians are specially anxious for the annexation of Trieste and the Italian Tyrol as that the very idea of an Italo-Austrian alliance is abhorrent to them. The execution of Oberdank has revived the bitter memories of the assassination of over 4,000 patriots in 1849–50, the brutal butchering of Ciceroacchio and his sons, the murder of Ugo Bassi, the ten martyrs hung at Mantua in 1852, the wholesale executions in Milan after the 6th of February, 1853, and the continued series of insults, woman-beatings, and murders perpetrated in Lombardy and Venice up to the last hour of Austrian occupation. Sixteen years are too few to efface such memories. Guerrazzi's dying hour was embittered by hearing a band play the Austrian National Anthem. When the Emperor of Austria came to Venice all the chief families and many of the poorest quitted the city, and the Marquis George Pallavicini, "cousin to the King" in virtue of being Knight of the Annunciata, in answer to the King's invitation to be present at the Imperial reception, replied: "Your Majesty forgets that for twenty years I wore the uniform of an Austrian galley slave." King Humbert has never recovered the popularity he lost during his visit to Vienna, and any attempt to force on the projected alliance will be prejudicial, not to say fatal, to monarchy. The prevailing irritation is increased by the fact that the first demonstrations of sympathy with the victim, such as the publication of Carducci's wonderful prose poem, and the hundreds of telegrams of condolence to the mother, who has since died of grief, were allowed to pass. Then came remonstrances from Vienna, and Signor Depretis set about the work of repression with a zeal never shown by D'Azeglio or Cavour when Austria was actually thundering at the gates of little Piedmont. One hundred and fifty-nine newspapers have been sequestrated during the past week, sixty-nine arrests made in one night, private domiciles illegally entered, sculptors' studios overturned in quest of Oberdank busts, while Depretis actually refused an interpellation on the subject of the execution. The stone thrown at Count Paar's carriage and the revolver fired at the Austrian arms are the isolated acts of two crazy youths. The leaders of the popular party have taken no part in the agitation, and would deprecate the idea of a war at the present time, knowing Italy to be utterly unprepared in any case. Although the Austrian official press puts a good face on the matter, and praises the Government for its admirable energy in repression, it is quite certain that the Emperor of Austria will not pay his projected visit to Italy this year, and that it would be the height of unwisdom were he to attempt it. M. W.

Correspondence.

TENNESSEE NOT IN FAVOR OF REPUDIATION.

To the Editor of The Nation:

Sir: As a reader of your journal, I am familiar with its well-known willingness to hear all sides of all questions, in order that your readers may know the truth. I cannot forbear, when so much is being said at this time against the people of Tennessee, to say a word in their behalf. They have been greatly misunderstood by many, and vilely slandered by the railroad monopolists. I state it upon my honor as a man (and I formerly lived in Tennessee, and know what I say to be true) that *there has never been a party in that State in favor of repudiation;* and in this I am sustained by the Hon. John L. G. Sneed, ex-Judge of the Supreme Court of that State, who made the same statement in a recent speech delivered in Bolivar, Tenn. All of the people are in favor of paying the State debt proper—that is, the debt from which the people received the direct benefit—in full; and the only trouble has arisen over the railroad debt, which is now in dispute and litigation, and awaiting argument in the Supreme Court of the United States. The bonds are a lien upon the railroads *until they are paid.* The railroads regularly paid the interest on the bonds before the war, and should pay it now. Many good men and true have long held that, inasmuch as the railroads received the direct benefit from the railroad debt, they in good conscience and equity should pay it; and I rejoice to say that the recent decision of the U. S. Circuit Court in Arkansas, in regard to a similar debt, contracted in a similar way, triumphantly vindicates them from the charge of repudiation, and sustains their position.

But, waiving the question of the liability of the railroads, and considering the equities on both sides, the people now say to the bondholders: We will pay the State debt proper dollar for dollar, and we will settle the railroad debt at 50 cents on the dollar, with bonds bearing interest at 3 per cent. Ever since the war, bills for a settlement of the debt have been regularly "railroaded" through the Legislature, but the people couldn't be forced to swallow them. In the last election in that State, the people for the first time took this matter into their own hands, and now tender the 100–6 and 50–3 settlement as a finality. This is a settlement upon a true State-credit basis, and the bondholders should accept it, because it is one which the people can and will maintain. I venture the prediction that when the present Legislature shall have recorded the will of the people by passing the 100–6 and 50–3 bill, and the position of the State shall have become thoroughly understood, the bonds will rise in the market, and Tennessee's credit will stand as high as that of any other State in the Union.—Very respectfully yours,

Louis G. Munford.

3 Fifth Avenue, New York, Jan. 20, 1883.

[We cannot, on our correspondent's theory, account for the widespread delusion on this subject. The present struggle between Tennessee and her creditors began in 1877, when the latter submitted to an arbitration advising "the issuance of new six per cent. bonds at the rate of sixty per cent. of the total amount of principal and past-due interest," and a special tax levy to meet them. The Legislature met expressly to consider this compromise, but failed to agree, and its non-action was universally regarded as proof of a popular majority in favor of repudiation. Postmaster-General Key contended at the time, in a letter to Governor Porter, that the debt was justly due; that in its capitol and its railroad system the State had got value received for its bonds, all of which, even those considered wrongfully issued, "were issued under laws providing for their issuance, by public officers selected by the people of the State." He declared it an incontrovertible maxim that "there is more of honesty and honor in paying a debt not justly incurred than in repudiating and refusing to pay one justly due." In 1879 the Legislature refused to entertain the adjustment still offered by the State's creditors, or even a 50-4 compromise. Last year, however, the bonds were issued at sixty, but the question of payment was so far from being closed that the fall electoral campaign (whose verdict the defaulting State Treasurer so scrupulously regarded) was fought and carried in favor of nothing better than 50-3.

But it is well to recall what preceded 1877—the doleful era of Virginia readjustment and the Bland bill in Congress. We quote from the Nashville correspondence of the *Tribune* (December 6, 1877):

"In 1866, Tennessee, instead of paying the interest on her bonds, merely funded it. She repeated it in 1868. From July, 1869, to January, 1874, she paid not a dollar of interest. In 1873, she funded her past due bonds and coupons, allowing no interest on bonds past-due five and ten years, or upon coupons past-due four years. The interest thus openly repudiated amounted, I am informed, to upwards of $1,124,000. On January 20, 1875, she repealed so much of the Funding Act as required the Treasurer to set apart revenue to pay the interest on the funded bonds. Her last performance was to send a commission to New York to delude the bondholders by significant suggestions that half a loaf is better than no bread, and that they had better offer 'voluntarily' to accept sixty per cent. in full of their claims. Again I ask, what does it require to tarnish the escutcheon of such a State?"

—Ed. Nation.]

LUNACY LAWS.

To the Editor of The Nation:

Sir: In your recent able editorial entitled "Doctor and Judge," criticising the report of the Permanent Commission of the Medico-Legal Society, which proposes reforms in the lunacy laws of this State, you fall into an unintentional error as to the recommendations of that Commission as to the right of lunatics confined in asylums to have an impartial medical examination at all times into their mental condition.

The recommendation of the Permanent Commission was that "every person confined as a lunatic should have the right, *without public expense*, to have his mental state and condition examined by competent medical experts entirely disconnected with the officers of the institution in which he is confined."

Your unfavorable criticism as to this recommendation of the Commission in this respect will, I trust, be changed on a careful perusal of that report, a copy of which I have the honor to enclose.—Truly yours,

"Permanent Commission."

The Union League Club, Jan. 29, 1883.

[If the examination is to be made at the expense of the alleged lunatic, the proposal very likely would not, in the majority of cases, lead to any trouble; still, why should inmates of a lunatic asylum have a perpetual right to set on foot inquiries into their sanity, even at their own expense? Their right to a full inquiry in the first instance should be carefully guarded, and there should be such a supervision of asylums as to make it impossible for those in charge of them to keep patients after they are cured; but that a man judicially committed to an asylum one day should have a right to set on foot an inquiry into his own mental condition the day after,

and to renew this as often during his stay as he fails to establish his sanity, seems to us to carry protection against abuses to a point at which it becomes an abuse in itself.—Ed. Nation.]

THE PROTECTION OF BOOKS.

To the Editor of The Nation:

Sir: In the excellent letter upon "The Interests of American Art" published in your issue of yesterday, I note the following paragraph:

"The protection of books does come logically into our illogical system of political economy, because the capital and labor involved in the production of books are pure trade interests, and, combined with our systematic piracy of foreign brains, the tariff on books probably does not make books dearer or discourage their production, for the books which without the tariff would be printed abroad are now printed at home. . . ."

The error of this statement is so manifest that it seems almost a waste of time and of your space to correct it. Yet it should be corrected; for it must be upon some such incomplete view of the case that those protectionists who are animated by sincere zeal for the public welfare maintain this American tax upon knowledge. The protection of books enters logically into our illogical system of political economy only so far as there are books to protect; in other words, the imposition of duty upon a foreign publication for the protection of American publishers is illogical unless that publication is reproduced here. The only escape is to hold—as the protectionists, to do them justice, perhaps do hold—that one book is as good as another, and that, if the reader is prevented by the duty from buying the foreign book he needs for his pleasure or instruction, he will seek his pleasure in some other book printed here, or turn his investigations into some other channel, on account of the impossibility, in most subjects of study, of obtaining, after reaching a certain point, books of American manufacture. In point of fact, very few works in foreign languages are ever reproduced here, in translations or otherwise; and a very small proportion even of English works upon higher branches of learning can command sufficient sale to bear reprinting in America. Many of these books are very costly, and the duty upon them, while it amounts to but a trifling item in the public revenue, falls as a real hardship upon the small number of educated people who must pay it, and does not benefit pecuniarily the few mercenary individuals who are chiefly responsible for the antagonistic position assumed by the United States toward higher education, literary, artistic, and antiquarian—a position as dishonorable to us in this age of enlightenment as it is striking in its contrast to the strong encouragement extended to this education by all the great nations of Europe.

I am, sir, very respectfully,

Thomas W. Ludlow.

Cottage Lawn, Yonkers, N. Y., Jan. 26, 1883.

MR. H. H. BANCROFT'S LITERARY METHODS.

To the Editor of The Nation:

Sir: The admirable review of Mr. Hubert Howe Bancroft's 'History of Central America,' which appeared in your issue of January 25, was necessarily kept within the limits of a criticism on the volume itself. But it seems to me that the time has come when a word should be said as to the methods employed by that author in the manufacture of the books which bear his name.

Some years since, when it was announced that Mr. H. H. Bancroft, a successful bookseller and stationer of San Francisco, was collecting all available material relating to the history of the Pacific Coast, the work was justly looked upon as one of great public spirit. At that time Mr. Bancroft was not known to have written anything, or, if he had, his writings were so inconsiderable as to have escaped observation. By careful attention to the details of an exacting business he had acquired a competence, and, so far as the public could judge, he now proposed to make a collection which should be of value to the historian whenever the latter appeared. Upon the publication of 'The Native Races of the Pacific Coast,' the general reader learned for the first time of Mr. Bancroft's literary aspirations, and the citizens of San Francisco felt a natural surprise at the capabilities of one who could devote all his waking hours to the stationery trade and yet produce five ponderous volumes within so short a time. A vague and evasive explanation that Mr. Bancroft had been "assisted" by a number of collators and indexers was, however, accepted as sufficient. But of late those who have been interested in literary matters upon the Pacific Coast have come to know that the part which Mr. Bancroft has played has been simply that of Mæcenas, now trying to plume himself in the laurels of Horace.

Mr. Bancroft's historical library is situated on Valencia Street, in San Francisco, the width of the city from the book and stationery establishment where he spends his time. At the latter place is carried on an extensive and complicated business, including, besides the departments mentioned, others for printing, lithographing, bookbinding, law-publishing, etc., at the head of which, any business day, directing, signing checks, managing the innumerable details, Mr. Bancroft may be seen. At the Valencia Street library there are, to be sure, a number of persons engaged in collating and indexing. But, more important than that, there are two or three gentlemen and one lady engaged in writing the histories which bear Mr. Bancroft's name. It is not denied that what they write is submitted to Mr. Bancroft, who is a sort of managing editor to the bureau which he has founded; but I am credibly informed that page after page goes into print without a mark or interlineation by Mr. Bancroft. That he could not at the same time write histories in such voluminous and rapid succession and attend to the multifarious affairs of a large and complex business, is self-evident. Four or five different histories on different sections of the coast, such as Oregon, Utah, California, etc., are in course of simultaneous production, each section being taken by a different writer. That these facts are deliberately suppressed, and that the real authors, unknown and underpaid, are passed with a slurring acknowledgment simply intended to quiet those who know the facts, are sufficient reasons why those facts should be published. Mr. Bancroft deserves great credit for the expenditure of large sums of money in collecting valuable historical material. Governor Leland Stanford deserves great credit for his munificence in providing the means by which the experiments in instantaneous photography were carried on, and by which Dr. Stillman was enabled to observe the movements of the horse and to publish his work on the habits of that animal. But if Governor Stanford, not content with being the patron, had endeavored to assume to himself the discovery of the processes and the authorship of the book, common honesty would have cried out "Hands off!" Men's time and services are for sale; but literary reputation cannot be bought or sold.

Again, in the publication of his bureaucratic histories, Mr. Bancroft displays remarkable thrift, and the habits of the methodical business man still cling to him. For several months prior to the appearance of the volume just noticed by you, the newspapers of San Francisco were approached by his agents with offers to furnish articles containing "information" as to the forthcoming volumes, and with intimations that friendly notices would be liberally rewarded. The only magazine on the Pacific Coast contained a long article lauding Mr. Bancroft, from the pen of a lady employed in his bureau. Similar articles have appeared elsewhere, emanating from the author of the book about to be published and from his employees. So little did Mr. Bancroft conceal this fact that he personally assured the writer that he was willing to pay liberally for favorable reviews in any respectable paper, not thinking or knowing, apparently, that respectable papers were just those with which such a bargain could not be made.

Such have been the means employed in the production and publication of this work, and it is to be regretted that one who, by such fair means as establishing a valuable collection of historical books and documents, has become entitled to great praise, should be so lustful of renown as to adopt unfair means to obtain it.

Charles H. Phelps.

New York, January 29, 1883.

RELIGION AND HONOR AT HARVARD.

To the Editor of The Nation:

Sir: As a Harvard graduate, with a deep interest in all that concerns my Alma Mater, I wish to answer the appeal with which the letter of "A Student," in your last issue, concludes, and to protest against both the reasoning and the tone of his letter. It opposes the present church and chapel regulations at Harvard on two grounds—namely, that all religious observances required of students by college authorities are objectionable because required, and that the Harvard system in this matter is wrong because it relies in great part on the honor of the students.

Not being a parson, I cannot answer the first objection *ex cathedra*. I deny, however, the existence of "forced religious training" at Harvard. Were Harvard a prison or an insane asylum, the words might apply; but no man who objects to being present at religious services is forced to come to Harvard at all. Many students come there on their own responsibility, and I cannot believe that the American *paterfamilias* ever actually compels his sons to enter Harvard against their fixed desire, reasonably expressed. If, then, the authorities say to the young men who voluntarily come under their control, "We believe that a daily public offering of thanks to God for all that He has given us, a confession of sin, and a prayer for His help in our daily life is not only fitting in itself, but also conducive to a better attainment of the objects for which you have come here, and therefore we appoint a convenient hour for a short service of the simplest form, which we wish you to attend at least four times a week, and we also wish those of the three lower classes who spend Sunday in Cambridge to attend morning prayer on that day at whatever church they select," I see nothing either unreasonable or "forced" in it. Were Harvard the only university of its grade in the world, the word "forced" might have greater truth, but even then there is scarcely any position in this country to which a university degree is a necessary qualification.

With the second objection I am more free to deal. "A Student" says that the position of the Faculty in this matter is "both illogical and absurd," because if Harvard students—many of them men of old families North and South, who

have grown up amid the best social influences of this country, all of them men with great advantages for mental development—if these young men are put upon their honor, "it simply offers a premium on dishonesty." In a literal sense, of course, this is true. In every choice between right and wrong the wrong is likely to offer temporary advantages, often apparently greater than those of the right. But what is meant is, a premium *of which they take advantage.*

That this is true in some instances, I admit. I knew such men, but, though often companionable fellows, they were not, could not be, "men who would scorn to tell an untruth, and consider their word sacred in all other matters." The weak desire to escape the consequences of their own actions, even at the cost of truth, influenced them in other things besides the matter of church certificates. Let me not be thought to look down on these men from the pinnacle of my own righteousness. I often "cut chapel" myself on excuses that would not have borne investigation, and which I remember with shame and contempt; but I alone was to blame, not those who trusted my word. That "A Student's" assertion is true of Harvard men as a rule, I cannot believe. Certainly it was not true of most of my own contemporaries, but then, with all our faults, we did not greatly cultivate "agnosticism." What that form of belief may be, I have but a hazy idea, but if it tend to make men careless of their honor, even in religious matters, I trust that "A Student's" "agnostic" friends will keep their precious treasure to themselves. I doubt, too, if any men of my class would have gratuitously informed the readers of a widely-circulated journal that his friends were in the habit of lying *because* they were trusted; but perhaps "agnosticism" is to blame for such callousness.

Even were "A Student's" assertion true, does that help his argument? Would he have the burden of proof always on the students' side? We trust men's honor every day in other matters, although we know that it cannot invariably be relied upon. We know that the evil of an occasional breach of trust is less than that of a perpetual suspicion. Why is it "illogical" to trust men in religious matters also? The present church and chapel rules at Harvard may be inexpedient (that I am not discussing), but if we Alumni are to vote for overseers who believe in "voluntary prayers and common sense," let us have sounder reasons for doing so than those "A Student" offers. B.

PHILADELPHIA, January 29, 1883.

SOUTHERN HOMICIDE.

TO THE EDITOR OF THE NATION:

SIR: Enclosed find $3, my subscription for 1883. From motives of economy, I had decided not to renew it, but every Southern man owes you active support in your attack on the cowardly custom of assassination, which threatens to take among us the place left vacant by the comparative extinction of the "Code." No right minded man can regret that the duel is out of fashion; but it at least made some pretence (usually illusory) of securing equality between combatants, and to that extent was less objectionable than its successor, the street-fight. In the latter, the brave man, who is above taking a mean advantage and scorns being an assassin, is at a terrible disadvantage in meeting a cowardly or murderous adversary. If there is anything manly about it, if it has one redeeming feature or any ground of excuse, I cannot see it. That in attacking it you are slandering the South, I do not admit—nor even that you are likely to injure the South. That you do not fully understand us nor we you—that you may do us injustice in other matters, and, as I conceive, have done us injustice—does not affect this issue, on which I admit that you are distinctly and wholly in the right.—Yours truly, A. R.

TENNESSEE, Jan. 24, 1883.

Notes.

ROBERT CLARKE & CO., Cincinnati, will soon reprint a rare Ohio pamphlet—Ewel Jeffries's 'Short Biography of John Leith, giving a brief account of his travels and sufferings among the Indians for eighteen years, etc.,' originally published in 1831. The present issue, which will be edited by Mr. C. W. Butterfield, will be limited to 100 copies, or ninety copies for sale, unless the demand be shown to be greater before February 15.

Among the late Gustave Doré's latest designs were a series of twenty or thirty prompted by Poe's "Raven." These have become the property of the Messrs. Harper, who will engrave them and make them the occasion of a new and sumptuous edition of that poem, as a companion volume to their 'Ancient Mariner,' also illustrated by the French artist. The effect of his designs as interpreted by our American artists will be awaited with interest.

Miss Elizabeth Bryant Johnston is preparing a second edition of her 'Original Portraits of Washington,' published a year ago by J. R. Osgood & Co. She writes to the *American Architect* that she has profited by the reviews of her work, and accepts Mr. Charles Henry Hart's generous offer of all his data relative to Washington portraits.

Teubner's editions of the Greek and Roman classics have been secured for an American imprint by Townsend MacCoun, Chicago, who sends us L. Müller's 'Horace' and Dindorf's 'Iliad.' They are neat and handy volumes, with edges as yellow as pollen-dust, and with foreign-looking type and dull-white paper. If not so stylish as similar works wholly manufactured here, they are, we believe, less trying to the eyes, especially when read at night. We are still in the bondage of glossy paper.

The 'George Eliot Birthday Book' deviates a little from the common form, and is also peculiar, we believe, in giving only the birth dates of famous women—a task which proved insuperable in the case of not a few, as the editor tells us. A rather ghastly heliotype, apparently from a crayon portrait of George Eliot, serves as a frontispiece (Boston: Hall & Whiting).

A cheap edition in paper of Henry George's 'Progress and Poverty' has been brought out by the John W. Lovell Company.

A new 'Bibliotheca Americana' of Robert Clarke & Co. is worth consulting by students, book-lovers, and book-buyers. It embraces 6,589 numbers.

Mr. Alexander Ireland, whose own work on Emerson has been doubled in a second edition, sends to the *Athenæum* lists of articles on Emerson in English and American periodicals, before and since his death, foreign translations of and articles upon him, and books, pamphlets, etc., relating to him.

Mr. F. Leypoldt's name stands as publisher (at 31 Park Row, New York) on the January *Monthly Reference Lists* of the Providence Public Library—a four-page number. Mr. Foster returns to the topic of the "Civil Service," which he has already so effectively treated in his 'Literature of Civil-Service Reform.' The other current topic is "Gambetta and the Third Republic," in which the references show the immediate utility of 'Poole's Index' for such bibliographical publications as this. The side topics, or *hors d'œuvres*, are "J. G. Whittier" and "An Elective Judiciary."

In the twenty-third Forestry Bulletin of the Census Office, Professor Sargent makes an estimate of the consumption of wood in this country during the Census year, and fixes upon 140,537,439 cords (valued at two and a quarter times as many million of dollars) in domestic uses alone. Railroads and manufactures consumed only 5,000,000 more. An interesting colored chart exhibits the predominance of wood or coal as fuel throughout the United States.

A new volume of poems by Robert Browning, entitled 'Jocoseria'; a selection from his lectures by Sir H. S. Maine; an autobiographical memoir by the late Anthony Trollope; a translation of Renan's 'Souvenirs d'Enfance' contributed to the *Revue des Deux Mondes;* and an account by Dr. Schliemann of his recent explorations in the Troad, are some of the more interesting late London announcements.

Nature (January 4) reports the opening for inspection of the College Hall of Residence for Women Students, in connection with the University of London, at No. 1 Byng Place, Gordon Square, London. It is conveniently near the London School of Medicine for Women and the British Museum. Sir John Lubbock is Treasurer of the Building Fund, which in time will be drawn on for a larger building. This example should stimulate a similar benefaction for the Harvard "Annex."

Messrs. Acland and Ransome, whose very original and helpful manual of 'English Political History' we have more than once had the pleasure of praising, have had the further good thought to extract from their work the pages covering the last half century, which they label a 'Handbook of British Politics' (London: Rivingtons). This shilling pamphlet can readily be consulted by any one reading that portion of British, or, indeed, of modern history. It is indexed by administrations, as Canning's Ministry, 1827; Lord Goderich's, 1827; Duke of Wellington's, 1828, etc. An Appendix gives the constitution of the Houses of Lords and of Commons, and the changes wrought by the Reform Acts of 1832 and 1867-8, together with the titles of acts of Parliament relating to labor and labor organizations, and a select list of pertinent works, historical, biographical, politico-economical, etc., for the epoch under review.

We have received the current issue of 'The Year's Art' (London: Sampson Low & Co.). Mr. Marcus Huish has joined with him in his editorial labors Mr. David C. Thomson, author of the meritorious 'Life of Thomas Bewick' not long since reviewed by us. For all that pertains to British Art, even to the year's legal decisions affecting art and to the acquisitions of galleries, this annual is a complete store of information in great measure obtainable nowhere else. Such is the obituary of the year, the list of fine-art dealers and the directory of artists, filling seventy-five pages; the list of members of the Royal Academy from 1768 to 1882, now first published; the art sales of 1882; the catalogue of engravings and etchings published from December, 1881, to November, 1882; that of the chief art-books, etc. The announcement is made on p. 174 that the next issue will contain "some account of the many important art institutions (galleries, museums, art-schools, clubs, societies, and publications) of the English-speaking countries of the world." To this end the coöperation of secretaries is particularly requested by Mr. Huish (whose address is New University Club, St. James Street, London, S. W.) before October 1, 1883.

The January *Portfolio* (J. W. Bouton) is, we may safely affirm, the best first number of any year since this admirable periodical was founded. In variety of illustration no one of its 156

predecessors can compare with it. It opens with a steel engraving after one of Millais's little English damsels; it has its customary representative etching, from a French hand, representing the Hôtel de Cluny: it reproduces in facsimile two chalk studies of female heads (one tinted) by Mr. E. J. Poynter; it gives a number of excellent woodcuts of the New Forest; uses "process" work for another kind of illustrations; and finally employs a sort of photogravure called "ink-photo" to represent that most striking monumental group erected in memory of Philippe Pot, and preserved in a private museum at Dijon. The text accompanying this last full-page print is very readable, and so is Mr. Hamerton's first paper on Paris in its artistic aspects. He makes two remarks worth quoting: that Paris owes its magnificence to the apartment system of living, which determined the domestic architecture; and that, not to mention other and moral losses which the great lodging-houses involve, they dwarf the principal monuments—drown them out, so to speak. Once, he says, even in London, the Nelson Monument seemed too tall; now not an inch could be spared. It was the perception of this fact that determined the location of the Alexandrian obelisk in Central Park. Before leaving the *Portfolio*, let us also mention an article on the new Law Courts, with a general view and some details.

Among the latest volumes in the Tauchnitz series are the 'Autocrat of the Breakfast Table,' the 'Professor at the Breakfast Table,' and the 'Poet at the Breakfast Table.' The appearance of these books in the German-English collection is simultaneous with the handsome new Boston edition, and with a reprint of the earliest book in the English "Mayfair Library" of Messrs. Chatto & Windus.

M. Alphonse Daudet's new novel, 'L'Évangéliste,' is now appearing in the Paris *Figaro;* M. Zola's 'Au Bonheur des Dames' is coming out daily in *Gil Blas;* and M. Halévy's 'Criquette' has just been begun in the *Temps.*

We record the progress of the following serial publications: Kluge's 'Etymologisches Wörterbuch,' parts 3–4, *hehr-Pauke* (Strassburg: Karl J. Trübner); 'Brehm's Thierleben,' Parts 61-65, still in the Mammals; and Düntzer's illustrated 'Goethe's Werke,' Parts 13-18 (New York: B. Westermann & Co.).

—In *Lippincott's* for February, Louise Seymour Houghton, under the title "This Our Brother," shows how the nature of the East Florida negro is perverted and corrupted by the Northern tourist. The great argument for steady work, in the mind of the negro in Florida, as elsewhere in the South, is the necessity of providing against the winter. But where his habitat is a region frequented by the tourist, he can often find light employment in hotels and boarding-houses at wages which give him a great distaste for the small profits to be gained by planting corn. If he is very lazy, he will "find congenial occupation in rowing a boat, running or rather lounging on an errand, loafing around wharves and hotels for chance jobs," or even "in capturing young alligators and mocking-birds or stealing orange-blossoms for the benefit of the Northerners." Thus, when the spring comes, he has got through the winter with such comfort, thanks to the tourist, that no amount of argument will induce him to appreciate the value of providence. Even his own proverb, "as pore as July," fails to teach him practical wisdom. The picture is probably exaggerated, for the number of Northern tourists who go to Florida in the winter is surely not sufficient to affect a very wide area; but, granting that their influence is baleful, how is the evil to be remedied? The tourist will go to Florida for health or pleasure, and consequently hotel life will furnish the negro with a kind of occupation which some negroes will always prefer to agriculture. The negro will have to get accustomed to winter-hotel life in the South, just as he has in the North to summer-hotel life. The Saratoga hotel negro gets along without agriculture, and, to judge by our experience in the North, it is not he who suffers from the "guest," but the latter who is the victim of negro activity and thrift. Freedom will ultimately, no doubt, produce the same effect in the South. The writer justly criticises the tourist habit of showing "an interest" in the freedmen by indiscriminate present-giving, and of converting the church services into a regular Sunday entertainment, by contributions of money, the religious show being made as diverting as possible by pastor and flock in return. S. P. Scott has an illustrated article on Saragossa, and an anonymous contributor on "Beauty versus Bric-à-Brac" makes an elaborate protest against "the present tendency to identify the love of luxury, ostentation, curiosity, and fashion with the love of beauty." A great deal that is said about the collector is true; but we, in our turn, must protest against his being denounced for the desire to possess the "objects" he admires. The idea of the writer, that the love of beauty may be cultivated to that point that seeing beautiful objects will be regarded as "real possession," and when the desire to own them will come to be thought "vulgar," may commend itself to art critics; but we fear it will be a long time before either artists or "art patrons" will look upon it with any favor.

—'A Lost Function in Romance' is the title of a pamphlet (published by G. P. Putnam's Sons) in which Mr. Caroll Bryce discusses one branch of the old question of the moral uses of fiction. He shows very easily that most of the present English and American novelists differ from their great predecessors in not undertaking to teach a lesson of any kind. Mr. James, for instance, or Mr. Black, has no message to deliver to mankind, no sins to scourge, no abuses to attack. They are simple story-tellers, each in his own different way. "Contemporaneous fiction, then, here and in England, seems, so far as novels are concerned, generally to lack any very aggressive, consuming, and positive moral purpose." The fact stated by Mr. Bryce few people will be inclined to dispute, but we do not find him offering any suggestions as to a remedy. The modern novelist has had his attention called to this peculiarity very often; but his reply is that he does not want to teach, that the function of teaching is disagreeable to him, and that he proposes to go on telling stories in his own way. He says, too, that the public are tired of being taught and want to be amused; moreover, that literature is an art in itself, and that romance is all the better for having lost the function the disappearance of which Mr. Bryce deplores. Those who are interested in this subject will find a good deal of food for profitable reflection in the case of Hawthorne, a novelist whose stories had no practical moral purpose whatever. The author of the 'Scarlet Letter' cared no more for "reform" than Mr. James does, yet his romances would lose a very great part of their interest if it were not for their hold upon the conscience of the reader. Pure art for art's sake would, we suppose, not appeal to the conscience at all; but any permanent future for fiction on such terms seems to us out of the question, as long as novel-readers remain moral agents.

—The address on "The Place of Original Research in College Education," read before the National Educational Association last summer by Prof. John Henry Wright, of Dartmouth, has been reprinted in a separate form, and deserves more attentive consideration than most of such papers do. The author has still the glow of German training fresh upon him, and it is natural that he should attack American problems by German methods, and that he should imagine those problems to have been less studied than they have been by men who have added to German training the sobering experience of many years of work under American conditions. But our older men are perhaps a little tired, and if the needed reforms are to be initiated, they will doubtless be initiated by young men who, like Professor Wright, feel keenly the want of the stimulative and directive agencies that are so potent in German university life. As we must still be content to learn from Germany, Professor Wright has done good service by the preparation of his careful, copious, and attractive account of the working of the German *seminarium philologicum* from the time of Gesner to the present day. Due space has been given to Ritschl's "model seminary," and those who have read Ribbeck's admirable memoir of the great teacher, as well as those who have not, will be glad to have the essence of this important part so well put. Only we must remember that the *seminarium* was originated simply as a corrective to the "funnel" system of absorbing lectures, and that its use depends almost wholly on the capacity of the director. Lecturers there are many, but teachers there are few, the world over, and Ritschl's power over his students was a mystery which he himself could only explain by that other mystery "love." It must be added in all fairness that Professor Wright is not blind to the bad side of seminary organization. He is too clear-sighted an American for that, and he has a thoughtful word to say about "narrowing specialties" and "precociousness"; but he does not dwell enough on the sophistic character of some of the work that is done. The whole machinery of "disputation" requires skilful management if the discussion is not to degenerate into mere quibbling.

—But the pamphlet treats of original research, and we are interested in the German *seminarium* only so far as it promotes original research. Now, "original research" is a much-abused phrase, and it may confidently be said that a very large proportion of German doctor-dissertations, which are supposed to constitute the *dessus du panier* of such work, cannot be properly classed under that head. Much of it is mere mechanical statistic on lines already laid down, without a new idea to enliven the mass of details. But if original research means simply individual research, investigation as opposed to absorption, no one can deny the importance of engaging in such work as soon as the student is adequately equipped. But what constitutes adequate equipment? If we should demand in America for classical philology what is theoretically demanded in Germany—absolute readiness in the formal command of Latin and Greek—we should be found to postpone the golden time to which one would gladly look forward as in the near future. Everybody sees that the trouble lies largely at the doors of our secondary schools, which are usually satisfied with a meagre preparation for the very slight classical entrance examination of our colleges. The average age of the Freshman is much higher than it was twenty or thirty years ago, and requirement and preparation have not kept pace with the advance. What has been gained in accuracy of grammatical knowledge has been lost in command of vocabulary, in actual acquaintance with authors. The modicum of classical reading done by a boy of seventeen is absurdly small, and in the latter years of college life young men are often getting up elementary text-books at an age when the German student is working on higher lines of research.

—We have received from H. Champion, 15 quai Malaquais, Paris, an English circular which is noteworthy not merely for the two periodicals advertised in it, but for the way in which they are described. "The following papers," it says, "are, according to the Documents and articles they contain, to be admitted amongst the most useful ones. 1°. Le Cabinet historique. New series, published under the Direction of Mr. U. Robert, clerk attached to the Manuscripts of 'National Library. The first part is entirely consacrated, etc., etc., the second part contains: historical and bibliographical works, referring to the records and Libraries, such as: inventories, catalogues, etc. A foreign list of books kept every day with the greatest care, is to return many useful services to the Librarians. The Cabinet Historique has, amongst his colleagues: M. Omont, of the Manuscript's office; M. Molinier, of the Magazine's Library, etc. 2°. La Bibliothèque Nationale, 'Montbly recueil' of the latest french publications, with an appendix containing the list of maps and ancient books newly entered in the 'departement' of printed things. This bulletin published by the National Library contains the complete nomenclature of the lawful deposit; it is, in a word, the catalogue of the National Library kept 'au courant' with the indication of the prices."

—For folks who have to do with books, accuracy and completeness in the giving of proper names are quite indispensable. Yet even the mother of Jakob Grimm might have smiled had she seen his name expanded to Jakob Ludwig Karl Grimm, as it is in some library catalogues. And a personal acquaintance of the Muscovite linguist, Rudolph Westphal, ventures the assertion that even Westphal himself has forgotten the other names which conscientious librarians have inserted in pencil on his title-pages. But coming years may produce other Grimms, with Jakob among their Christian names, so that no less degree of fulness would prove distinctive. The already established fashion of christening children with three names, and the gradually prevailing fashion of printing these in full on the title-page of books, are on the whole entirely commendable. Geoffrey Chaucer and William Shakspere managed, indeed, to scrape through tolerably successful literary careers without middle names, and the latter was as vacillating in the orthography of his surname as the most ardent modern spelling-reformer could desire; albeit the somewhat exceptional character of the writings of these two eminent men will doubtless continue for some time longer to distinguish them sufficiently from possible homonymous rivals to whom the future may give birth. Far more troublesome to bibliographers than either of these kinds of cases must be those in which an author's name changes while an index is in press or library-cards are in making. Fancy, for instance, the sighs of the poor cataloguer as he changes the card-headings of 'Adam Bede' and the score that follow it, from "Eliot, George," to "Evans, Marian," and then to "Lewes, Marian Evans," and then to "Cross, Marian Evans [Lewes]," and finally, on sober afterthought, back to the original pseudonym. These sighs have been heaved and all these changes made in a well-ordered library not five miles from Boston.

—But not only women, from whom such trouble might naturally be expected—even men, too, have begun to vex librarians by their matrimonial alliances. Probably the only man who may be said to have made a new departure in comparative philology since Bopp is Dr. Karl Brugmann, of Leipsic. He began life and attained celebrity with only one *n* at the end of his name. But a few months ago, the preparations for his wedding having been made, it was found at the civil marriage (*Civil-trauung*) that the license permitted only a Brugmann with two *n*'s to be joined in holy matrimony, and the groom was required to sign the blanks accordingly. Rather than postpone the happy day, and on the advice of the bride's father, who is a jurisconsult, it was decided to sign with two *n*'s, under protest, and investigate afterward. And on inquiry, the parson who made out the papers said that the name stood as he had written it not only in the certificate of baptism (*Taufschein*), but also throughout the parish register. And so, though the family was originally Dutch, and the single *n* originally correct, the young Doctor concluded to prevent any future difficulties by changing to Brugmann, and the whole family has followed him. Of the strictness and thoroughness of German officials these facts are characteristic, and for the American philologist who desires to be *au courant* they are noteworthy. It may be added that Brugmann is now preparing a 'Compendium of Comparative Philology,' which is to be for the science in its present phase—and no doubt its present phase only—what Schleicher's was for it ten years ago.

—The *Kulturkampf* certainly does not flourish in the modern world; but, not deterred by its failure in Germany, parties in France and Switzerland have entered upon the experiment. In Switzerland the attempt has met, fortunately, with a serious check at the outset. On the 14th of last June a Federal decree was issued adding a Secretary of Public Instruction to the Department of the Interior, to look after the execution of Article 27 of the Constitution, which establishes compulsory free primary education. Hitherto the cantons had had the charge of the matter, and naturally there had been considerable diversity of action, especially between the Protestant and Catholic cantons. At first sight the decree seemed simple and inoffensive enough, but was soon seen to portend very serious changes. The Radical leader, M. Schenck, showed his hand with a most imprudent frankness. He was not only going to introduce uniformity of secular teaching, but to draw up a scheme of moral and religious instruction, which was to be enforced not merely in the public, but in the private schools too. It is true he intended so to construct it that it should not contradict any of the creeds professed in Switzerland; but what chance was there of his succeeding? and if he succeeded, whom would he have satisfied with his Government religion? Of course it was an attack upon the Catholic cantons, and, as they are in a minority, the decree might have been confirmed by the Federal Assembly had it not also been an attack upon the liberties of the cantons, which they are by no means ready to yield to the Central Government. Imagine our Commissioner of Education undertaking to draw up a statement of moral and religious truth to be taught compulsorily in all the primary schools of the United States. Our Government has made great progress in centralization since the Civil War, but neither we nor the Swiss are quite ready for such uniformity. An overwhelming majority of the Federal Assembly persisted in referring the question to the people, and the people, on the 26th of November, defeated the plan by a decisive vote. It is not likely to be speedily resumed. The Swiss are getting to be a little tired of religious bickerings. The Protestants have had it very much their own way of late. The Federal constitution of 1873 secures the civil power against the religious. Now perhaps they are beginning to feel that it would be safe to indulge in a little brotherly love, that they can afford to tolerate a little. Possibly they have begun to see that the civil power is safest when it is entirely neutral on religious affairs, and confines its efforts to baffling the efforts of religious bodies to get it under their control.

—Every one who has given any attention to the subject of Feudalism has felt the difficulty of making this state of society, in its structure and practical workings, intelligible to himself. It is a thing easy enough to describe in general definitions, but nothing in the field of history is harder than to understand really how it came into existence, and how it worked in detail. M. Seignobos, of Dijon, has been struck, as he says, by the impossibility of understanding the feudal régime by studying it "from the centre of the kingdom and the supreme government, because it was formed in the country at large and at the bottom of society." He has, therefore, taken a single province—Burgundy, in which he resides—and made it the subject of a detailed examination, the results of which are presented in an octavo of 417 pages, entitled 'Le Régime Féodal en Bourgogne jusqu'en 1360,' this being the date of the extinction of the first ducal house of Burgundy. We are not aware that this work has been performed, at least upon such a scale, for any other feudal community. We consider this, therefore, the most instructive treatise upon Feudalism—not its origin, but its structure and character as a social institution—with which we are acquainted. It still leaves something to be desired. A feudal map of the province, divided into *châtellenies*, inferior fiefs if possible, ecclesiastical jurisdictions (*potés*), and *baillages*, would be a most serviceable addition. Moreover, it is not entirely clear as to the relation of the *châtelains* and *prévots*. At the close the author cautions against accepting the picture here presented as belonging to any province but the one in question, and perhaps the other Eastern provinces—Champagne, Lorraine, and Picardy: for the West and South it certainly would not be a correct view. We suppose, for instance, that the exceedingly degraded condition of the peasantry described by him would not be true, at least in the same degree, in Normandy. It is to be hoped that the example of M. Seignobos will be followed by others, and that we shall have a similar analysis not only of other French provinces, but for England, whether for any one county or for the estates of any one nobleman. What, for instance, would be of greater service in understanding the Wars of the Roses than such a description of the possessions of the king-maker Earl of Warwick?

—The fourth popular matinée at Steinway Hall on Thursday afternoon again attracted a large audience, no less select and refined than the best that assembles for a Philharmonic concert. The soloists were Mr. Max Heinrich, who sang an aria from Spohr's "Jessonda" in good style; Mrs. E. P. Dodge, who did fairly well with some German songs; and Miss Jessie Pinney, who played Schumann's pianoforte concerto in A minor, Liszt's twelfth Rhapsodie, and a serenade by Moszkowski. It was a bold thing in one so young and inexperienced to attempt Liszt's Rhapsodie in a place where Joseffy had played it but two days earlier; and still more bold to play the magnificent Schumann concerto, and without notes, too. Miss Pinney, however, conquered all difficulties and achieved a decided success. A momentary lapse of memory in the concerto does not count in face of all the good qualities displayed on this occasion. Her intellectual and emotional interpretation of the music was alike admirable, her touch firm—delicate, and strong in turn—her runs "pearling," and her phrasing in consonance with the intention of the composers; and to all this was added a certain poetic charm peculiar to gifted musicians of the fair sex. She was warmly applauded and recalled by the audience.

Among the orchestral selections was "Le Rouet d'Omphale," one of Saint-Saëns's most picturesque symphonic poems, in which one can almost see the great Hercules amusing himself at the spinning-wheel of the Lydian princess, and which contains some pretty new orchestral effects, notably in the treatment of the harp. There were also copious extracts from Wagner's "Meistersinger," which were finely played. The first piece on the programme was a novelty in MS.—an orchestral prelude and fugue by Mr. Otto Flörsheim, one of the most gifted of our local musicians, who, it is to be hoped, will be "heard from again." The prelude contains a broad, impressive melody, supported by rich harmonies, while the fugue is written in strict polyphonic form, with modern orchestration and modulations. The interest is sustained throughout, and the composition was well received by the audience.

JAMES FENIMORE COOPER.

James Fenimore Cooper. [American Men of Letters.] By Thomas R. Lounsbury. Boston: Houghton, Mifflin & Co. 1883.

PROFESSOR LOUNSBURY'S volume is an admirable specimen of literary biography. We can, in fact, recall no recent addition to American biography in any department which is superior to it. It gives the reader not merely a full account of Cooper's literary career, but there is mingled with this a sufficient account of the man himself, apart from his books, and of the period in which he lived, to keep alive the interest from the first word to the last. At the same time, the author has avoided most of the faults of current literary biography. He has not made any attempt to enhance the interest of his subject by tearing away the veil from the privacy of family life, nor to stimulate the appetite of the reader with newly-discovered gossip and scandal, or those petty personal details which make biography so often read like tittle-tattle prepared for the delectation of cooks and chambermaids. As Cooper's life was one prolonged and furious quarrel with his critics and neighbors, there was no doubt plenty of material for this sort of writing. The "Mile-End" controversy alone, of which Mr. Lounsbury gives an intelligible account, probably engendered hosts of stories to Cooper's disadvantage, out of which a volume of "spicy" anecdote might be made. But what should we gain from it all, except a knowledge of the fact, which is undisputed, that Cooper had a hot temper and liked to quarrel? So far as he showed temper in public and as a literary man, we cannot overlook it; but is the place of the 'Spy' in literature affected by this? Not any more than the plan of "Childe Harold" is affected by our knowledge of Byron's lameness, or of his unhappy domestic troubles. In this as in other respects, Mr. Lounsbury has a just feeling for proportion and a most welcome sense of decorum.

The volume takes us back to a period of American literature which it requires considerable mental effort to make real to ourselves. There is no question, and never has been any, of the school of fiction to which Cooper belonged. All of the novels which form the basis of his fame are tales of adventure written in that vein of romance which we associate with the name of Sir Walter Scott. Cooper himself took pains to acknowledge this with a frank confession of discipleship that is perhaps without a parallel in the history of literature. But the real sources of his power did not lie in any connection with, or dependence upon, Scott. It was as an American novelist that he appeared in literature, and it was their American character which gave his novels their first success. There were, of course, a variety of other causes which placed Cooper, almost from the first, in the foremost ranks of the novelists of his time, and these Mr. Lounsbury analyzes with much fairness. He first proved, for instance, by example, that the sea might furnish as good material for fiction as life ashore. It is to Cooper that Mr. Lounsbury thinks we owe the sea-novel, and points out that in Cooper's sea-stories the hand of a master is shown in nothing more strikingly than that he does not overload them with nautical detail, unintelligible to the general reader—a defect which many of his successors have not avoided, and into which his own sailor's life might easily have led him.

It is probably, however, in his novels of pioneer and Indian life that his permanent fame will rest. It was these, and 'The Spy'—a story which occupies a peculiar position of its own—that made Cooper's name known all over the world in his life-time, and Mr. Lounsbury is clearly of opinion that they will retain a firm hold upon popular favor. One advantage the Leather-Stocking tales had which, as time goes on, will not be diminished: that they described a kind of life admirably adapted to romance in being practically unknown to the novel-reading public. Cooper's materials were furnished him by the America of his own time; but even fifty years ago the pioneer and Indian types were known accurately to a very small number of people, and hence there was an enormous scope for the imagination. Scott, to liberate his fancy from the trammels of the commonplace, was obliged to go back to the period of "chivalry": Cooper had the backwoods of his own day and their denizens ready to his hand. Now the backwoods are gone: they have been chopped down; the land is under cultivation, covered with towns and cities, and well supplied with newspapers. The pioneer of our day pushes his way Westward by the aid of a railroad and a construction company, and lives, if he is of an adventurous turn, not by the chase, but by speculation in mines or town lots. The Indian, too, as he exists, is not the savage of Cooper's day. The conditions of his life have changed. He is not contesting the possession of the continent with his white foe; he is not filled with lofty thoughts of regaining his lost empire: he lives on a reservation, tills the soil, pretends to desire to become a civilized man, and does his scalping, as far as possible, "on the sly." We have no longer any very good means of judging whether Cooper described types actually existing in his day or not. We may suspect that he did not; but, admitting that he drew upon his imagination, what difference does it make now, or can it make in future? Thus much may be suggested as a reason for believing that the popularity of Cooper's stories of adventure will not be undermined by the spread of a belief that his types are and always were unreal. At the same time it must be confessed that there has been a change in what we may call the imaginative habit of the world which tells the other way. At the time that Cooper wrote, the reading classes were greatly under the influence of a feeling about civilization and nature which played into his hands. Civilization was held responsible for most of the vices and defects of human nature and life, and it was generally believed that the further we got from civilization, and the nearer we got to primitive natural life, the more likely we were to find virtue and excellence of a high order—such as we like to have presented in romantic types. The Indian presented this state of nature in one way, the pioneer in another. All the preconceptions and prejudices of readers in Cooper's time disposed them to test the truth of his pictures, not by the facts of the case, but by this theory.

Now, the imaginative habit of the world is reversed, and we think of civilization as a process which improves the capacity of the natural man for the practice of virtue, and we do not regard civilized man as a noble savage in a state of relapse. Our idea of human progress involves that of a more or less steady advance from a savage state, and we can hardly think of getting rid of civilization except by introducing barbarism. Cooper's pioneers and Indians, therefore, are unreal to us for the reason that our social imagination teaches us to expect to find in such types characteristics the very opposite of those which his earlier readers expected to find in them, and which he gave them. We see the same thing in a different way in Scott. To the historical imagination of his day, the romantic behavior and conversation attributed to such characters as Rebecca, Ivanhoe, Cedric the Saxon, Richard, Berengaria, was natural and probable. By Thackeray's time, they had become fit material for burlesque. But Scott has thus far survived burlesque, and he would be a bold critic who should undertake to predict that Cooper's reputation will disappear as time goes on. The considerations to which we have adverted will tell on the one side or the other, and the world will take a long time to make up its verdict. Thus far, as Mr. Lounsbury shows, Cooper's fame has borne the tests which time and a change of taste have brought to it remarkably well.

AMICIS'S FIRST WORK.

Military Life in Italy: Sketches by Edmondo de Amicis, Army Officer. Translated by Wilhelmina W. Cady. With illustrations. G. P. Putnam's Sons.

EDMONDO DE AMICIS'S name is so well known as the author of several admirable books of travels that it alone would suffice to call the attention of the reading public to any work of his; and indeed, who could forget, after having once read them, the panoramic word-paintings of Constantinople, the graphic studies of Paris, the keen appreciation of Holland and its people, the intimate characterization of Spain and the Spaniards, the vivid Eastern pictures of Morocco? De Amicis is more than a poetic author, he is a great artist, and this artistic temperament is so apparent in his writings that no one can read his descriptions of men and places without recalling at once some favorite artist—Gérôme, for instance, in his Moorish characters; Millet, in his portraiture of the peasantry of Italy; Horace Vernet, in his battle scenes; Detaille or Neuville in his delineation of military types.

This work, of which the translator should have preserved the original title of 'Military Sketches' (*Bozzetti Militari*), for they are simply sketches, was the first literary venture of Amicis. This fact, also, should have been noted, because, though only now translated into English, it was this work which won for him his first literary laurels, while he was still a young officer in the Italian Army. This would have warned the reader and predisposed him to condone an occasional youthful exuberance of style and some verbose overdrawn descriptions, very natural to the enthusiastic young military patriot of Italian liberty, in those eventful years when Italy freed herself from foreign despotism. The translation is all that can be desired, both in style and in correct interpretation, retaining at the same time the smoothness and local coloring of the original. We detect here and there a slight flaw, but of so little importance that it is not worth noting, except the rendering of the Italian army weapon *daga* once into "poniard" and another time into "dagger," from which people might suppose that Italian soldiers wore, even in military service, the popular weapon of a brigand, whereas it is only the technical name of the sword-bayonet.

The volume is a series of sketches, and each so vivid as to give an artist a subject for one or more charming pictures. But this is not all, for beyond the artist and the poet there stands out prominently the patriot. To appreciate fully the worth of the book, besides its great artistic merit, one must call to mind the time and events that brought it forth. After the revolution of 1848 Italy sunk for nearly ten years under the oppressive yoke of foreign bayonets. The Austrians occupied Venice, Lombardy, Tuscany, Parma, and part of the Papal States; the French, Rome and Civitavecchia. The King of Naples, the infamous "Bomba," had six full regiments of Swiss soldiers, two cavalry regiments of Bavarians, while the rest of the army, composed of Neapolitans, merely acted as police against the Liberals. Piedmont alone had a national army. The Italian people, therefore, for long centuries, and at that period with more reason than ever before, had looked upon the soldiers as their natural enemies and oppressors. This feeling was so rooted in their very souls that it took years to eradicate it, and it is not even now fully outgrown. The war of liberation of '59, Garibaldi's achievement in '60, the Italo-Prusso-Austrian war of '66, drove the foreign bayonets from every part of Italy, except Rome, and the Piedmontese army, together with the former volunteers of Garibaldi, the army of the ex-Grand Duke of Tuscany, and the yearly recruits from the general conscription introduced all over Italy, formed the new Italian Army. This army had to be amalgamated, trained, disciplined, instructed in its letters, and, above all, to be recognized by the lower classes as their protector, and not their enemy. This was the most difficult task, for the ignorant classes are the most tenacious of hereditary prejudices. In fact, they opposed the conscription by all the means in their power, especially in the southern provinces, resorting to all manner of tricks, pretences, and evasions, and when these were found unavailing, the conscripts actually hid in the woods or the mountains, and often openly joined the brigands. This accounts for the enormous increase of brigandage during those first years of Italian liberty; and it took some of the best generals of the Army, Pallavicino and Medici among others, and years of martial law, to suppress it.

This book of De Amicis came out about this time—1868, if we remember right—and it had a wonderful success and immense circulation. It went into the mansion of the rich and into the hut of the peasant, for it interested them all, as by the Italian conscription law every one is bound to serve. It taught them to make a distinction between foreign mercenaries and patriotic Italian soldiers. It taught them that the Italian soldiers were not slaves of a despot, but the protectors of the liberties of the people; that the officers of the Army were not the taskmasters, but the fathers of their men, loving and respecting them as their fellow-citizens—men whom they had known as workmen and peasants in their own towns or villages. Read from this point of view, the book of De Amicis will acquire double lustre, both for its intrinsic merit and its patriotic aim. In it the true patriotic army is portrayed to the life—the soldier's duties, the marches, the sufferings, the privations, the pleasures, the excitements and storms of battle; and through all this an undercurrent of deep sentiment, the love of home, of a lover, of a mother. Indeed, the mother's love permeates the whole book, and is one of its most delicate charms. The Italians, like the other Latin races, have been charged with having no word to express home, and to have very little conception of the English or American idea of a home. Let those who think so read these sketches to be undeceived; for if the Italians have not the word (though *focolare*, "the hearth," may very well answer for it), they surely have the *carità del natio loco*, "love of the native place," as Dante calls it, as strongly impressed as any people in the world.

These sketches of De Amicis are real pictures of military life, each complete in itself, and form, as it were, a gallery of paintings. The "Midsummer March," so hot, so dusty, so sultry, on an August day, beautiful yet terrible for a long march—one almost pants for fresh air in reading it. Then the taciturn officer and his taciturn orderly, who for four years never exchange other than words of command and assent; and yet, under that rigid exterior of military discipline there lurks such depth of love and feeling between the two. The "Wounded Sentinel" is a graphic sketch of the bitter trials of the first Italian army when called upon to suppress some local tumult or bread riot. Men who had fought all the battles of Italian independence as volunteers with Garibaldi and soldiers of the Army of Liberation had to bear the insults of a crazy crowd and be called oppressors, hangmen, and, worse than all, "Croats." How natural, and pathetic at the same time, the indignation of the sentinel who, striking the two medals that he wore on his breast, exclaimed: "Oh, it is useless for them to give us medals because we have fought for our country if afterwards they are to throw cigar stumps and cabbage heads in our faces!"

The sketch of the filial love of the peasant conscript, who returns after three years of absence to a town near his birthplace, and is expecting a visit from his old mother, who leaves her farm at dawn, and comes to town on foot with a bundle under her arm, to meet him, is worthy of Millet. Then follows a charming little incident, which we know to be historical, the "Son of the Regiment." A boy of twelve, ill-used at home by his step-mother, follows a regiment as it passes through his town, and is discovered too late to be sent back. The soldiers keep him for months, feed him and dress him, till, on their return from the summer encampment, he is restored to his home, and better treatment. But we should have to note one-half of the book to mention what most impressed us as natural and picturesque. What more sleepy than the description of the "Nocturnal March"? It seemed as if Morpheus in person had spread over the whole regiment a veil of drowsiness. The love story of "Carmela" is very touching, and a splendid subject for a melodrama. The next sketch, "That Day," is a battle scene worthy of Horace Vernet.

De Amicis turns occasionally from description of scenery or pathos to humorous or rollicking traits; and he is then a perfect caricaturist, or a jolly scapegrace. Take, for instance, this description of an ignorant Sardinian peasant of twenty, a soldier of infantry. It is an artistic mask, fit for a caryatid:

"The first time he appeared before me at Florence, he inspired me with sympathy. His appearance, however, and several of his replies showed me instantly that he was indeed an original. Seen in front, he was himself; seen in profile, he was another. One would have said that his features changed in turning. From the front view there was nothing to say—the face was like many others; but his profile made one laugh. The point of the chin and the end of the nose tried to touch and did not succeed, impeded by two enormous lips that were always open, and which allowed one to see two rows of teeth scattered like a platoon of national guards. The eyes resembled pin-heads, so small were they, and they almost disappeared between the wrinkles when he laughed. The eyebrows formed two circumflex accents, and the forehead was only high enough to separate the hair from the eyes. A friend said to me that he seemed like a man made for a joke."

In the next sketch, entitled "At Twenty," is detailed the life of seven young lieutenants just graduated, and in their first year of regimental life. Here the author is as gay and lively as a young student or artist, overflowing with fun and jokes and escapades, his spirits effervescing like a freshly-opened bottle of champagne. The book ends with a description of the cholera of 1867 in Italy, and the noble conduct of the Italian Army in allaying its ravages. The illustrations are wretchedly poor, and entirely unworthy of the work.

CREIGHTON'S PAPACY DURING THE REFORMATION.

The Papacy during the Reformation. By Mansell Creighton. Boston: Houghton, Mifflin & Co.

If one were to name those periods of history upon which it would be most difficult to find satisfactory information, the fourteenth and fifteenth centuries of our era would stand high upon the list. Falling between the heroic period of the mediæval Empire and the great upheaval of the sixteenth century, they have suffered by comparison. Yet in these centuries of transition were developing those germs of human thought which the previous age had generated and the following age was to mature. To the student who is concerned with the study of causes and origins, rather than with dramatic moments and great crises of public life, such a period must offer even greater attractions than those more generally studied, because more easily comprehended. Of late years this attraction has begun to be felt, and in all departments of historical study men have been turning to the transition centuries with a zeal only the greater because here were found the explanation and justification of much that was perplexing.

The result has been such works as Burckhardt's 'Civilization of the Renaissance'; Symonds's elaborate study of the same period; Voigt's 'Humanism,' the best work of its kind, but as yet unfortunately inaccessible to English readers; and Lindner's 'History of Germany in the Fourteenth Century,' following upon the incomplete work of Lorenz. In France, men have been waking up to the perception that these years of trial were the time of a new birth in French political life, and a long series of studies has been produced in which this development of a French nation out of feudal elements has been the leading thought. Still, one cannot as yet point to any great or commanding treatise on the whole period of transition which should lay claim to be regarded as the standard work in framing our conception of its manifold political, religious, and artistic meaning. The ambition to produce some such work as this seems to have been the guiding motive in the work before us, of which the first two volumes have just been issued.

Mr. Creighton is a clergyman, writing, as he informs us, in the intervals of a busy life, at a distance from the scenes he is describing, and with only printed materials at his command. These facts alone, while tending to disarm criticism upon certain points, would assure us from the outset that a book of the first rank would probably not be the result. And yet, with this limitation, we hasten to add that it is the best book within our knowledge upon the whole field of European history in the given period. Other books have had a more limited point of view, within which their treatment may have been more effective, but in choosing the Papacy for his central figure Mr. Creighton has been able to include every phase of public life and thought which this era of complicated political problems could present. In using the word Reformation,

he has given it wisely its broadest and truest meaning—not the separation of Protestants from Catholics, but the working out through long and painful struggles of divergent lines of belief and character which could only culminate in a final separation. In that sense of the word, the Reformation begins with Wyclif, in whom we find represented at once the philosophical, theological, and political elements of the opposition to the papal system. Mr. Creighton seems disposed—it does not appear upon what evidence—to undervalue the influence of Wyclif upon English thought. It is true that Cobham's death was the knell of the organized opposition, but one needs only to notice the frequency of later allusion to Wyclif's doctrine as the source and representative of all heresy to see how deeply his personality was impressed upon the movement. Nor can the impulse given by him to the resistance of the Government to papal assumption be overlooked, in its effect upon the whole future of the English policy.

The account of the Hussite movement, following directly upon Wyclif's teaching, is somewhat more detailed and more satisfactory. It forms the natural transition to the leading idea of both these volumes: the growth of the conciliar as opposed to the papal system. In developing this opposition, we are carried into the most intimate details of papal intrigue—wearisome details for the most part. The popes of the schism were not interesting persons. They were the creatures of chance, thrown into prominence by powerful currents of interest which they were unable to control. The prestige of the Papacy as a great guiding influence upon the minds and hearts of men was vanishing, while, in just the same proportion, its demands as a temporal sovereignty among the other states of Europe were increasing. These two tendencies must necessarily come into collision. The common political and religious sense of Europe, loyal as yet to the traditions of the Church, could not tolerate its steady decline in spiritual influence. "Reform!" was the cry of every one of the varying elements which made up the Council of Constance. In the midst of this universal demand for improvement, the Papacy stood alone, pushing with a blind fatalism toward its doom. It resisted, compromised, yielded, surrendered utterly, as the case might be, but did not change, did not reform. That is the dramatic result to be drawn from the mass of detail which Mr. Creighton has presented: after two centuries of struggle, begun by Sciarra Colonna's iron glove flung into the face of Boniface VIII., and ending with the bull of Leo X. against Martin Luther, still the same opposition, the same inability to comprehend the movement of time. Therefore the inevitable breach.

There was only one of the ruling tendencies of modern thought with which the Papacy of the latter half of the fifteenth century fully identified itself—the revival of classical study, and the vigor of intellectual and artistic life which was its direct result. Doubtless the Papacy was here also lending a vigorous hand to the digging of its own grave. Its fall was due no less to the intellectual than to the political new life of Europe; but the issue was wholly lost in the splendor of the revival which surrounded the courts of Nicholas V. and Æneas Silvius, and which culminated in a Medicean Papacy! One cannot fail to regret—in spite of Mr. Creighton's protest that whenever he has omitted or gone into great detail he has done so deliberately—that he had not chosen to throw more into prominence this intellectual march of Europe as a factor in preparing the catastrophe toward which his narrative is moving. One short chapter disposes of the vast plans of Nicholas V. and of the galaxy of literary stars by which he was surrounded. The obvious weaknesses of this whole school of literary acrobats are emphasized, but we cannot think that they are placed in a worthy light as leaders in a development they little understood. So of Æneas Silvius; a few pages at the close of the long narrative of his political intrigues suffice for an account of his very extraordinary literary activity.

In these comments the faults and virtues of the book will have been suggested. The chief fault is a lack of light and shade in the presentation. Page after page goes on with sentences all built on the same model, wearying the reader with a sense of iteration, and leaving him without definite pictures in his mind. One can imagine that the whole was written by "stints" of so many hours a week, no matter what the mood of the writer might be. We cannot admire dramatic writing of history where it suggests shallowness of preparation, but, especially in dealing with a field so wide as this, one demands at least a feeling of perspective. Where the multitude of details makes it impossible to retain them in the mind, one must demand that they shall be subordinated to the general impression. Mr. Creighton might well have learned here from our great master Ranke, whose ponderous learning never displays itself in monotonous narration of particulars, but serves as the sure foundation upon which a narrative is built, every sentence of which is put where it stands in order to *tell* on the final result. As translator of the 'Englische Geschichte,' it is the more to be regretted that our author did not grasp more fully the style of his great original.

But now, when we consider the excellences of Mr. Creighton's work, we are forced to a very high measure of praise. To begin with, it was a most laudable undertaking to present a work of this scope to English readers. We are personally grateful for this supply of a long-felt need. We predict that for many years this will be the book most often taken in hand by those who seek for a knowledge of the time it covers. Then the use of materials seems within the limits we have mentioned to have been in a high degree careful and conscientious. The best sources, on the whole, have been in the author's hands, and he has used them without much help from other modern writers. Appendices at the end of each volume give an account of these sources. They are mainly what we might call the "standard" authorities, and indeed the author informs us that he has intentionally not wandered very widely from these into especial studies. The style, if often monotonous, is never offensive. It is correct to a fault. One might be tempted to call it a gentlemanly style, so far is it from crudities on the one hand, and affectations on the other. It shows the hand of a practised writer of good English—not a grand style, not capable of much variety, not dramatic certainly, but eminently proper. There is nothing to be said against it. Mr. Creighton's point of view is that of a man deeply impressed with the vices of the system whose ruin he is describing, yet there is nothing of the violent partisan about him. He gives, or tries to give, every man his due. His state of mind is historical, not polemic, and that is great praise for a Protestant clergyman writing of Roman pretension and corruption.

If the continuation of the work shall be in any degree dependent upon the success of these first volumes, we venture to believe that it will not be long delayed. It will in many ways be a more severe test than the present one, seeing that the author will then come into competition with a multitude of earlier writers, instead of having the field practically to himself, as is the case here. But even then the competition will be in the treatment of special topics; as a broad view of European politics during the Reformation proper, the later volumes will, like the earlier, have a place peculiarly their own.

Reminiscences of Court and Diplomatic Life. By Georgiana Baroness Bloomfield. 2 vols. G. P. Putnam's Sons. 1882.

Lady Bloomfield's 'Reminiscences' cover a period of some fifty years, commencing properly with her appointment as maid of honor to the Queen in 1841, and embracing residence at St. Petersburg, Berlin, and Vienna, as wife of the ambassador. They are very agreeable reading, and present, no doubt, a graphic picture of "court and diplomatic life"—all that they profess to do. The author disclaims the ambition of adding to the "history of our own times," and certainly there is in the volumes very little "information"—whether as to the countries visited or contemporary history and international relations. The book will serve very well to pass an idle hour; whether it was worth while to give it the honor of two large octavo volumes may be questioned. It contains several illustrations—portraits of sovereigns, and views of palaces and castles.

The sole privilege which royalty in England, as we find it depicted in these pages, seems to enjoy, other than those which are common to all the world, is that of becoming a mark for the pistol-shooting of any lunatic whose madness chances to take the bent of regicide. Beyond this, it has no resources but to live upon beef and mutton, just as all the world does; it has to get through its evenings by playing at cards for infinitesimally small stakes (Lady Bloomfield mentions as a fact out of the common that, after an evening spent in gambling of this exciting description, she rose a winner of eightpence), by singing glees, by doing fancy work; in short, it has to do battle with Time, the great enemy, with weapons precisely similar to those which are in daily use in every private household. Here, for example, is a Windsor "interior" culled from the book before us:

"*Windsor Castle, Nov.* 8, 1844. We had such a gay evening last night, for after dinner the Queen began polkaing with Countess Wratislaw, and made her give a regular dancing lesson. We afterwards played at a new German game, and then another of my accomplishments was brought into play, for the Prince began spinning counters, so I took to spinning rings, which you know I am an adept at doing, and the Queen was delighted. It always entertains me to see the little things which amuse Her Majesty and the Prince, instead of their looking bored as people so often do in English society. The Queen supplied me with her different rings, and gave the history of each. One, a small enamel with a tiny diamond in the centre, the Prince gave her the first time he came to England, when he was sixteen. Another beautiful emerald serpent he gave her after they were engaged. The next, the Queen said, 'was my wedding ring,' which she has never taken off; and yesterday, when a cast was taken of her hand, Her Majesty was in an agony lest the ring should come off with the plaster."

The maids of honor appear to have had very easy times of it at Windsor, their duties, indeed, being almost entirely comprised in the arduous labor of presenting the Queen with a bouquet when she sat down to the dinner-table. But when Lady Bloomfield married her husband, who was Minister Plenipotentiary at the Court of St. Petersburg, she found that the maids of honor at this despotic court enjoyed an amount of liberty that would have "scandalized" the Queen of Great Britain. These young ladies had no objection to hear the chimes at midnight, and the following are some of the shocking things which they were permitted to do uncensured by His Majesty the Czar of all the Russias:

"After the play, Julie Bobrinsky proposed driving with me in an open carriage to hear the nightingales which abound in the environs of Peterhof. It was quite light, the weather was delightful, not a leaf was stirring, and the still waters of the gulf were like a mirror. We drove along the shore from 'Mon Plaisir' to a new pavilion which the Emperor built in imitation of one at Palermo which His Majesty greatly admired. The nightingales were singing sweetly, and the night was so still each note was distinctly heard. We stayed out for about a couple of hours, and enjoyed the drive extremely; but I could not help comparing the liberty of the maids of honor in Russia to that enjoyed at Windsor, and thinking how scandalized the Queen would have been had Her Majesty heard of our driving about the park and visiting Virginia Water in the middle of the night!"

And we may add, not the Queen only, but the entire respectability of Great Britain, Ireland, and all the British colonies, would have regarded any such conduct on the part of British maids of honor in the light of a personal affront.

Lord Bloomfield was British Representative at the court of Berlin when the Crown Prince brought from England his bride, the Princess Royal; and we learn from Lady Bloomfield that on the occasion of her first reception the much-enduring Princess Royal was compelled by the stern laws of regal etiquette to "polonaise with twenty-two princes," and when her first baby was born, it was forthwith provided with "forty-two godfathers and godmothers, of all kinds of creeds, from the Emperor of Russia to the Emperor of Austria."

Lady Bloomfield thus describes her reception by the Empress of Austria:

"The Empress returned at the end of May, and received me shortly after. She was very beautiful, tall, and had the greatest profusion of rich brown hair, which hung in curls down her back. She wore a magenta-colored satin train, and when the folding-doors were thrown wide open and I saw Her Majesty for the first time, she appeared like a beautiful vision. We were a considerable distance from each other, as the Empress stood in one room, I in another, and there was a large empty room between us. No one was present; when the folding-doors were opened we curtsied to one another, then each advanced a few steps, curtsied again, and finally we met in the centre of the middle room. Her eyes were very fine, her complexion brilliant, and altogether she was most striking. She spoke in English, which she informed me she learnt from her father's grooms! She was passionately fond of dogs and horses, rode splendidly, and sometimes drove a four-in-hand."

This resplendent and imperial lady talking English after the classical manner in vogue among English grooms must have been lacking in what theologians call "grace of congruity"; but on this delicate subject Lady Bloomfield preserves a discreet silence. Lady Bloomfield and her husband appear to have possessed in a remarkable degree the power of making themselves agreeable to the royal and princely personages among whom their days were cast, and the result was that they were constantly made the recipients of favors which caused less successful courtiers to grow yellow with envy. For example, at a ball in the Winter Palace at St. Petersburg, the following incident occurred:

"After a time we reached the middle of the gallery, where the Cotillon was being danced; then the Empress, to my extreme astonishment, sent for two chairs, sat upon one herself, and ordered me to sit on the other. The surprise of the bystanders was undisguised, and I could not myself account for this sudden expression of Imperial favor."

Outlines of Primitive Belief among the Indo-European Races. By Charles Francis Keary, M.A., F.S.A., of the British Museum. Chas. Scribner's Sons. 1882. 8vo, pp. 534.

Mr. Keary has made a contribution of positive value to the discussion in regard to primitive thought and institutions, which has been carried on so actively and with such abundant results within the last twenty-five years. He has done his work with great thoroughness and in a genuinely scientific spirit, and the reader feels that he is following a safe guide, even if upon some special points he may be disposed to question the views presented to him. We cannot do better, both for Mr. Keary and his readers, than to present, not so much the results of his inquiries—which would call for too lengthened and elaborate a statement—as the method he has pursued, and the limitations within which he has worked. This is one of the most characteristic features of the book, and one which most invites confidence.

The title-page shows that he has taken none but the Indo-European race into account. For this reason he says (p. 3): "I am not compelled to defend the results at which I shall arrive against arguments and facts drawn from other fields of inquiry, from other languages and other literatures." Thus we are protected at the outset from the specious analogies which have, we think, sometimes led astray other inquirers in this field, and have given a touch of uncertainty to some of their results. This is not assuming that the Indo-European race necessarily passed through different phases of thought and of institutions from other races, but merely that our knowledge is incomplete. Nothing is more remarkable than the universality with which certain customs and institutions, and even certain fables, are found among the most diverse nations. Of fetishism, for example, Mr. Keary remarks (p. 53) that it might seem to lie "outside our studies, seeing that none of the Indo-European creeds, of which we have any cognizance, are found in that primitive condition. But yet we know, not by theory only, but by a hundred proofs, that our forefathers have been in the fetish-worshipping phase; and, therefore, the traces of fetish worship among the Indo European races cannot be altogether left out of account."

In one respect Mr. Keary has, perhaps unconsciously, confined himself within narrower limits than is desirable: he has, namely, hardly touched upon the religious belief of any branch of the Indo-European race except the Indian, the Greek, and the Teutonic. To be sure, upon approaching the Greek mythology, he promises (p. 156) to have "an eye often directed to these neighbor systems—to the Teutonic and Celtic beliefs upon the one side, and upon the other to those discernible in the Vedas." But the Celtic, Slavic, Roman, and Iranian religious systems are scarcely touched upon at all. Perhaps it was not necessary for his scheme. Possibly the materials are too meagre—although we feel sure that the Roman religion, at least, would have afforded peculiarly rich materials for just the inquiry that he is engaged in. For Mr. Keary's subject is not Mythology, but Belief; and it has been remarked that the Romans had no mythology, but they certainly had a very positive and vital set of beliefs. In his preface he calls attention to the "two roads along which students are now travelling toward the same goal of fuller knowledge touching Prehistoric Belief." Comparative mythology is that which has been most familiar to us ever since the publication of Max Müller's memorable essay upon that subject some twenty-five years ago. But probably most students have been impatient at the narrowness with which Max Müller and his school treat the inquiry, as if it were purely a philological one, and mythology arose only out of an "abuse of language." The element of Belief, the religious side of the inquiry, is—we will not say ignored—but certainly made far less prominent than it should be. The treatment in the book before us aims to be historical rather than scientific; it is not an inquiry "*how* and *why* beliefs have come to be what they are, but *what* they have come to be" (p. 2). The preliminary questions touching the nature of Belief and its relation to mythological problems are handled in an introductory chapter, which "those who have no relish for psychological questions" are advised to skip. It is, however, indispensable to Mr. Keary's discussion, because it gives definitions which are essential to all parts of the work. "The history of Belief," he says (p. 3), "in its early mythologic stage, is a new study, and is, therefore, without those canons of criticism which past generations of students have bequeathed to the modern historian in other fields." The most important of these definitions are those which determine the successive stages through which the religious conception passed on its way to monotheism. These he gives as three—Fetishism, Polytheism, and Anthropomorphism. It is in the distinction between these two last that the essential feature of his theory is found.

"The belief in one god," he says (p. 44), "is a thing not difficult to understand; for, whether it be true or false, it is a belief of which we have a hundred examples around us. . . . But to what instinct does the belief in many gods respond? The difference between god and god cannot be an observed difference, as that between tree and tree or between man and man. . . . Why should Zeus be unlike Hermes, and why Apollo different from both? The explanation once universally given, and even now thought 'generally sufficient,' is that the characters of the gods are the result of mere invention, and, in fact, the children of fancy. But such a notion is, as we have before agreed, inconsistent with the seriousness of true belief. . . . When, however, we realize that the gods were once confounded with natural phenomena, all difficulty in accounting for their characters is taken away. Apollo is not like Hermes, because the sun is not like the wind. Just so long as the natures of both are connected with outward nature will their characters remain apart, and yet the belief in both remain real. When they become altogether abstract conceptions, either the two will merge in one, or one of them will lose his divine character. He will then become a subject for fancy and for the invention of poets; he will no longer be an object of worship. This nature-worshipping stage of belief, then, is, so long as it remains pure, the stage of the most pure and unmixed polytheism."

In the third, the Anthropomorphic, stage, the names of the gods "have grown into proper names, designations of *persons* and not of *things*; and the gods stand out as clear and as thinkable, in virtue of this name, as any absent friend may be." "This third condition of belief," adds Mr. Keary (p. 53), "lies quite beyond the sphere of the present inquiry." Here, therefore, is another limitation of the work. A single chapter is given to Fetishism, and then the rest of the volume is devoted to the stage which he designates as that of pure polytheism, preceding anthropomorphism. This is, of course, consistent with the title, 'Outlines of *Primitive* Belief.' The anthropomorphic stage is no longer primitive; it is that of the Olympian gods and of the Greek poets.

In the following chapters, eight in number, we have an admirable discussion of the polytheistic conceptions of the Indians, the Greeks, and the Teutons, ending (chap. x.) with an interesting chapter upon "Heathenism in the Middle Ages"—itself, of course, for the most part of Teutonic origin. Of these chapters we have not left ourselves room to speak. They abound, as might be expected, in statements and opinions which excite question and opposition. The plan and scope of his work did not permit the author to support these opinions by arguments; they are sometimes presented as natural deductions from principles already laid down, sometimes as bare statements, for which his solid scholarship must stand as sole guarantee. Thus, the course of the Greek migrations, and the origin of

the Pelasgians, as given in chapter iv., make a plausible and consistent theory, and one which we are inclined to accept; it cannot, however, be regarded as proved. The classification of the Greek divinities in pursuance of this theory is one of the most interesting parts of the book.

This book will be found serviceable to the student of human thought, of which Belief is one of the most important parts; to the student of early institutions, which are invariably based upon religion; and most of all to the student of mythology, which has its roots in this phase of human belief. Mythology has come down to us chiefly in its anthropomorphic form—a higher development, no doubt, but in this point of view a degeneration. Here is the excellence of Mr. Keary's method, that he has aimed to keep himself to this earlier stage, in which mythology was taking shape; and herein lies the peculiar value of his book for the scientific study of the subject. Here, too, we will add, we find a special cause for regret that he has left the Roman religion so completely to one side. For the dry, practical mind of the Romans checked the development into the anthropomorphic phase more completely than was the case with any other nation with which we are acquainted. For the three great branches of the Indo-European race which he has taken into consideration, Mr. Keary has provided an admirable guide to the study of religious development.

History of Billerica, Mass. With a Genealogical Register. By the Rev. Henry A. Hazen, A. M. Boston: A. Williams & Co. 8vo, pp. x.–510.

BILLERICA, originally bestowed, under the name of Shawshin, as an adjacent tract on Cambridge, in order to check emigration to Connecticut, is now separated from Cambridge by three intervening towns. The present name was adopted in 1655, and has the distinction of being unique in the United States, as is that of the parent Billericay in England, an Essex County village, of which an interesting description is given in a special chapter by the Rev. Edward G. Porter, and which contributed four of the *Mayflower's* passengers. Thoreau notes in his 'Week on the Concord and Merrimac Rivers' that

"When we were opposite to the middle of Billerica, the fields on either hand had a soft and cultivated English aspect, the village spire being seen over the copses which skirt the river, and sometimes an orchard straggled down to the water-side, though, generally, our course this forenoon was the wildest part of our voyage."

He hazards the guess that Billericay is Villarica, which perhaps is no worse than that which infers a *castra* in the final syllable from the abundant Roman remains in the neighborhood. In the New England town, he remarks, "solid men must have lived, select from year to year; a series of town clerks at least; and there are old records that you may search." Mr. Hazen says that few ancient records so well kept exist anywhere, and he has searched them with admirable patience and diligence. Thoreau also reproduces Capt. Daniel Gookin's account of his visit with the apostle Eliot to the peaceful home of the Pawtucket tribe at the junction of the two rivers. Mr. Hazen does the same, and tells much more of this mild-mannered people, who unjustly fell under suspicion in King Philip's war, and, notwithstanding their discreet withdrawal, suffered without vengefulness many wrongs at the hands of the men of Billerica. The town escaped entirely at that time, but in King William's war and Queen Anne's war there were bloody sporadic descents on outlying settlers, and pursuits in which the whites "smelt Indians in one place," and sometimes unluckily caught up with them.

But in spite of the worthies already mentioned, of Major Simon Willard, who figures somewhat, and of the Winthrops, who had extensive grants in Shawshin, Billerica has rather a dull history. It did not quarrel with its first minister, or divide on the location of the church or of the schoolhouse. It calmly accepted the change from Orthodoxy to Unitarianism which surprised Massachusetts in the first quarter of this century. It took its quota of the hapless Acadians, and its share in the fighting at Lexington and Bunker Hill. It has a soldiers' monument on the Common in memory of the civil war. It was formerly on the Middlesex Canal, now abandoned; the turnpike left it on one side; it made the first experiment in narrow-gauge railroads in this country, and that enterprise failed and was abandoned. Thoreau thought the town already "in its dotage." Still, it has slowly but surely increased its population since 1840 (from 1,632 to 2,000), though it has now but 500 more inhabitants than in 1776; and its mills and manufactures are on the increase.

The infant colony of Shawshin in 1642 enjoined its selectmen to

"have a vigilant eye over their brethren and neighbors, to see first that none of them shall suffer so much barbarism in any of their families as not to endeavor to teach, by themselves or others, their children and apprentices so much learning as may enable them perfectly to read the English tongue."

The Billerica Social Library of 1772 was one of the earliest in Massachusetts, and the town now has a public library, the gift of a venerable woman. It has had flourishing academies and private schools, but while the *families* of the place are nominally among New England's best, but few notabilities derive from them. For family reasons, the pioneer, John Farmer, published in 1816 his 'Historical Memoir,' which perhaps antedates any other Massachusetts town history; but it was a little pamphlet of only three-dozen pages. Mr. Hazen has made a thick book, in which he has done all that industry and literary skill could do with a rather commonplace Puritan farming community, and for genealogical purposes he is sure of the gratitude of a long posterity. The volume is rich in well-selected illustrations, among which we miss only a map showing the successive bounds of the territory from the beginning. Apparently, plenty of materials for this exist (p. 510).

The Russian Empire: Historical and Descriptive. By John Geddie, F.R.G.S., author of 'Lake Regions of Central Africa,' etc., etc. New York: T. Nelson & Sons. 1882.

THIS work is mainly descriptive, but it contains enough of history to justify the title. The plan on which it has been elaborated is particularly well adapted to the subject. Instead of describing the various divisions of the vast Empire in geographical order, the author has followed the process of growth by which from small beginnings it has reached its present proportions. He thus presents to us in historical order, with slight deviations, Novgorod the Great and its neighbors, Little Russia and Kiev, Poland and Lithuania, the Volga and the Kliazma, Moscow and Great Russia, Astrakhan and Orenburg, the Uralian provinces, Northern Russia, St. Petersburg and the Baltic regions, Crimea, New Russia, Caucasia, Siberia, the Chinese border and Pacific Coast, and Russian Turkestan, including the latest conquests under Kaufmann, Tchernayeff, and Skobeleff. The descriptions are drawn from ample and trustworthy sources, and in every part evince a laudable effort to be "up to date," although the writer is evidently ignorant of the Russian language, and apparently unfamiliar with the German literature on his subject. His historical authorities are scanty, the principal one being Rambaud; but he has made good use of his materials in general, and his book will be found instructive reading not only by those to whom most parts of Russia, both in Europe and Asia, are still *terræ incognitæ*, but also by those who have already devoted time and attention to this branch of geographical and historical knowledge. His chorographical and ethnographical details are copious, his descriptions are clear and neat—as are also his maps—and his judgment is free from bias. That he is not a blind admirer of Russia as it is, may be inferred from his summing up of the present state of affairs thus:

"It is clear that this great country has reached a crisis in its fate. The three chief powers to be reckoned with, it would seem, are a corrupt military bureaucracy, that has almost said its last word—that is clearly moving toward bankruptcy and ruin; a people still almost dumb and blind, and only half conscious that they have rights and grievances; and a party of wild political dreamers, strong as yet only by reason of desperation, that seek, as the sole panacea for the ills of society, the total destruction of order and law. What will be the issue for Russia it is impossible almost to guess; before it, as a French writer has said, there rises 'an immense note of interrogation.'"

That he does not admire Russia's remoter past either—at least not in the sense in which it is looked upon by the Katkoffs, Aksakoffs, and the minor Slavophils, who would fain return to the good old Muscovite times, and undo, if possible, the work of Peter the Great—is clear from the following lines, which are characteristic of the author's decided tone and occasionally overdone painting:

"The chief of all the European streams is almost the only one that does not mingle its waters with those of the other rivers of the earth, in the great circumfluent Ocean, pouring them instead into a salt lake of Inner [?] Asia. The Russian people also—the most powerful, in numbers at least, of the European nations—had their faces long turned in the same direction as the current of the Volga, and dwelt, first by reason of an evil destiny, and afterward from prejudice and ignorance, a race apart from others. . . . Peter the Great seized the lagging Russian nation fiercely and roughly by the throat, and dragged it from its moping seclusion in the Volga forests into the full light of modern civilization. Keeping a vice-like hold upon it, he entered upon one of the most stupendous 'matches against time' ever witnessed in the history of the world, spurning it forward with savage blows and kicks, until he had worn out in the struggle his own herculean strength, but had launched his country on the track of progress on which the nations of the west had already embarked."

Mr. Geddie, when carried away by a rhetorical momentum, is apt to overstep the lines of chronological order and accuracy. It is not correct, in speaking of "the march of the nations across the great highway of the steppes," to mention "Huns, Goths, Vandals, and Sarmatians, following on one another like waves of the sea," for they did not follow in this order; or to make Huns and Khazars descend on the Black Sea countries *after* Vladmir of Kiev (pp. 334–5); or the Magyars under Árpád overthrow "the barbarian power that Huns and Avars had established on the ruins of the Roman rule in Pannonia" (p. 243)—no such power existed in the time of Árpád. That Moscow was "three times, toward the close of the fourteenth century, . . . assailed by Olgerd and the Lithuanians" (p. 141), is a very loose statement, for the assaults took place in 1368, 1370, and 1371. That it was burned "in October," 1812 (p. 142), is erroneously stated, for the burning took place in September (Old Style or New). Neither did Alexander I. die "in 1824" (p. 367), but in 1825. Such slips, however, are not numerous. The author sins more often in his spelling of names. Not only does he use *j* for *y* ("Jaroslav," "Krasnojarsk")

and *sch* for *sh* ("*Sch*amyl")—as if he were writing in German—and *ch* for *sh* ("Men*ch*ikof," "*Ch*ahin"), *j* for *zh* ("Voron*ej*," "Po*j*arsky"), *ou* for *u* ("Bo*ug*," "K*ou*ma"), and even *c* for *ch* in "Nicolas" (Czar or Saint)—all in good French style—but he also has both "Gali*tz*in" and "Gali*ts*yne," "Su*w*aroff" and "Su*v*aroff," "Kia*kh*ta" and "Kia*ch*ta," and similar duplicates. *Lower* is "Nish*n*i," as Germans write it, in "Nishni Novgorod," and "Ni*j*ni," in the French way, in "Ni*j*ni Tagilsk," and the absurd English fashion of using the adjective alone to designate Lower Novgorod is not discarded either. The plural "Karaim" is used as an adjective for Karaite, and such ungrammatical plurals as "Tchuva*shs*" and "Diebi*tchs*," and double plural forms as "Polovt*sis*" and "Tsiga*nis*" occur. "Perecop" contrasts strangely with "*K*immericum," and "Dolgu*r*uky" and "*Gh*enghiz" are too often repeated to be misprints.

The House that Jill Built, after Jack's had Proved a Failure: A Book on Home Architecture. With illustrations. By E. C. Gardner. Fords, Howard & Hulbert. 1882.

THE people who need them ought by this time to be pretty well acquainted with Mr. E. C. Gardner's clever books on house-building. The last, which is lately reprinted from *Our Continent*, has the same vivacity that spiced its predecessors; the same eye to the practical conditions of planning and construction; the same lively fancy that made them entertaining. The illustrations, which were the weak spots in the previous books, are this time considerably bettered. The amateur of building will be likely to find them attractive, and may use them with effect as a means of badgering his ar[illegible]t. He will find many good suggestions [illegible] without hard reading, and a variety of [illegible] plans sufficient, perhaps, to make him glad [illegible] advice. Some of the plans, indeed, are uncommonly good in respect both of picturesqueness and convenience.

The reviewer of the book is specially invited, by a printed slip which is sent in it, to read the introduction prefixed to it by the editor of *Our Continent*. It appears from this introduction that Mr. Tourgée "had built one or two houses that did well enough on paper, but were simply appalling in their unfitness when he came to try to adapt the occupants to the earthly tabernacles which had been erected for their use and enjoyment." Therefore he did not believe in architects, and did not welcome his associate's proposal to publish a series of papers on the building of houses by one of them. But the papers, which are here reprinted, have converted the editor, at least to Mr. Gardner. His experience was that of many persons who either choose the wrong architect or do not clearly know in the beginning what they want. The common difficulty is, in fact, that clients go to their architects without this knowledge. It develops as their work goes on, at the cost of countless alterations, or flashes on them suddenly at the end with angry disappointment. If a man has no individual habits to which his house must be fitted, he may buy one ready-made, like the houses that are built on speculation by the block in New York. But the ins and outs of his way of life are not to be measured at a glance like the length of his arm or the size of his waist. To plan a house to suit a man's idiosyncrasies requires the same sort of familiarity as to paint his portrait well. A stranger cannot do either, unless he has an insight akin to genius. The natural corollary that the wife, who is to spend her days in the house, and rule its daily work, should be the best judge of its adaptation, is implied in Mr. Gardner's title, and is the keynote of the book. In truth, to plan a house successfully needs both an architect and a housekeeper. In proportion as housekeeping is the more or less absorbing occupation of the household, the housekeeper's share of the planning is greater or less. But not all wives are housekeepers, nor do all women, any more than all men, know beforehand what they want, and this necessary part of the housewife's knowledge is not too recondite for an intelligent architect to acquire. It is common to say that it takes a woman to plan a house. It takes a peculiar kind of woman—rather an exceptional kind—but it is well to have a woman to criticise it, which is a different thing.

C F Bickford 620 26 83

[illegible]ber's Log of his Voyage around Cape Ho[illegible] by Morton MacMichael, 3d. Philadelphia. 1883.

THIS is a common-sense, although rose-colored, account of a rather monotonous trip from Philadelphia to San Francisco in the good old ship *Pactolus*. As the mere record of a sea-voyage, we have not seen so interesting a narrative since 'Two Years Before the Mast,' from which, by the way, the author seems to have borrowed the best portions of his descriptions of life aboard-ship. After leaving the Capes, the landlubber wasted no time in gazing on "the rapidly-receding shore," but immediately succumbed to a severe attack of sea-sickness, that soon convinced him of the truth of the Japanese proverb which says that "a sea-voyage is an inch of hell." This state of mind lasted but a few days, and for the remainder of the voyage he saw only the bright side of life. Off the Rio de la Plata he encountered a gale of wind, in speaking of which he makes the accustomed remark that "both the captain and mate say they never went through so terrible a night before." He relates, however, many curious things from his own observation—as, for instance, that shark-steak tastes like a quinine pill, while broiled flying-fish is both delicate and well-flavored; and that in sea-slang an English vessel is a "Lime-Juicer." The *Pactolus* was well commanded, although the "mate concluded to give Mr. Charley [a sailor] a licking" for pouring turpentine over the little tom-cat, and the "second mate indulged in a row with a sailor," and, later on, "let poor, innocent Hans have a rap on the jaw." The book is too long for the reader's entertainment. The author often repeats himself, and his style is not good. Nevertheless, Mr. MacMichael gives one a great desire to take a cruise.

BOOKS OF THE WEEK.

Acland and Ransome. A Hand-book of English Politics for the last Half-Century. London: Rivingtons.
Bar, Prof. L. International Law: Private and Criminal. Boston: Soule & Bugbee.
Barrington's Fate. [No-Name Series.] Boston: Roberts Bros.
Brehm's Thierleben. Chromo edition. Parts 63-65. B. Westermann & Co.
Browne-Haldeman. The Clarendon Dictionary of the English Language, for School, Home, and Business Use. University Publishing Co.
Browning, R. Lyric and Dramatic Poems. Edited by Edward T. Mason. Henry Holt & Co. $2.
Characteristics of True Devotion. Translated from the French. Thomas Whittaker. 75 cents.
George Eliot Birthday-Book. Boston: Hall & Whiting. $1 25.
George, H. Progress and Poverty. John W. Lovell Co. 20 cents.
Greenough, J. B. The Greater Poems of Virgil. Vol. i. Pastoral Poems and Six Books of the Æneid. Boston: Ginn, Heath & Co. $1 55.
Greer, H. A Dictionary of Electricity; or, The Electrician's Hand-book. W. L. Allison. $2.
Griesinger, T. The Jesuits: a Complete History of their Open and Secret Proceedings. In 2 vols. G. P. Putnam's Sons. $6.
Holbrooke, G. O. Selections from the Letters of the Younger Pliny. Boston: John Allyn. 80 cents.
Holmes, O. W. The Poet at the Breakfast-Table. Boston: Houghton, Mifflin & Co. $2.
Kluge, F. Etymologisches Wörterbuch der deutschen Sprache. Parts 3-4. *Hehr—Pauke*. Strassburg: Karl J. Trübner.
Knowlton, Helen M. W. M. Hunt's Talks on Art. Second Series. Boston: Houghton, Mifflin & Co. $1.
Liddell and Scott A Greek-English Lexicon. Harper & Bros.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 8, 1883.

The Week.

THE Nicaragua Canal scheme came up in the House on Monday, in the shape of an attempt to make the bill incorporating the company a special order for February 15. It was defeated, Mr. Perry Belmont pointing out in opposition that although the provision for a Government guarantee of interest has been stricken out, the company takes its concession from the Nicaraguan Government, under a condition which makes it subject to the provision of the Clayton-Bulwer Treaty relating to the joint guarantee of neutrality by all Powers who like to join in it. As our Government has signified its intention not to stand by the treaty, the passage of a bill incorporating a company subject to it is clearly out of the question. The chances are that no canal will ever be built under an American charter (unless the Government builds it itself) until the Clayton-Bulwer Treaty is disposed of. Few persons like to invest in a disputed claim or construct canals for belligerents to fight over. On the other hand, it will probably be difficult to get England to modify the treaty till she is sure that, whether she modifies it or not, a canal will be made. In fact, the enterprise seems just now to be in a vicious circle.

The defeat of Mr. Windom in the Senatorial election in Minnesota will be generally regretted by fair-minded men. His long service in the House of Representatives and in the Senate, as well as his brief conduct of the Treasury Department, won for him, in spite of his temporary weakness on the financial question, the reputation of an unusually able, sagacious, and broad-minded man. His public usefulness constantly increased with his experience of public affairs. The attacks made upon his character by his enemies were easily repelled. Whatever his shortcomings may have been, he was conspicuously the fittest man in Minnesota for high representative position, and known as such to the whole American people. It is a pity to see him overthrown by intrigues and attacks of a small and purely personal nature. Minnesota can scarcely fail to lose in character, as well as in the representation of her interests, by the change made.

In commercial and industrial affairs there have been some unfavorable features in the past week, the most notable of which were several important failures, and especially that of the Union Iron and Steel Company at Chicago. There have also been very heavy snows in the Northwest, which have obstructed railway traffic and business generally. The movement of grain at the West has decreased largely during January, partly as the result of the hindrance to traffic caused by the heavy snows, and partly owing to the unwillingness of producers to sell much grain at present prices. On the other hand, the foreign markets for breadstuffs have continued to advance, and therefore afford the prospect of a continued active demand for our surplus of breadstuffs at fair prices. Cotton, though still at extremely low prices, is being exported freely, and the aggregate weekly export value is in excess of the corresponding week of last year. The money market has been extremely sluggish, and the tendency of rates of interest has been downward. But this was mainly on account of the stagnation in speculation, particularly on the Stock Exchange. The operations of the United States Treasury have absorbed some money in the past week, the coin balance having increased over $3,000,000, while the associated banks of New York city lost nearly an equal amount. The Secretary of the Treasury, probably assuming that this would continue to be the case, has made a call for $15,000,000 of the 3½ per cent. bonds (extended 5s) for redemption on May 1. The foreign money markets have been in nearly the same condition as that of New York—viz., dull and at low rates of interest—because of the stagnation in the Stock Exchanges of both London and Paris, as well as New York. There has been but little disposition in London and on the Continent to buy American securities, though there has been a little more evidence of it in the last day or two than for a week previous. The balance of foreign trade on the exchange of commodities alone is so nearly even that the rates of foreign exchange are now governed almost exclusively by the probabilities of foreign buying of American securities; and as there have been no considerable purchases in the past week, the rates of exchange have remained almost unchanged. The general tendency of prices of stocks has been downward, the decline in the week ranging from 1 to 5⅝ per cent. on the general list of stocks.

The failure of the Union Iron and Steel Company at Chicago, and that of the Kansas Rolling Mills at Rosedale, a suburb of Kansas City, should set unprejudiced minds to inquire more seriously into the truthfulness of the talk which represents a high tariff as a protection against the breaking down of industrial enterprise. Nobody will pretend that the establishments that have just failed did not belong to the highly-protected class. The industries they pursued were indeed among the few most favored. They had certainly not to suffer from foreign competition. We do not understand it to be alleged that their business management was either dishonest or negligent. They enjoyed all the advantages which a high protective tariff can afford. But it can scarcely be doubtful that just these artificial advantages were among the most important causes of their downfall, for they were of just that class of which so faithful a friend of the protective system as the *Tribune* recently observed that they were "stimulated to an unnatural growth in productive power." For a while the protective tariff enabled them to distribute enormous dividends among their stockholders. Their managers thought they saw a chance for more by expansion. They expanded to an unnatural degree under the stimulus of the tariff, and here they are. The workingmen who were employed in those establishments are turned into the street. We are told that the protective tariff is made for their especial benefit. It does not appear to protect them against being turned out without work and sustenance now that the establishments have failed. Neither did it formerly give them any share of the enormous dividends distributed among the stockholders. They had to content themselves with the market price of labor. We certainly do not mean to say that industrial establishments will not sometimes break down under a better revenue system. But we do mean to say that the high protective tariff, when represented as a system that can be relied upon to prevent such disasters, is a delusion and a snare.

The Albany *Evening Journal*, in the course of an article comparing wages in this country with those in England, and showing that there is not nearly so much difference as is commonly supposed, although money goes much further there than here, and that protection has really nothing to do with the amount paid, makes this striking observation:

> "Bricklayers and carpenters get better pay than weavers and miners. We all know that. Yet the former are not mentioned in any tariff scheme, and the others are alleged to get all the benefits of protection. We pay our printers higher wages than a like number of operatives in the Harmony Mills of Cohoes ever got. Yet type-setting is not under the shadow of protection's Chinese wall, and spinning is."

The *Evening Journal*, by the way, is one of many of our Republican contemporaries whose views on the tariff have undergone a marked change of late. The fact is that the day has passed when blind adherence to protective notions could be insisted upon as a test of party orthodoxy. Attention is sometimes directed to the fact that many Democratic leaders and newspapers seem to have fallen away from the old economic doctrine which used to be fundamental to the Democratic faith. This might be more discouraging but for the other fact that there has been a marked advance among Republicans in a liberal direction. The truth is, that opinion in favor of revenue reform is not controlled by partisan lines, but is gaining strength among all intelligent citizens, no matter what their party proclivities may have been heretofore. We congratulate our Albany contemporary upon the emancipation from the protective tyranny which has followed so soon after its declaration of independence of bosses and machines. The results of larger freedom are seen in the energy and earnestness of conviction with which it discusses the foremost questions of the time, and which cannot fail to commend it to the growing number of thinking and independent Republicans.

It appears that the bill relating to Niagara Falls, recently introduced in the Legislature, is in the nature of an inquiry, and that, upon the report of the Commissioners to be appointed, it will still remain for the Legislature to

give effect to its recommendations. This would probably throw the matter over to another session, with the chance of further delay. Meanwhile the destruction of the natural features of the Falls would go on. It is desirable to avoid this, if possible. Of course care should be taken not to incur unnecessary expenditure, but it is quite likely that delay would increase instead of diminishing the cost of the measure. In twelve months "enterprise" could do a great deal to "improve" the neighborhood, and the additional improvements would have to be paid for. It is understood that manufacturers and mill-owners are organizing an opposition to the bill. The sooner this opposition is encountered the better. With every year's delay the number of factories and mills will multiply, the vested interests will grow larger, and the force of the opposition will increase accordingly. Objection also is made by some of the taxpayers of the village of Niagara Falls, who fear that the withdrawal of considerable property from assessment will impose additional burdens upon them. The sooner this objection also is met the better. The value of the land which the State contemplates buying increases every year, and the amount of taxable property withdrawn will increase, of course. Whatever force there may be in the opposition will gather strength with the lapse of time. If it is really intended to set apart a State reservation at Niagara Falls, the matter ought to be settled at this session. If suitable men are selected for Commissioners, the Legislature might safely appropriate the money for the work now, fixing the maximum of expense at the limit already informally ascertained.

"The New York *Nation* is engaged in the difficult task of attempting to demonstrate that the best classes of society in the South are composed of murderers. This is an old story about the South, reiterated for many years by Republican journals, until many of them grew tired of it and stopped it some time ago. The *Nation*, however, has started a fresh crusade in the old Chicago *Inter-Ocean* style, claiming that murder in the North is a very rare thing, and murder by persons outside the slums an impossibility. The criminal statistics of the Northern States of course flatly contradict the *Nation's* theory, and Northern newspapers in their daily recital of local crime do so also. The position of the *Nation* is a very absurd one, and we are astonished that a journal, ordinarily fair in its criticisms of the South, should take it. It even cited a stabbing affair at a low negro ball in Virginia, the other day, as evidence of the depravity of Southern gentlemen in first-class society."—*Louisville Courier-Journal.*

This is gross and reckless misrepresentation of the *Nation*. We are not "attempting to demonstrate that the best classes of society in the South are composed of murderers," but to show to the Southern people, from the columns of their own papers, that there is more homicide practised there by men called gentlemen than is good for their fair name as well as their material prosperity, and that they had better stop it. We have never thought of asserting that murder is a very rare thing in the North, but that homicides among the better classes, committed for social or business reasons, are more rare here than in the South, and that all kinds of murder are far more apt to be punished according to law. The "stabbing affair at a negro ball in Virginia," of which the *Courier-Journal* speaks, was first discussed in accordance with the telegraphic report received by the Associated Press; but we put it at once in its correct light as soon as its true character became known.

The decision of Judge Van Vorst in Mr. Loubat's suit against the Union Club is of considerable interest, not only to the Club, but to the public at large. Mr. Loubat was turned out of the Club by the Governing Committee, which has power to expel "for conduct improper and prejudicial to the Club." By one of the rules the proceedings of this committee must be "strictly private." The Treasurer of the Club, Mr. Leroy, who was a member of the committee, was examined as a witness before trial, and produced the minutes of the proceedings in the case. He was asked by Mr. Loubat's counsel a number of questions, the object of which was to bring out the motives that actuated him in voting for the expulsion of Mr. Loubat. Some of the questions were as follows: "What conduct on the part of Mr. Loubat did you, as a member of the Governing Committee, deem to be improper and prejudicial to the Club? For what cause did you vote for the expulsion of Mr. Loubat? Did you, as a member of the Governing Committee, deem the fact that Mr. Loubat had in private conversation in the club-house used improper language a cause for expulsion?" Judge Van Vorst's decision is that such a line of inquiry "violates the sanctity of such proceedings, and would disturb their efficiency, and is clearly opposed to the policy out of which such investigations originate and by which they are to be conducted." The English courts have decided—and with their decisions Judge Van Vorst's opinion is in accord—that every member of a club has property interests which he may call upon the courts to protect; that he cannot be turned out of a club, at least unless it has unusual features in its constitution, without some sort of trial, which involves notice, an opportunity of meeting the charges against him, etc. But one of the main objects of a club is that its life shall be just as little public as the family life of its members; that if differences or disputes occur between its members they shall be settled within doors. Now, obviously this cannot be done if a member who is disciplined for improper behavior has the right to send for a judge to see whether the club or its committee understand what improper conduct is, and to tell them what may or may not be done among gentlemen.

The increased observance of Lent in New York during the past twenty-five years is a phenomenon generally attributed to the growth of the Episcopal and Catholic churches; and probably the same thing is noticeable in other parts of the country. For fashionable people it is an institution which has great attractions, notwithstanding the "bad jokes" which, according to the *Tribune*, circulate every year with regard to their doings during Lent. These jokes are founded on the idea favorite among scoffers that the religious observances of those who carry on "society" are more or less a sham and pretence, and that it is absurd for people devoted to the pomps and vanities of the gay world to suddenly become devout for a few weeks, fast, go to church on week days, and refuse, according to one of the traditional jokes, to dance "on a crash." We have no doubt that Lent has an excellent sanitary effect, and, whatever it does for the soul of society, gives its body a chance of periodic rest, which it much needs. Society in New York, it should be remembered, is managed, not by people in mature life, who can stand a prolonged strain, but by very young girls and boys, who, having thrown aside all parental restraint, and being passionately fond of excitement, would keep it up all through the winter if the Church did not interfere to check their excesses. From this point of view all sects and denominations may rejoice in Lent.

The trouble at Annapolis seems to be the sort of trouble that might spring up in any military school where the master enforces an unpopular system of discipline. The Superintendent, Captain Ramsay, has introduced a "demerit" system which the cadets resent as degrading. In addition to this, Cadet Woodruff has been deprived of his cadet rank for certifying, on his honor, that he had not rendered any assistance at an examination to any cadet, when, as a matter of fact, he had written out solutions of half the questions proposed, and taken means to bring them within reach of his fellow-pupils. A large number of the students have been placed under arrest for expressing sympathy with Mr. Woodruff and other cadets who have been disciplined. They have now resorted to the columns of the *Herald* to state their case, which is a very improper thing for them to do; and their sympathy with Mr. Woodruff seems uncalled for, as his case evidently merited severe punishment. The affair will probably, however, make an inquiry into the system of discipline adopted by the Superintendent seem necessary.

The probabilities are now that the bill empowering the Government to expel pretenders from France will be defeated in the Senate, and to the hearty satisfaction of all but the Extremists of the Left. Discussion has had a most destructive effect on the whole scheme. People are ashamed of the alarm into which Prince Napoleon's manifesto threw the Assembly. They are ashamed of the notion that the Republic can be endangered by placards. Moreover, exceptional legislation, directed against individual officers—like the Orleanist Princes, whom it is proposed to put on the retired list, not because they are old, or incompetent, or culpable, but because they are dangerous—is said to be viewed with great disfavor in the army, as an exercise of power which puts every officer's commission in peril. The *Temps*, the ablest and calmest of the Republican journals, argues powerfully and with ill-concealed scorn, that if individuals are to be exposed to "exceptional legislation" because they are supposed to be dangerous to the state, where is it to end? In the opinion of many, great wealth, or great talents or ambition make a man dangerous to the state. Gambetta was considered by many far more dangerous than any of the pretenders. Many, too, consider all persons holding Socialist opinions danger-

ous to the state. Is there to be legislation empowering the Government to expel from the country everybody whom it singles out as likely by his presence to imperil republican institutions?

Mr. Chamberlain has answered his colleague Lord Hartington's assertion that nothing more is to be said about Irish Home Rule, and that the Irish question is practically closed, by the counter assertion that a good deal more is to be both said and done about the causes of Irish discontent, including, of course, Home Rule. This little incident has attracted a good deal of attention in England, as showing how much discordance Mr. Gladstone probably keeps down, and, indeed, how potent his influence as a leader must be to make it possible for both Mr. Chamberlain and Lord Hartington to serve under him. During the Liberal opposition Mr. Chamberlain made no attempt to disguise his reluctance to accept Lord Hartington's leadership, and indeed his doubts as to the genuineness of Lord Hartington's liberalism. The old divergence of sentiment and opinion has been suppressed, but evidently not extirpated, by Mr. Gladstone's leadership. We may be sure that whenever Mr. Gladstone ceases to lead, it will break out again and make a Whig-Radical combination impossible. But this is not the only sign of the trouble that is to come in the Liberal ranks whenever Mr. Gladstone quits the scene. Sir Charles Dilke has been making speeches to his constituents, which seem to show that not only has he got over his Republicanism, but that he is getting over some of his Radicalism. He is marked out in all sorts of ways for the Liberal leadership in the House of Commons after Mr. Gladstone's retirement. Lord Hartington must, in the course of nature, before very long go up to the House of Lords on the death of his father, the Duke of Devonshire, and no one sitting in the House of Peers can exert much influence in the Liberal party as it is now made up. Even if he retained the title of leader, the real authority would go to his lieutenant in the lower house, and that lieutenant Sir Charles Dilke will be.

Sir Charles is still young, very able, full of political information, in possession of a considerable fortune, without which the highest success is not possible in British politics, and is an orator of great power. Now that he has got into the Cabinet—which is to an English politician as important as getting the Governorship or the Senatorship of his own State is to an American politician—all things seem not only attainable to him, but within easy reach. When, the other day, therefore, he defined the true function of the Radicals, with whom he has hitherto acted, to be "the permeation" of the Liberal party with Radical ideas, and not the formation of a distinct critical and exacting group, and condemned their tactics in the past as erroneous, he caused great alarm and dissatisfaction in Birmingham and Manchester and other Radical centres. Even the *Pall Mall Gazette* condemns his language in no very measured terms. It ridicules the work of "permeation" as one which the Radicals could never have accomplished in the past. It denies that the Whig element in the Liberal party could be either permeated or persuaded by Radicals who did not act together as a critical and hostile minority, determined to have its way, or to make it very unpleasant if it did not; and predicts that the tactics which have had in the past such marked and valuable effects on Liberal policy will have to be persisted in.

This is probably all very true. If the Radicals had confined themselves to moral suasion, they would have had about as much influence on the Whigs as the Parnellites would have had on the House of Commons if they had continued to make that old annual statement, about the wrongs of Ireland, which the majority used to dispose of so neatly by a division without debate. It was by showing their teeth, or making it hot for the Conservative wing, that they forced a Radical programme on the party and secured a seat in the Cabinet for their most prominent member. Sir Charles Dilke's condemnation of this policy, which he himself helped to carry out, is, therefore, naturally looked on as a sign that he thinks it necessary for the success of his own career to separate himself from his old associates. But his old associates are evidently not disposed to take this performance in good part, or to take up the work of "permeation" with any zeal; and Sir Charles Dilke is probably, in proposing it to them, making the only mistake which could mar his fortunes. It will be easily seen, however, from all this on what a volcanic region Mr. Gladstone's Cabinet is built.

There seems to be very little doubt that the Government in Ireland at last has the murderers of Lord Frederick Cavendish and Mr. Burke in its grasp, and that this and other assassinations in and about Dublin were the work of one large band, composed principally of rather intelligent mechanics, who deliberately undertook the task of intimidating both the Government officials and the police, courts, and juries. They are evidently a sort of outcome or sequel of the Fenian organization, and have that readiness to take life under the orders of a secret society which has so long been a striking feature of Irish disorder and discontent, and has now apparently spread to the Continent. But nothing whatever has yet appeared to show that there was any connection between these conspirators and the Land League, or in fact that they had any respect whatever for the Land League agitation. The history of the Molly Maguires in Pennsylvania proves that it is very easy to organize assassination societies among a certain class of Irishmen, simply as a means of cowing authority of any kind, or of getting rid of private enemies. In fact, this readiness to conspire to assassinate seems to have become a disease of the Irish mind, very like the brigandage in Sicily and Greece. In both these countries there is apparently no class of the community which does not contain sympathizers with or confederates of brigands, and, in both, brigand means murderer in case of necessity. Curiously enough, however, the Irish assassin rarely robs his victim, or murders him with the view of robbing him, and probably manages to dignify his doings with some glamour of patriotism. Even the Pennsylvania Molly Maguires had a dig at England and Gladstone in their passwords; and some doubtless flattered themselves that in shooting overseers and contractors they were in some manner giving greatness and terror to the Irish name.

The Dublin revelations are nevertheless placing the Land League agitators in a very embarrassing position. One of the strongest traditions of Irish agitation makes it necessary to treat all Government prosecutions for offences of a political or agrarian character as unfair, owing to the corruption and partisanship of everybody connected with them, including the juries. No Irish agitator or popular leader dares openly to avow that he thinks anybody has been fairly tried for a political or agrarian murder or outrage. Consequently the Land Leaguers have to suppress all expressions of satisfaction that the Dublin assassins have been found out, lest they should seem to admit that the courts will give them justice, and at the same time have to suppress all expressions of sympathy with them, lest they should seem to approve of assassination. The Government is not helping them out of their scrape by its way of executing the Repression Act in other directions. The local authorities have been using the arbitrary powers conferred on them by the law in a way which is lamentably calculated to deprive the Dublin prosecutions of all moral weight. Severe sentences have been summarily inflicted for trifling indiscretions of speech, and the extraordinary spectacle has been presented to the people of three or four editors and reporters of provincial papers, sentenced to imprisonment for refusal to disperse at a meeting on the summons of the police, marching through the streets handcuffed, in convict's dress, and with their clothes in bundles under their arms. In fact, if half what is told is true, the worst fears of the English Radicals as to the possible abuses of the Act are being realized. The crusade against the press and the platform seems to be as fierce as under Mr. Forster's Coercion Bill, and it can be defended, and is defended, only on the plea that crime in Ireland cannot be suppressed without the suppression of free speech also.

The Court of Cassation in France has struck a heavy blow at the Silver Convention of the Latin Union. That convention gave free circulation to the silver coins of each country of the Union in all the other countries of the Union, which includes France, Italy, Switzerland, and Belgium. A French creditor, having refused to receive Swiss silver in payment of his debts from another Frenchman, was tried for it under the law which makes the refusal to receive the national coins punishable with fine or imprisonment. The Court directed his acquittal, on the ground that the Monetary Convention did not modify the law so as to bring all Latin silver within its operation. The Public Prosecutor appealed, but the Court of Cassation has confirmed the decision of the court below. It is feared that the effect of this decision will be virtually to abrogate the Monetary Convention as far as France is concerned.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, January 31, to TUESDAY, February 6, 1883, inclusive.]

DOMESTIC.

THE reduction of the public debt of the United States in the month of January amounted to a little more than $13,500,000, making the reduction for the first seven months of the current fiscal year $95,000,000, or an average monthly reduction of $13,570,000. This continuance of the large monthly reduction was mainly owing to an unexpected falling off in the expenses, notably in the current expenses of the Pension Bureau. The customs receipts were greater by $2,000,000 than those of December, but the internal-revenue receipts fell off about $500,000. The expenditures for the month were about $2,000,000 greater than those of December. On Thursday the Secretary of the Treasury issued another call for continued 5 per cent. bonds of 1881, the amount embraced in the call being $15,000,000.

Two large failures occurred during the week. The Kansas Rolling Mills, in the suburb of Rosedale, Mo., were closed on Saturday. For the past three months the mills have been somewhat embarrassed, influenced, it is said, by the general depression in the iron trade, and for two months they have been running on reduced time. The stock is owned chiefly by A. B. Stone, of New York; and Amasa Stone, W. R. Harris, and D. Teets, of Cleveland. Mr. A. B. Stone is the President. The Trustees have taken possession of the works. The liabilities, secured and unsecured, are $600,000. The assets, the officers state, are ample to cover all indebtedness, the plant being worth about half a million. The lumber-manufacturing firm of Ferry & Brother, of Grand Haven, Mich., the head of the house being Senator Ferry, who is now seeking a reëlection at the hands of the Michigan Legislature, has also failed. The liabilities, it is thought, will amount to upward of $500,000, contracted in large part by the failure of the firm's Utah mines.

There have been great floods during this week in Western Pennsylvania, Ohio, and Indiana. The railroads have suffered much damage by washouts and ruined bridges, and parts of the towns of Fremont and Defiance in Ohio, Allegheny City and Pittsburg in Pennsylvania, and Wheeling, W. Virginia, have been submerged. Reports from Central Ohio show the highest water by from six to twenty inches ever known there. Along the Scioto Valley alone the damage is roughly estimated at $1,000,000. Some lives were lost and thousands of people rendered homeless, some in a destitute condition. One of the results of the floods was the igniting of oil at the Standard Oil Works in Cleveland, Ohio, which threatened for a while to cause a great conflagration, as the burning oil was carried through the flooded parts of the city on the surface of the water. On Monday the fire in the neighborhood of the oil works had been practically extinguished.

The Senate continued the debate on the Tariff Bill on Wednesday. The sugar question consumed most of the session. In the afternoon both houses adjourned early out of respect to the memory of the late Godlove S. Orth, of Indiana. The tobacco and provision schedules of the Tariff Bill were discussed on Thursday and Friday. On Saturday and Monday the Senate got through the jute and hemp schedules and began on the wool schedule.

The House also has continued its seemingly interminable debate on the tariff during the week. There seems to be little hope of a Tariff Bill being passed this session. Monday being the day set apart for suspension of the rules, the Legislative, Executive, and Judicial Appropriation Bill was called up, but a motion for its immediate consideration was lost by a vote of 176 to 108.

The House of Representatives accomplished little on Tuesday. The Democrats filibustered against the Tariff Bill. In the Senate the woollen schedule of the Tariff Bill was considered.

The Pension Appropriation Bill, as agreed upon by the Appropriation Committee, was reported to the Senate on Saturday. The bill contains only one amendment by the Senate committee. It appropriates $86,575,000, and reappropriates $15,800,000 of unexpended balances of former appropriations, now in the Treasury.

The House Committee on Military Affairs has practically agreed upon a bill to place General Grant upon the retired list of the Army, with the rank of General.

The annual statement of the organized and unorganized military force of the United States was sent to Congress by the Secretary of War on Saturday. It showed the number of commissioned officers to be 6,583; non-commissioned officers, musicians, and privates, 81,031; number of men available for military duty, 6,797,006.

Under the new treaty which it is proposed to make with the Sioux Indians, the Government, in addition to giving 320 acres of land to the head of each family and eighty acres to each minor child, stipulates to furnish to each Indian settlement a physician, carpenter, miller, engineer, farmer, and blacksmith for a period of ten years. On their part, the Sioux surrender between 17,000 and 18,000 square miles of their former reservation, and agree not to sell or slaughter for sale the cows and oxen to be furnished them by the Government unless by permission of the Interior Department.

The term of office of Messrs. Burt and Graham, Naval Officer and Surveyor, respectively, of the Port of New York, will expire on the 7th instant, but it has been decided to make no change in these offices until the President has appointed the Civil Service Commissioners, who, it is expected, will be appointed in a few days.

A public meeting was held in the rooms of the Mercantile Exchange, in New York, on Saturday, for the purpose of considering the matter of petitioning Congress to legislate against the circulation of trade-dollars. Speeches were made by several merchants, who dwelt on the inconvenience and loss occasioned to a large class of people by the trade-dollar.

A revolt took place among the first-class cadets of the United States Naval Academy at Annapolis on Wednesday. A few days previous Cadet Woodruff was reported for dishonorable conduct in certifying in connection with an examination paper to a falsehood. He was arrested and made a confession in writing of his fault. Being a cadet petty officer, he was immediately reduced to the ranks. When this became known, as he was very popular, Cadet Lieutenant Street, of his division, led his fellow-cadets in cheering for the culprit while the Superintendent and other officers were within hearing. The Lieutenant was immediately arrested. Other insubordination followed, and a number of other cadets were arrested and put on board of the man-of-war *Santee*.

On Wednesday, on the seventeenth joint ballot, Gen. C. F. Manderson, having received 75 votes, was elected United States Senator from Nebraska. On Thursday the deadlock in the Minnesota Legislature was broken, and D. M. Sabin was elected Senator from that State to succeed Mr. Windom. The result was brought about by the action of the Democratic caucus, which agreed to give up its candidate when 35 Republican votes should be cast for any candidate except Windom. Mr. Sabin is a business man of ability, and is at the head of the Northwestern Car Factory at Stillwater. He has been one of the most successful politicians of Minnesota, and is a member of the State Legislature.

It is announced that Mr. James G. Blaine has been for some time past preparing a political history under the title of 'Twenty Years of Congress, from Lincoln to Garfield. A History of National Legislation from 1861 to 1881.'

The Massachusetts Republican State Committee organized on Wednesday for the year, with young men in the leading places and old leaders on committees with them. Henry Cabot Lodge was made Chairman; Edwin B. Hale, Chairman of the Executive Committee; Henry N. Sawyer, Chairman of the Finance Committee; and George A. Flagg, Secretary of the General Committee.

The State Treasurer of Alabama, Isaac H. Vincent, has been found to be a defaulter to the amount of $212,687. The discovery was made on Wednesday, and on the preceding Monday Vincent left Montgomery and has not since been heard from. Most of the money went in cotton speculations. Attachments were levied on all his property in Montgomery, which amounts, however, to only about $15,000 in value. Vincent abstracted his bond and the book in which it was recorded from the Auditor's office, evidently with the object of protecting his bondsmen, but it is stated that the contents of the bond can be established by secondary evidence so as to fix their liability.

The Grand Jury at Washington on Thursday found an indictment against Henry A. Bowen, for corruptly endeavoring to influence the Star-route juror, William Dickson.

One of the most disastrous snow-slides ever known in the Rocky Mountain regions occurred near Crested Butte, Colorado, on Wednesday night. Thirty men, employed in a coal mine, were sleeping in a building which was crushed to atoms as it was hurled down the mountain side by the avalanche. Seven were killed and eighteen injured, several fatally.

The coroner's jury at Milwaukee, Wis., rendered a verdict in the investigation of the Newhall House disaster on Monday afternoon. They found the proprietor of the house guilty of culpable negligence in not employing a sufficient number of watchmen to guard the house against fire and to awaken the inmates in time to save all the lives possible. They found the Newhall House easy of egress and devoid of intricate passages. Nevertheless, they found the owner of the house guilty of negligence in not having provided more escapes in case of fire.

The steamboat *Old Colony*, of the Fall River Line, bound from Newport for New York, went ashore on Hart's Island, in Long Island Sound, at about eight o'clock on Sunday morning. The passengers and some of the more perishable freight were taken off by the *City of Lawrence*, of the Norwich Line.

At a meeting of the Board of Trustees of Columbia College, New York, on Monday, a petition signed by 1,352 persons was received from the Association for Promoting the Higher Education of Women. The petition asks the Trustees to extend the educational privileges of Columbia College to such women as desire and deserve them, under such restrictions as the Trustees shall deem best.

Professor George W. Greene died at East Greenwich, Rhode Island, on Friday. He was born in 1811. He was the author of a number of historical works, chiefly relating to the history of the United States.

The United States Consul at Amsterdam wrote to the State Department that no person in the United States had asked him for any information about the approaching International Exposition in that city, and that only six firms in this country had engaged space in the Fair building. He says that there is considerable disappointment in Holland at the failure of the United States to take more interest in the Exhibition.

FOREIGN.

A heated debate took place in the French Chamber of Deputies, on Thursday, on M.

Fabre's compromise bill in regard to the Orleans Princes. The bill was finally passed by a vote of 343 to 163, and the Chamber adjourned for a week. In the debate the Right persisted in an organized system of obstruction. M. Fabre's bill as passed consists of three clauses: the first prohibits the Princes from filling any civil or military post; the second empowers the President to decree their expulsion; and the third enacts a penalty of from one to five years' imprisonment for a violation of such decree. General Thibaudin explained in the debate that the bill did not strike the Princes from the Army roll, but only removed them from active service, leaving them their rank. In the French Senate, on Friday, the bill relative to oaths in courts of justice was passed, with an amendment that a juryman can demand the suppression of the formula "Before God and man" in taking the oath. An important modification in the bill, as finally passed, was the suppression of the clause ordering the removal of religious emblems from courts of justice. There seems to be little chance of the Expulsion Bill passing the Senate, as of the committee on the bill eight members are opposed to it and only one is in favor of it. Public uneasiness in France is said to be increasing. The preliminary examination of Prince Jerome Napoleon having been concluded, he will shortly be arraigned on an indictment for an attempt to overthrow the existing régime, and it is expected that his case will be decided within a week.

A meeting of Socialists was held in Marseilles on Sunday, at which about one hundred persons, including a number of women, were present. Resolutions were adopted strongly condemning the Lyons tribunal which convicted Prince Krapotkine and his fellow-prisoners. The proceedings were turbulent, and terminated amid cries of "Vive la Révolution internationale."

The examination of the men recently arrested on the charge of entering into a conspiracy to murder Government officials was resumed in Dublin on Saturday. The court-room was densely crowded and the excitement great. The Clerk of the Court read the charge against them, which was to the effect that, on the 6th of May last, James Carey, a member of the Corporation; Joseph Brady, a stone-cutter; Edward O'Brien, a shoemaker; Edward McCaffery, a car driver; Peter Carey, a mason; Lawrence Hanlon, a carpenter; Peter Doyle, a coach-builder, and Timothy Kelly, a coach-builder, murdered Lord Frederick Cavendish and Mr. Burke. The reading of the charge was greeted by the prisoners with a burst of loud laughter. The evidence produced against Carey was that he had been the lessor of a room in which two knives and a rifle had been found, and that the cuts in the clothes of the murdered men and their wounds had been inflicted by instruments similar to the above-mentioned knives, which were produced in court. The evidence against O'Brien and McCaffrey was that they had been lurking about the scene of the murder shortly before it was committed. Brady was identified as the driver of the car upon which the assassins rode. On Monday the examination was resumed, and evidence introduced against the prisoners accused of attempting to kill Mr. Field. A little girl identified a man named Kavanagh as the driver of the car which contained the men who intended to assassinate Mr. Field. The identification was complete. Several more men, including Kavanagh, were added to the list of those charged with the murder of Lord Cavendish and Mr. Burke. The evidence against the prisoners on this day was not particularly important. Some sensation was caused by the reading of extracts from books found in a Fenian armory.

Earl Spencer has appointed the period between the 14th of February and the 7th of March for hearing appeals under the Crimes Act. The Bishop of Killala has issued a pastoral letter condemning secret societies. Reports of deaths from starvation in various parts of Ireland are beginning to be received.

Warrants have been issued for the arrest of Messrs. Davitt, Healy, and Quinn. Mr. Healy, in consequence of his impending imprisonment, intends to resign his seat in Parliament. The Dublin Grand Jury has returned a true bill for seditious libel against Mr. O'Brien, editor of the *United Ireland*.

Mr. Chamberlain, President of the Board of Trade, speaking at a banquet at Swansea, England, Thursday evening, said the next session of Parliament would be an interesting but not an exciting one. Matters relating to England and Scotland demanded consideration. He believed the recent measures passed would bring about a settled state of affairs in Ireland.

It is understood that the new Egyptian representative Assembly will meet soon to advise the Government on proposed internal reforms. The Khedive's decrees appointing Sir Auckland Colvin financial adviser to the Egyptian Government and naming the members of the Indemnity Commission have been published. The Commission includes the diplomatic agents of England, Austria, France, Germany, Italy, Russia, the United States, and Greece, and is under the presidency of Abdurrahman Pasha, Arabi's Minister of Finance.

The German military officers in the employ of the Porte have drawn up a plan for the reorganization of the Turkish Army, by which great improvements will be effected, as it retires a swarm of useless officers and devotes their pay to more useful purposes. It is understood that the Sultan has expressed his entire concurrence in the views expressed in the report of the officers.

The Pope has returned a very conciliatory answer to the German Emperor William's letter. It is hoped that a direct and personal understanding will soon be reached on the basis of a complete revision of the May laws, with concessions on the part of the Vatican upon the question of obtaining the previous consent of the German Government to all ecclesiastical appointments. The Berlin *Germania* (Ultramontane), discussing the Emperor's letter to the Pope, proclaims it injustice to conclude a peace by which the Empire would derive greater benefit than the Church. The Berlin *Reichs-Zeitung* says the Emperor's letter has produced a painful impression in Catholic circles.

By command of the Emperor, Prince Bismarck has sent a letter to the German Consuls and other diplomatic agents in the United States concerned in the collecting and forwarding of subscriptions for the relief of the sufferers by the recent floods, in which he says that the Emperor has learned with keen interest how general was the sympathy awakened among the Germans in America for the sufferings of the residents of the inundated districts, and that he is much gratified by this proof of the feeling of kinship which citizens of the German race abroad entertain for their countrymen in the old home, and which corresponds with the friendly relations existing between the Governments of Germany and the United States. In conclusion, the Emperor warmly thanks the committee which had in charge the matter of collecting the funds.

In the German Reichstag, on Thursday, Herr Sonnermann asked whether, in consequence of the disaster to the steamship *Cimbria*, the Government proposed to make any international arrangements to prevent collisions at sea. He advocated the introduction of the electric light for that purpose. Herr Scholz, replying in his capacity as Federal Commissioner, said the Government felt the same sympathy as the nation with the sufferers by the recent disaster, and had also a sense of its responsibility. The Government could not immediately answer the interpellation, but would keep the subject in view. An official inquiry had been instituted, and until a result was reached the Government must reserve its decision.

A number of Danish subjects in North Schleswig, Prussia, having objected to military service in the German Army, the Danish Government has made representations to Prussia pointing out that by the Danish law all German Schleswig-Holsteiners inhabiting Denmark are especially exempted.

A German emigration return presented to the Reichstag shows a decrease of 16,000 in the year 1882, as compared with the previous year, and that 168,454 emigrants passed through Hamburg, Bremen, and Stettin, mostly for the United States. This was exclusive of 63,756 foreigners.

A despatch from Berlin says that M. de Giers, on reassuming the direction of the Russian Foreign Office, issued a circular to the Russian representatives abroad, explaining that the result of his personal exchange of opinion with the German, Austrian, and Italian Foreign Ministers was satisfactory, and tended to the preservation of peace.

A solemn warning, printed on fine vellum, has reached the Czar and the members of the Russian Cabinet, claiming universal suffrage, the right of the people to own land, freedom of conscience, of the press, and of public meeting. If these demands are not granted before the coronation of the Czar, the Revolutionary Committee sending the warning threaten to revert to intimidation.

The Czar has issued his manifesto giving notice of his coronation at Moscow on the 27th of May. The manifesto is addressed "to all Russian subjects." An ukase orders the attendance at Moscow, on the occasion of the coronation, of all marshals of the nobility and prefects of provincial capitals except those of Siberia, whose attendance is excused on account of distance, and the presidents of the rural and urban administrations. The Minister of the Household is charged with the duty of making the necessary preparations. He will be assisted by a special commission.

The London *Times*, in an editorial commenting on the Czar's manifesto, says that much too little attention has been attracted by the subsidence of the revolutionary storm, and the reassertion of ascendency by the permanent forces of Russian society. It says that the events of the last few weeks indicate the break-up, for the present at least, of the Nihilist conspiracies.

In the Spanish Cortes on Thursday night Señor Pedregal (Republican), an ex-Minister, moved that the most-favored-nation treatment be accorded to the various countries, including England and the United States, that desire to make treaties of commerce. Señor Armijo, Foreign Minister, opposed the motion as prejudicial to Spanish interests, and asked authority from the Congress to negotiate with the various governments which should offer suitable compensation. Señor Pedregal's motion was rejected by a vote of 112 to 18. On Saturday the Chamber of Deputies discussed the new parliamentary-oath formula. Señor Sagasta, in replying to objections to the oath raised by some of the Deputies, expressed admiration for the procedure of England in all the acts of her political life, which rendered her a privileged nation as regarded liberty, prosperity, and grandeur. Señor Sagasta wished Spain would follow England's example. He insisted upon the necessity of the oath, or an equivalent therefor. The motion for the abolition of the oath was finally rejected by a vote of 162 to 13, and the Chamber adjourned until the 8th instant.

The Spanish Government has issued a ministerial circular, ordering the adoption throughout the country of the decimal metrical system of weights and measures.

Cetywayo has been reinstalled as King of Zululand. Many of the chiefs express great dissatisfaction at the terms on which he has been restored.

THE PROTECTIONIST PANIC.

THERE was a studied attempt, at the meeting at Cooper Union on Thursday evening, to put the revenue-reform movement in a false position. It was assailed as a movement for free trade, especially free trade in the interest of Great Britain. Few will be deceived by this. Nobody calls for the repeal of all tariff laws and the instant closing of custom-houses. No representative revenue reformer fails to recognize existing facts, or proposes to put out of view the interests which have grown up under our economic policy. A sentence from Mr. Evarts's own speech might well serve for a revenue-reform text. Referring to the questions upon which the people expressed an opinion at the last election, the speaker said that one of them related to the political managers, and that another declaration at the polls was to the effect "that exactions were not to be made or persisted in at the expense of the people, in the accumulation of revenue that it might be expended in wasteful and profligate jobs." Here is a starting point. The revenue is too large. It should be reduced. Upon what plan should it be reduced? The tariff reformers say, by lopping off excessive duties that go to the enrichment of favored industries which, even according to the protective notion, receive far more protection than is needed to put them on a competitive equality with foreign manufacturers; by simplifying the tax-laws and wiping out their many shams and abuses; and, above all, by relieving raw materials from extravagant duties, so as to give manufacturers genuine protection, enabling them to manufacture more cheaply, and thereby to obtain a footing in the world's markets which their European rivals now monopolize. This is not free trade. This is not in the interest of Great Britain. It is in the interest of American workingmen, and of American capital in the broad sense, since it would largely widen and multiply the profitable opportunities of both.

Having misrepresented revenue reform as an absolute free-trade movement, the meeting misrepresented history by asserting that the commercial crises and labor troubles of the past were the consequence of efforts to enforce the free-trade principle. It would be easy to refute this assertion in detail, but it is not necessary to go further back than ten years. There has been no worse crisis than that of 1873. Did it happen under a free-trade policy? Before the panic occurred, while it lasted, and during the years of slow and painful recovery, the high war tariff was in full operation—the same tariff which is still in force, and which threatens to bring about another and similar period of distress; a tariff which, by applying an artificial and excessive impulse, endangers the very interests which it aims to promote. But the summit of absurdity was reached by the resolutions adopted when they touched the question of the foreign carrying-trade. Here is something about which it is impossible to deceive the people, to whom many tariff matters are mysteries. The operation of duties upon particular interests is often understood only by experts. But anybody with two eyes, or even one, can see for himself that the carrying-trade has gone out of our own hands and into those of foreign ship-owners. Has this happened under a free-trade policy? On the contrary, it is a conspicuous illustration of the working of the opposite system. The protectionists have had their own way here. As to other articles they say, You shall only import them upon paying a heavy duty; but as to ships they say, You shall not import them at all. The result is that we have no ships. Yet, in full view of the destruction of American shipping under the navigation laws, the meeting resolved "in favor of restoring ocean navigation under our flag," but only "in American-built ships." That is, it insisted upon holding fast to a narrow system under which, as has been already proved, American ocean navigation cannot revive.

We ought, however, to give the protectionists credit for their entirely unselfish spirit, and for good, soft hearts. The speeches at the Cooper Union meeting were fairly overflowing with tender solicitude for the comfort of the working classes. "It is not for the purpose of making any manufacturer rich," says the benevolent protectionist, "that we impose high duties upon imports. It is not for the purpose of putting dollars into the pockets of the stockholders in woollen mills or in Bessemer-steel works and a multitude of other establishments, that we make the whole people pay taxes to them by obliging them to pay higher prices for the articles they have to buy. It is not the benefit of the capitalist that we have in mind at all. It is only of the poor laboring man that we think, and it is in his behalf that we tax the American people. If we did not tax them, the industries in which the laboring man is employed would go to the bottom; the laboring man would have nothing to do, and would perish in misery."

Listening to such speeches, one would think that if, in consequence of the high prices for manufactured articles which the tax imposed upon the purchasing consumer in the shape of tariff duties creates, the manufacturer "incidentally" gets rich, this philanthropic system would provide for some method to increase the benefit to the workingman, in the shape of wages, or a share in the profits in proportion to the profits of the whole business, or at least a method to secure the poor workingman—during times of prosperity, when the industry protected by a tax levy in the shape of protective duties yields large profits—against the distress of evil days, when, in consequence of the results of overstimulation, the industry breaks down and the laboring man is thrown out of work. This, however, does not seem to be the case. It is notorious that a good many manufacturers have at times made enormous profits and grown very rich, and that stockholders in some instances have received dividends amounting to from twenty to ninety per cent. on their investments. But we do not remember to have heard of a single case in which individual manufacturers or companies said to their operatives, "We have, owing to the tax levied upon your fellow-citizens for your benefit, done uncommonly well this year. The time may come when we may not do so well. We will therefore so apportion these unusual profits, which we owe to that beneficent tax, among the company and you, the operatives, that you may have a comfortable reserve to live on if evil days should overtake us." This, we are sorry to say, has not been the way in which individual manufacturers or corporations talked to their workingmen about the profits derived from the high prices which resulted from the tax upon the consumers, levied, as they say, for the benefit of the poor laboring man. No, the poor laboring man received only those wages which the manufacturer was obliged to pay him according to the current price in the labor market: he received no more. And when the evil day comes—when a great establishment like the Union Iron and Steel Company in Chicago breaks down—then we are coolly informed that some thousands of workingmen are simply turned into the street. It appears, therefore, that, although the speakers at the Cooper Institute meeting may have meant what they said, the protective tariff is not as purely a philanthropic contrivance, and not as exclusive a benefit to the workingman, as they chose to represent it.

There is another fact which makes the philanthropic argument appear rather puerile. Hearing the protectionist orators speak, one would think that men obliged to work with their hands were naturally in a state of starvation in this country, and that it required a protective tariff to give them work and bread. The mere statement of the case suffices to show how absurd it is. There never has been a country under the sun whose natural resources invite and encourage and reward labor as do ours, and in which an artificial stimulus is so little needed to make labor of all kinds remunerative, and everybody who is able and willing to work comfortable. Would anybody undertake to assert that laboring men could not find ample work to do, or that they could not make enough by it for a comfortable livelihood, in times when this country had no protective tariff? When men were thrown out of work and went for some time without any, it was only because they had been devoting themselves exclusively to some specific employment which temporarily became unprofitable. And such things happened under a protective tariff as much as when we had none, and perhaps more so. But to say that a protective tariff is necessary to give the laboring men in America work and bread, is absurd.

EDUCATING WOMEN.

THE petition presented to the Trustees of Columbia College on Monday, on benalf of the education of women, was referred to a committee, which will, we suppose, report some plan of acceding to the petitioners' request. As has been repeatedly pointed out, the object of the movement is not to secure "co-education," but, as President Barnard expressed it, to secure for women the same general opportunities for education that are open to the men. As to details, the petitioners prefer to leave them entirely to the college. If the college objects to classes of young men and women receiving instruction together in the same rooms, then it is asked to provide for them separate instruction, as the Harvard "Annex" system does now. One method or the other is in

operation at two of the English universities and at a large number of the leading American colleges. The question which is presented to the Trustees is really whether it will confine the instruction it affords to one sex, or whether it will give equal opportunities to both.

It is expected that action on the petition will be taken at the next regular meeting, and the subject is so important that we trust it will then be fully discussed. It is a matter in which men are interested quite as much as women, and we have no doubt that most of the arguments against the higher education of women would, if they were fairly examined in debate, be found to rest on mere prejudice. The feeling against it, unless we are much mistaken, exists now chiefly among women themselves, and grows out of a confusion or fallacy with regard to a supposed effect on the manners and demeanor of the sex. If you ask a "conservative" woman what objection she has to her daughter getting the best education the times afford, you generally find she has in her mind a picture of a type of woman as produced by "higher education" not agreeable to the fancy of either sex—a woman who is undomestic in her habits and unfeminine in her tastes, who takes the initiative in conversation, is perpetually agitating for some "cause," or "reform," is ill-dressed and untidy, in fact regards dress as an unimportant matter, and the desire to attract the attention and interest of men as "frivolous." To make the picture more hideous, she is generally thought of as wearing spectacles and carrying an umbrella, and as having a family of neglected children and a miserably uncomfortable husband at home.

If there be a type in society of which this picture is a caricature, as is very possible, it is agitation, not education, that has produced it. The agitation for women's rights of one kind and another has been caused by the denial of these rights, and the work of bringing about a change has at least produced, as it generally does, reformers whose behavior is distasteful to conservatives, and who run into excesses which do something to bring reform into ridicule and contempt. But to educate a woman will not tend to make her an agitator of this sort, but, on the contrary, will probably have just the opposite effect. Why should training the mind of a woman, and throwing open to her the treasures of learning, make her a disagreeable companion, and lead her to insist on taking the stump and haranguing mixed audiences whenever she has an opportunity? Agitation as a career has and will always have few attractions for any but a small percentage of either sex, and we know that in the male sex the effect of the higher education is mainly conservative. The male type that corresponds with the female type at which conservative women shudder, is generally the product of ignorance rather than education; and we have no doubt that a thorough education, just "such as the men get," would have the effect of making fewer and fewer women set up with visionary schemes for the redemption of the world by the extension of "rights" of one kind and another.

The chief difficulty with the education of woman at present is not that she is educated too much, but that she is educated imperfectly. After being provided with one or two half-learnt modern languages and a smattering of music or art, she is reported to her parents as "finished," and launched into the world. This is the old story, told, not by reformers, but by conservative satirists, a thousand times. So far from being educated, in nine cases out of ten she does not even know what education means. Of training and discipline she has little or none. One of the great advantages of opening the doors of colleges to her must be that she will be subjected to the same mental training and discipline that the experience of ages shows is the price of all intellectual improvement in either sex. Looking at the matter from a purely conservative point of view, we can imagine nothing more likely to promote intellectual modesty and diffidence among women, nothing less likely to encourage them to "unsex" themselves or to try to get up "movements" to regenerate the world, or to render a crusade against Man, in ready-made clothes, armed with the traditional umbrella and spectacles, attractive to them than a liberal education, such as a college of the standing of Columbia would provide.

The conservative ideal of women is a very old and valuable one, and has produced in times past female characters and lives of extraordinary beauty. It embraces all the gentler virtues and graces of mind and disposition, and it requires that woman should be, above all, charming—should always please. There is something almost grotesque in the notion that this ideal will be interfered with by the "higher education." A girl who has passed an examination and got a college degree does differ from a girl who has got a "diploma" from a finishing school (everybody knows, by the way, what a charmingly "domestic" place a girl's boarding-school is), chiefly in the fact of having got a diploma that is good for something. We know of no branch of human knowledge taught at Columbia or any other college which contains any principles calculated to lead women to believe that an undomestic life is best adapted to them. They will not find a hint of the kind in the classics, or mathematics, or science, or literature, or history. On the contrary, the broader a view women or men get of life—in other words, the more complete or "high" their education is—the more clear does it become that the ordinary career of woman must be that of a wife and mother.

It is this fact which makes conservatives so fond of dwelling on the importance of women being "charming." Being charming means principally, or at any rate three-quarters of the time, being charming to men. But the idea that ignorance constitutes with most men a large part of woman's permanent charm, is a delusion. An educated man may not like his wife or sister to display more knowledge than himself; but every man likes intellectual sympathy, and, consequently, on the theory that woman's first duty is to be charming, conservatives ought to admit that she should be afforded the best means of qualifying herself for the task. To provide the higher education for one sex, and to cut the other off from it, is really unfair, on the conservative theory; it gives men a very high standard as to what women might know or appreciate intellectually, while it gives women no chance to conform to it. We are being told all the time that marriages are growing later because men are getting more and more exacting.

The common liberal arguments that women are entitled to the "higher education" for the same reason that they are entitled to manage their own property, to make their own contracts, to practise medicine, we should not, of course, dream of urging on conservatives; but we can assure them that, on their own ground, nothing ought to give them greater satisfaction than the manifestation by women of an interest in the higher education. The true corrective for the half-education that produces the type of woman that conservatives dread, is the education which disciplines the mind and teaches the use of the intellectual faculties. This the colleges alone can give, and give, moreover, to the large class of young women whose circumstances do not permit them to obtain at home anything like the thorough teaching of the university.

THE ENGLISH AND AMERICAN PRESS.

LONDON, January 12, 1883.

CERTAIN of the English newspapers, not long since, made much of an article in an American review decrying American journalism. I am the last to assert that there was not much justice in the article, but such matters are, after all, entirely comparative. It is well and wise for an American publicist to criticise with all useful or justifiable severity the weak or dishonest manner in which most American journalism is carried on; but an English journalist, in taking up the outcry, should be sure of his right, from his English standpoint, to throw stones at our glass house. No two men will see the matter from the same side, but it may, perhaps, be permitted one who has served in his day on both sides of the Atlantic, and whose knowledge of both systems runs beyond the day of nearly every actual editor of a leading journal on either side, to make a comparison which no man, possibly, is entirely qualified to make otherwise than suggestively, and pass judgment on the claims of English journalism to greater consideration than its American sister enjoys.

The *Pall Mall Gazette* may be allowed greater freedom of criticism in this matter—and has taken it—than any of its English contemporaries, because the sterling honesty of its general management and the superior ability of its editor-in-chief make it, for the day that is, the best newspaper in London. It has always been able, and, even under Greenwood, was the most remarkable in many ways of all European journals; but Greenwood's pungency was greater than his judgment—he was rancorous, and lost in personal bitterness the fairness of judgment which is indispensable to a strong lead in public opinion. But Morley is as able and can be as pungent as was ever Greenwood, and, though it seems to me that in some of his ideas of national policy he goes dangerously near to a relaxation of authority in favor of a local liberty which, however just theoretically, would be dangerous to England's actual imperial position, he is still, of the whole editorial corps, the man of the

largest, most generous, and liberal ideas. Admitting this, and that my *tu quoque* applies less to the journal which has most vigorously applauded the American critic of American newspapers, there is still a pebble or two in our garden-walks for the *Pall Mall Gazette*, and some larger for most of its English contemporaries.

It is unquestionably true that the level of American journalism is, so far as the results of education, even of abstract intellectual calibre, are concerned, much below that of England; and the sweeping assertion of the *Pall Mall*, in comment on the American writer—that no American journal approaches the English standard in the conduct of the proprieties of journalism—though exaggerated, need not form subject of dispute, for the exceptions which we might make would only show the rule more just. It is evident that the comparatively large number of Englishmen, graduates of the great universities, possessors of small or large incomes, who are ambitious of public lives, and hence willing to serve in journalism without regard to the rate of compensation—to say nothing of the relatively much greater number of Englishmen who have all the intellectual advantages which an university education can give—will, as long as such a disparity exists, give English journals an immense advantage in available intellectual resources, and a consequently higher average of staff ability. In the amenities of journalism, again, it is evident that, owing to the general higher social cultivation of the brain-workers in England, there will be a great difference in the standard to which the tone and conduct of a journal will be referred; and we must admit that many things are said in many American journals which no English journal read by the classes that control the tone of journalism would admit. In scholarship, and breeding, and intellectual and social training, England has the advantage over us by the result of the centuries of her universities and great fortunes. Against such advantages no young country can struggle.

But granting these disparities, I deny any further superiority to English journalism. In political honesty, in fairness as between man and man, I can only except the *Pall Mall Gazette, under its present management*, from the general rule, that the English journals are inferior to ours; in reckless partisanship they, with very few exceptions, certainly do surpass all our leading journals; in their subserviency to personal ends and interests—such as, for instance, the owning of the *World* by Jay Gould—they are quite as bad, if the personalities which control the tone of the paper are sometimes more respectable. Even the *Times*, which used to be the organ of public opinion, is becoming that of Mr. Walter just as much as the *Herald* is that of Mr. Bennett. And that form of dishonesty which is involved in the sacrifice of a common public interest to a class, clique, or vested interest is so general and so rank with the great English prints, daily or weekly, that it is neither reprehended nor apprehended by the public, while fair play as to persons, personal or national interests, ideas or doctrines which encounter common prejudices, is scarcely known to the most liberal English journals. Fair play is a virtue Englishmen are very fond of talking about, but which, except as between parties equally indifferent to English interests and prejudices, is very little known. I have lived in England since the more than Chinese wall of prejudice against foreigners was breached by the Crimean War, and see with satisfaction a great change in English ideas with reference to "outlandish" people; but at this day the broad hospitality of American journalism to the outsider, and its general fairness of appreciation of foreign matters, is so imperfectly comprehended by the English press that they take it for our satisfaction at being noticed by foreigners (especially Englishmen), or the desire to conciliate them.

Now, as cleanliness does come after godliness though it is next to it, so good manners in the press do come after justice; and the English press, with all its ability and decorum, is as inferior to the American in the major virtue as ours to that in the minor virtues of decorum and scholarship. If American journals defend corrupt practices, English journals hide and ignore them, and the magnitude and venerable character of the abuses in nowise change the character of the defence. *Truth* is the only conspicuous print in England that does attack certain abuses which have no kind of parallel in America for journals to attack or defend, and *Truth* is an acknowledged corsair. It is true that no English journal now would defend such a corrupt system as our civil service, as certain American journals do, but the vice of English journalism is simply more decorous—it ignores.

But it is in criticism, literary and artistic, that the utter recklessness and want of conscience of the English press are most markedly shown. Art criticism is simply so preposterous that nothing need be said of it: from the *Times* to the *Saturday Review*, the notices of the plastic arts are beneath attention. In literature, the general tone is what might be expected from a society divided between mutual admiration and mutual detestation. I remember asking one of the most celebrated authors of the generation, some years ago, if he had read the criticisms on a certain volume just out, and he replied: "I never read the criticisms in the English journals; they are simply the expression of personal likes and dislikes; there is no longer any true criticism in England." Oddly enough, I had by chance known the way in which public opinion had been prepared for the work in question, which was as follows: When the first sheets were out of the press, a copy of the book (without waiting for the binding) was sent to personal friends of the author connected with the leading literary and daily papers, and a chorus of laudation was prepared so loud and so completely in accord that when it struck up, at the moment of the appearance of the book, the public ear was taken by storm, and no contrary voice dared raise itself for a long time, and until the book had reached its second edition. You have only to know to what clique an author belongs to be sure of the tone this or that paper will assume in criticising it. Even the *Times*—which, as a general thing, gives to the specialists which it has on its staff for most branches of criticism the books it considers worthy of notice—used, at the time when I was more conversant with these matters than I now am, to exclude rigorously certain authors from notice in its columns. I remember hearing a late eminent historian say that as long as —— was at the head of the literary staff of the *Times* he had never a chance of being noticed in it; and, as the *Times* rarely expresses any very decided opinions in its criticisms, its preferable form of condemnation was silence. We who are, or have been, more or less behind the veil conceive no kind of respect for the literary criticisms of the English press. We know that the *Saturday Review* will always be caustic, and the *Times* always heavy and noncommittal; but the authors and the critics, when not the same class, are too much interconnected to permit criticism to be fair and impersonal. The public is a stupid one: it goes to the Royal Academy year after year with no other desire than to be told what it shall admire, and admires it. Its intelligence is equal to the sensational novel on which it largely feeds, and for everything beyond that it is willing to take on faith what is printed for it daily. The press is beset by young men, just from the universities, who for the most part know how to write excellent English, often able and witty, with the confidence in their own opinions which young men generally have before they have learned very much. They enjoy slashing their enemies and exalting their friends. The older ones were like them, and have grown up in the belief that criticism is a matter of opinion merely—*de gustibus non disputandum*—and they go on as they began; and so it happens that the body of the literary criticism is, and deserves to be, the most ephemeral of English literature—there is little knowledge and almost no conscience in it. If the *Spectator* is honest, it is heavy, and not always wise; and if the *Saturday Review* is bright, it is utterly dishonest, and so on; the *Pall Mall Gazette* and its secedeling the *St. James's Gazette*—when the latter is not cantankerous, as it often is—leading the way in such exception as there is.

American journalistic literature has its grave faults, but, to my way of thinking, they are not so gross as those of the English. The honest, studied, deliberate opinion of the results of intellectual labor is rarer in English journalism than gentlemanly tone and scholarly brilliancy are in American; and in this comparison the press of London is losing, and perhaps the American, as a whole, is gaining.

THE PROSPECTS OF THE OPPOSITION.

LONDON, January 11, 1883.

IT is significant of the tendency to do everything in public which our great-grandfathers would have done in private, that our political parties now discuss their own affairs, their organization, their leaders, their mistakes in the past, their weakness in the present, their plans for the future, in the columns of monthly magazines. Formerly, a party was guided by its acknowledged leader and the select council of experienced politicians who surrounded him. Discontented subordinates plotted against him, but they plotted in secret. They did not, unless when some open revolt broke out, go before the public with their complaints and schemes. We have changed all this. Party discipline has generally been lax among the Liberals, so that no one was much surprised when, under Lord Beaconsfield's Government, different lights of the Liberal party used to controvert one another in the press. But the Conservatives have had a closer party cohesion, and have been much less prone to rush into print. It is the more significant, therefore, when six Conservative members are found in three successive months using the pages of the *Fortnightly Review* and the *Nineteenth Century* to discuss the causes which have brought the Conservative Opposition to its present condition of mutual distrust and collective weakness. Some of these articles have been anonymous, but the writers are pretty well known, and the views they state, the complaints they level against their leaders, are repeated in speeches and conversation by men of mark in the Conservative ranks. There is something remarkable not only in discontent so openly expressed, but in the extreme disheartenment of a party lately so powerful. Though the Conservatives were beaten badly at the general election of 1880, they had been almost as badly beaten in 1868, yet within six years they came triumphantly into power. They have no such great occasion for despondency, particularly as Mr. Gladstone, who is the chief source of Liberal ascendancy—because the country believes in him, and he unites the different sections of his

party—may probably retire in a year or two's time. When he has retired, it will be far more difficult to hold together and manage the Ministerial party; so the Conservatives will then have a chance. However, this prospect does not console them. They recall with sadness the days when Lord Beaconsfield led a strong and submissive majority, and exhaust themselves in investigating the causes of their present misfortunes. Though they throw most of the blame on their own leaders, there are really other reasons not less important.

The first and chief of these is the dominion which Mr. Gladstone possesses over the popular mind. The Conservatives have not—it is not to be expected that they should have—any one to put in competition with him. Any Liberal candidate can conjure with his name, whereas there is for the moment no Tory name to conjure with—none which excites enthusiasm and lends authority to the doctrine or the name on whose behalf it is invoked.

The second is the absence of any positive and definite policy to set before the country. No doubt the chief business of a Conservative party is to maintain and justify existing institutions, and therefore a programme of legislative changes is less to be expected from them than from their opponents. Still, even in protecting and justifying what exists, there must be certain general principles capable of being stated, and there are measures which may be, and ought to be, passed in the interest of the whole people—measures which involve no disturbance of the political equilibrium. Such principles, such measures, Conservative statesmen ought to indicate: that they are not doing so, that the party has no constructive programme to place before the country, is the complaint made by some of the writers I have referred to, and one may therefore assume that this defect does not exist merely in the imagination of those who look at Conservatism from the outside. These writers blame the present leaders. But may not the fault be traced further back? It has been the fashion ever since Lord Beaconsfield's death to treat him as a man of profound insight and skill. He has become a beatified, if not canonized, saint to the Tory party, who are often heard to wish they had such a leader now. Nevertheless, it was really he who taught the Tory party to get on without constructive ideas. He had his views as regards foreign policy, and, whether constructive or not in that department, they were positive, and had much attraction for some minds. He relied a good deal on them, and believed, till the election of 1880 arrived, that they had won for him the support and confidence of the nation. But he had never any domestic legislation to propose which interested the people, or any considerable section of the people. He did not care for such matters, thought them below the level of the "haute politique" which he enjoyed, did not even train his lieutenants to consider this as an indispensable part of an English statesman's work.

He did, it is true, conceal the absence from his scheme of politics of constructive ideas, intended either to improve the machinery of government or to better, through wiser laws, the condition of the humbler classes, by the sonorous and often half mystical phrases which he scattered abroad, and which, while they taught little, seemed to suggest much. Hence the gap was not so much felt in his reign as it is now, when there is no similar master of language to give the *mot d'ordre* to Conservative speakers. They cannot hark back to his foreign policy, because that was condemned in 1880, and upon the other burning questions of the day they have, or seem to have, nothing specific to propose. While blaming the conduct of Irish affairs by the present Government—and it is no doubt open to much criticism—they have not suggested any alternative policy. Some of the bolder spirits have, indeed, declared that nothing but repression was wanted—that the grievances of the Irish tenants are only the result of the weakness and lenity of Mr. Gladstone. The more responsible leaders do not deny that something was wrong, but have not indicated what remedial measures ought to have been taken, otherwise than by repeating that Mr. Gladstone's have been mischievous. As regards Egypt, it has been the same thing. The Government were blamed for not interfering sooner, and told that the National party was all moonshine. They were blamed for interfering in the way and at the time they chose; and when Arabi was tried, some prominent members of the Opposition pressed the Foreign Office with questions in a way which implied sympathy with Arabi, and almost went the length of espousing his cause. Such behavior gave the impression that these critics had really no view of their own, but were only casting about for some way of annoying the Government, determined to prove it wrong whether it held back in Egypt or went energetically forward. Consequently the Government was not damaged.

This mistake was made, not by the leaders of the Tory party, but by some of the younger and more eager partisans. But here we come upon the third and most serious of the evils which afflict the party. Its recognized leaders have not sufficient authority to hold their followers in check. They are flouted in Parliament and censured in magazines by those who ought to be their loyal subalterns. They are charged with want of courage, want of strategy, want of earnestness. It is alleged that they have fallen behind the time, while their jealousy of new merit makes them unwilling to bring on and give a chance to the rising young men. In fact, all the misfortunes of the party are laid at their doors. These sweeping accusations are unjust, because they do not allow for the exceptional difficulties which Sir Stafford Northcote has to encounter. His party has suffered during the last two sessions from bad generalship; but the fault has lain as much with the army as with the general. Himself a ready and effective, though not impassioned, debater, he is ill-supported in the House of Commons. Nearly all the best speakers of the Tory party are in the House of Lords, where they are not wanted, because they have there an overwhelming majority. In the Lower House there is very little debating power among the Conservatives, and a good deal on the Government side. Hence Sir Stafford Northcote feels that there is not much use in fighting pitched battles, since he is sure to be beaten, not only in numbers, but in argument. His own preference is for a quiet and watchful opposition, which may every now and then embarrass the Government and point out their mistakes to the country, but which should seldom challenge a formal trial of strength. He sees no great good to be attained by constant skirmishing, judging (and judging wisely) that the Ministerialist majority is more likely to be distracted by internal dissensions if it is not kept always on the *qui vive* to resist attacks from without. This, however, is not the view of the active youth of the Tory party. They are always ready for a fray, and have persuaded themselves that the secret of Lord Beaconsfield's success lay in his powers of invective. They are therefore perpetually taking, or making, occasions for a raid upon the Ministry; and Mr. Gladstone's readiness to lift up every glove that is thrown down, and the warmth with which he repels attacks made on his own motives, add zest to the process.

They get plenty of practice in speaking, and succeed in delaying the Government measures, but otherwise nothing is gained for their party. The country is disgusted, and the Ministerialists, irritated by this idle skirmishing, close their ranks and give a more unquestioning support to Mr. Gladstone than he might otherwise obtain. Sir Stafford Northcote and his brother-chiefs sometimes try to call in and hold back these skirmishers, but usually in vain. They think his quietness want of spirit, then refuse to obey, and sometimes draw him on into conflicts which his judgment seems to disapprove. Thus the discipline of the party suffers, and the strength of the party, the moral weight which its protests might have if reserved for important occasions, is frittered away on these trifling engagements. A party leader has with us no means of controlling the members of his party except by the ascendancy of his own character, for a constituency will not generally punish its member by throwing him over unless he has openly voted against the principles he was returned to support. This spirit of mutiny or independence, whichever one calls it, is therefore a great difficulty in his conduct of affairs, and the failures of the party may fairly be ascribed as much to its existence as to any mistakes in his strategy.

If it is asked what produces this disorderly spirit, the answer must be: impatience, and an exaggerated idea of the importance of House of Commons struggles. There are many people in the world who mistake restlessness for energy, and fancy that the way to succeed is to be always doing something. For themselves, these skirmishing politicians may be right, since they at any rate bring their names before the public, but they do no good to their party. Very often a cause has more to gain from the mistakes of its adversaries, and from the languor which sooner or later comes upon them, than from any advocacy of its own claims. There are several ways of working up a minority into a majority, but constant carping is not one of them. However, as the Liberals were constantly active in their campaigns against Lord Beaconsfield, and used pretty strong language about him and his Government, the young Conservatives think that what answered for their opponents must answer for them also. They forget that the agitation of the Liberals was chiefly an agitation in the country, with comparatively little fighting in the House of Commons. This is the second mistake the Tories have been making. They greatly overrate the influence of House of Commons debates on the country. These debates are now far less fully reported than formerly, partly because they are so inordinately long, partly because the London newspapers are printed off earlier in the morning, in order to catch the earliest trains. It is only on great occasions that speeches made in Parliament are attentively studied, even by that part of the nation which cares about politics. Those who are themselves members of the House of Commons are naturally interested by the tournaments which go on there under their own eyes, and attribute too much importance to them. The causes which move public opinion and determine the result of an appeal to the nation are large causes, and operate with little reference to the prowess shown in such tournaments. If the Conservative debaters were to strike harder home at the Government when it gets into a difficulty, that might put the party into better heart for the time, but it would make little difference in the long run. And now the weakness of the party in the House of Commons is of less evil augury than these despondent Tory writers fancy. Their turn will come, if only they have patience.

What injures them in the opinion of moderate men now is not so much their want of fighting power as their want of judgment, calmness, and

resolution, and, still more, their want of a positive and constructive policy. It is not brilliant debaters whom the English care to see at the head of a Conservative Ministry, but solid, steady men, with administrative capacity and a disposition to prevent the necessity for large changes by a willingness to make small ones in a cautious way. If the Conservative party could get hold of one or two such men—men of the type of Sir Robert Peel, even if less eminent—they might look forward to a return to power at no distant day. Firmly as the Liberal Government seems to stand now, no one can tell how its sections may feel toward one another after Mr. Gladstone's sceptre has passed to other hands. There may be dissensions and a break-up of the parliamentary majority. There may be a lukewarmness on the part of some important class, as there was among the Nonconformists in 1874. The forces which make for Conservatism are always so strong in England that Liberalism succeeds only when the Liberal party is excited, stimulated either by devotion to some particular man, or by the prospect of some much-desired reform. If a general election takes place at a dull time, and upon no important issue of principle, it is apt to result in favor of the party which has property upon its side. A quiet policy, a waiting policy, is, therefore, the true one for the Conservatives to follow at present; for it will not delay, and may hasten, that natural reaction in which their best chance lies. Unfortunately for them, this is just what the eager youth cannot reconcile themselves to. They seem disposed to repeat next session the mistakes of the last two.

Y.

THE RESTORATION OF ST. MARK'S.

VENICE, December 11, 1882.

IN my former letter there was question of the high tide of the 28th of October as of a very unusual event. And so, indeed, it seemed, as none such had occurred since 1876, and none before that since 1866—to take the dates given by shopkeepers on the Piazza. But yesterday it came again. In October there was full moon, this time there was "no moon"; there was *scirocco* (southeast wind), of course, as that is a condition precedent, blowing up the tide from the ocean and filling the channels of the Lagoon. And as yesterday was Sunday, as it was very warm (50° Fahrenheit), and not raining, the occasion served as a feast not laid down in the calendar, and the Piazza, in the morning, was crowded with boats. Perhaps one hundred and fifty small craft—gondolas, barchettas, sandolos, and canoes—were swarming there together; some had come in through the Merceria and the other little streets behind the Piazza, but the greater number came from the harbor, over the edge of the Molo. For two hours there was a scene of unusual gayety, shouts and cries, the upsetting of canoes, the transportation of foot-passengers from dry land on one side to dry land on the other, in boats or on backs; and the alarm arose that the water was falling, and there was a huddle and a rush to escape through the narrow space left open in the temporary wooden bridge along the quay.

If boats have been to day where they are not wont to go, they have also been cut off from their usual routes. The gondolas from the railway station have had to follow the circuitous course of the Grand Canal, as their usual more direct course by the smaller water streets was shut by the water rising too high under the bridges. And the steamboats on the Grand Canal could not run, because there was not height enough under the iron bridge at the Academy of Fine Arts; so that for once the twin modern abominations of Venice had quarrelled. Could they but have wrought their own mutual destruction!

Not that they are equally obnoxious to the lover of Venice. Nothing is to be said for the iron bridge: it is a monster, an eyesore, an offence in every way, and does no service to any one beyond accommodating a very few foot-passengers, at two centesimi apiece, who might have crossed in a gondola for five. As for the steamboats, it is just a year—All Saints' Day, 1881—since they began their trips, and a few months before that time a friend of yours landed at Liverpool and hurried through to Venice that he might see it again before the boats should be there to spoil it. His fears were natural; no one who knew and loved Venice could have been without such anxieties. But we have the pleasure of reporting that the result is not so bad as was to be expected. Such innocent little boats were never seen before. They are not twice as long as a gondola; they are very silent—they puff not nor ring bells, and but seldom whistle. One man, *seated* at the wheel amidships, says gently to the engineer below, "Avanti," "Dietro," "Ferma"; another man gathers the two-soldi pieces, or palancas, which constitute the fare; and he, if in Paris, would have a dreadful horn to blow as the boat approaches a station, but here he is hushed to the prevalent tranquillity. The canal is really none the worse for these boats, except as they disturb its drowsy sentiment of antiquity. Nor do they govern Venice as surface and elevated-railways are supposed to govern New York. After dark they are not allowed to run, as the canal is not lighted in any way; they are stopped when there is a fog; and on the feast of the Madonna della Salute, in November, they had to put up with the usual two bridges of boats across the Grand Canal, and to interrupt their trips accordingly. The barcaiuoli may find their monopoly infringed and their business injured, until the natural adjustment comes with time, but they don't mind the steamboats at all—peatas, barchettas, batellas, caorlinas, burcchis, and steamboats accommodate one another in the friendliest way; nor is the traveller in his gondola at all conscious of being bullied by the larger and swifter vessels.

But to come back to the flood in St. Mark's Place. It is perhaps to be wished that the columns of St. Mark's Church should rise out of the water always. Never did they look more lovely than with the little salt waves lapping against their bases. And the writer, for one, has never been able to forgive the Piazza for being so large and showy, so well paved, so uniformly walled in with palace fronts. One longs for the old time when a little canal crossed from south to north, close to the walls of St. Mark's Church; when another canal, parallel to the former, bounded the open square on the west, and that at half its present length; when all the south side was built up with private houses, as shown in Gentile Bellini's picture; and when the early Church of Saint Geminiano stood where now is the very centre of the Piazza, and on the edge of the second canal, so that the tranquil little place was no more than a *campo*, like many another in Venice, with nothing to give it especial glory beyond its fellows, except the lovely church on its eastern side. In what has just been said there may be a slight mingling of dates and epochs—no matter for that; the point is, that the square is a great deal too big and too showy for the church to have its best effect, and that it would be better if the church could never be seen at a greater distance than fifty yards.

For there is nothing about the church which appeals to the distant spectator. It is small, it is square, it is low; beyond all other buildings, it is lovely in external color and in variety and delicacy of sculptured detail. But these are addressed to the student who strolls beneath its morning shadow, or studies its mosaics in the light of evening sunshine. It is not a Gothic cathedral, to rise above a subject town and call across the fields to distant villages; it is built under the protection of a palace larger and higher than itself, of which it was the chapel. The great tower that belongs to it, and that holds its bells, is separated from the church by a public place as wide as Broadway. That, indeed, is seen from afar, and over broad stretches of sea; but of the church only the iron finials and weather-cocks are visible above the palace roofs to distant gazers. And the great tower is without detail, as if meant to attract no eyes but those of distant navigators of the lagoon, while the church is absolutely encrusted with gold and color and delicate carving in low relief, inside and out, walls, roof, and floor—a bewildering museum of precious art, and the loveliest piece of decoration in color that Europe holds.

It is upon this assemblage and combination of delicate art and workmanship that the restorers have been employed for many years, with but brief interruptions. Under the Austrian rule, from 1850 to about 1858 (it is difficult to establish the exact dates, but they are not important), the work of rebuilding the north face went on. Then came a pause. The floor and the mosaics within attracted the attention of the restorers, but not much was done at any one time until after the expulsion of the Austrians. Since Italy has begun to "do for herself," the work of renewing the south side has been undertaken and carried out, and now scaffoldings are up on the west front, with mats of reed and osier which hide what is being done behind them. To describe the results of these restorations is to deal with changes wholly unwarranted, and destruction the most wanton and inexcusable. It is apparent that the present directors are wiser and more careful, and that, so long as the present control shall exist, wanton recklessness and causeless destruction will be avoided; but even up to a very recent epoch, five or six years ago at most, changes were made without cause, and parts of the old work, taken down perhaps of necessity, were put up again haphazard, or replaced indifferently by new material.

In speaking of St. Mark's, one may use the regular terms of orientation as in speaking of a French cathedral, for St. Mark's is approximately *orienté*—much more nearly so than is common in Italy. The apse is turned to the east; the great façade on the Piazza is then the west front; the side on the little square of the lions and toward the Merceria is the north flank; and the short elevation on the Piazzetta, and looking toward the sea, is the south flank. Now, the work done during the Austrian dominion (speaking of the exterior only) consisted in rebuilding and renewing the north flank, from the projection of the transept to the northwest angle. It was done with sufficient care to insure the retention of the main lines of the building, and, so far as one can now judge, to replace each column and capital, and each encrusted piece of carved marble in its proper position. Photographs taken by Mr. Ponti in the very first years of his practice, in 1850, as he now assures us, certainly before the scaffoldings were put up on the north side, afford the means of tolerably close comparison with the existing building. Every change of a capital, or even of a slab of the thin marble veneering which invests the whole building, is perfectly visible; and one thing appears evident, that the curious and beautiful little pavilion which projects from the northwest angle—not properly to be

called a porch, as it leads to no doorway, but flanks the façade as a purely ornamental feature —that this remains intact. The work on the south side was done much more recently, and finished only five years ago. The renewed part here extends from the inner angle made by the Treasury (which was spared) to the southwest corner of the church, and, most unfortunately, it includes the angle pavilion on this side, which has been wholly rebuilt. Of the two separate pieces of work, that on the south side, the latest one, seems to have been done with the least conscience. Even sections of mouldings have in one case at least been changed, as if the old work had been plucked down and carted off before anybody had thought to take a careful mould of its profiles.

But there is one point in which the destruction has been at once the greatest and the most wanton. The walls of the church are faced and entirely covered with thin slabs of marble. In the old work these were of extraordinary beauty—Greek and Oriental stones of strange veinings of purple and warm brown—and set so as to be the most effective, in small pieces, the veinings prettily contrasted and opposed in "herring-bone" patterns and zigzags, or more elaborately combined into rhomboids by opposing the reversed slabs cut out of one richly-veined block. The effect of color produced by this wonderful surface of warm tints, subdued and gilded by time, emphasized by the more brilliant hues of the few mosaics which line niches and the like, and contrasted by the soft gray shades of delicate bas-relief, is indescribable, and, so far as we know, unequalled in art. As the walls of the Treasury building and of most of the west front still are, so was the whole south flank and its corner pavilion when the writer was last in Venice, and so was the north flank, unquestionably, before 1850.

Nor should any one, thinking of the merely expensive and gorgeous, but never very effective, use of rich marbles in sixteenth-century door-pieces and seventeenth-century altars, in churches at Rome or at Florence, at Ghent or Bruges, for one moment think that all this Venetian splendor was, after all, not very valuable—only sheets of veined marble, mere curiosity and bric-à-brac, not architecture. Byzantine art was always strongest in pure decoration separated from the sterner and graver duties of the builder: color was to the whole twelfth century, in the East and in the West, what organized sculpture grew to be in the thirteenth—its favorite mode of expression. Both influences combined in the choice of the external adornment of St. Mark's, and the tribute of Greece and of the Levant to the powerful and dreaded Republic was embodied in the precious materials sent by the shipload to adorn the chapel of her dukes. The use of beautiful materials is therefore more free and extensive, and also immeasurably more artistical, than elsewhere. Small pieces of Byzantine enamelling are of priceless value, not to collectors only, but to the lover of color-harmonies; the whole church of St. Mark is like a great casket, where still richer and softer colors than those of enamel are combined on a great scale and with unequalled knowledge and skill.

What, then, have the restorers done to this exterior to justify this long preface? They have stripped the walls of their precious, ancient, richly-colored, and richly-veined stones, and have substituted a smooth and uniform sheathing of common and inexpensive bluish, gray-veined Italian marble, purchasable anywhere by the square metre. They have done this, not in one place or in two, but over great surfaces of wall. We count, now, on the south flank of the church and on the north, the places where the marble has been spared—not those where new marble has been put in. The old marbles were fitted together in small pieces; here and there they had corners broken and pieced, or irregular cracks across their surface. The metal clamps and anchors that held them fast to the brickwork were rather easily seen by those who looked for them; weather-stains were plenty. Irregularity like that of a fine Eastern carpet, and not accurate balance; unexpectedness, and not regular repetition; glow and splendor, not colorless uniformity, were the motives of the old design. But to the modern engineer or architect, brought up and taught in the Italy of 1830 to 1860, to whom Palladio probably was a demigod, all this old work was unpleasing. He did not hate it as long as it passed for an antique, for a curiosity, for barbaric spoils of the past; but to reproduce it, to take pains to disturb it the least possible, and to put back religiously all he had to take down—a thing not to be asked of him. Down it came, to allow of the perhaps necessary strengthening of the brickwork behind it; much of it was broken in the hasty stripping off; much of it, as appears, was allowed to be appropriated and sold to this and that foreigner; the rest was sorted out, and the less-injured and more uniformly-marked pieces were brought together and used in certain recessed and withdrawn parts of the building. All the rest of the wall, including the outer and more prominent parts, spandrils and archivolts of the great vaults, large lower surfaces below the windows and bas-reliefs—all was faced with marble of no color and but little variety of veining, in slabs of uniform size, very accurately and neatly adjusted.

There remain, in the defaced north and south sides of the church, disks of some of the richest of the old marbles, an archivolt of the "Arabian Porch" on the north side, and many a good bit besides, cleaned off, to be sure, and deprived of its old soft color given by time. The old shafts of porphyry and verde antique, alabaster, and cipollino remain, and are all, or nearly all, in their old places, though they also have been washed up and rejuvenated. The square projection of the Treasury, next to the Porta della Carta and the Ducal Palace, remains intact; the northwest angle pavilion and the old front of the church are also intact, or very nearly so. Scaffoldings, indeed, are up now on the west front, but, as has been said above, the present direction seems to be better advised than those which have gone before. If much has been lost, much remains. But few of the lovely Byzantine capitals have been replaced by new ones, and those few were terrible wrecks. Even in the rebuilt southwest pavilion, the old shafts and the old capitals fill their old places. Nor has any hand been lifted up against the bas-reliefs of Grecian, Oriental, and Italian work, of which there are, though few on the south side, many elsewhere.

Now, as to the necessity of the rebuilding, and taking up the question with reference to the south flank and southwest corner only: it is asserted very positively that the whole of the masonry here threatened ruin. It has been very completely rebuilt. The wall here is that of the Zeno Chapel (Cappella Zen) and of the Baptistery. The mosaics of these two apartments, both walls and vaults, were torn down with pick-axes, and without attempt to preserve even parts of them. All the accounts agree as to this, and yet those were as precious mosaics as almost any in the building.

None of the numerous commentators upon these restorations have denied the haste and recklessness of the demolitions; but neither do any of them deny that rebuilding here was a necessity. It is plainly asserted that the angle pavilion was threatening to fall, and to drag down with itself the never very solid, and now thousand-year old, brickwork of the neighboring walls—in partial proof of which photographs are shown of this part of the building as it was in 1867, exhibiting certainly a bewildering tangle of iron-ties and straps and suspension-rods. Let us, then, admit that most extensive and thorough repairs were called for, and that they were rightly undertaken. It remains true that every part of the outside decoration could have been put up again exactly as it had always been. Nothing is easier than to make a great cartoon with every joint and every irregularity of surface marked upon it; to number each scrap or fragment of stone with stiff water-color and a brush; to lay every piece flat on a garret-floor in its original relations to every other; to take off from the wall and to preserve every piece of mosaic; and, finally, to put all back *in statu quo ante*. Nothing, we say, is easier, except to do as the engineers did—that is, to let it all be torn down anyhow by contractors; to exercise no watchfulness over the smaller and less seemly fragments; to leave it all to the fidelity to a common contract of common builders, and to the supervision of ordinary building superintendents. The capitals of the Ducal Palace, of which there was question in my former letter, are constructive features: if they are unsound, the building is unsafe. The marble and mosaic decoration of St. Mark's Church are not, in any sense, constructional. No injuries to these, no wear, no shabbiness, no slow decay, no gaps, no breaks, no cracks, can authorize interference with them. The old work, no matter how defaced and injured, is better than the best modernization of it. That, one would have said, was an established law in such cases.

R. Sturgis.

Correspondence.

MR. H. H. BANCROFT'S LITERARY METHODS.

To the Editor of The Nation:

Sir: Is not your correspondent, Mr. Charles H. Phelps, in your issue of the 1st instant, less than just to Mr. H. H. Bancroft?

Perhaps Mr. Phelps is not aware that there are *two* Mr. Bancrofts in the publishing firm of A. L. Bancroft & Co., of San Francisco, and that it is Mr. A. L. Bancroft who may be seen "every business day at the head of the extensive and complicated business, signing checks, etc." This Mr. Bancroft told the present writer, in London, last spring, that after his return to San Francisco in the summer his brother, Mr. H. H. Bancroft, would devote all of his time to his historical work.—I am, sir, etc.,

A. F. Hunter.

Boston, Feb. 3, 1883.

A NEW FIELD FOR CONVICT LABOR.

To the Editor of The Nation:

Sir: Will you allow me to offer a suggestion on the subject of convict labor? It is this: Let all convicts who can read and write be set, under competent supervision, to *indexing books;* and let those who cannot, receive the necessary instruction as soon as may be.

It is almost an insult to your penetration to point out the advantages of this plan. I may mention, however—

That it will not conflict with the interests of any class of laboring persons, or at least any that has a claim to consideration;

That the kind of labor proposed is peculiarly suited to the reformatory idea, being incomparable for teaching order, patience, humility, and

for thoroughly eradicating the last trace of the Old Adam in whoever pursues it.—I am, sir, etc.,

ANOBIUM PERTINAX.

JOHNS HOPKINS UNIVERSITY, Feb. 2, 1883.

THE SACRAMENT OF PENANCE.

TO THE EDITOR OF THE NATION:

SIR: In one of your editorials of last week, speaking of the protestation of innocence made by some men convicted of murder in Ireland, you alluded to a Catholic manual, entitled, 'What Every Christian Must Know and Do.' In the course of your remarks, you seemed to opine that the manual in question, bearing the approbation of Cardinal Cullen, would afford outlaws and criminals arguments to parade their innocence before the public. In proof thereof, you quoted a passage to the effect that, when absolution is given by the priest, "your sins are forgiven, the pains of hell taken away, and your soul made bright and beautiful like an angel of God, and the kingdom of heaven is yours."

The fair spirit, however, which uniformly characterizes the *Nation* redeemed itself when you requested some Catholic theologian to make an explanation on the subject. If no abler and better qualified person has already acted under your suggestion when this reaches you, I would ask the favor of submitting to your readers the following simple considerations:

By the sacrament of auricular confession the Catholic Church understands a conscientious self-accusation of sins committed, to a lawfully ordained priest. If the penitent is *heartily* sorry, fully determined never to repeat the crime, animated with a firm purpose of amendment, and possessed of other concomitant dispositions, absolution is granted unto him; but supposing that one of the sins confessed might have been a murder, the fact that he received sacramental absolution does not make him "innocent as the child unborn," either in the sight of God or of man. I speak of innocence in contradistinction to guilt deserving a human punishment. Christ on the cross told the penitent thief: "This day thou shalt be with me in paradise." He forgave him, but did not call him innocent, and say that he was suffering unjustly.

A sin, a crime, especially when injurious to a fellow-being, must be considered in a twofold light: first, as an offence to God, and as such deserving an eternal punishment in the future life; second, as a grievous human offence against society, and as such deserving a human retribution in this world. Now, sacramental absolution, granted and applied through the merits of Christ, remits the eternal punishment; but the temporal one consequent on the infringement of human laws cannot be washed away by the vicarious blood shed on Mount Calvary. The first is a matter of conscience, and with that human justice has nothing to do; for, according to the old Roman maxim, "De internis non judicat prætor."

Hence it becomes evident that when the priest, in virtue of a delegated power, grants pardon "in foro interno"—that is to say, in the court of conscience—the course and operations of human justice are not in the least affected, and the penitent, rising from his knees, is as guilty and accountable to society after as well as he was before going to confession.

Any man, Protestant or Catholic, has a right to plead "not guilty" before the sentence is pronounced from the judicial bench—"nemo se criminari tenetur." But if he happens to be a member of the Catholic Church, he cannot call himself innocent because a priest said, in the name of God, that his sin was forgiven him.

If a Catholic, then, should have the effrontery to declare himself innocent of a murder he really committed, because the future punishment due to it was forgiven in the sacrament of penance, we may say of him with St. John, "that he lies, and the truth is not in him."

Yours truly, A. T. ENNIS,
Pastor Catholic Church.

MANHATTAN, KANSAS, Jan. 26, 1883.

RELIGIOUS DISCIPLINE AT HARVARD.

TO THE EDITOR OF THE NATION:

SIR: A communication which appears in the *Nation*, whatever its native excellence, is thereby raised to a level which perforce makes criticism necessary. For fear that the letter in your last number, "Religious Discipline at Harvard," may not come to the eyes of men better informed on the subject than myself, as a past officer of the St. Paul's Society (of the Episcopal Church) of Harvard, caring for its reputation, I cannot let the charges in it pass unnoticed.

In the winter or spring of 1881, some $8,000 or $9,000 was offered to the Society with which to build a permanent chapel, provided a suitable building-lot could be found, and the Society should show that there were enough good, earnest churchmen in the University to keep up such a building, and warrant the expenditure of so great a sum—the good sense of which was apparent to all. As most of the land in the neighborhood is owned by the College, and the rest very closely held, it became necessary to petition the Faculty or Overseers for land on which to build. This petition was refused on the ground that the College could not recognize sectarianism, and the plan fell through.

In the meantime, to satisfy themselves of the number of churchmen, a canvass was made. How thorough this was I am unable to say, but feel sure it was done in good faith, and know that the results were not markedly different from the annual statistics taken by the Faculty and published in "The Harvard Book," triennial reports, etc. Upon so slight a foundation, "A Student," fretting under the irksome religious discipline (?) of Harvard, and with the petulance of a child who won't eat bread because its milk is sour, charges that these statistics "were taken with the express purpose of deceiving"; that "a zealous member, through one of the papers —*an organ of his* [the italics are mine]—attempted to show," etc.; that "the returns were falsified"; that "the list was drawn up for a purpose, and the designers did not scruple at any means to bring about the desired end." These statements have the raciness of a political controversy, are decidedly "brash," and, applied to men now out of college, are lacking in that courtesy which, by a longer sojourn in Cambridge, the writer may acquire. They are wholly inapplicable to the then officers and members of the Society active in this affair, who were known as a more than ordinarily "good set of fellows"—their social standing of the best. The one making them in an outside publication, no matter how thoughtlessly, merits a good round rebuke.

The reason of all this rancor is thus quietly summed up: "As a result, the public have the opinion that Harvard is more religious than she really is"!

This was written merely to correct gross misstatement, not with the intention of carrying on the old argument, nor as a Philistine warring on the chosen few of agnosticism. A few words, however, may not be out of place. It is questionable whether the prevalence of scepticism and unbelief, *pari passu* with increasing liberalism in the matter of chapel-going, is an argument for its total abolishment. The young student, still groaning under the burden of occasional chapel-going and attendance at church (not a Senior), could have been at the time but a Sophomore—more probably a Freshman. As one who has had his bout in Spencerian philosophy, and been thrown with the agnostic tendencies of Harvard, I should like to record that a Freshman who knew at least a dozen agnostics in one class, and whose "acquaintance" was so limited as to escape the canvasser, is the precocious and wholly abnormal development, *not* of Harvard, but of those fortuitous circumstances that led him there. As a matter of fact, the young man who is "agnostic" for the sake of argument, when it comes to enrolment, in general stands out in the faith of his fathers; and hence the "dozen" easily and naturally become "three."

More than this, there is a strong undercurrent against voluntary prayers among the students. The matter came up for debate in the Harvard Union, I think, which contained more than a fair proportion of the free-thinking and Bohemian elements, and a large number of men came out decidedly opposed to the abolishment of prayers. Out of the rut, and rubbing with the world, their position seems to me correct; for, though the remark quoted from President Eliot's report may be one of *the President's blank forms*, it is yet true that this discipline is wholesome, even from a material point of view. The majority of people one meets have religious sentiment and are sensitive to it. It is well to have a sense of that sentiment ground into the young man. The youth who in the Cambridge garden is so hurt with the thorns as he plucks the roses of undergraduate life, will find it bitter pushing through the barriers and hedgerows that exist, outside the cultivated circle, in this everyday, working world. The present system of religious discipline at Harvard has no doubt its evil side. Is there a better? A practical test would show its results highly preferable to none at all. A GRADUATE.

JANUARY 29, 1883.

SOUTHERN HOMICIDE.

TO THE EDITOR OF THE NATION:

SIR: We Southerners who think substantially with the *Nation* on this question can, I think, do our section some service by writing short articles to our papers, both secular and religious, presenting the question fairly and directly; and if the papers of our city or town have brought up the subject, we can insist on their discussing the question on its merits, and not allow them to evade the real issue, as so many are doing, by searching for the ulterior motives of the *Nation*. From my intercourse with Northern men, I find the *Nation* but expresses the common opinion of the North. This opinion was formed before the *Nation* came into existence. With Redfield's 'Homicide, North and South' (J. B. Lippincott & Co., Philadelphia) in our hands, we can get enough startling facts to jar the self-complacent and to produce some agitation. It is at least worth the effort. VIRGINIAN.

TO THE EDITOR OF THE NATION:

SIR: My subscription is nearly out. I enclose $3 to renew. To some extent, renewal seems to have been made the test of your subscribers' opinions upon the question of homicidal ethics discussed in your columns; hence you will permit me to say I make this enclosure because I cannot spend the same amount in any way which, in a year, will give me the same intellectual enjoyment, or as much food for reflection. With some of your opinions I do not agree, but surely it is wise to hear the other side of any question, especially when as fairly put as

you generally have it. If you are to express only my opinions, it would be better for me to stop my subscription, save my money, and rely on my own thinking.

Most you say of Southern homicides is true, though I do not concur in all your conclusions. My not concurring, however, shall not make me fly off at a tangent and in a pet. I cannot forget your manly course in sustaining the great principles of civil and individual liberty during the dark days of reconstruction, when to do so was not popular in your section, and when our dearest rights were dependent on their maintenance. Nor do I complain that your criticisms on homicidal tendencies are confined to this section; it is always more agreeable to take the beam out of our brother's eye than the mote out of our own. Allow me, however, in conclusion, to suggest, more as a question of taste than in any spirit of unfriendly criticism, that perhaps your readers would be happier if you brought the homicidal discussion to an end. Northern people must sometimes tire of hearing of Southern sins, and we Southerners, like other sick people, become nauseated with too much medicine, though given with the kindest motives, and however much we may acknowledge the necessity of the original dose.

Very truly your friend,

CHAS. M. BLACKFORD.

LYNCHBURG, VA., Jan. 29, 1883.

TO THE EDITOR OF THE NATION:

SIR: Perhaps if all the Northern press were to discuss the question of "Southern Homicide" and "Why Capital does not Seek Investment in the South" in the judicial, conservative manner in which you have lately argued it, there would not be that sensitiveness on the part of Southern people to the publicity given to the matter which you see now manifested. But your way of treating the subject, unfortunately, is not the prevailing disposition of the Northern press. Namely, in the Christmas number of *Puck*, with the chimes of Peace and Good-Will echoing o'er the earth, there appears on its last page a colored picture aimed at the South, and calculated to do us lasting harm. The picture represents a swamp, with a big sign (sticking out of the mud and water) inviting Northern immigrants to come and settle; but as the immigrants come down the road headed by a fat capitalist with a bundle of greenbacks, and a sturdy workingman with his tools on his shoulder, they are halted by a ghastly figure—a stalwart skeleton, with knives and pistols in its belt, a rope around its neck, and carrying a shotgun—warning them to turn back in haste unless they would "die by violence." Behind this ghastly desperado who bars their path can be seen a fine rolling country, but on every hill-top a negro swinging from a tree, and in every field a lonely grave.

In his comments on this "cartoon," the editor says—without limiting his language to any one State, or to one part of the South, but embracing the entire country—that the capitalist who attempts to collect his just debts in the South must expect either to be lynched or assassinated for "doing his duty"—*i.e.*, collecting his just debts. *Puck* has probably a large circulation in this country, and doubtless finds readers in England and on the Continent of Europe. The effect on the imagination of an ignorant foreigner of such a picture illustrating life in the South would be to arouse the most horrible conceptions and forebodings if he contemplated migrating there. How incalculable the injury it could do. It has been said you cannot indict a nation; ought there to be immunity for libelling an entire people, and accusing them, without limit, of assassinating and lynching unoffending capitalists who are simply in the act of collecting their just dues? The world knows that society in the South is not in the disturbed condition it is at present in Ireland. Yet, in sober earnest, the editor of *Puck* accuses the Southern people of greater crimes against unoffending capitalists who come to their country to do them good, than have yet been charged against the Irish peasantry in the most disaffected districts.

A heart regardless of its social duties, and fatally bent on mischief, is one definition of malice. Malice is also inferred from want of probable cause. How, then, can the editor of *Puck* escape the charge of having wantonly and maliciously printed a libel against the Southern people, who have done him no wrong, but, by buying his paper, have contributed to his good? Your paper, Mr. Editor, has treated Southern questions in a very different manner from the heartless, false satire of *Puck*.

I have subscribed to the *Nation* for years; have had my heart delighted at some of your defences and kind words in encouragement of the South, and I thought at the time such a course must lose you subscribers with a certain class at the North. As I have followed you in your discussion of "Southern Homicide," I have thought it a pity that the South just at this time should be brought into such unpleasant notoriety. If one could induce some portion of the tide of immigration to flow to her, and some of the unemployed capital at the North to seek investment in her borders, he would do a better service to the South than by holding up to public scorn and ridicule a defect in her social system. But I see there are others who differ, and think that to secure the immigrants and capital we must first bring about a change in public sentiment as to the "sacredness of human life." How far the late war may be responsible for such a state of affairs, I cannot pretend to say; but it seems to me that after four years of fighting, in which every family lost some member, and the entire male population took part, and death by violence—*i. e.*, in battle—was a daily occurrence, people would naturally grow somewhat obtuse on the subject of homicide; and during the years of the carpet-bag régime it became very general for the whites to carry arms for their own protection and that of others, in case of any unforeseen disturbance, mêlée, or quarrel between the whites and blacks, and among the whites themselves. But, whatever the cause, the habit of carrying concealed deadly weapons, and the disposition to resort to them in settlement of personal quarrels, are much to be deprecated; and where inveighed against in a manly, charitable way, let us hope the people of the South will find some return for the irritation the discussion has given rise to in an improved public sentiment on the subject.

Yours truly, WM. H. S. BURGWYN.

HENDERSON, VANCE CO., N. C., Jan. 29, 1883.

Notes.

'THE War between Peru and Chile,' by Clements R. Markham, will bear the American imprint of R. Worthington. The same publisher has nearly ready a new edition of Mr. Theodore Tilton's novel, 'Tempest Tossed.'

The Century Co. will revise the revised 'Imperial Dictionary,' and give it the name of 'The Century Dictionary.' This task will occupy several years, and will be under the direction of Prof. W. D. Whitney.

Dr. E. H. Knight, whose death in Ohio was recently announced, had been engaged for some time on a supplementary volume to his valuable 'Mechanical Dictionary,' incorporating the numerous inventions and improvements in mechanics since the publication of his previous volumes. Fortunately, he lived to complete the work, having put the finishing touches to it but a short time before his death. It will be published by Houghton, Mifflin & Co.

Chas. Scribner's Sons will shortly reprint for this country the 'Life of Lord Lawrence,' and have also in press 'Ice Pack and Tundra,' by W. H. Gilder; 'Historical Handbook of Italian Sculpture,' by Charles C. Perkins; a new American novel, 'An Honorable Surrender'; and a new edition of Dr. S. Wells Williams's 'The Middle Kingdom.'

Volume 1 of 'A History of the People of the United States, from the Revolution to the Civil War,' by Prof. John B. McMaster, is nearly ready to be brought out by D. Appleton & Co.

Henry Holt & Co. will be the American publishers of Miss Helen Zimmern's 'Epic of the Kings,' an English prose version of Firdusi's 'Shah-Nameh.'

Jowett's translation of Thucydides is announced by D. Lothrop & Co., Boston. Dr. Peabody, of Harvard, will furnish an introduction.

A 'Comparison of all Theologies,' by the Rev. James Freeman Clarke, being this author's Lowell lectures supplementary to his 'Ten Great Religions,' will be published by Houghton, Mifflin & Co.

John E. Potter & Co., Philadelphia, announce for immediate publication a 'Pictorial History of the Bible,' quarto.

'Walks in Southern Italy and Sicily,' by the Rev. Augustus J. C. Hare, is in preparation by Geo. Routledge & Sons.

Miss Hoppus, a young English authoress of much promise, has just written the concluding chapters of a story to which she gives the title of 'A Great Treason.' The scene is laid in America during the War of Independence.

Last summer we reviewed the Messrs. Holt's edition of Mr. Serjeant Ballantine's 'Some Experiences of a Barrister's Life.' This work has, since the author's arrival in America, been reproduced with his consent from the sixth London edition, and now bears the imprint of J. B. Lippincott & Co., the copyright being in the name of J. M. Stoddart, another Philadelphia publisher. Serjeant Ballantine supplies a special preface. The plates were purchased of the Messrs. Holt; the binding is a clever imitation in cloth of legal sheep.

From Ginn, Heath & Co. we have a treatise on 'Vibratory Motion and Sound,' by J. D. Everett, Professor of Natural Philosophy in Queens College, Belfast, and long and favorably known as an active and prominent member of the British Association for the Advancement of Science. The present treatise explains the laws of vibratory motion in perhaps as clear a manner as is possible in the present state of mathematical science. Many simple geometrical demonstrations are given of propositions which have heretofore been treated only by means of the higher branches of mathematics. The seventh chapter, which describes several ingenious methods of converting rectilinear into circular motion, and *vice versa*, is especially interesting. The theory of waves and undulations is presented in a very satisfactory manner. The laws of vibratory motion are the foundation of the modern theories of sound and light, and it is perhaps as an introduction to acoustics and optics that the book will have its chief value. Chapter xii. of the work treats of "simple and compound tones"; and chapter xiii. and last, of "musical intervals." They are very short, and contain nothing new.

From the Clarendon Press, Oxford, we have a

new volume, Corneille's "Horace," edited, with introduction and notes, by George Saintsbury. It contains a very elaborate introduction, consisting of four essays upon French tragedy, a life of Corneille, and a special introduction to Horace, all good and interesting. The text is carefully edited, and the twenty-five pages of notes are among the best that have ever been appended to a French classic for school uses. They are sufficiently minute to give an idea, in a condensed form, of the criticism of words and grammatical forms to which French editors have subjected their classic writers, and at the same time they sufficiently bring out the high literary merits of the tragedy. Altogether this neat little volume is worthy to take its place by the side of the excellent editions of Shakspere's plays issued from the same press.

A third, revised edition of Dr. James R. Nichols's 'Whence, What, Where?' has just been published by A. Williams & Co., Boston.

Part 1 of the *Journal of Social Science*, embracing the papers read at Saratoga last summer before the American Association, is now procurable of the firm last mentioned or of G. P. Putnam's Sons. Two papers have an historic as well as social-economic interest—"Early Factory Life in New England," by Mrs. H. H. Robinson, and "American Factory Life," by Miss Lucy Larcom.

In the *Harvard University Bulletin* No. 24 is given the first instalment of the Cromwell and Frederic the Great books left by Carlyle to the University Library; and the beginning of a bibliography of Ptolemy's 'Geography,' by Mr. Winsor.

The current number of the *Magazine of American History* is noticeable for an imaginative article by the late Dr. J. G. Kohl, of Bremen, on the naming of Rhode Island. It displays critical acuteness and much ingenuity, but can hardly be said to settle the question.

The weekly issues of *Our Continent*, bound together as a monthly, show that this periodical rivals the magazines in the profuseness, though not (on the average) in the quality, of its illustrations. Like them, too, it sometimes suffers the illustrations to be cause of the articles rather than the reverse. The opening article is a good illustration of the danger of this want of logic in the editing.

The *American Angler* of this city is now publishing a series of essays upon the game fishes of America, and gives every week, on its front page, a cut of some representative American fish.

The students of the School of Drawing and Painting at the Boston Museum of Fine Arts have issued a December number of their publication launched in June—the *Art Student*. It offers a number of creditable examples of the work of the school—several from the life and from the nude—together with some note-book jottings, a promising etching, etc. The literary portion is agreeably youthful.

The Valentine Cards sent us by L. Prang & Co. do, as the publishers allege in their circular, convey "only the most pure and refined sentiment." They are not without interest as industrial and commercial products, and as "survivals" on the one hand, and "developments" on the other. As either art or literature they do not differ in quality from the holiday cards of the same enterprising firm.

As their Economic Tract No. 8, the Society for Political Education (4 Morton Street) have reprinted, by permission, Mr. F. W. Whitridge's, article on the caucus system from Vol. I. of Lalor's 'Cyclopædia of Political Science.'

Morris Coster, 1162 Broadway, has issued a Dutch-American 'Almanak en Jaarboekje voor het jaar 1883,' the first ever produced, as he informs us. It contains information for immigrants, and celebrates the various Dutch churches of this city, with the aid of woodcuts of the buildings themselves and of pastors. The publisher promises a better compilation hereafter.

Dr. C. H. F. Peters, of Hamilton College, has within a month past begun the publication of his Celestial Charts, the construction of which he commenced in 1860, according to the method described by him in the quarterly journal of the Astronomische Gesellschaft ten years ago. The charts were made with the thirteen-inch refracting telescope of the Litchfield Observatory—the same instrument with which so many additions to the group of small planets have been made by Dr. Peters. The faintest stars included are of the eleventh magnitude. The first issue embraces twenty charts, none of which exceed in declination twenty-five degrees either north or south of the equator. Each chart is twenty minutes long in right ascension, and five degrees broad in declination, thus covering nearly twenty-five square degrees of the celestial sphere. It is most gratifying that astronomers everywhere may now avail themselves of the great advantages to be derived from these charts, which have been, in part, so long in existence as manuscript. All the work, observations, reductions, and drafting, having been done by Dr. Peters without any assistance—and the expense of publication and gratuitous distribution being borne by him also—the celestial charts are likewise noteworthy as constituting a memorial quite unique in the life of an astronomer.

In the very handy little *Annuaire de l'Observatoire Royal de Bruxelles*, for 1883 (the fiftieth year of its issue), Professor Niesten gives a "Table des Comètes" which will be of great service in determining whether objects of this sort, so frequently discovered of late, are old or new. The table is compiled from all the best available authorities, and contains the usual elements of nearly three hundred comets; and they are arranged, not, as ordinarily in tables heretofore, in the order of time, but according to the constants of inclination of their orbits to the plane of the ecliptic. Sixty-seven comets fall between the inclinations zero and thirty degrees, 113 between thirty and sixty degrees, and 110 between sixty and ninety.

A translation into Greek of Professor Butcher's inaugural discourse, noticed in a recent number of the *Nation*, has appeared in the well-known Κλείω of Trieste.

By the agreement between Germany and Greece in regard to the excavations at Olympia, Germany was to have one copy of all duplicates. The division of spoils has just been made by a commission appointed by Greece, and seven cases of the smaller objects have arrived at Berlin, the larger statues being stored for the present at Olympia. There are many terra-cottas and numerous archaic bronzes. One of the most precious of the latter is an image of a woman of extreme plainness, which is very ancient, for it came from the foundations of the temple of Juno, which is at least not later than the eighth century B. C. But German archæologists just now are more occupied with a very remarkable find lately made in Saxony of a large gold fish, valued at 10,000 marks for the gold alone. It is covered with carvings in an archaic Greek style, representing mythological personages.

M. Oppert read lately before the Académie des Inscriptions a communication on a cylinder just deciphered by Mr. Pinches, of the British Museum, containing a curious inscription of King Nabonid, who reigned from 555 to 538 before our era. Nabonid, like the authorities of the British Museum, had been making excavations at Sippara, and had found "an inscription of Naram Sin, son of Sargon, which for 3,200 years no king among our predecessors had seen." This will put the reign of Naram Sin at about 3750 B. C., and of Sargon, his father, at about 3800. Both kings were previously known by several texts, but not their date. Sargon is the king who tells of himself how he was, when an infant, exposed on the water in a basket, and saved by a peasant; a story which of course reminds one of Moses in the bulrushes.

More and more, as it seems to us, the leading articles in *Le Livre* claim the attention of its readers without omissions. "The Librarians of the Emperor Napoleon I." is the subject of the first in the January number, and is interesting for the light it throws on Napoleon's judgment and selection of men, and for a glimpse of the "695 volumes of jurisprudence, literature, ancient and modern history, military art, geography, travels, etc.," which he took with him upon his abdication to Elba. In the second, a book illustrator who survives his generation, M. Camille Rogier, furnishes M. Eugène Forgues an agreeable topic, and justifies the reproduction of some of the artist's designs. The third paper has a greater value than the foregoing, for it tells of the formation, neglect, and restoration of the unsurpassed library of the Paris Conservatoire de Musique. It is only lately that full effect has been given to the royal ordinance of March 29, 1834, providing for the deposit in this collection of a copy of every musical publication in France; but now the library is very much in the condition of that of Congress, and books piled upon the floors are fast choking the passages and making research impracticable. Both Berlioz and Félicien David held the post of librarian, but treated it as a sinecure, and left the library worse than they found it. In the present custodian, M. Weckerlin, the right man has been found for the right place. He has in particular, besides a general methodical rearrangement and filling up of lacunæ, made a collection of more than 1,500 musical portraits, and another of autographs, equally precious; and, finally, he has substituted a card catalogue for the former folio. The veteran statesman Victor Schœlcher, a passionate admirer of Handel and collector of his works, has given his invaluable Handel library to that of the Conservatoire.

In addition to the Italian *Esploratore* there is to be a new *L'Esplorazione*, "a fortnightly review of geographical achievement and of Italian interests in all parts of the globe." The editors are Prof. G. B. Licata, of the African Society, and Chev. F. Borsari, Secretary of Committee of the Third International Geographical Congress. The place of publication is Naples, Largo Carolina, 1. The first number, now before us, bears date of Jan. 15, 1883. Reviews of geographical publications, and particularly of Italian text-books, "whose mode of compilation is generally deplorable," form a part of the programme.

—We regret to record the death, on February 2, of Prof. George Washington Greene, in the seventy-second year of his age, and in his native town, East Greenwich, R. I. He was a grandson of the revolutionary General Nathanael Greene, and his life of this ancestor, of which the third and last volume was published in 1871, is his most enduring monument, and in its class is not surpassed by any American biography. Prof. Greene belonged to the generation which was outraged by Mr. George Bancroft's judgments and imputations on its grandsires, and which had both the requisite knowledge and literary skill to repel them. His education, begun but not carried far in Brown University, was completed by study abroad, which was favored by a long residence in Rome as U. S.

consul (1837-45). In the spring of 1848 he was appointed instructor in modern languages at Brown, and in 1852 became a resident of this city for a period of some dozen years, during which he was engaged on the life of General Greene. In 1865 he put forth the admirable 'Historical View of the American Revolution,' composed of his Lowell lectures in 1863. Other works, showing the versatility of his scholarship —such as his 'Historical Studies' (relating especially to Italian genius and literature), republished in 1850 from the *North American Review*, and his 'History and Geography of the Middle Ages' (1851)—might be enumerated. In 1872 he was appointed non-resident Professor of American History at Cornell University. He was for many years an esteemed contributor to the *Nation*. In spite of his failing eyesight, he continued his literary labors to the last, and was, we believe, contemplating a life of the poet Longfellow, between whom and himself a very warm friendship existed.

—We have received from D. Appleton & Co. the first volume of the new edition of Bancroft's 'History of the United States,' an edition which will contain in six volumes the substance of the original twelve. It is a handsome octavo, well printed on good, but not very heavy, paper. Although considerably thicker than a single volume of the original edition, it is not at all clumsy or cumbersome. On comparing this with the corresponding volume of the "Centenary" edition of 1876, one is surprised to see how extensive changes the author has found desirable, even after so short an interval. The comparison of the three editions illustrates his untiring energy and faithfulness of preparation, as well as, perhaps, a certain restlessness and captiousness of self-criticism. The first thing that strikes one is the increased number of chapters, resulting from subdivision. This volume contains two volumes of the original, and is divided into thirty-eight chapters instead of eighteen. This is in itself an improvement. The original chapters were unduly long; the new ones are some of them too short; but, on the whole, short chapters are far more manageable for the reader than long ones, even where, as in this case, there is an excellent analytic table of contents. But the new arrangement is not the result merely of subdivision: the matter is rearranged in such a manner as vastly to increase the lucidity and continuousness of treatment. For example, chapter viii. (the same in both the earlier editions), "The Pilgrims," is divided into two chapters—chapter xi., "Prelates and Puritans," and chapter xii., "The Pilgrims." But this is not enough. The chapter originally contained several pages upon the early explorations of New England, which could not but be felt to be out of place, standing as they did between the headings "Influence of Calvin" and "The Reformation in Germany." These pages are now removed, so that the treatment of the religious movement is uninterrupted, and the irrelevant matter is incorporated partly in chapter v., "The English Attempt Colonization," partly in chapter vi., "England Plants a New Nation in Virginia." The substance of the one chapter is therefore now found distributed among four. In the present edition Mr. Bancroft returns to the principle of division into periods, abandoned in the "Centenary" edition. His division is, however, a new one, the present volume containing two periods, or rather parts—Part 1, "The English People Found a Nation in America"; Part 2, "The Colonies Obtain Geographical Unity"—thus emphasizing an historical fact of great importance. Each part consists of nineteen chapters. As the permanent shape taken by a great historical work, this new arrangement—which we have thought it worth while to describe at some length—is certainly an improvement, and probably a desirable one. It must, however, make the work of citation and reference rather hard. It is a great convenience in referring, for example, to Gibbon, to know that in all editions chapter xv. is one and the same; and Bancroft's is a work which will always be extensively cited. The author tells us in his preface, with a certain pathetic dignity, that this revision "must be his last." However this may be, the spectacle of two men past eighty busily engaged in carrying on the literary labors which they began when young, is an inspiring one to all students of history. If Bancroft does not stand—as no living historian does —upon the same plane as Ranke, their names will, at any rate, ever be joined by virtue of this association.

—'Dr. Breen's Practice,' it appears, illustrates, rather unexpectedly, the truth that "we are a great nation." The contrast between the manners of *jeunes américaines* abroad and the prejudice with which Grace Breen's setting up as a doctor is received in her country town, has struck a French critic. He sees that there may be varieties in American character, notwithstanding that dreadful monotony which English travellers who spend four or five weeks in traversing a country as large as Europe discover on the surface. A French mother who sees a stranger violate with utter unconcern some of the most sacred laws of social propriety, thinks she has entirely accounted for it by saying, "Oh, she is an American." Yet Dr. Mulbridge refused to consult with a woman, and Dr. Breen's very friends would not trust her in a real illness, but wanted *a doctor*. Even in Paris, female medical students are better received than this. Our critic has heard some of the most eminent members of the Faculty of Medicine speak of one or two of their theses as among the most remarkable of the last few years. Conclusion: Americans—some Americans—have prejudices, like the rest of the world; there are conservatives even in the country of radicals. But after all the critic is not quite fair to us. He does not believe in female physicians, but he attributes his own doubts, not to stupid conservatism, but to perception of the plain laws of nature. He quotes a sentence of Mlle. Aubertine Auclerc written to the Municipal Council of Paris: "It is a shame that men should make women their milch cows," and declares he cannot find that men have ever done so. It seems to him that it is Nature who is responsible for this division of labor. Until it is proved that the injustice of society has made women mothers and men fathers, and that a law could remedy all this, he for his part will continue to believe that the two sexes were created for different ends, and consequently have received different faculties and aptitudes. "Not that either is therefore superior to the other, but they are not the same, that is all." Very well, if these are the reasons that convince an Arvède Barine that doctors should always be men, may not the most hidebound conservative of a New England village be in part influenced by the same idea?

—Karl Blind, in an article in the Vienna *Neue Freie Presse*, notes the curious fact that the recent revelations regarding Darwin's religious opinions were only noticed by three or four of the English periodicals, and that even *Nature* suppressed Darwin's letter to a Jena student, which Haeckel had sent to the editor as part of one of his lectures. In this letter, it will be remembered, Darwin had stated, verbatim: "For myself, I do not believe that there ever has been any revelation"; and in a conversation with Dr. Ludwig Büchner, he said he was with him in thought, but preferred the word agnostic to atheist, and that he had given up Christianity because "it is not supported by evidence." Karl Blind adds to this testimony another item, in the form of a letter written by Darwin in 1873 to a Dutch gentleman, N. D. Doedes, of which we make the following translation from the German as given in the *Presse*:

"I find it impossible to give a brief answer to your question. I do not know if I should be able to answer it if I were to write a great deal about it. Thus much I can say, that the impossibility of understanding how this great and wonderful universe, besides our own consciousness, could have come into existence through chance, seems to me to be our principal argument for the existence of a God; but whether this argument is of any value I have never been able to decide, for I know that, if we accept a highest cause, the mind again strives to know whence *it* came and how *it* arose. Moreover, I cannot pass over the difficulty which, on this assumption, arises from the vast amount of suffering prevalent in the world. I am, indeed, asked to attach a certain amount of weight to the judgment of the large number of intelligent men who have implicitly believed in God; but here again I see what an insufficient kind of proof this is. The safest conclusion seems to be that the whole subject lies beyond the range of human understanding; and yet—a man can do his duty."

—We have met with some most alarming statistics in a German writer. Every one knows that there is a Goethe bibliomania as there is a Shakspere mania and a Molière mania, and Calderon and Cervantes manias, and as we thought last year there was going to be a Longfellow mania. Now, the result of the German epidemic is that, whereas in 1868 there had been printed in one place or another 3,900 letters of Goethe addressed to 340 different persons, in 1879, only eleven years later, there were, we are told, 8,600, written to 600 correspondents. The reader will notice that the two dates are separated by a sun-spot interval, though it is not said that this has anything to do with the result. But what a terrible prospect! By 1890, at the same rate, there will be 20,640; in 1901, 45,408; and by the end of that century no library could contain them, and not even a German professor would be able to read them through. Perhaps it is in view of this that Goedecke and Vollmer are preparing a "critical and definitive" edition of all the works in the 'Bibliothek der Weltlitteratur.' For the letters are not the only works of Goethe that are growing. During his life only one form of "Goetz von Berlichingen" was printed, that of 1773. Now there are three. The text of 1772, which was never performed, was published after the poet's death. Still later came the arrangement of 1804, which had increased (as we have seen to be the habit of the works of this writer) so much that, like Wagner's operas, it could not all be performed on one day, and three acts were played September 29, the rest on October 13. This enlarged *recension* was found in a closet at Munich, was acquired by the Heidelberg University Library, and is now published by Professor Baechtold. "Iphigenia," too, is growing by gemmation, like the fungi: a new text arrangement (*rédaction*), by the poet's own hand, has been discovered. We say growing, because these sister texts are not used to give various readings, as in editing the Greek and Latin classics, but both texts are printed by any conscientious German editor at full length. At least that is what Professor Baechtold has done for "Goetz von Berlichingen," and what he will probably do for "Iphigenia."

—At least six worthy editions of Molière's complete works are now passing through the press in Paris, and there is never a month and rarely a week which does not record the publication of some book or pamphlet about the master mind of the French drama. Among the latest of these many volumes is one which is highly characteristic of the length to which a literary passion and a thirst for discovery may lead a

patient critic. M. Auguste Vitu, the brilliant dramatic critic of the *Figaro*, has just published a book on the house in which Molière died, which he identifies with the present No. 40 of the Rue Richelieu, although unfortunately no vestige of the original edifice remains, save a well in the party-wall, now covered out of sight. Hitherto it has been supposed that the house was No. 34, and an inscription on its front sets forth the belief. But M. Vitu marshals a host of new witnesses, the best of them being extracts from family papers of the present owners, some of which are almost contemporary with Molière's death. The real house was built in 1658 and leased by Molière in July, 1672. It overlooked on the rear the garden of the Palais Royal, to which Molière had a key, and through which he could thus take a short cut to his theatre, standing then very nearly on the ground now occupied by its successor, the Théâtre-Français of to-day. But he did not live long to enjoy it, nor did he enjoy it much while he lived. He got possession in the first week of October, 1672, and on October 11 his second son died; in the next few months he was hard at work rehearsing the "Malade Imaginaire," a very genuine invalid himself; and after the first performance of the new play he was brought home to die in an upper room, on February 17, 1673. Most interesting is M. Vitu's reconstruction of this fatal abode. The consideration of this house, however, fills only the first seventy pages of his 'Maison Mortuaire de Molière' (Paris: Lemerre; New York: F. W. Christern), the remaining 400 pages of which are taken up with a history of the Rue de Richelieu, house by house—a history now told for the first time from researches in the archives, public and private, of Paris. M. Vitu announces as in press similar exhaustive volumes on two other Molièrean houses—the tennis court which the Illustre Théâtre hired, and Molière's father's house in the Halles.

— The January number of the *Rundschau* is the one hundredth issue of that periodical. Of its 160 pages, no less than 74 are devoted to fiction. L. Friedländer has an article on Roman Strategy, and Freiherr von Goltz one on Africa. Freiherr von der Brüggen considers the relation between Church and State, in an essay on the evangelic-religious movement in Russia, which throws light on the moral condition of that nation and the efforts of propagandists to introduce New Testament teachings. Besides the regular bibliographic, artistic, and literary notices, there is a long article by Karl Frenzel on the Berlin theatres, which not only reviews the new plays produced within the last few months, but incidentally gives a clear view of the condition of the German drama in general. The Germans evidently do not lack interest in theatres. Berlin has one theatre to every 68,000 inhabitants; Paris, one to every 70,000. Hamburg has four theatres, Munich three. Since 1870, permission has been given to private theatres to make use of the classical repertory of which, before that date, the Court theatres had a monopoly. The poorer classes, who were unable to pay the prices asked at the royal theatres, were thus allowed to become familiar with these plays, and it became possible to give such performances as those of the Meiningen Company, in which every detail is represented with historical accuracy and great splendor. But the great desideratum at present is new plays. Everybody writes them, many are printed and acted, but few succeed. The Schiller prize has not been assigned for several years. No one could rival the classical drama except Wagner, who has had the assistance of music. Anzengruber, Wilbrandt, Lindau, Putlitz, Bürger, L'Arronge gave up the unequal contest, and applied themselves, with more or less success, to the treatment of modern social problems and conflicts. This year, however, a reaction seems to have set in, in favor of Wildenbruch, whose historical play, "Harold," made a great sensation in Berlin and elsewhere. But Herr Frenzel believes that, like other reactions in favor of tragedy, this one will be limited to a single author or even to a single play.

TROLLOPE'S LORD PALMERSTON.

Lord Palmerston. By Anthony Trollope. London: Wm. Isbister.

"In his sixty-seventh year (January, 1851) he [Lord Palmerston] wrote to his brother from Broadlands. Speaking of the Christmas just past, he says: 'I took a fling, and went out several days hunting and shooting in the fine of the early day, coming home, of course, for work earlier than if I had been only a sportsman.' Let gentlemen of sixty-seven who habitually go out hunting and shooting—for I am aware that there are Englishmen of the age who do so—bethink themselves of the manner in which they pass the remainder of the day after they have come home. Are they tired, and do they sleep, or sit over their tea? Do they congratulate themselves that at sixty-seven they have been still able to perform so well many of the feats of their youth? I think I may say that they none of them betake themselves to the hard, thoughtful work of their lives: and that, if such work still falls to their lot, it has to be done before they go out hunting or shooting."

This paragraph from Mr. Trollope's work has a twofold interest. It exhibits Mr. Trollope's special gifts as a biographer; it also draws attention to the main secret or explanation of Lord Palmerston's success as a statesman.

The best talent which the writer of biography can possess is the capacity for seizing the personality of his hero; the power, that is to say, of seeing all the character which is shown in small personal traits, or the way in which petty facts of every-day life are the best illustration of character. The possession by Mr. Trollope of this gift or power is manifest in every line of his reflections on the very simple sentence from Lord Palmerston's correspondence. Most of us would have passed over the words which convey so much to Mr. Trollope without any particular attention. Some of us would have noted them as showing that Palmerston was a genial English gentleman with the tastes of a country squire. Very few would have seen, as Mr. Trollope perceived at a glance, all the physical and mental energy implied in the fact that a gentleman of sixty-seven could for two or three days together have a fling with the hounds in the early part of the day, and then come home for hard work in the afternoon. Nor is it difficult to perceive why Mr. Trollope saw so much more meaning in Lord Palmerston's habits than would be apparent to an ordinary reader: the training of the novelist came in to aid the labors of the biographer. For the greater part of his active life Mr. Trollope observed, reflected upon, and noted down the ways of English gentlemen. The whole of his works may be described under the title of one of them—they might all be headed, 'The Way We Live Now.' Hence, when he learned that a gentleman well advanced in years found it easy to hunt in the morning and work hard in the evening, Mr. Trollope could in a moment compare Palmerston's manner of life with the existence of the other squires and country gentlemen whom he has painted in 'Framley Parsonage,' 'Orley Farm,' 'The Last Chronicle of Barset,' or in any other among the score of pictures of modern England which he has left behind him for the entertainment of the present and the instruction of many a future generation. He thought of all his worthy friends as they came in wearied and worn-out from the hunting-field; he imagined them sipping tea, lounging in their easy-chairs, nodding over a book before dinner, or falling fast asleep after dinner, undisturbed by the music of their daughters or by the conversation of the youngsters who talked around them. He compared the squires he had known or imagined—knowledge and imagination may in this case be pretty much identified—and contrasted the minister of sixty-seven with the whole of the group. With this gallery of English portraits before him, Mr. Trollope could see at a hint where Palmerston agreed and where Palmerston differed from other Englishmen.

Add to this, that novel-writing, whatever its defects as a training for the intellect (and these defects are not inconsiderable), leads any one who practises the art to avoid abstractions. A successful novelist must train himself to look at men as they are. Hence a biography by a writer such as Trollope may have many deficiencies, but the one fault which it hardly can have is the fault, common enough to many distinguished writers, of treating a statesman as if he were merely the incarnation of some principles of statesmanship, instead of being, as he must of necessity be, a man of human flesh and blood, who, though occupied in politics as other men are occupied in the practice of the law or the transaction of business, is, like all of us, mainly taken up in hundreds of concerns and interests which have no direct reference to the pursuit which has made him famous. Mr. Trollope, at any rate, never forgot or suffered his readers to forget that Palmerston was a living, vigorous man of marked virtues, and of equally marked faults, whom it was absolutely impossible to treat as a mere representative of Palmerstonian policy.

Whoever wishes to measure the merit no less than the deficiencies of Mr. Trollope as a biographer, will find few better modes of doing so than by comparing the small, superficial, and probably ephemeral 'Lord Palmerston' with Mr. John Morley's lengthy and elaborate 'Cobden,' which may probably be a lasting memorial both of Cobden's policy and of the views maintained by Cobden's biographer. In many respects Mr. Trollope's work is sure to suffer by the proposed comparison. Mr. Morley is a trained thinker; his book bears throughout the traces of thought; he is the advocate or exponent of something like a political system; his 'Life of Cobden' is an exposition or defence of Cobdenism. Mr. Morley, further, is, as every one who has studied his writings must perceive, one of the most conscientious of workers; he has, it is clear, carefully examined every topic which in his judgment required to be studied by any one who undertook to narrate the history of the work done by Cobden for the world. Mr. Trollope, on the other hand, never professed to be, and certainly was not, a master of political theories. His observations on politics, whether in his novels or elsewhere, never go very deep. A good deal may be learned, even about social or political questions, from Mr. Trollope's descriptions of character and of society; but there is rarely much instruction to be got from his set remarks on public affairs. His 'Palmerston,' it must be admitted, is sketchy. No one will be surprised to find it in some respects inaccurate, as it certainly is in many respects superficial.

Yet, for all this, Mr. Trollope's work possesses one merit which is not to be found in Mr. Morley's 'Cobden': it contains a picture of Palmerston. Mr. Morley's two volumes contain, not a portrait of Cobden, but a treatise on Cobden's doctrine. Unless it be the one graphic and powerful description of the blow which befell Cobden on the death of his son, we doubt whether there is one picture throughout the whole of Mr. Morley's pages. Such a passage as that which we have cited from Trollope's 'Palmer-

ston' is, we are well assured, not to be found in the length and breadth of the whole of the didactic biographies with which Mr. Morley has instructed, and we may also add interested, the world. The truth is, that Mr. Trollope did not study, and perhaps would not have understood, sociology or political science; but he did thoroughly observe English society. He knew much less of man than of men, but of men he knew a great deal, and the men he understood best were Englishmen. Hence Lord Palmerston's account of his hunting and his working not only conveyed to Trollope, as we have already pointed out, a real glimpse into Palmerston's character, but also enabled the trained novelist to give to his readers, in the form of a few casual reflections on the way in which Palmerston spent his time, something like a key to the causes of Palmerston's success as a statesman.

Palmerston, happily for Mr. Trollope's reputation, was one of those persons whom the sympathetic painter of modern English society could thoroughly understand. His Lordship was not a man of genius or originality; he was not a great orator; he was not one of those leaders who tower above their fellows; he was not gifted with any extraordinary grasp of intellect or with any very remarkable originality of character. He received from nature the best outfit for success—genuine success—in the affairs of life which any man can desire. He was endowed, not with extraordinary qualities, but with an extraordinary amount of various valuable, though not in themselves uncommon, qualities. At the bottom of his success lay, as Mr. Trollope points out in effect in the passage we have cited, the possession of perfect physical health and strength. A strong body is, as we have all of us been taught from our youth up, often enough (and perhaps a good deal too often) a very inferior thing to mental or moral excellence. Teachers who are so careful to impress this maxim on the mind of youth appear to forget that a strong, and above all a healthy, body (the two things are by no means the same) is, if not the necessary yet certainly the natural, foundation for a strong character and a healthy mind. Lord Palmerston's physical endowments exactly represented his mental and moral gifts. England has possessed several better, nobler, and more far-sighted statesmen; but it may well be doubted whether among the line of English ministers will be found more than, at the most, two or three men who, in combined soundness of judgment, firmness of resolution, and energy of action, equalled Palmerston.

In nothing was his strong sense better seen than in a characteristic of his career on which Mr. Trollope has laid just emphasis—namely, the utter absence of all effort to push himself unduly forward, and even the cautious avoidance of undertaking any duties for which he was not fully prepared. This determination to bide his time is the characteristic of a strong man. The impatience which forces weaker natures to seize on positions which they can hardly hold with credit is, to a certain extent, connected with the sense of physical weakness or disease. He who has no certainty that his life will be long, feels that he cannot sacrifice the chances of the present day for the better opportunities which may never be his. The man of vigorous body has within himself the presage of a long life. Looking for a lengthy existence, he can play a waiting and therefore, in many cases, a wise game. Healthiness, again, is at least half the secret of sound judgment. Morbid feeling is the almost certain concomitant of a sickly body; but morbid sentiment is a fatal bar to forming a correct estimate of other men's character. There is no proof that Palmerston was gifted with any of the intuition of genius. He assuredly had strong feelings and strong prejudices. But, on the whole, his fairness and soundness of judgment led him right, both in his views of character and in his decision as to the course of action to be adopted at a given moment. He was utterly free from cant and from a belief in formulas, and he was, it must be added, like most persons of a coarse and vigorous nature, not very tightly bound to general political principles. His dealings with Louis Napoleon show him both at his worst and at his best. He had no special liking for Napoleon III. at any period of that adventurer's career; but Palmerston, it must now be admitted, perceived at the time of the *Coup d'État* one or two facts completely hidden from every Englishman of note, unless we except (the exception is an odd one) Walter Bagehot. He saw, more clearly perhaps than the President himself, that the name of Napoleon had a real hold on the French people; he held—and subsequent events have amply justified Palmerston's judgment—that the Orleanists and the so-called Party of Order hated the Empire a great deal more than they loved liberty, and were not much more concerned to support the Republic than was the President who overthrew it. He probably underrated—though this is not quite certain—the power of Republicanism in France, and he certainly grievously, and with very discreditable want of moral insight, overlooked the flagrant immorality of the *Coup d'État*. Still, for the purposes of immediate action, and especially for determining the course to be taken by English statesmanship, it must now be admitted that Palmerston took as clear and true a view of the crisis in 1851 and 1852 as any English statesman.

The alliance, it should be noted, with Louis Napoleon—or rather with France—was used by Palmerston for objects which he judged to be of paramount importance to England and to Europe. He was, moreover (and this is the point to be specially noticed), not the least disposed to let himself be hoodwinked by his ally. "The Emperor's mind," he writes in 1859 or 1860, "is as full of schemes as a warren is full of rabbits, and, like rabbits, his schemes go to ground for the moment to avoid notice or antagonism." In another letter, he tells the Duke of Somerset: "I have watched the Emperor narrowly, and have studied his character and conduct. You may rely upon it that at the bottom of his heart there lurks an inextinguishable desire to humble and punish England." And Palmerston was always ready to act upon his own convictions of political expediency. In a private conversation with the French Ambassador, he said outright that England desired peace, but that if the Emperor wished for war he would find that England was quite ready for him. Can any one who remembers 1870 doubt both that Palmerston had rightly gauged Louis Napoleon's character, and that his bold words were the wisest and most effective means of meeting the plots of a conspirator whose hesitation was equal to his faithlessness? Compare Lord Palmerston's insight with Cobden's complete blindness as to the real character of a statesman whose intellectual appreciation of free trade covered a multitude of sins in the eyes of the great free-trader.

In point of moral obtuseness, Palmerston and Cobden stand pretty much on the same level. Each was prepared far too readily to condone the crime of December. The unscrupulosity of Cobden was, it is true, the kind of unscrupulosity which is common to enthusiasts, religious or otherwise, to whom the "cause" is everything; and the man who promotes the "cause" cannot, whatever his offences, be a bad man. The unscrupulosity of Palmerston was the unscrupulosity of the man of the world, who takes things as they are, and is far too willing to shake hands with a scoundrel if the scoundrel's friendship is of value. But if you waive the moral question, Palmerston has, in every point of view, the advantage of Cobden. The old minister used his eyes and ears, watched the Emperor narrowly, and saw clearly enough how the land lay. The freetrader clung tight to his economical principles, made up his mind truly enough that it was not the "interest" of France to attack England, or for that matter Germany, and therefore derided all fear of invasion on the part whether of Englishmen or of Prussians. The plain truth is, that Palmerston had in great perfection the qualities, not in themselves very rare qualities, of a good working political leader. He could, when necessary, at any rate in his younger days, recognize the force of new ideas. Though a disciple of Canning, he placed himself in time on the side of parliamentary reform, and, though a nobleman and a landowner, saw at least as soon as others of his class the truth of free trade. But he was neither a man of original conceptions nor a man endowed with any special aptitude for grasping general ideas or principles.

As one looks over the whole of his life, as narrated rather too sympathetically by Mr. Trollope, one can see why Palmerston was hated, the extent to which the aversion felt to him by many opponents was justified, and the kind of defence which can justly be made for his policy and influence. He was a man of rather common qualities, who, by virtue of judgment, force, and often of rather vulgar self-assertion, defeated men of greater intellectual powers than himself. Mr. Trollope's comparison between Palmerston and Guizot is, by way of contrast, a very apt one. We may feel perfectly sure that, measured as men of intellect, the English minister fell far short of his French rival. Guizot will occupy a permanent place in literature after the failure of his policy is entirely forgotten. Palmerston neither by word nor writing contributed a single thought to the stock of human knowledge. But in politics Guizot failed as markedly as Palmerston succeeded. Nor let any one attribute this to the injustice of fortune. Palmerston succeeded because he had what Guizot had not—an eye for facts, and vigor to act in accordance with the facts of each crisis in so far as he perceived them. Let any one compare the miserable intrigue by which the French minister tried to support the Sonderbund, with the energy with which Palmerston really did support the cause of the Swiss Federation, and he will soon admit that Guizot's permanent banishment from the political life of France was as just and as natural as Palmerston's life-long influence on the politics of England. Cobden and Bright hated Palmerston partly because he was the most vigorous and dangerous opponent of their political system, partly, and more justly, because he represented that kind of hand-to-mouth statesmanship which all but refuses to look to anything more than the immediate exigencies of the day, and which entirely declines to recognize the often very important truths of economists and other theorists who are in certain respects in advance of their age. No one can say that this tendency simply to "deal with things as they occur," which is characteristic of all English statesmanship, and more especially characteristic of Palmerstonian statesmanship, is without its grave evils. The fourteen years from 1850 to 1864 were, as one now sees or imagines, a period when much might have been done to anticipate or avert the difficulties which now beset English statesmanship in Ireland. Palmerston knew in some respects more of Ireland

than most premiers. He did nothing whatever to modify the Irish policy of England.

Yet the very hand-to-mouth character of Palmerstonian statesmanship suggests to a certain extent the defence of his policy, and the true apology or explanation for the confidence placed in him, and men like him, by the English people. Whatever may be the case centuries hence, politics is not now a science, nor anything like a science. There are, it is true, a certain, though very limited, number of principles, mainly economical, to which every competent statesman ought to take heed in the conduct of affairs. There are, further, doctrines of justice and humanity which, though their application may sometimes be a little difficult, cannot be neglected by any one who believes that the aim of political as of other human efforts is to promote the welfare of mankind. But the immediate calling of every statesman is to deal with occasions as they arise. He has, at best, before him in many instances but a choice of evils. For this rough-and-ready work of every-day politics, presence of mind, energy, decision, insight into character, knowledge of men, and belief in plain dealing are for the most part of far greater avail to a minister than the rarer gifts of eloquence or genius. With the qualities needed for the every-day work of politics Palmerston was endowed, and the English people followed a competent leader who was known to care for the interests of England as they always have followed, and to the end of time probably will follow, men of the Palmerstonian stamp. If Palmerston were alive, he would probably even now, under conditions not very favorable to his influence, soon return to power. Let no one suppose that Mr. Gladstone's immense authority is inconsistent with this assertion. The present Premier, who, be it remarked to the credit of both statesmen, served zealously under Palmerston, has an infinite number of gifts not possessed by Mr. Trollope's hero. But it is very questionable whether the hold on popular sympathy undoubtedly possessed by Mr. Gladstone is not due as much to the qualities which are common to him and to Palmerston as to the qualities which will always, from some points of view, render the one minister a marked contrast to the other. Immense strength of body, unwearied love of work, unbounded determination, amounting at times to arrogance, great capacity for acting boldly when requisite on the spur of the moment, are characteristics which, though in a somewhat different form, marked the policy of Palmerston as they now mark the policy of Gladstone. The minister who has bombarded Alexandria and has occupied Egypt has not much to learn in the way of prompt energy from the Premier who sent the Guards to Canada, and was prepared to declare war with the United States rather than tolerate the seizure of the representatives of the Confederacy. Both Palmerston and Gladstone have thoroughly understood that it is the electors, and not the House of Commons, who are the ultimate sovereign of England. The differences between the two men are patent; the one, however, was, and the other is, the really strong man, both physically and morally, of his day. The future biographer of Mr. Gladstone will, if he knows his work, tell how his hero cut down trees and returned to the labors of a minister after going through the toil of a woodman, just as Mr. Trollope tells us how Palmerston, when an old man, rode out with the hounds in the morning, and then in the afternoon worked at memoranda and despatches a good deal harder than any young Foreign-Office clerk.

"SCHAFF-HERZOG."

A Religious Encyclopædia, or Dictionary of Biblical, Historical, Doctrinal, and Practical Theology. Based on the Real-Encyklopädie of Herzog, Plitt, and Hauck. Edited by Philip Schaff, D.D., LL.D., Professor in the Union Theological Seminary, New York. Associate Editors: Rev. Samuel M. Jackson, M.A., and Rev. D. S. Schaff. Volume i. Funk & Wagnalls. 1882.

THIS is a stately volume of 850 very large pages. The work is to be completed in three volumes. Herzog's original 'Real-Encyklopädie für protestantische Theologie und Kirche' (1854-68) embraced twenty-two, including the supplement. His new edition, begun in 1877, on which Dr. Schaff's publication is based, is to consist of not less than fifteen, of which ten have appeared. Dr. Schaff's three, comparing the number and size of the pages and the type, will contain more print than four of Herzog's. Judicious condensation and a strict excision of repetitions might have considerably increased the comparative amount of matter, in the higher sense; but no such process, except in trifles, is to be discovered. The 'Religious Encyclopædia' is in reality neither a translation nor an abridgment of the 'Real-Encyklopädie,' but "a condensed reproduction and adaptation of all the important German articles, with necessary additions, especially in the literature, and with a large number of new articles by the editors and special contributors. More than one-third of the work is original. Every article is credited to its author, except the majority of editorial articles, which are unsigned." Much British and American biography has been added. "Living celebrities are excluded." The bibliography has been brought down to date. The "List of Writers," which comprises the contributors, living and dead, for both the German and the American work, represents a tremendous array of learning; but, unfortunately, some of the best contributions have been left out or badly cut up in the American reproduction, and a very large portion of the original American matter has been contributed by writers not deemed worthy of a place in the list, or belongs to the "unsigned" part of the editorial labor. Herzog himself, like his associate editor Plitt, is now numbered among the dead contributors.

The comparison of a number of successive notices may show how far the 'Religious Encyclopædia' differs as to contents from the 'Real-Encyklopädie.' The latter devotes eight pages, by Pastor Michelsen, to Lars Anderson, the greatest promoter of the reformation in Sweden; the 'Religious Encyclopædia' replaces them by eighteen lines, beginning thus: "Anderson, Lars (*Laurentius Andreä*), b. probably at Streugnas [*sic*, for Strengnäs], 1480; d. in the same place, April 29, 1552; was chancellor of the realm and most intimate councillor of the King from 1523 to 1540, and stood together with Olans [*sic*, for Olaus] and Laurentius Petri," etc. The reader soon enough discovers that "the realm" means Sweden, and in some other article he may find out that "the King" means Gustavus Vasa. Schaff gives a life of Rufus Anderson, "D.D., LL.D.," who "was president for many years of the trustees of Bradford Academy; a member of the board of trust of Andover Seminary; was active in benevolence": Herzog knows no such man. Schaff alone has an article on Andover Theological Seminary—an article teeming with "Rev.," "Dr.," "D.D.," "Hon.," "Esq.," and "Madam"—and some lines on Antonio Andrada, the author of 'Novo Descobrimento do Grão [Grão] Catayo on [ou] dos Reynos de Thibet,' and also on Diogo Andrada—a name changed in the same notice into Andradias. The 'Religious Encyclopædia' abridges the 'Real-Encyklopädie's' lives of Jakob and Johann Valentin Andreä, and adds brief notices of Abraham Andreä, of Andreas Cretensis and Andreas of Cæsarea in Cappadocia—misplacing these two both alphabetically and chronologically—and of Andreas "of Crain" (that is, which is not stated, of Carniola). Herzog has, of course, a notice of the apostle "Andreas"; Schaff forgets the apostle, both as Andreas and as Andrew.

The preceding will have incidentally shown our readers that slight editorial slips are not unfrequent in the new work before us. Dr. Schaff himself tells us in the preface that "an apology may be due the German authors for abridging their contributions"; ampler apology is surely due for abridging them carelessly and revising the abridgments with equal carelessness. The German authors and editors are perfectly guiltless of such Hebrew as "g'natz" (page 99, where ignorance of the language terribly distorts the accurate statements of Schürer), "shūbāth" (550), "*h*orbāh" and "y'shīmō*kh*" (629), "b'nē *v*'eden" (692), or "*g*iddūy" (783); such Assyrian as "Acha-abb*re*" (41); such Italian as "Pitture Sacræ . . . *D*ei Cemeteri di Roma" and "dell*i* Antiche Arti" (417); such French as "*la* génie" (175), "des Église Réformées" (222), "la Républiques" (228), "*R*évue des Deux Mondes" (320), "cœur humaine" (337), "Répertoire Assyrien*ne*" (585), or "demotique," "ritual funeraire," "*l*e Bible," and "notices recueille*s*" (all on page 707); such renderings of Hebrew words or names in English as "Sichem" (15), "*S*ohar" (immediately after "Hazohar," 353), "Ehe*j*eh" (354), "Juda ben Isaa*k*" (355), or "*Ch*iddekel" (690); such spellings of classical names, in an English text with the ordinary rules, as "Berœa" (80), "*K*tesiphon" (187), "*K*allistus" and "Philo*k*alus" (416), "*K*aly*k*adnus" (577), or "*K*tesias" (side by side with "Cyrus," "Cambyses," and even "Ctesias," on p. 597); and such geographical nomenclature as "Münich" (four times in one column, 225), "Freisig" (for Freisingen, 225), "Méaux" (three times in a few lines, 325), or "Osnabrüc*h*" (513). Nor are the German authors or editors responsible for the frequent omission of Greek accents; for the almost general omission of definitions after the titles; and such awkward beginnings of notices as "Ahimelech (*brother of the king*) was probably a son of Ahiah," "Alexandria, founded in 322 [*sic*, for 332] B.C. by Alexander the Great, rose rapidly," and "Chili, The Republic of, established Feb. 16, 1817, and [*sic*] numbered 1,938,861 inhabitants in 1869"; for beginnings, on the other hand, so gushing as "Brooks, . . . an able and beloved minister of the Universalist Church," or "Budington, . . . a beloved and able Congregational minister"; or for references to titles which do not exist in the book, as to "Accad" (p. 583), which ought to be there.

We would not dwell on editorial slips like these, were such the only ones; but graver offences are equally frequent, and we have neither room nor time to point them out. A few examples, however, must be presented: Paul de Lagarde's "Abulfaradsch" is editorially reproduced in twenty lines, of which thirteen are devoted to a very imperfect enumeration of books and editions. The life proper is condensed in this one sentence of characteristic construction: "Abulfaraj (*Bar Hebræus*), b. at Malatia in Cappadocia, 1226; d. at Maragha in Adharbaid*schan* [*sic*]; the son of a Jewish physician, who had embraced Jacobinism; was appointed Bishop of Gubos in 1246, Bishop of Aleppo in 1247 [?], and Maphrian, or Primate of the Jacobites, in Chaldæa, Assyria, and Mesopotamia, in 1266." That Abulfaraj's Christian name was

Gregory; that he was himself a physician like his father; that he died in 1286; that he was "appointed" Maphrian years before he could occupy his seat as such "in 1266"; that he resided at Tekrit on the Tigris, facts clearly stated by Lagarde, and subject to no critical doubts—all this is forgotten in this one-sentence biography of the famous Jacobite, not to speak of other interesting points. Almost exactly equal space, and much more minute attention, is devoted in the 'Religious Encyclopædia' to Jacob Abbott, an American writer as dear, it is true, to children as the Syrian is to theologians and historians, and "mentioned here because of his 'Young Christian Series,' . . . a series which has been extensively circulated." And the life of Jacob Abbott is incomparably fuller than that of King David, which, after telling where and when he was born and died, immediately proceeds thus: "While a fugitive from Saul, he headed a band of freebooters"; then devotes six lines to the cave of Adullam, which ought to be given under that head; and finishes the narrative in fourteen more lines—the whole presenting a unique biographical sketch of the warrior king, in which there is absolutely no mention of Samuel or Jonathan, Michal or Abigail, Gath or Ziklag, Joab or Abishai, Philistines or Syrians, Moab or Ammon, Bathsheba or Uriah, Nathan or Gad, Absalom or Ahithophel, Adonijah or Solomon. This is substituted by the associate editor, Rev. Samuel M. Jackson, for Orelli's nine pages of close historical narrative in the 'Real-Encyklopädie,' and is drawn out into a page by some very superficial remarks on psalms and text-criticism, and some twaddle on David as "the man after God's own heart," all of the trite old pattern, but including the original discovery that Kuenen "slighted David's claims upon the enthusiasm of the Church, and sought to emphasize his faults," so that he "might sneer at his religion."

The omission of almost all the events in the life of David in the sketch devoted to him is not to be attributed to an editorial rule excluding or limiting the narration of facts popularly well known or easily discoverable in the household Bible. Far from it. The abridgment of Herzog's "Abraham" reproduces only the stories, so well known to every Sunday-school pupil, about the patriarch's wanderings, Lot and Sarah, Hagar and Ishmael, Melchizedek and Abimelech, angelic apparitions and divine revelations; everything historico-critical is left out, and there is not even an allusion to the age in which the father of the Hebrew nation is believed to have lived. Nor is there a chronological date attached to any of the heroes of the legendary or semi-legendary periods of Hebrew history whom we can discover in this volume—ending with the letter F—such as Aaron, Abimelech, Barak, Caleb, Deborah, or Eli, while such interesting characters as Agag, Boaz, and Ehud are completely forgotten, though the insignificant Abdon is noticed. The abridger of Orelli's "Debora," by the by, makes her enemy Sisera, King Jabin's captain, a "Canaanitish King," and has this "King, Sisera, . . . *executed* . . . in the tent of Jael." The reader will in vain look for historical dates under "Chronology," for there he finds only: "See 'Era,'" and "Era" naturally reproduces only Herzog's "Ära" (by Orelli), while Herzog's "Zeitrechnung"—embracing sixty-three pages in vol. xviii., and twenty-seven in vol. xxii., of the first edition—is still to come. Thus Schaff's "Chronology" is also still to come—in a supplement; and with it we may also have an "Andrew," an "Athaliah," an "Azariah," and the other forgotten notices—say, after Smith's 'Dictionary of the Bible,' the pages of which Dr. Schaff and his associates might have turned over more diligently than they did—and also the article "Accad," already referred to in the book. The last-named notice would be very well done by Prof. Francis Brown, whose contributions to this volume, including "Cuneiform Inscriptions" and "Eden," show him to be perfectly familiar with the latest products of Assyriology, and a painstaking and careful scholar.

Let us add, in justice to Dr. Schaff and his associates—whose undertaking we cannot but recognize as not less arduous than useful—that Prof. Brown's are not the only original American contributions that deserve commendation; that many an abridgment appears to be well executed; and that many an omission is due to too much reliance upon Herzog's guidance. Thus, the 'Real-Encyklopädie,' the plan of which is somewhat peculiar, has no "Agag," "Asarja," "Athalja," "Boas," or "Ehud" either. If Schaff's abridger leaves "Ahab" without a chronological mark, and furnishes "Ahaz" and "Ahaziah" with dates, he only follows the example of the German writer, F. W. Schultz, whose reason in not dating the reign of Ahab was probably the desire to ignore the conflict between the Biblical and Assyrian chronologies arising from the mention, in the Assyrian inscriptions, of Ahabbu Sir'lai, identified with Ahab of Israel, as a contemporary of Shalmaneser II. Ignoring at one place, however, does not remove the discrepancy; for, returning to Schaff, already, under "Azariah"—"the son and successor of Ahab . . . (B.C. 897–896)"—and also under "Elijah," we find Ahab dead in 897, while, under "Ben-hadad," we read that "the Assyrian King, Shalmaneser II. (B.C. 858–823), . . . thoroughly in agreement with the Bible [*sic*]," says that, at the time of his first expedition against Ben-hadad II. of Syria, "the Syrian king was in league with 'Achabbu'—*i. e.*, Ahab of Israel." The 'Real-Encyklopädie,' too, betrays under "Ahasja" and "Elia" what it suppresses under "Ahab"; but it has no "Ben-hadad," its "Syria" and "Shalmaneser" are still to come, and from "Assyrien" all trouble is removed by reference to "Nineve." Whether it will in the Assyrian articles, like the 'Religious Encyclopædia,' compromise the Biblical chronology and vitiate its earlier notices by adopting the common Assyriological date for the reign of Shalmaneser, or adopt Oppert's view of a break in the Assyrian Eponym Canon, remains to be seen. In any case, it is a question of consistency only, and not of orthodoxy; for surely neither of the two cyclopædias can be reproached with want of reverence for the inspiration and the text of the Bible, though both dare to question occasionally the correctness of a word or a figure. Dr. Schaff's orthodoxy is particularly broad and deep. It colors every article with the tenor of which critical scepticism can have anything to do, even after all that Herzog's conservatism has done in defence of authenticity or belief. In regard to the fundamental Christian tenets, we have from the pen of the veteran writer on religious topics, at the close of the long article, "Christology"—an article evidently intended to be his own crowning contribution—the following confession of faith, which speaks for itself:

"We accept fully the faith of the Church in all ages, and consider the divinity of our Lord as the corner-stone of Christianity. We hold, with Rothe and Ritschl, to the *moral* nature of the God-manhood of Christ, but without sacrificing his eternal divinity. We would go as far with the Kenosis theory as the unchangeable nature of God permits and as the unbounded love of God demands. We dissent from the dyophysitic and dualistic psychology of Chalcedon, and hold to the inseparable personal unity of the life, and at the same time to the genuine growth, of Christ, without asserting, with the Kenoticists, a growth of the divine Logos, who is unchangeable in his nature; but we substitute for this impossible idea a gradual *communication* of the divinity to the God-man."

The intense Biblico-religious sentiment which pervades Dr. Schaff's 'Encyclopædia' manifests itself not only in the defence of the often-assailed genuineness or remote antiquity of such books as Canticles, Ecclesiastes, Chronicles, and even Daniel—Chronicles is called "thoroughly reliable history," and Daniel is defended against so orthodox a scholar as Franz Delitzsch—but it also radiates charity and admiration over the Jewish spirit and literature of the rabbinical periods. Thus we read, under "Education," that the schools of Tiberias and Jerusalem poured forth in the two Talmuds "a stream of varied learning unparalleled in history." Not satisfied with this eulogium, the writer quotes, apparently from an article in McClintock and Strong's 'Cyclopædia,' the following extraordinary statement: "The Talmud is an encyclopædia of all the sciences of that time, and shows that in many departments of science these Jewish teachers have anticipated modern discoveries." We would exclaim, "Credat Judæus!" were it not for the circumstance that the Talmud is best known to Jews. In this sad time of Rohlings and Stöckers, Jews may be delighted by learned defences of the Talmud like Delitzsch's, but glorifications of it based on hearsay or pan-theological sentimentality no more touch a chord in the Jewish heart than, for instance, the full statement, under "Egypt," how, by the ten plagues, "in order the following gods were mocked: (1) Osiris, the great god of the Nile, the sacred river; (2) Heki, the 'driver away of frogs'; (3) and (4) the fly gods; (5) the sacred ram worshipped at Thebes, and the sacred ox at Memphis and On," etc. To Jewish students, at least, the worldly science of the Talmud and the plagues of Egypt are of little account. May our readers pardon this digression.

Lectures on Art, Delivered in support of the Society for the Protection of Ancient Buildings. By Reginald Stuart Poole, Prof. W. B. Richmond, E. J. Poynter, J. T. Micklethwaite, and William Morris. London and New York: Macmillan & Co. 1882.

THE gentlemen whose lectures make up this attractive volume are all men of distinguished attainments as artists or special students of art, and the lectures themselves will repay attentive perusal. The introductory discourse, by Mr. Poole, keeper of coins in the British Museum, treats of the Egyptian tomb and the Egyptian idea of the future state. The architecture and art of the ancient Egyptians were, as he points out, so intimately associated with their religious beliefs, and especially with that concerning a future state, that they cannot be understood independently. The construction and decoration of the tomb are carefully examined, and the manner in which these have resulted from the peculiar religious beliefs is explained. A fact of startling significance to students of archæology, to which Mr. Poole calls attention, is that whereas the paintings of these Egyptian tombs were preserved essentially intact from remote antiquity till within the past thirty years, they have now nearly perished—owing largely to the indiscretion and violence of explorers and travellers.

Professor Richmond's lecture is on monumental painting. In the course of his remarks, we think he draws the line somewhat too sharply between monumental and decorative painting, as if they were two distinct classes of art. We conceive, on the contrary, that all good monumental art has a strictly decorative basis. The frescoes at Assisi, for instance, illustrate this; they illumi-

nate the walls and roofs precisely as the ornamental devices of the mediæval scribes do the pages of a missal. It is the same with all the great frescoes of the Italian schools, even with those of Correggio at Parma. The decorative element does not disappear till the decline of painting, under the late Renaissance. Much might be said on this point did our space allow. We cannot, however, do more than to add that, in our judgment, the decorative element, when rightly understood, is an integral part of all good painting whatever. That is to say, any picture, however realistic, and whether associated with architecture or not, ought to be so designed as to present an arrangement of lines, lights and shades, or color masses, which shall be agreeable to the eye, even when no regard is had to anything else. All narrative, didactic, or other expressional motive must be based upon this as a primal scheme, or else we shall not have a work of art in the truest sense.

Mr. Richmond (pp. 29, 30) calls attention to the methodical, deliberate, and precise nature of Italian painting; and he argues that the chaste and severe character of Italian design in fresco is owing to the peculiar nature of the fresco process. This last we take to be not wholly true, for chasteness and severity of design are constant in all early and central Italian art, whether in fresco or tempera; and they are equally constant in the architecture and sculpture. These qualities have their origin in the Italian genius rather than in the peculiarities of any technical process. The fact is noted that the excellence of Italian art is largely due to the close connection which was maintained between architecture, sculpture, and painting—the three being very commonly practised by the same person—and that this association of the arts is necessary to the normal development of each. He touches, too, upon a point of much importance respecting the nature of Masaccio's combined realism and classic design, and remarks truly (p. 51) that this master shows "what true realistic painting may be without loss of dignity." There has been a great deal of confused thought and teaching about the idealization of form in Italian design as derived from the example of the Greeks. But in truth there was nothing of the kind in the early and central schools of Italy. The Italians possessed, by native inheritance and tradition, instincts of design akin to those of the Greeks; but they studied and represented nature as they found it, incorporating into beautiful compositions forms which often (as in the case of Masaccio's works) were positively ugly when considered by themselves as types of beauty. It was not until the true life of art was dying in Italy that artists began to idealize form in the common sense of the term.

The third lecture, by Mr. E. J. Poynter, appears to us the least instructive of the series. His subject is ancient decorative art, but he gives very little information; the larger part of the discourse being devoted to a conjectural consideration of the character of Greek painting. In the absence of all remains whereby to form a clear conception, Mr. Poynter infers this and that about Greek painting. His inferences seem sometimes plausible, it is true, as where, concerning the art of Polygnotus, he judges that since the sculptures of the pediments of Ægina were executed just before the time when this master exercised his talents, his outlines would probably be at least as perfect as theirs. But this and kindred argument, belonging to the domain of curious speculation, are not what we want as the substance of a lecture on ancient decorative art.

Mr. Micklethwaite treats of the development of English parish churches from the monastic plan, introduced by the Italian missionaries, and the secular, which was a continuation of the British type. In the course of his remarks he says some very good things about restoration, and about the fallacy of the idea that the original style of a church which has been altered according to the successive wants of the people for perhaps a thousand years, can always be determined, or is worth restoring by the sacrifice of all these historic accumulations and associations.

The fifth and sixth lectures are by Mr. William Morris. The first of these is on "The History of Pattern Designing," and the second on "The Lesser Arts of Life." Both are mainly characterized by the general good sense with which Mr. Morris always expresses himself. In the early part of the first lecture (p. 139) he disconnects ancient from mediæval art rather too absolutely, in our opinion; and we are not quite sure whether by the remark on p. 142, that the realistic tendency of Assyrian art, "had it lived longer, would most likely have driven it out of the path of monumental and decorative art," he means to affirm that a realistic character in art is necessarily inconsistent with what is monumental and decorative. We could not agree with such an idea so long as the Parthenon sculptures and Tintoret's Crucifixion and many other such examples are before our minds. The important fact that the lesser arts cannot be separated from the greater—that they always depend upon the greater—is clearly and well stated, and this statement may be useful to those who suppose that the art which concerns itself with beautifying the products of industry is essentially different from higher art, and may be cultivated by different means. Mr. Morris argues forcibly in favor of that true art cultivation for artisans which will make them happy in the consciousness of ability to produce what is really beautiful—a cultivation which can result only from training of the perceptions and tastes without any direct reference to utilitarian ends.

Dorothea Scott. Oxford : Parkers. 1882.

THIS monograph of twenty-eight pages, printed for private circulation, was prepared by Mr. G. D. Scull, an Anglo-American who has already done good service by his volume on 'The Evelyns in America,' noticed in these columns. Mr. Scull has made a special study of the relations between our early English visitors and settlers and the mother country, and among the family papers of some old English country homes he has found much valuable original material throwing light on persons of note in both countries. Wooton supplied him with curious details of successive generations of Evelyns who tried their fortunes on this side the Atlantic. The Journals of Col. Montresor, of the British Engineers, with the record of his services in this country in the old French War and in the Revolution, are being printed in the *Magazine* of the Pennsylvania Historical Society, from the originals in possession of the present representative of the family. Dorothea Scott has a more purely personal interest for Mr. Scull and his kinsfolk, for from the three elaborate pedigrees appended to his pamphlet she figures as the ancestress of the Sculls, Woods, Tysons, and other well-known Jersey and Pennsylvania Quaker families, and thus connects them with the Scotts, who trace their descent back to Henry III. and through a long line of royal and noble names. But for the general reader, Dorothea Scott's story is a curious bit of domestic grief, well worth studying as illustrative of her time.

She was the youngest daughter of a Scott, of Egerton, and his wife, a Knatchbull, whose present representative, now Lord Brabourne, is well known for his share in English politics and literature. She was born in 1611, and was heiress in her own right of an estate in Kent of £500 a year; and having first married a Major Daniel Gotherson, who died in 1666, she afterwards married a man named Hogben. Before 1660 she and Gotherson joined the Society of Friends, and her meeting went under the name of Scott's Congregation, from her success as a preacher. About 1662, at Whitehall, in the presence of the King, she met a John Scott who claimed relationship and made good use of her credulity. She and her husband paid him large sums of money for lands in Long Island, and made him their agent for the purchase of still larger tracts which he said he had bought on their account directly from the Indians. About 1667 she undertook, through Governor Lovelace, to get at the truth, and promised, in case of a favorable report from him, to "goe over to New Yorke and carry an hundred and twenty families with her to the great advantage of ye Place"; but Lovelace and his brother could find no trace of any lands belonging to Scott or to her. Worse still, she had intrusted to Scott her only son, under promise of preferment and of advancing his fortune, and Lovelace found that Scott had sold the lad to an innkeeper at New Haven, from whom he was redeemed by the payment of seven pounds. Her petition to the King, that Lovelace should be ordered to examine her claim, was referred to the Duke of York, as the Chief Proprietary of New York, and by him to our old friend Samuel Pepys, then Secretary of the Admiralty, to collect evidence against Scott.

It is owing to the careful, business-like solicitude of Pepys that the few writings touching Dorothea Scott's case were preserved, and it was out of his zeal for the establishment of her claim that Pepys fell under the machination of John Scott, and was long put to trouble and vexation before he could effectually clear himself from the aspersions cast upon him by that unscrupulous and plotting adventurer. Pepys set to work with characteristic thoroughness, and brought together a great number of depositions and informations as to Scott's dishonest proceedings in New England, Long Island, Barbadoes, France, Holland, and England. He reported that Scott had sold the Gothersons (Dorothea Scott and her husband) 20,000 acres of land in Long Island, although he did not own a foot there; he made the Gothersons pay large sums for timber to build houses on their land; he even got poor Dorothea's jewels, and showed them, among others, to "Col. Lewis Morris, an eminent planter and great Quaker in Barbadoes," who bought £200 of his Long Island perpetuities or leases for 999 years.

Scott declared that he would be revenged upon Pepys, and, to this end, joined a band of desperate malcontents, among them the notorious Dr. Titus Oates, and hatched a conspiracy against the Government as well as against Pepys. They accused him of being a Papist and keeping a priest in his house, and alleged that Sir Anthony Deane (a famous shipbuilder for the Government) and himself were friendly to the King of France, and treasonably furnished him with secret information as to the strength of the navy. Other charges were made against Pepys in Parliament, and a discharged servant was induced to commit perjury to sustain the charges. Pepys was seized and committed to the Tower; bail was for some time refused, but at last he was allowed his liberty on giving security in £30,000. It was eight months before the case came on for trial; in the meantime the servant confessed his perjuries on his death-bed. Pepys sent queries to Dorothea Scott, who again recounted her grievances at the hands of her rascally kinsman, adding that her old family jewels were worn by the wife of the man who had cheated her out of them, for Scott, in one

of his visits to New York, had married Deborah, daughter of Joseph Rayner, of Southampton, Long Island. Poor Pepys was long cut off from the King's friendship for his share of the business, but finally established the truth of his charges against Scott and his own innocence.

In 1680, Dorothea Scott and her family came to Long Island, no doubt to secure a grant of land as compensation for her losses. Her youngest daughter married a Welsh emigrant, John Davis—one of the sect called "Singing Quakers"—who lived at Oyster Bay, on Long Island, and, as his name appears on the assessor's list for 1683 rated at £40 per annum, presumably a man of substance. In 1705, he followed his sons to Salem County, New Jersey, and from them the blood of Dorothea Scott, the representative of kings of England and Scotland, runs in the veins of the Quakers of that peaceful region. A more creditable kinsman was Richard Scott, one of the earliest settlers of Rhode Island, and a sturdy Quaker, whose wife wrote a strong letter of remonstrance to Governor John Winthrop, protesting against those whom "the world in scorne calls quaikers."

Of John Scott's subsequent fate little is known, and although Mr. Scull has not told that little in this sketch of his ancestress, he has in preparation a full memoir of that knavish agent, for the New York Historical Society, and it is satisfactory to learn that the arch-scamp had at least to seek safety in exile in Norway—the Alsatia of the English rogues of the seventeenth century—and that only in his extreme old age was he again allowed to enjoy a small pension and to return home to die. How far poor Dorothea's only son profited by his harsh experience in being sold to service is nowhere told, although Lovelace in his report says that he "putt him to school in New Yorke, where hee much improved himselfe." The whole story is of interest in itself, and of value as showing what side-lights are thrown on contemporary history in the pursuit of genealogical researches.

The Still-Hunter. By Theodore S. Van Dyke. Fords, Howard & Hulbert.

It is a good sign of the increasing intelligent interest taken in field-sports in this country that the literature on the subject is being thought worthy the efforts of men who know what they write about, and are able to express their ideas in a clear and interesting manner. Mr. Van Dyke's book on still-hunting shows that he has carefully and lovingly studied the art (for art it is), and his minute and exhaustive instructions, derived from personal experience, cannot but be as instructive to those trying to surmount the difficulties of still-hunting for deer, as they are interesting to all who have but a general and undeveloped taste for wood-life and the chase. The man who goes to the Adirondack lakes in July and August, and shoots a deer stupefied by the light of a jack at ten yards' distance, or held by the tail in the water by his partner in crime, the guide, may perhaps feel, after reading fifty pages of this book, that he is not the true sportsman his fancy has led him to think, and that rectitude and skill in deer-shooting are as difficult to live up to and acquire as almost any of the graces and arts of life. Mr. Van Dyke's book is almost wholly one of instruction; and to those whose idea of a "still-hunt" is largely indebted to the rather vague recent use of the term in a political sense, it will prove a revelation.

Still-hunting is, beyond doubt, the most scientific of all sports, especially in a country where deer have been much shot at; and at the same time, when followed by an expert, it is the most certain in its results. Mr. Van Dyke assumes that his reader is a tyro, and takes him along from the first to the ninth chapter before his education in woodcraft and venery suffices to get him a shot at the game, though it is plentiful on the ground he travels over. These nine chapters are all of great interest, and admirably ordered. The first great difficulty in still-hunting is to get a sight of a deer at all. When you have overcome that, the second one presents itself, which is to see the animal near enough to shoot at it. The rolling, wooded country into which Mr. Van Dyke takes us is the most favorable for still-hunting, and now, "after several days of blighted hopes have passed over your head, on some of which you have seen nothing but tracks and occasional long jumps, and on others only a tail or two glimmering out of sight in the dark depths of timber or over a ridge," he allows you experience enough to bring you within shot of a deer. She (for it is a doe) first appears on

"a ridge a hundred and fifty yards away, just dimly visible through the cloud of twigs and branches of intervening trees. It can hardly be a deer; it looks small and dark, and lacks all that graceful outline of the deer engraved on the lock-plate of your gun. Its head, too, is low down, and projecting like that of a long-necked goat, while its nether extremity looks awkwardly angular, like that of a cow."

The fidelity of this description can be proved by any one who has had the rare pleasure of watching a doe strolling leisurely through the woods. She comes on within thirty yards of the hunter, he bleats to stop her, and

"Presto! what a change! at the sound the awkward-looking thing is resolved, as by the stroke of an enchanter's wand, into all the grace and symmetry of the artist's deer. It stands in the light of the rising sun with sleek and shiny coat, rotund with fatness; its dark eyes are turned inquiringly toward you; its delicate ears are turned forward to catch the slightest sound."

The doe is shot at, and missed through being too sure, but an hour or two later another chance occurs, and the first deer is killed.

Fifteen more very interesting chapters are devoted to hunting under almost every conceivable condition of locality, weather, and habits of the game, which vary wonderfully, according to their surroundings. Then follow nine chapters devoted almost entirely to the rifle, showing as much close study, research, and rhetorical clearness as those preceding; and a concluding one on "moccasins, buckskin, etc."—the "etc." being a few pages of most excellent advice and hints—finishes altogether the best and most complete American book we have yet seen on any branch of field-sports. We hope Mr. Van Dyke will not consider us invidious in alluding to one error of belief he labors under, when he states, on page 25, that he "has never known a deer to eat what is known as 'dry feed'—to wit, sun-dried grass." We have seen in Michigan, in October, a small stack of wild hay much plucked out and eaten by deer, and in the winter, along certain logging-roads, deer are certain to come out of the swamps and eat the "tame hay" which has fallen from the loads going through to the lumbering camps.

The Home Needle. By Ella Rodman Church.—*Home Occupations.* By Janet E. Ruutz-Rees. D. Appleton & Co.

To our thinking no one of the series of "Home Books" is so much to be commended as either of the two before us. The first is an intelligible and simple manual from which to learn all the kinds of sewing which are essential to make a family comfortable and a home attractive. Not dress-making only, but the house-linen and the mending-basket receive due attention. The sensible comments scattered through it are a needed corrective for the mistaken notion, unhappily gaining ground, that the sewing-machine is to supplant the old "home needle." Undoubtedly, it lessens the number of hours to be spent over long seams, but no machine can *finish*, and, besides, machine sewing is only too apt to make the worker careless and slack about the finishing. Every woman should know practically how to sew, if for no other purpose than to gain a rational idea of what should be expected of seamstresses and such work-people.

'Home Occupations' brings a refreshing memory of an older time when it was permissible to enjoy a thing because it was pretty, without painful questionings as to sincerity or high art. "The Possibilities of Tissue Paper," and "What Can be Done with Beads," may be suggestions horrifying to those initiated in the mysteries of current taste, but the craze for ceramics and crewels implies well-filled purses, while bright leaves and nutshells are to be had for the seeking, and there are plain folk, and gentle folk withal, who can find much pleasure in the dainty and inexpensive devices with which the book is filled.

The writer has very successfully carried out her purpose, which was, not to suggest definite plans or rules for regular employment, but to find pleasant ways of filling hours not spent in the active pursuit either of business or amusement. With all our ever-increasing desire to acquire "accomplishments," there must be a great many persons who never attain excellence either in music or painting, while there are others to whom the leisure for such employments comes too late in life for them ever to gain technical skill. To all such the making of pretty things which need only patience and natural cleverness is a delightful resource, and this book to them will be most helpful. Two chapters might easily lead to actual scientific study. From "The Preservation of Flowers, Grasses, and Seaweeds" to the study of their structure and habits is but a step. (May we add in passing that botany is the one natural science which no girl should fail to study? Of nothing is it more true that the delight of youth will be the solace of age.) "Amateur Photography" is almost sure to teach something of chemistry, and to develop somewhat of artistic taste. It is strange we have been so long in coming to it. It is five and twenty years since "Claude Mellot" undertook it, in Kingsley's 'Two Years Ago.' One use of it does not appear to have occurred to the writer, though it is as simple as it is valuable—the copying of prints or drawings not otherwise to be obtained. There lies before us a photograph of a map of the Scotch lakes taken ten years ago from a then rare book. A large class in a high school who were reading the "Lady of the Lake" were supplied with copies that cost practically nothing.

Beowulf, an Anglo-Saxon Poem; and the Fight at Finnsburg. Translated by James M. Garnett, M.A., L.L.D. Pp., xl.-107. Boston: Ginn & Heath. 1882.

A few months ago we had the pleasure of noting the appearance of Professor Harrison's edition of the 'Beowulf' text. Before the end of the year Professor Garnett surprised us with his modern rendering of the noble old poem. That there was need of such a version no one will hesitate to admit. Kemble's rendering, made in 1837, was not only out of print and excessively rare, but even when procurable could be of little service, being based on an antiquated text. Colonel Lumsden's rhyming version, published in 1881, might enable the general reader to form a tolerable estimate of the more striking literary features of the poem, but to the genuine student of Anglo-Saxon could be little more than a

stumbling-block. It was faulty in plan and careless in execution, whereas the present work is evidently the ripe fruit of genuine scholarship. A glance at the introduction alone, irrespective of the translation, will make this clear. Pages xxiii.-xxviii. contain the fullest bibliography that has ever yet been prepared on the subject. It supersedes the work of all previous editors, German or English.

Professor Garnett's general remarks and criticisms are also admirable. As to the translation itself, we have not merely read it with great satisfaction, but have examined two test passages with all possible care. The first is the description of Beowulf's fight with Grendel (pp. 22-26); the second is the narrative of the robbing of the dragon's cave (pp. 67-71). The fight with Grendel is one of the easiest to read in the entire poem, and on that account probably all the harder to render. It is unquestionably the most graphic bit of alliterative verse in Germanic literature. We do not say that Professor Garnett has reproduced all the directness and fire of the original: our modern speech is not adequate to the task. But we do judge that within the limits of a line-for-line and word-for-word rendering the translator has had remarkable success. He has felt the sustained power and dignity of the original, and imparts a just sense thereof to his readers. The second passage is difficult for a very different reason. It is one of those tangled, obscure preambles which are the sorest test of one's patience. The MS. is wofully corrupt. Grein, Heyne, and other editors, by dint of conjectural restorations that seem akin to inspiration, have succeeded in making sense out of broken letters and ugly *lacunæ*. The translator has toiled painfully in their footsteps and smoothed down the path still more. No one, we venture to say, will have the first conception of such efforts unless he put Grein's or Heyne's text by the side of this English, and then compare them all with Wülcker's reprint of the MS. in his new edition of Grein's 'Bibliothek.' It is like stepping back from daylight into "chaos and old night."

We have no space here for the minutiæ of criticism, although we have noted several words and phrases for correction. Such corrections belong in a technical journal of philology. We prefer to dwell upon the general merits of the rendering, and to congratulate American scholarship upon having at last achieved in our speech of today a thoroughly honest and intelligible reproduction of our earliest great poem. If the translator has erred at all, it has been in the direction of too great literalness. By occasionally sacrificing the Anglo-Saxon construction, and using more freely words of Latin origin, he would, we believe, have made his lines smoother and their meaning more obvious. But the point is a debatable one, and we do not offer it as more than a suggestion. At any rate, whoever, philologist or not, will use Professor Garnett's translation faithfully, will find in it the best possible aid to his own understanding or interpretation of an unusually difficult subject.

Early New England People: Some Account of the Ellis, Pemberton, Willard, Prescott, Titcomb, Sewall and Longfellow, and allied Families. By Sarah Elizabeth Titcomb. Boston: W. B. Clarke & Carruth. 1882.

To work out from one's family as a centre, and gratify one's curiosity by tracing more or less fully its connections by blood and marriage, is a natural impulse for the genealogist, especially the neophyte. To publish a selection from such a correlated group of ancestors, especially if there be plenty of talent and distinction to adorn it, would also seem natural, and this is what Miss Titcomb has done, though we do not now recall another instance. The names mentioned in the title are a guarantee of the widespread interest which the volume before us possesses; but we can add Sir Wm. Pepperell, Judge Haliburton, Robert Treat Paine, Gen. Return Jonathan Meigs, Margaret Fuller, Harriet Prescott Spofford, Harriet Hosmer, the Evarts and Hoar families, Gen. Wm. F. Bartlett, and many others. There is no lack of romance, particularly in the case of the Ellises; and some of the biographical sketches of the elder worthies have for non-scholarly readers an obvious convenience and value. The great drawback, however, to the usefulness of the work arises from the author's want of literary dexterity and her defective chronological sense, which last, quite as much, perhaps, as inexperience in book-making, has prevented a clear arrangement. The employment of different kinds and sizes of type and of the conventional genealogical enumeration would have brought out in relief the relationships which it is the author's object to display, and which a skeleton chart would still further have elucidated. It must be said, also, that authorities are rather loosely cited, and that the general pedigrees inspire more distrust than perhaps, with the counsel and assistance at Miss Titcomb's command, they deserve. The book is handsomely printed.

The Iliad of Homer, done into English Prose by Andrew Lang, M.A., Walter Leaf, M.A., and Ernest Myers, M.A. London and New York: Macmillan & Co. 1883.

BUTCHER and Lang's translation of the Odyssey has been generally recognized as an excellent work. It has been widely recommended by Homeric scholars, and most readers have been delighted with it. Now we have a translation of the Iliad done on the same plan and in part by one of the same persons. If it does not attain the same popularity, the chief reason, we presume, will be the different nature of the poem, which is not perhaps so well represented in this smooth, evenly-flowing prose as the more quiet narrative of the Odyssey. Besides, the version is not quite so successful as in the former case, though the difference is not very great. The slight affectation of archaism in language which in the Odyssey offended some critics, is somewhat increased in this new volume, and there are passages here and there in which, to a careful and loving student of the poem, the present translators will seem to have missed the connection of thought or the point of some special word. Still, we are thankful to have the general impression of the poem thus faithfully reproduced for the many readers who have not time for the study of the original. We cannot help also being glad that the opinion of the two new translators prevailed so far as to introduce *k* and *os* instead of *c* and *us* in the spelling of proper names (though Olymp*us* and *C*orinth are admitted). The wide circulation which this book deserves and will obtain will do a great deal to familiarize people outside of scholarly circles with these forms, which will certainly, we think, in time prevail over the Latinized forms that have been so long in use. Mr. Myers's introductory sonnet deserves notice as a fit companion to that which Mr. Lang prefixed to the Odyssey.

BOOKS OF THE WEEK.

Thoms, J. A. A Complete Concordance of the Revised Version of the New Testament. Charles Scribner's Sons. $2 50.
Thorold, A. W. The Claim of Christ on the Young. A. D. F. Randolph & Co. 90 cents.
Townsend, L. T. Bible Theology and Modern Thought. Boston: Lee & Shepard. $1 50.
Trimble, Esther J. A Hand-book of English and American Literature, for Schools and Academies. Philadelphia: Eldredge & Brother. $1 50.
Tyrrell, R. Y. Dublin Translations into Greek and Latin Verse. Dublin: Hodges, Figgis & Co.
Vinton, J. A. The Richardson Memorial: Full History and Genealogy of the Posterity of Three Brothers—Ezekiel, Samuel, and Thomas Richardson. Portland: Hoyt, Fogg & Donham.
Whitelaw, R. Sophocles, Translated into English Verse. London: Rivingtons; New York: E. P. Dutton & Co.
Whist, or Bumblepuppy? Ten Lectures Addressed to Children. Boston: Roberts Bros.

Henry Holt & Co.

HAVE READY:

Evolution and Christianity.

By J. F. Yorke. 12mo, $1 50.

An attempt to point out the bearing of Evolution upon Religion, and especially upon Christianity.

GOSSE'S

On Viol and Flute.

Selected Poems. By Edmond W. Gosse. 12mo, $1 75.

TEN BRINK'S

Early English Literature.

Translated by Prof. H. M. Kennedy. Large 12mo, $2 25.

Sibylline Leaves.

By A. E. M. K. 16mo, cloth, gilt, $2.

A tasteful and ingenious little work which does "fortune-telling" by giving extracts from the poets in response to questions regarding one's destiny.

WALKER'S

Political Economy.

By Francis A. Walker, President Massachusetts Institute of Technology. Large 12mo, $2 25.

BROWNING'S

Lyrical and Dramatic Poems

Selected from his Works by E. T. Mason. Square 12mo, $2.

HENRY HOLT & CO., New York.

A Word

ONLY A WORD.

A Romance. From the German of

GEORG EBERS,

Author of 'Uarda,' etc.

One vol., paper, 50 cents; cloth, 90 cents.

WILLIAM S. GOTTSBERGER, Publisher,

No. 11 Murray Street, New York.

At all bookstores, and by mail on receipt of price.

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address Publisher of the Nation.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 15, 1883.

The Week.

THERE is an effort made by the advocates of protection to cry down Mr. Lamar's speech in the Senate against the protective system, as the utterance of a man who was always given to wild fancies, and who has many times in the past misled the people of the South, greatly to their own detriment. This will not do. There is no public man of prominence in the South to whom such a description would be more unjust than to Mr. Lamar. It is true that in his younger days he was swept along by the whirl of the secession movement. But when the war was over, no Southern man recognized the new order of things more promptly and justly, and no one used the voice of peace and reconciliation more impressively than he. He did this, too, although representing one of the most hot-headed and turbulent of Southern constituencies. Neither should it be forgotten that when the seductive cry of cheap paper money rang all over the South, and when the silver craze had reached its highest mark, Mr. Lamar had the moral courage to throw himself against the prejudices and follies of those who had sent him to Congress, and to defend the cause of sound money at the imminent peril of losing his place in public life. With such a record of self-sacrificing fidelity to his convictions, Mr. Lamar may claim that respect for his utterances which established character and ability command.

While a great part of his argument against protection as a system is not novel in character, and in the nature of the case could not be—for it is a well-worn subject—he sets forth two ideas with peculiar force, which deserve the most earnest reflection on the part of the American people. One is, that this is probably the only country in the world whose people have been severely and superfluously taxed for a series of years because their rulers were unable to devise a mode of reducing taxation, for the simple reason that the taxes were not imposed for the one legitimate purpose of raising revenue, but for the purpose of paying bounties to certain business interests. We present, therefore, the curious spectacle of a people complaining of excessive taxation, possessing also the supreme power, through their representatives, to do with taxation what they please, but vainly struggling to get rid of the burden because it conceals and disguises itself in a variety of specious pretences. How true this is, and how pitiable is the exhibition, the debates in Congress demonstrate every day. The other leading thought in Mr. Lamar's speech is, that the protective system has brought forth a vast organization of capital and labor which professes to be dependent for existence not upon the natural development of resources and the natural growth of industries, but upon taxation by the Government: "two thousand millions of capital and millions of people—the one for profit, the other for bread and butter—depend upon an aye-and-no vote of the Government." And after a high tariff of twenty years' duration, the industries so propped up profess to be in a state of embarrassment, tottering on the verge of disaster, their respective representatives declaring on oath that if the duty affecting them be reduced their business will be destroyed. It needs no further argument to show that such a condition of things is, in the long run, intolerable and untenable, especially in a country with free institutions.

Heavy snows and extreme cold weather throughout the Northwest, and heavy rains and floods in the Ohio Valley, have seriously interfered with all traffic and industry during the past week. Thus far the damage from the floods has not been so great as might have been apprehended, but their full effects have not yet been felt. The decrease of traffic and railway business in the Northwest on account of snows is largely only a delay of business that will yet have to be done with the advent of better weather; but the delay has been very trying to the Western merchants, who have sold few goods and collected but little money. This delay in so important a portion of the commercial area has affected business generally. In financial affairs there has been a tendency toward stagnation in the money market. There are large amounts awaiting some profitable employment, and the endeavor to find some temporary use for this has depressed the rate for call loans on stock collaterals as low as two per cent. The difficulty of finding any profitable employment for money is reflected in the small amount of bonds presented for redemption at the United States Treasury. The collections of the Treasury have also been largely in excess of its disbursements; the Sub-Treasury in New York gaining about $2,000,000. This has drawn some money out of the banks, the weekly statement of which on Saturday last showed a decrease of $438,300 in the average amount of their total reserve for the week as compared with the previous week. Foreign exchange has remained comparatively firm, notwithstanding the fact that in the last four months the value of our exports has exceeded the value of our imports by about $100,000,000. If we deduct from this a reasonable amount for the annual interest and dividends that would be due and payable to foreign holders of American stocks and securities in January, it would still leave a large amount, which would naturally be expected to depress the price of exchange to the gold-importing point. But it is apparent that we must have been receiving something else that has offset the large balance in our favor on the exchange of commodities alone, and it is to be presumed that this something else has been, to a considerable extent, American railroad stocks. It is possible that this has been one of the factors in keeping the stock market in the feverish, depressed condition which has prevailed for the past month. There seems, however, to be a better tone in the stock market than a week or two weeks ago, and though the changes in prices in the last ten days have not been large in either direction, there seems to be a growing feeling that they are about at the lowest.

The Boston *Advertiser* says, apropos of the leasing of the Mutual Union Telegraph lines by the Western Union, "that it might not be strictly accurate to say that the former company was organized for the purpose of being sold out to the latter, but it is quite true that the result was inevitable from the beginning," and that "there is no better or safer business in the country than starting rivals to the Western Union Telegraph Company." We believe the history of the Western Union would go far to justify this statement. A large proportion of the growth of its stock has been due to the absorption of rival companies, started for the express purpose of being absorbed; and starting them has been found a very profitable enterprise for the promoters. Of course, in order to make them rivals worth buying up, the public has to be persuaded that they are set on foot by a band of determined men who are disgusted with the monopoly of the Western Union, and propose to relieve the American people from it. This always excites the sympathy of a warm-hearted and sanguine people, especially if accompanied by low rates, and it soon gives its business to these enemies of monopoly, to enable them to drive hard bargains with the monopolists and sell themselves at a highly remunerative figure. There is something very ingenious in this method of making the monopolists themselves pay the cost of occasional attacks on them in their strongholds. Of course, it is a kind of business that cannot be carried on indefinitely. We are evidently approaching a period in which the absorbing powers of the Western Union and the gullibility of the public will be exhausted, without bettering the condition of those who use the telegraph. And yet something must be done to deliver us from exclusive dependence on the telegraph of one great corporation. We say this without meaning to find any fault with the way the Western Union does its business; but we do say that no corporation, however well managed, is fit to be intrusted with the telegraphic business of a whole nation. The public interest requires that such work should be done either by competing companies, or by an organization like the Post-office, which is controlled by public opinion. The objection to giving the work to the Post-office is, that it would increase the patronage of the party in power for the time being, already far too great. We have yet to see whether the Civil-Service Reform Act will lessen the weight of this objection, and, if so, to what extent.

In the meantime, there is another remedy which has not been sufficiently considered—that the railroad companies, many of whom are already chartered as railroad and telegraph companies—should do not only their own telegraph business, but also that of the public,

which they could do with comparatively little expense. The Reading Railroad Company has already adopted this course, and the Baltimore and Ohio Railroad Company has a line from Chicago to the seaboard east, and should it be followed by the larger Western railroad companies, a very strong opposing interest would be created which could not readily be bought out. To-day the Western Union depends very largely upon contracts with such railroad companies which will in course of time run out by limitation or otherwise be broken up. Of the capital and debt of the Western Union a very large percentage to-day consists in contracts with the railroads and in the good-will of its business, and a very small percentage in actual capital put in. This has probably been the chief element of its weakness in the market, where competition with the smaller telegraph companies and the litigation growing out of it have only been minor symptoms. There is no good reason why railroad companies should not do the telegraph business for the public, and also the express business—both now going over to middlemen, much to the detriment of both the railroads and the public.

Among the wise vetoes of Governor Cornell was one which Governor Cleveland is likely to have a chance to repeat. It related to a bill speciously entitled "to secure to inmates of institutions for the care of the poor freedom of worship," etc., but the purpose and the effect of which were to introduce sectarian distinctions in these public establishments. The bill, which is again before the Legislature, provides that the institutions shall be open to the visits of clergymen of the several denominations to which the inmates belong, or, if they are infants, to which their parents belong, and that facilities shall be afforded for denominational services, as well as for these visits. If this scheme should prevail, the House of Refuge—which is understood to be the object chiefly aimed at by the promoters of the measure—would be divided into little sectarian groups. The Baptists and the Methodists would have their days, the Presbyterians and the Unitarians would be set apart in their respective corners, while the Roman Catholics would be found in one room, and the Protestant Episcopalians in another. But we could not reasonably stop with these familiar branches of the Christian Church. If an unthrifty Parsee should neglect his children so that they should fall within the control of the Society for the Reformation of Juvenile Delinquents, the devout parent would have the right to demand—indeed, the managers would be bound, without any demand, to furnish—facilities for the exposition and practice of fire-worship. It is necessary only to state the case to show how disastrous such a situation would be to order and discipline. Governor Cornell very truly said in his veto message that "charitable support or correction," and not religious instruction, is what the inmates are primarily brought together for; that while freedom of worship is a guaranteed and cherished right, it "presupposes certain conditions," among which is "the ability of independent or self-maintenance"; and that "provision for religious worship must depend upon circumstances peculiar to each case." We understand that the provision made in the House of Refuge is purely unsectarian, and so general as to adapt itself to all denominations, while Jewish rabbis, Catholic priests, or so-called evangelical ministers are at liberty to take part in the simple services. The managers, in a protest against the measure, object that a parent "who has lost the right of control over his child because of its conviction and imprisonment for crime" should not be allowed to dictate a form of worship to the prison; and they say that the bill ought to be entitled "to compel juvenile delinquents to conform to the supposed sectarian observances of parents who have neglected their natural duties." This is a terse summary of an argument that should be conclusive with the legislative committee which has the bill under consideration.

The exposure of the lobbying operations in General Hazen's interest, made by Mr. Beltzhoover in the House on Thursday, shows that the officers of the Signal Corps undertook last winter a systematic and comprehensive scheme of lobbying to gain support for and secure the passage of a bill introduced last session, called "The Majors' and Captains' Bill," which provided for the addition of three majors, twelve captains, and twelve first lieutenants to the Signal Corps, for the regulation of appointments and promotions, and for other details tending to consolidate the Corps and establish it on a permanent foundation in connection with the Army. The evidence is documentary, consisting of letters written by the officers interested in the bill, which show that, to get up a "boom," the usual lobby devices were resorted to—editors aldermen, and chambers of commerce being stimulated into action which was made to seem "spontaneous." The case is a bad one, but it must be said in defence of General Hazen that to convince Congress of the necessity of passing bills where the Executive has no direct means of influencing legislation, there is no way but "lobbying" of some kind.

The celebration of the one hundred and fiftieth anniversary of Georgia, which began on Monday at Savannah, would be interesting merely as the commemoration of an historical event, but is far more so from the fact that during the latter part of the third half-century since her birth Georgia has undergone what might be described as a second birth. In no part of the South were the results of the war more promptly and heartily acquiesced in. Nowhere were more intelligent and earnest efforts made to repair its material waste. Nowhere have the people more successfully adapted themselves to the new order of things, and nowhere are the signs of an awakening of the commercial and industrial energies more abundant and gratifying. Perhaps it would not be extravagant to say that Georgia has done more to develop the resources which are the foundation of a great State during the last eighteen years than in all the remainder of the one hundred and fifty years which she is now celebrating.

A number of Stalwarts, calling themselves the "Lincoln Club," had their twelfth annual dinner on Monday night, many of the leading lights being present, including "Sol" Smith, "Jake" Hess, "Johnny" O'Brien, "Tom" Platt, and others less known to fame, and the chaplain of the party, the Rev. Dr. Newman. We have read the report with much interest, expecting that some of the speakers would reveal that long-kept secret, what a Stalwart is and wishes; but the matter was carefully avoided by all except Tom Platt. He made what was evidently intended to be a biting, sarcastic speech, showing that Tom feels sore and thinks the times are out of joint, and that the country is going to the dogs, just like the literary pessimists. His revelations, however, were deprived of nearly all value by their being thrown into a negative form. He did not tell us what Stalwarts believe, but what they do not believe. He, for his part, did not believe in Republicans electing Democrats to office, or in such reforms as the newspapers are now advocating, or in such Republicanism as they are now teaching, and, becoming facetious, he added that if this be the heaven they had been preaching, he felt like the little girl who wanted to go to hell on Saturday afternoons to have a good time. Tom's humor, though a little profane, is not bad on the whole, but it will not take the place of exposition. He must some day describe to us *his* heaven and that of his friends. At present the public does not think it a very nice sort of place. The Rev. Dr. Newman struck a cruel blow at Darwin and the evolutionists by remarking that he preferred finding his ancestors in the Garden of Eden to finding them in a zoölogical garden.

There is a great deal of trouble in the Methodist Church over the Isabella silver mine, which was originally "endorsed" by the *Christian Advocate*, the official organ of the Church, and now turns out, to say the least, to be of doubtful value. The *Herald* publishes interviews with one or two high Church authorities which show that they take a very singular view of the responsibility of the Church in the matter. Bishop Harris says: "I do not think it is right or just to saddle the Isabella mine transactions upon the Methodist Church." The *Advocate*, he continued, "is the official organ of the Church in the sense that it is published by authority of the Church's legislative body, the General Conference, which chooses the editors, and which can remove them, too—and does sometimes," added the Bishop, with emphasis, "if it is dissatisfied with their course. But neither the General Conference nor the Church is responsible for the editorial utterances of the *Advocate*. This has been called a Methodist mine, but I think very unfairly. It has no more connection with the Methodist Church than a burglary would have if committed by a member of the same church." Mr. Phillips, of the Methodist Book Concern, goes beyond this, and insists that Dr. Fowler and Dr. De Puy were "free agents in such a case as this." Now, what is charged is that Drs. Fowler and De Puy, who were conducting the *Advocate*, and published an enthusiastic editorial on the mine, were, immediately before doing so, let in "on the ground floor," or, in other words, got their shares at half price in consideration of the article.

Whether this is true we do not know, but it shows clearly enough what trouble any church would be likely to get into if it took the view of such matters suggested by Dr. Harris and Mr. Phillips. The only reason why a puff of a silver mine appearing in a religious paper like the *Advocate* has any more weight with a church-member than any other puff, is that it is an "editorial utterance" made by men selected for the express purpose of giving advice by the Church. The only way that the Church can show that it is not responsible is by taking the severest measures when the puffing begins, and not waiting till there has been an exposure.

In the not very sweet-tempered controversy between Senator Ingalls and the Rev. Dr. Patton, the latter displays his immense superiority to his adversary in the rhetorical art, by expressing, in reply to the Senator's hope that he (Dr. Patton) may be damned eternally, his own hope that the Senator, "putting away all malice, evil speaking, bribery, and corrupt practices, may be finally welcomed to the glorious rewards of the eternal hereafter." If Mr. Ingalls had had the smallest experience of religious controversy, he would have known that its keenest weapon is a prayer, not that an opponent may suffer eternal punishment—which is simply a vulgar street oath—but that he may escape it—especially if uttered in a despairing tone. Dr. Patton has shown himself a complete master of this arm by surrounding his prayer with conditions which he evidently doubts much whether the Senator will ever be able to fulfil; but in this he may be disappointed.

Mr. Parnell's proposal that provision should be made for the payment by their constituents of the members of his party in Parliament, as a necessity of successful agitation, is another sign of the extent to which the representation of Ireland has passed, and is likely to pass, out of the hands of the landlord class, who have always hitherto held it, into that of poor men, more nearly connected with the peasantry. There is no doubt that it will hardly be possible to keep the kind of material of which the Home Rule party is composed in London without furnishing them with the means of support. Probably not one in a hundred of those whom any Home Rule constituency is at all likely to elect, has any private means. A considerable number of the Parnellites now in Parliament have had to support themselves in London, some by writing for the press, some by subsidies from the voters, and some nobody knows how. But, anyhow, their poverty has furnished their English colleagues with many a bitter jibe, which we may be sure has not contributed to the reconciliation of the two countries. But if the Nationalist members, when they come in in larger numbers, have to depend on contributions from the constituencies, the outlook is rather a blue one for the cause. The most liberal patriots get tired of voluntary contributions to any man's support, and we may be sure the prospect of a salary in London, for making the British lion howl at St. Stephen's, will tempt a good many men into public life whose doings and sayings will not glorify the Irish name.

Mr. Trevelyan, the Irish Secretary, has been making a speech in England which shows that he, too, is falling a victim to the pernicious atmosphere which seems to surround Irish official life. He has been justifying the prosecution and imprisonment of Healy, Davitt, Quinn, and others for press and platform offences, by alleging that their language prompts to crime. Now, the peculiarity of this is that it is the argument by which restrictions on speech and writing have been justified in every country in Europe, and which Englishmen have now been deriding for fifty years. Liberty of speech was denied to Frenchmen, Germans, and Italians during all the earlier part of this century, on the express ground that it would lead to disturbance. The modern doctrine, which we practise here, and which is practised in part in England, is that the less notice there is taken of violent language the more harmless it is. Another peculiarity of Mr. Trevelyan's position, as well as that of nearly all English men who go to Ireland to hold office, is that Irish experience apparently produces no effect on it whatever. Each Englishman when he takes up the Irish question treats it as if the particular experiment he was going to try upon Irishmen had never been tried before; the fact being that every means of bringing Ireland to reason, except good government, has been frequently tried. Press prosecutions as a means of making Irishmen behave themselves—that is, stop murdering landlords, bailiffs, and policemen, and getting up riots and outrages—have been tried for over a century, and have always ended simply in making the criminals more popular than before, and giving increased weight to their talk.

We called attention a fortnight ago to the Mallow election in Ireland, a small and corrupt borough hitherto held by the Liberals, in which the Liberal candidate had just been defeated, in spite of all exertions, by O'Brien, a Home Ruler, or Nationalist, without a cent in his pocket. We said that it was an extremely important event, as indicating beyond much doubt the sweeping of all the Irish Moderates and Liberals from Parliament at the next election, and the return of a powerful force of Home Rulers under Parnell's lead, and therefore as illustrating the shortsightedness of those English statesmen who fancy they are going to close the Irish question by the Land Act and the Repression Act. The last *Pall Mall Gazette* confirms this view in the following emphatic warning:

"This disappearance of Liberalism in the south of Ireland has been very confidently predicted by well-informed people for the last two years. It means, in plain English, that Mr. Parnell, or somebody more advanced than Mr. Parnell, will come back after the next general election with his contingent doubled or trebled. That possibility has long been present to all prudent politicians, as well as the decisive power which in a more nearly balanced state of English parties it would place in the hands of the Irish members. If in a couple of years we have a clean sweep of Liberals and moderate Home Rulers like Mr. Shaw, the two Blennerhassets, and the rest, we shall at last find ourselves face to face for the first time with a Nationalist majority from Ireland. Then, indeed, Lord Harrington will be able to say that the government of 5,000,000 people who live in Ireland presents problems by the side of which all our other problems together sink into insignificance. It would be easy enough, as everybody knows, to govern Ireland in a fashion if she sent no representatives to Parliament, and if our rule were non-constitutional. But, as it is, the principles of the English political system, to say nothing of the exigencies of our parties, make it certain that Irish opinion and the Irish members will be considered, and that attempts of all kinds and degrees will be made from time to time to conciliate them. We may all talk as loud as we please about refusing to go another inch, and taking care not to make Ireland a party question. But everybody with his eyes open knows that what we have just said is the simple and honest truth."

The Ministerial confusion in France continues. The various combinations through which M. Grévy is trying to get a new Ministry dissolve almost as rapidly as they are formed, and as they are simply combinations of persons of no political weight or significance, and with no support in the Chambers, they are not worth following. The crisis is one to which any parliamentary government is exposed, but which in England would be met by a dissolution. The Presidency of the Council would be given to some man of mark, and he would form a Cabinet, and, by dissolving Parliament, appeal to the country either to support it or to indicate what should take its place. M. Grévy cannot adopt this course without the consent of the Senate; but why he does not ask for this consent is one of the mysteries of the occasion. It is quite clear that with the present Chamber no strong Ministry is possible. Every fresh effort to patch up a Cabinet seems to carry the President lower down in the political strata. General Thibaudin, the latest Minister of War, is charged, we believe truly, with having surrendered and given his parole at Metz, and with having broken it and taken the field before being exchanged.

The French Senate, as was expected, has rejected the bill providing for the expulsion of the Princes, and, going further than this, has refused to agree to a compromise, offered by the Ministry, authorizing the President to expel the Princes by decree if their conduct should seem to him prejudicial to the safety of the state. In fact, the only thing the Senate is willing to do in the matter is to provide the punishment of banishment for any Prince found guilty of furthering pretensions dangerous to the state, but only after a trial before the Court of Assizes or the Senate. The result of all this is that the Ministry have resigned again. Of course, nobody cares about the resignation of the Ministry, but it seems as if it must carry M. Grévy and the Senate one step nearer to a dissolution. As far as can be gathered from the press, all the moderate opinion of France is growing steadily more hostile to the violent and exciting courses of the present Assembly, and especially to this last attempt to begin a policy of administrative or legislative proscription of individuals. There is no knowing where such a policy would stop, and it is therefore an alarming precedent. If the Princes may be punished without trial to-day because the majority does not like them, somebody or anybody else may be to-morrow; and, in a country of revolutions, every man with anything to lose is disposed to dread such weapons, no matter who may carry them.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 7, to TUESDAY, February 13, 1883, inclusive.]

DOMESTIC.

THE Ohio River has been rising steadily, and on Monday the situation in Cincinnati became serious, the rise having exceeded 64 feet. The losses of property will amount to millions of dollars, and thousands of people have been made homeless. All the factories and houses in the streets nearest the river are flooded. All railroads but one running into the city have suspended business entirely. On Sunday the fires of the gas-works which supply both Cincinnati and Newport, Ky., were put out by the flood, and the city has been obliged to depend on lamps and a few electric lights. Measures have been taken to meet promptly all cases of distress, over $15,000 having been collected for this purpose. Great damage has also been caused in Louisville, Ky., by the overflow, as well as in the river towns of Indiana. A great number of persons have been thrown out of employment.

On Tuesday the floods in the Ohio Valley reached an alarming point. In Cincinnati the water continued to rise till it reached sixty-five feet and one inch. The depot of the Cincinnati Railroad, which, however, consisted of small temporary frame buildings, was carried away by the bursting of a sewer in McLean Avenue, and for a time there were rumors of an extensive loss of life, which failed to be substantiated. In Louisville on Tuesday night nearly a square mile of territory was under water within the limits of the city. At eleven o'clock at night a dam in the north-eastern part of the city gave way, causing great destruction of property and the loss of a few lives. From 5,000 to 8,000 people are homeless. Business has been practically suspended in both Louisville and Cincinnati.

On Saturday, "for the first time in the memory of the oldest inhabitant," navigation on Lake Michigan was completely closed. The perils of winter navigation on the lakes this season are said to have been very great.

A special report from the Bureau of Statistics shows that the excess of our exports over our imports was nearly $260,000,000 in 1881, but in 1882 the balance in our favor was a little less than $26,000,000. The balance in our favor for the first half of the current fiscal year was $54,500,000. The exports were $425,500,000, in round numbers, for the six months, and the imports $371,000,000. If this rate of export should be maintained, our exports for the year would exceed those of last year by $100,000,000. In December the value of the exports of merchandise was $92,960,433, or about $3,000,000 a day. This rate has been exceeded only once in the history of the country.

The result of the tariff debate in the Senate on Wednesday was that books, pamphlets, and other printed matter were put on the free list; the duty on bituminous coal and shale was made 75 cents per ton, on matches 35 per cent. *ad valorem*, and on diamonds and other precious stones 25 per cent. *ad valorem*. On Thursday the duty on dressed and undressed building stones, with the exception of marble, was made $1 50 and $1 respectively, and the consideration of the free list was completed. On Friday a charge of $2 50 was put upon the entrance and clearance of vessels of 300 tons burthen and upward. On Saturday the tax on tobacco was reduced to 8 cents a pound, and the bill was reported from the Committee of the Whole to the Senate. On Monday so many amendments were offered that it was found impossible to pass the bill on that day, or on Tuesday.

The House has spent most of the week on the metal schedule.

The Senate Committee on Foreign Affairs on Friday decided to report a bill to provide for the execution of the provisions of Article 2 of the Supplemental Commercial Treaty of November 17, 1880, between the United States and China, for the repression of the opium traffic. It prohibits the importation of opium into the United States by Chinese subjects under penalty of a fine of not more than $500, imprisonment of not more than six months, and forfeiture of the package; and provides a similar penalty for the importation of opium into any open ports of China, or its transportation from one open port to another, by American citizens. The bill is to take effect on July 1, 1883.

The Senate Judiciary Committee has agreed upon a bill appropriating $150,000, to pay Mr. G. W. P. C. Lee for the Arlington property, the Government to be responsible for back taxes; and it is said that Mr. Lee has consented to accept this sum.

Representative Beltzhoover, who has favored the transfer of the Weather Bureau to the Interior Department, published on Thursday, in the *Congressional Record*, accompanying a speech upon this subject, a number of letters which indicate that the officers of the Signal Corps under General Hazen undertook, last winter, a systematic scheme of lobbying and of organizing demonstrations of public sentiment in support of a bill called "The Majors' and Captains' Bill," which provided for the addition of three majors, twelve captains, and twelve first lieutenants to the Signal Corps, for the regulation of appointments and promotions, and for other details, tending to consolidate the Corps and establish it on a permanent foundation in connection with the Army. General Hazen has made some very unsatisfactory explanations.

Treaties with the Sioux Indians have been submitted to Congress for action, which will throw open the great Indian reservation in Southern Dakota to settlers. The area of the territory included in the reservation is about 11,500,000 acres. The Indians are not to be removed to other Territories, but will be gathered into small reservations within the limits of the large one. The consideration paid to the Indians will be 25,000 cows and 1,000 bulls; 320 acres of land in the new reservation secured to the head of each family, with eighty acres for each child; and a good cow and yoke of oxen to each family that takes land and begins to cultivate it. The Government will also furnish to each of the new reservations a doctor, a carpenter, a miller, a blacksmith, an engineer, and a farmer for ten years.

Governor Bate, of Tennessee, in his message, reviews at length the history of the creation of the State debt. He says that $14,000,000 of bonds were issued to railroads immediately after the war, when a majority of the citizens were disfranchised; that purchasers were put upon their guard, and that he doubts if any Southern State has settled this class of indebtedness upon more liberal terms than those proposed by Tennessee. He suggests the tender of a settlement of the State debt proper in full, less the war interest, at the same interest as that of the original bonds; also, of those held by educational and charitable institutions, and the twenty-nine bonds of Mrs. Polk. He proposes that the remainder, or "contingent debt," be settled at fifty cents on the dollar, principal and interest, with interest at three per cent.

The proposition to submit a prohibition amendment to the Constitution of West Virginia to a popular vote, was defeated in the State Senate on Wednesday. The Prohibitionists of Iowa held a convention on Wednesday evening, and voted to demand of the Governor that he call a special session of the Legislature to reënact the prohibition amendment to the State Constitution, the former amendment having been declared unconstitutional by the Supreme Court.

The sesquicentennial celebration of the settlement of the State of Georgia began in Savannah on Monday and finished on Tuesday. It was a success.

Mayor Edson, of New York, presented the draft of a new charter for that city, prepared by himself, to the State Legislature on Thursday. It provides for single heads for all the departments of the city government except the Board of Education. The sole power of appointment and removal is vested in the Mayor. It is not believed that the proposed charter meets with the approval of politicians of either party, and there is little chance of its becoming law in its present shape.

A meeting of merchants engaged in the manufacture and sale of dry goods was held at Cooper Institute, New York, on Wednesday evening, to "protest against any legislation by which finished goods can be imported at lower rates than those imposed on the materials of which they are manufactured." The President of the meeting said that the protectionist meeting of the preceding week did not properly represent the manufacturers of New York, who were, in fact, outraged and insulted by the views expressed at that meeting, and that New York manufacturers demand that they shall not be taxed by the new tariff law so that they cannot compete with foreign manufacturers. Resolutions to this effect were adopted.

President Jarrett, of the Amalgamated Association of Iron and Steel Workers, has sent out a circular to the workingmen in the iron industries, saying: "We suggest that our craft, in every town and city in the country, organized or unorganized, get up tariff meetings immediately, invite every one to attend, and adopt resolutions calling on Congress to pass at once a tariff bill similar to the one recommended by the Tariff Commission or none at all. To pass a tariff bill such as the one now before the Senate would be to nearly, if not completely, close every iron and steel mill in the country."

The New York Chamber of Commerce has sent to President Arthur a memorial setting forth that the German prohibition of American pork is founded on misinformation, and suggesting that Germany be invited to send a commission here to see how carefully diseased pork is excluded from the exports.

On Saturday a meeting of the Board of Directors of the Mutual Union and Western Union Telegraph Companies was held, at which a contract was signed by which the Mutual Union is leased to the Western Union for 999 years. In consideration, the Western Union agrees to pay to the Mutual Union various sums amounting to $500,000 a year. The Western Union assumes full control of the Mutual Union's lines, and will carry out all its existing contracts.

Ex-Governor Marshall Jewell, of Connecticut, died in Hartford on Saturday. He was three times elected Governor of Connecticut, was appointed Minister to Russia in 1873, and returned to the United States in 1874 to take the Postmaster-Generalship in General Grant's Cabinet. He was Chairman of the Republican National Committee in the campaign which resulted in the election of President Garfield.

William E. Dodge, an old New York merchant, famous for his philanthropy and public spirit, died in New York on Friday morning, in the seventy-eighth year of his age.

The Department of State received a despatch on Monday from the United States Consul at Marseilles, stating that the remains of John Howard Payne had been forwarded to New York by the French steamer *Burgundia*, and are expected to arrive about the 15th inst.

FOREIGN.

M. Devès, Minister of Justice, and General Thibaudin, Minister of War, attended the sitting of the French Senate Committee on the Expulsion Bill on Wednesday, and spoke in support of the measure. The Committee, however, drafted a report demanding the rejection of the bill without debate on its individual clauses. On Thursday the report was read in the Senate. It stated that in the opi-

nion of the Committee there was no cause for the Republic either to feel alarm or to resort to the violent measures embraced in the proposed law. It would be a step in a dangerous path, and contrary to the ideas upon which the Republic was founded. The rumors, the report said, of conflicts or of a dissolution did not disturb the Committee, which was steadfastly Republican. Urgency was voted for the debate on the bill on Saturday, and the debate was then commenced. M. Challemel-Lacour, Republican, combated the proposal to reject the bill. He said the Government ought to be armed, as the natural leaders of the parties opposing the republic did not disarm. M. Barthélemy-Saint-Hilaire, President of the Committee, in opposing the bill, said he regretted to see the Republic depart from the path of tolerance. The Government, he said, should propose a general measure, not one directed against individuals. M. Devès, Minister of Justice, replied that the Orleanist Princes had requited the Republic's generosity by proclaiming their adhesion to the Comte de Chambord. If the Government shuts its eyes to the machinations of the Royalists it would be deserting the Republic. On Monday the debate was continued. M. Devès announced that the Government had agreed to abandon the Expulsion Bill and accept the proposal of M. Barbey, rendering the Princes liable to expulsion by the decree of the President of the Republic, if their acts should compromise the safety of the state. This proposal was rejected by a vote of 148 to 132. The first article of the Ministerial bill was then negatived by a vote of 172 to 89. A proposal submitted by M. Waddington, that any Prince found guilty of furthering pretensions endangering the state should be banished after trial before a Court of Assizes, or before the Senate sitting as a High Court, was adopted by a vote of 165 to 127.

All the members of the French Cabinet have resigned in consequence of the action of the Senate on the Expulsion Bill. President Grévy has requested them to remain at their posts for the present. It is stated that M. de Freycinet was summoned to form a Ministry, but that he hesitates to undertake the task.

On Friday the indictment against Prince Napoleon was quashed and he was released. The Radicals were violently excited against the judiciary by this action. The Government has introduced an additional clause in the Press Bill, making the issue of placards inciting to the overthrow of the Republic punishable.

The examination of the prisoners was continued in the Kilmainham court-room on Saturday. Michael Kavanagh, the carman, turned informer, and was the first witness examined. He deposed that on the 6th of May last he was engaged by four men—Brady, Kelly, Patrick Delaney, and one other. He drove the men into Phœnix Park to the Gough monument, where they were met by a cab driven by Fitzharris, from which four men alighted. James Carey and Daniel Delaney were on seats at the side of the road. In a few moments he saw Lord Frederick Cavendish and Mr. Burke approaching arm in arm. Some one among those he drove said the tall man was to be assassinated. Kavanagh was then ordered to go further away by some of the conspirators. As he started he heard some one repeat, "Mind, it is the tall man." Kavanagh was so near the scene of the assassination that he heard one of the victims cry "Oh!" and on looking round he saw one gentleman fall, and saw that the other, who had an umbrella, was lying on the ground. The four men he had driven to the Park jumped on his car and he drove away. Kavanagh then described the route he took. He received £3 and some harness from Brady in payment for his services on this occasion. He was afterward engaged by the party which attacked the juror Field. In their flight on this occasion Brady and Kavanagh wrapped some kind of swords in paper and threw them into the basin at the gas-works. Brady again paid for the car. In replying to the counsel for the Crown, Kavanagh said that on the 6th of May he wore a white hat, but that a man on the car, who was not in the prisoner's dock, changed with him, giving him a large brown one. This evidence is important, as it is believed to furnish a clew to a murderer who has not yet been apprehended. After Kavanagh's evidence had been given, various points in his account were corroborated by other witnesses. Kavanagh's evidence is thought to be conclusive. The Crown has accepted the evidence of another informer, who will identify the actual murderer of Lord Frederick Cavendish and Under-Secretary Burke. It is certain, from the evidence given so far, that Mr. Burke was first murdered, and that the plot was primarily against him. The examination is to be continued on Thursday.

On Thursday Messrs. Davitt, Healy, and Quinn, who were arrested some time ago for making inflammatory speeches, having refused to give bail for good behavior, were arrested and conveyed to Kilmainham Jail.

The trial of Mr. William O'Brien, editor of the *United Ireland*, for seditious libel, was begun on Friday. On Thursday 2,000 starving persons surrounded the house of Mr. Woodhouse, the Poor-Law Inspector at Glencolumbkill, and demanded employment. Mr. Woodhouse, in replying to the crowd, advocated emigration.

Archbishop Croke has written a letter confirming the accounts of the widespread and fearful distress prevailing in the counties of Mayo, Donegal, Clare, and Sligo. He says the country can never expect peace and plenty until it is rid of the yoke of a bloated and ruthless oligarchy.

Mr. Trevelyan, Chief Secretary for Ireland, in a speech at Hawick, Scotland, on Friday, denied the statement that the diminution of agrarian crime in Ireland was more apparent than real. He referred to the rapidity with which murderous crimes had diminished when it became apparent that the murderers would be hanged. He denied that the Government had suppressed freedom of speech or liberty of the press. The Government, he said, was ready to work with the Irish members of Parliament in advocating legitimate schemes of reform. Mr. Trevelyan stated that 90,000 farmers in Ireland had taken advantage of the Arrears of Rent Act.

The London *Times*, in an article on the programme of the Irish party in Parliament, says it is probable that Mr. Healy's scheme for local government in Ireland will form the basis of the chief Irish Bill. On the address in reply to the speech from the throne there will be a debate on the general subject of the Irish policy of the Government. Mr. Parnell will demand an official account of the private inquiry held at Dublin Castle, and will point out the necessity of further measures for the relief of distress in Ireland. A bill to amend the Land Act has been drafted already.

Mr. Parnell, in a communication asking the attendance of the Irish members of the House of Commons at the opening of Parliament next week, says events of the greatest importance to Ireland will be discussed. A preliminary meeting of the party will be held on the 14th inst. to consider the action of the Irish members during the session. Mr. Parnell, writing to Mr. Joseph Walsh concerning a possible vacancy in the representation for the County of Mayo, deprecates the election of a member who will refuse to take his seat. If the time came for the Irish members to retire from the House of Commons, he says, they should do so in a body. He earnestly advocates the adoption of some system of pecuniary compensation to members. If the constituencies did not make an effort in that direction, he should be obliged to consider whether he could persevere in the thankless task of endeavoring to keep together an independent Irish party.

Mr. Judah P. Benjamin, the celebrated London barrister, formerly a member of the Cabinet of the Confederate States, has retired from the practice of his profession.

The late Earl of Ashburnham's collection of manuscripts is offered for sale to the British Museum. They extend from the Saxon period to the time of Cromwell, and include the refusal of Hampden to pay ship money. There are 4,000 volumes in all. The price will probably be £160,000. The London *Times* points out that if Great Britain hesitates to purchase the collection, America is certainly ready to do so.

The conference on the Danubian question was formally opened in London on Thursday. All the delegates were present except the Turkish Ambassador. Rumania has protested against being admitted to the conference with a consultative voice only, and has declined to attend the conference or to recognize the resolutions.

The Montenegrin Government has issued a circular letter to the Powers, announcing the rupture of the relations between Turkey and Montenegro, on account of the refusal of the former to agree to the cession of territory on the frontier.

Mr. Wallace, United States Minister to Turkey, has protested against the maintenance of the petroleum depots established in Smyrna and Constantinople, in which all the petroleum imported into Turkey has to be stored, the importers paying eight per cent. of the value for storage dues. Mr. Wallace declares that this really amounts to an increase of the import duty. He will accept a compromise making a considerable reduction in the charges for storage.

Richard Wagner, the great German composer, died in Venice at 4 o'clock on Tuesday afternoon. He was born at Leipsic on the 22d of May, 1813.

Mr. Edwin Booth made his last appearance in Berlin on Monday night. The house was crowded, and he was received with enthusiasm. His season in Germany has been most successful. He has played before crowded and enthusiastic houses every night, and been presented with a silver laurel crown.

The German Reichstag on Thursday rejected the estimates for 1884–85, thus sealing the fate of Prince Bismarck's biennial-budget scheme.

The Court of Appeals at Vienna has confirmed the sentence passed against the manager of the Ring Theatre and other persons who were convicted of criminal neglect in not providing adequate means of exit from the theatre, thereby causing such great destruction of life.

The Spanish Council of Ministers has decided to treat as freemen 40,000 slaves who were not liberated by their owners in Cuba in 1870. These slaves are those who were not included in the census taken in 1870, under the law for gradual abolition, because of the failure of their owners to enter them in the lists. The Minister of the Colonies has announced that he will grant Cuba electoral laws similar to those in force in Spain. At a meeting of the Dynastic Left on Monday, Marshal Serrano presiding, it was resolved to actively oppose the Ministry, notwithstanding that Señor Moret counselled a pacific attitude. The divergence of views among the prominent members of the party is much commented on.

The Egyptian Council of Ministers has adopted the first thirty-four clauses of the new charter for Egypt, embodying the proposals made by Lord Dufferin.

The news from South America is that the Chilians continue to collect the monthly war contributions in Lima. The Cholo Indians in the Department of Piura have risen in arms to the number of 5,000, and have been plundering indiscriminately.

A CLEAR ALTERNATIVE.

THE fact that more than five weeks after the passage of the Civil-Service Reform Bill, and four weeks after his approval of it, the President has not yet appointed the Commissioners provided for in that act, begins to attract general attention and to excite remark. Nobody will find fault with the President if he makes his selection for those important places with great care and deliberate circumspection. It may, indeed, not be the easiest thing in the world to find three persons each one in every respect fit for the position and all three likely to work harmoniously together. The President, therefore, ought not to be unnecessarily pushed and hurried by his advisers and critics.

But rumor has it that the President finds great difficulty in solving a problem which he thinks the Civil-Service Reform Act to have imposed upon him—namely, the problem to appoint a Civil-Service Commission which will be equally satisfactory to the civil-service reformers and to the Machine politicians. If this is really the light in which the President looks at the task to be performed, he may as well give it up. The problem is one that cannot possibly be solved. If he makes a Commission to please the civil-service reformers, he must select men who are thoroughly determined to carry out the spirit of the act in good faith, and who also possess the necessary qualifications for doing it, and that will of course dissatisfy the Machine politicians. He cannot please the latter without so constructing the Commission that, while appearing to serve, it will really defeat the purpose of the law; and that would of course be easily detected and appropriately criticised by the civil-service reformers. Skilled equestrians can ride two horses running side by side; but nobody has ever been known to succeed in riding two horses going in absolutely opposite directions.

It has been suggested in various quarters that there might properly be one "practical politician" appointed as a member of the Commission. No arrangement could be more absurd. It is one of the most important objects of the Civil-Service Reform Act to take the public service, as far as this law touches it, entirely out of practical politics. The practical politician is to have absolutely nothing to do with it. The very spirit of the law demands that the practical politician's characteristic methods and tests of fitness shall be carefully excluded from the business of making appointments and removals. That business is to be managed upon principles as far away as possible from the practical politician's point of view. To what end, then, should a practical politician be put on the Civil-Service Commission? It can only be to keep the Civil-Service Commission in contact with the spoils system and the political machine, and to a certain extent under their influence. Nothing could be more absurd on its very face. We might as well put a whiskey distiller on a committee for the promotion of temperance, or a tobacco manufacturer at the head of an organization for the suppression of smoking.

It is said here and there that the whole civil-service reform idea is on trial in this attempt to carry it into practice under the new law. This is a mistake. The civil-service reform idea, just as it is embodied in the so-called Pendleton bill, has already been tried and tested in the New York Custom-house and elsewhere; and wherever it has been tried in good faith and by competent persons it has been found to work successfully. It is no longer a mere experiment of uncertain issue. There is no question at all about its practicability in all the offices designated by the law. Nothing is needed but earnestness of purpose and competent management. There ought, therefore, to be no delusion about one thing: it is not the civil-service reform idea that is on trial, but the good faith of those who have to execute the civil-service reform law.

President Arthur's language in his last message concerning the popular demand for just that kind of reform which the new law provides for, and concerning his willingness to carry out such a law, was so unequivocal and emphatic that it would be unfair to question his intentions beforehand. It may be supposed that the believers in the spoils system and the beneficiaries of Machine politics are bringing all their influence to bear upon him to swerve him from his purpose. It is very much to be hoped that he will not permit his judgment to be persuaded that by some legerdemain he can compromise between the reform and the thing to be reformed. The alternative before him is clear and absolute. Any attempt to evade it would be seen through at once and would fail. If the President manfully recognizes and performs the duty which the law imposes upon him, he will have all the more credit, as it will be generally remembered that the influences he had to overrule were those which had in former times been strongest with him.

THE ORLEANS PRINCES.

THE Orleans Princes, who are still threatened with expulsion on account of Prince Napoleon's manifesto, are in a curiously embarrassing situation. They are sincerely attached to their country, like the military service, are personally popular, have undoubtedly given up all hope of reigning; and yet they are in danger of exile, without trial, under a régime of which the equality of all before the law is the principal feature. Moreover, the family has never at any period given any sign of a desire or intention to take or hold the crown by force. Louis Philippe was put on the throne by the free act of the Chambers, and he ran away in 1848 with a readiness and complacency which no other deposed sovereign has ever surpassed. The temper of the family has, in fact, always been very averse from violence of any sort. Its forte has been in shrewdness, dexterity, and calculated peaceableness. Between 1830 and 1848 France was more than once on the verge of war, partly owing to the King's love of intrigue, as in the case of the Spanish marriages; but he always managed to avoid a collision, even at the expense of his reputation.

Nobody believes that the Duc d'Aumale or the Comte de Paris would enter into a conspiracy against the Republic. Nobody alleges that any of the family believes a restoration of the monarchy possible in France at present. None of them has committed any overt act against the Republic like the posting of the Prince Napoleon's placards. Everybody likes them personally. The Duc d'Aumale, now the head of the house in point of wealth and age, is one of the most distinguished of living Frenchmen. He served in the army in Africa, before 1848, and won as much distinction as a strategist as the wars against the Arabs would permit. He is a member of the French Academy, an honor for which the late Emperor sighed in vain. He is a great art connoisseur and collector, and has a house at Chantilly which is hardly surpassed by any private or even royal residence in the world, both for splendor, taste, and historic interest; and his hospitality in it, unlike that of the Bonapartes, reaches the very best class of Frenchmen in all walks, including the most ardent Republicans. His domestic misfortunes, too, have been great enough to touch the heart even of a Nihilist, for he has lost his wife and all his children in succession—the last son after he had reached manhood. This final blow drew from Victor Hugo a touching expression of sympathy, widely separated as he was in politics from the Orleans family. Why, then, is there this desire to drive them out of France on the part of the more fidgety Republicans?

There are three causes for it. One is that the Princes seriously offended the French public when it was in a very sensitive state, by accepting from the first Assembly after the war the return of the property confiscated by Louis Napoleon after the *Coup d'état*, amounting to about $8,000,000. It is true, the amount confiscated was about $20,000,000, and the Princes refused to accept more than actually remained in the possession of the Government of the property originally taken. It is true, also, that if the confiscation was an act of spoliation pure and simple, there ought to have been nothing discreditable in taking back their own; but although the case was one of simple spoliation as far as Louis Napoleon was concerned, it was not one of simple spoliation as far as the Princes were concerned. The French people had a sort of lien on the property. An old law of the French Monarchy compels each sovereign on mounting the throne to hand his private fortune, originally derived from the state, back to the state. When Louis Philippe found that he was likely to be elected King, in 1830, he, on the 7th of June in that year, made his fortune over to his sons. He was not elected till the 9th, and accordingly at that date, having no such property in his hands, he was able to evade the law, but that he had evaded the law in an unworthy manner was the opinion of a great many. His principal justification was, that taking a revolutionary crown under a very uncertain tenure was not the succession to the crown contemplated by the framers of the law. If his transfer was illegal, however, it was for the courts to set it aside by a regular judicial process after the Orleans family was driven out. But Louis Napoleon, after the *Coup d'état*, set it aside by a simple decree of his own, or, in other words, by brute force, and probably as a piece of private vengeance, so that his act was really simple robbery; but it was an act which left the equities of the case as regarded the French people standing, and they were irritated greatly when, in the midst of the national dis-

tress, the family took back what was left by a vote of the Legislature, also without judicial process. This was a fatal error on the part of the Princes.

The second cause of hostility to them is the success of the Pretender in 1849 in getting the popular vote for the Presidency. The peasantry, it is true, knew nothing about the Orleans Princes, but they knew nothing about Prince Napoleon; they simply took the man with the best-known name, as they would have taken Thiers in 1871, or Gambetta in 1877. Thiers and Gambetta are both gone. The Bonapartes are discredited. The need of a strong man begins to be talked of. The President of the Republic, after M. Grévy, may be either forced on the Legislature by public outcry, or he may be produced by popular election, and, in the absence of all political notables, the voters are not unlikely to take hold of the name which seems most illustrious and which they hear oftenest. They will not take the Prince Napoleon; why not, therefore, the Duc d'Aumale?

The third cause is that the Orleans Princes are soldiers, and actually serving in the Army, and in the Army their popularity is great and naturally grows. Now, all Frenchmen, and especially all French politicians, are afraid of the Army. To a very large number of them the Army is really the people. They speak of it in the terms of mingled reverence and admiration which American writers bestow on the voters. It is, in their mouths, always the Army only, of all the nation, which is pure, simple, patriotic, wise, and devoted. When things begin to go wrong, as at present, the politicians hold the Army over each other's heads, just as they do "the people" here. They ask each other how long the Army will stand this sort of thing, and threaten each other with the irritation of the Army unless there is some improvement. A prince in the Army, therefore, at a crisis like this, readily becomes a shape of dread. The majority in the Assembly, engaged in dickerings, and intrigues, and cabals, and in making and unmaking ministries and reversing policies, is startled by the slightest tumult in the street, inquires eagerly what the soldiery think about it, and suspects every prominent military man of meditating interference of some kind, and especially and naturally suspects military princes of having a military following disgusted with the doings of the "rhéteurs" in the Legislature, and ready to save the state. This last is probably the only cause of suspicion the Orleans family can remove. If they are wise they will quit military life. Soldiering may be a pleasant and appropriate occupation, but the time has apparently gone by when it was the sure road to political eminence in France.

THE PRESS AND AGRICULTURE.

A TENNESSEE farmer's wife wrote a letter to a morning paper, the other day, complaining rather bitterly of that newspaper for always extolling the "superiority of agriculture" to other pursuits. She says that she once held the same opinion, but actual experience has changed her views. The farmer and his family, she maintains, have not a pleasant or easy life at all.

There is no denying that her picture of farm life is true enough in the main. The grain, hay, butter, eggs, fowls, and fruit do not, as a rule, much more than pay for the cost of production, and the only way they can be made to do this is by constant, unremitting, monotonous toil, the necessity for which compels the farmer to use as much of his sons' labor as possible, so that they can rarely get a thorough education. The farmer's wife has meantime to make herself a drudge indoors. The daughters, she thinks, as a rule, marry farmers, and "a very few years change their blooming youth to a haggard old age." Probably it is the daughters who get, before their marriage, most of the luxuries and of the education which the scanty means of the family can procure; but when this is the case the education is hardly of a kind to make a marriage with a man pursuing their father's occupation at all attractive to them. The effect of their education must be to a great extent to discontent them with farm life, and to make them form an ideal of existence in sharp contrast with it; an ideal in which concert, theatre, and opera, unlimited magazine reading, and music, with occasional trips to Europe for the renewal of their wardrobe—in short, the amusements and privileges of the wealthy city dweller—play a most important part. All this no doubt produces a large number of agricultural girls, if we may call them so, who are sensitive, refined, and qualified to appear well in a new sort of life. There are more of such girls in the United States than in any other country in the world. The system, however, is constantly breeding, as it must, dissatisfaction with what they see about them, and a desire for change; a suspicion, too, that "home" is not what it might be. All this does not tend to make farm life one of pure happiness and content.

On the whole, people on farms work harder, sleep less, live plainer, and have fewer luxuries, than people who live in cities and towns. Moreover, they barely make a living, while they see colossal fortunes built up around them by the middleman, the speculator, and the "monopolist," who handle what they produce. The correspondent might have added—and cited Dr. Sargent's recent lectures on the subject to prove it—that life in towns is, on the whole, more healthy than it is in the country. Town people have less malaria, better food, higher spirits, and, on the whole, get more out of life in every way.

No paper, however, stands alone in recommending agriculture, and advising people to adopt it as a pursuit; the advice is given by the press generally. No newspaper ever recommends a correspondent, who applies to it for information and suggestions as to the best means of earning a livelihood, to come to the city to try "clerking" in a dry-goods store, but invariably advises him to try a country life and agricultural pursuits, assuring him that he will secure by this means health, wealth, and a comfortable provision for his old age. The habit of giving this advice is one of the features of modern journalism, and is not altogether confined to this country, as any one will admit who recalls the scheme for getting the Jews out of their troubles by inducing them to go back to Palestine and take up the plough. It is in this country, however, that the advice is most continually given, and yet, strange to say, this is the country which has one of the greatest city populations in the world, in which people are continually crowding into cities, and in which it is almost impossible to keep the second generation "on the farm."

The fact is that the press has inherited the literary tradition on the subject of country life which has come down from classical times, its idea of agricultural pursuits being mainly that derived from thinking about them in town. There is no one to whom life in the country seems more attractive than to a busy city man, who looks to it as a place where he can get rest and relaxation, fresh air, and freedom from responsibility. The literary man and journalist in New York looks upon the country just as Cicero did, and it is the literary view of life in the country of which the Tennessee farmer's wife complains. This view rests on ancient urban tradition, not on farm experience. The farming class, who make up the greater part of the population of the globe, the men who actually till the soil, have never had a close connection with literature, and the notion of the lives they lead, which the poets and essayists and finally the press put forward, is not derived from their experience.

The literary view is, no doubt, perfectly right as far as it goes. A rich lawyer or merchant, who likes to have a place in the country at which he can play at being a farmer, can get all those advantages from the life which, according to the prevailing press theory, it affords the farmer. One of the reasons always urged for adopting agricultural life is its "independence." No farmer who gets his living from the soil would dream of recommending it for this reason, because he knows very well that he is tied down to it from one year's end to another. It is assumed that he has no one over him, though farm mortgages are so common in this country that it is difficult to believe that the dread of his creditor is not constantly before his eyes; but at any rate his profits are so small that nothing short of constant watchfulness enables him to make both ends meet. The city man, on the other hand, does actually get independence in the country; he escapes for the time being his business, his correspondence, the daily wear and tear of an exacting life. He has plenty of time to improve his mind by reading; his children have every opportunity for out-door exercise and sports. His girls play Beethoven and Mozart, and read poetry and study the fashions, with no reason for dreading that it will unfit them for any rural life that they are ever likely to lead in after years. His farm, if he has one, is conducted with the delightful feeling that it makes no difference whether it pays its expenses or not, so long as it gives him milk and vegetables for his table. Moreover, the country air and country "views" are a constant source of delight to him, while the real farmer's ideas of atmosphere are principally confined to a knowledge of the different effects it produces on the crops, and the enjoyment of landscape is to him quite as unintelligible as the pleasure which city people find in the curious occupation of "walking"; the idea of using his legs for purposes of relaxation being

one that never occurs to him. Health is naturally one of the results of a country life which is always held out as a reason for engaging in agricultural pursuits. But no farmer who contrasts the appearance presented by "tourists" with that of his friends and neighbors, would be likely to come to think there was anything in such an argument. He would be more likely to infer that health is one of the things which people get by living in cities. At any rate, he would not be far wrong if he were to insist that all the things which in the literary view of the country recommend it—health, independence, and opportunity for "culture" in all its forms—imply the possession of money, while constant farm life implies a sad want of it. It is for this reason that farmers' sons and daughters and wives probably in nine cases out of ten share the ideas of the Tennessee writer, and show the strong disposition to leave the farm and flock into cities which is one of the features of American life. It is useless to urge them not to do this on the grounds generally brought forward. As long as the world has to be mainly employed in getting its subsistence out of the earth, agriculture will be the commonest of all occupations; but the progress of civilization is in great part measured by the number of people who are released from it, and who are enabled to earn their living in ways in which they have more leisure and less constant and monotonous toil. Notwithstanding the literary city traditions on the subject, we must therefore expect from time to time to hear a plaintive request from farmers, or their wives or daughters, to "let up" a little in our rosy pictures of agricultural happiness.

THE CRUSH HAT.

THE Boston *Advertiser*, while expressing entire agreement with the position we have taken with regard to bouquet reform, suggests that there is an opportunity to join in another movement for social improvement, in which it thinks we would have an immense amount of female support. It quotes an "anxious mother"—a representative of a large and important class, whose good opinion, if it counts for little with girls, is of the utmost moment to young men—as demanding that men shall stop bringing crush hats to balls. The reason she gives is that the dresses of girls are blackened and injured by them. The german dancer places his folded hat, held in his right hand, upon "the back breadth of the delicate waist," and "polishes it about until the destruction is complete." The anxious mother therefore demands that crush hats be "banished." It is a painful illustration of how little of the real leaven of Reform fills the hearts of some of those who take it up, that the *Advertiser* flippantly hints that the crush-hat abuse as practised by men may be a good "plea" by way of "set-off" against the bouquet abuse as practised by women. This is the old idea so commonly met with in politics, that the way to meet an abuse countenanced by one party is to show that quite as bad a one is tolerated by the other. It is not in any such spirit of levity that we can discuss matters which concern the social interests of two great historic sexes, however usual the practice may be between Republicans and Democrats.

But we cannot join in any crusade against the crush hat, because, instead of regarding it as an evil, it is to our minds one of the greatest boons vouchsafed by civilization to man. Whether there is any truth in the idea that the german dancer spoils dresses by "polishing" them with it we do not know; but admitting that such may be the case, the conclusion drawn, that it should not be allowed at parties, is for a variety of reasons unsound. First, some men still go to parties not to dance, but for the purpose of engaging in what they like to think is conversation; and a non-dancing man cannot make such a use of his opera hat as to spoil a lady's dress. Besides this, dancing men themselves can dance without the assistance of an opera hat, and thus, if a movement against the hat was set afoot, they could meet it at once by simply abandoning the practice, without giving up its use for other purposes. The anxious mother's complaint recalls the old story of Sir Astley Cooper's reply to a lady who told him she had a dreadful headache whenever she put her hand to her head. He advised her not to put it there. If crush hats do really blacken ladies' dresses, ladies can easily prevent their being used in dancing; but to ask us on this account to give up using crush hats, shows rather an anxious than a rational state of mind.

We have within the past few years noticed symptoms of a hostility to the crush hat in society, but the explanation generally offered has not been connected in any way with ladies' dress. The movement was started in England, where society is in the hands of a rich and idle class, one of whose amusements is the introduction of fashions for the mere sake of variety. In this society the fashion was suddenly started of bringing to balls and parties, instead of a crush hat, the ordinary tall black hat which is known among gentlemen as a beaver, among others as a "silk hat." The hollow pretence of a reason given for this was that "cads" had got into the habit of carrying crush hats, and that gentlemen ought to break loose from a caddish custom. Everybody knows, however, that whatever gentlemen do, cads copy, and that, in fact, cads are recognized as such by their habit of copying and not copying well. Besides this, if the cad is beginning, as some people think, to produce a dangerously good copy of the original, the stiff hat would be a poor barrier. He can carry a stiff hat, and if gentlemen, in terror of him, were to band together, and come to parties provided not only with a beaver, but with an umbrella, overcoat, and arctics besides, he would be there also in costume as soon as he got wind of the change. For these reasons we say that the practice of carrying a stiff hat was introduced without any cause but love of variety, in a foreign, frivolous, and aristocratic society; and it is a fashion which we are not bound to adopt here unless for reasons which commend themselves to our judgment. Anglomaniacs may maintain that the fact that there is a movement against the crush hat in England, is reason enough for our falling in with it; but for those who look into social questions with a calm, steady, impartial scrutiny, this will not do. In this country we can consider the crush hat as it really is, without the slightest regard for "abroad."

Now, we venture to say that for convenience, economy, and utility, no article of dress has been invented by man for man's use which at all compares with the crush hat. The blessings it has conferred on us can best be appreciated by reflecting what our position would be if the foolish movement against it gathered headway and it were really banished, and we were condemned to the use of the stiff hat instead. In the first place, the expense of hats would be greatly increased, because exposure to a very small number of balls would completely destroy not only the appearance, but the form and identity of a tall hat. If it is not to be used in dancing it must be left about, and the temptation to sit on hats exposed in this way is well-nigh universal. The only other alternative is to leave it in charge of the host's servants, who would, of course, make a compact bundle of it, in conjunction with arctics and overcoat, the effect being probably as serious as in the first case. Besides all this, there is a natural difficulty of distinguishing between the hats of different persons, which, if they were left about a ball-room, would lead to unpleasant charges of misappropriation, such as, in the case of umbrellas, continually create hard feeling, smile and jest about them as we may. At the theatre or opera, the case of the stiff hat is even worse; for there is literally no place provided for it except the floor, where, if not constantly watched over, it is kicked or trampled to pieces in an incredibly short time. There is no more distressing and anxious situation in life than that of a man whose attention is continually distracted from beautiful music or an absorbing drama by the well-known, sickening sound produced by the contact of his neighbor's foot with the hat which he tried to put out of his reach by depositing it beneath his seat, or in a corner of his box; and we can imagine nothing more likely to destroy popular interest among men in the theatre than the thought of the spectacle which their stiff hats would present at the end of the performance. These are things that women and mothers know nothing of.

That a crush hat has its moral uses, in giving confidence to and aiding the conversation of the stupid and embarrassed who constitute so large a proportion of "society men," any candid man will confess. The hands in society are the great obstacle to the expression of thought, and if something is given them to do the difficulty is got over. For this purpose the shape of a folded crush hat is convenience itself. A tall hat would defeat the object, and itself create embarrassment, for, owing to its cumbrous shape, holding it and conversing agreeably is a very difficult feat, which only long practice renders possible. It is reasons like these which, probably, originally led to the introduction of the crush hat. They are reformatory reasons. They show that instead of joining in a movement against the crush hat, we should do all in our power to resist anything of the sort.

GRUCKER'S LITERARY DEVELOPMENT OF GERMANY.—II.

PARIS, January 18, 1883.

I LEFT M. Grucker's book on 'The History of Literary and Æsthetic Doctrines in Germany' at the chapter concerning Leibnitz, which is full of interest. While, thanks to Leibnitz, to Thomasius and their disciples, the German language was increasing every day in strength and substance, German poetry was still very imperfect and artificial. We find a return to nature and simplicity first in Saxony, in the works of Christian Weise (born in Zittau in 1642), rector of the Academical Gymnasium of Zittau, and author of many comedies, dramas, religious poems, and popular songs. Weise wrote also some didactic essays. His literary principles are sound. "I love liberty," he says, "and simplicity. What does not come from the heart does not go to the heart. . . . A painter would be absurd if he painted roses with golden buds; a poet would be mad if he painted shepherds with furs." He criticised the importations of the hôtel Rambouillet, so well attacked in France by Molière, but still triumphant in the Nuremberg school. "A lover will not say, at Nuremberg, 'My dear, I shall have the honor of walking with you'; but: 'You only master of the citadel of my heart, the inflamed globe of the immense sky will be so happy as to throw our two shadows on the green carpet of the flowery country.'" Weise had the courage to say: "The more simply things are expressed, the more they strike us." These principles were expressed in three essays: "Ueberflüssige Gedanken der grünenden Jugend" (1668); "Nothwendige Gedanken der grünenden Jugend" (1684); "Curiose Gedanken von deutschen Versen" (1691). Weise had no imagination; he was essentially an utilitarian, and he had but small esteem for poetry. "He who should call me a poet," he says, "would not much oblige me." He was a pedagogue, and considered poetry as a sort of discipline for the youthful mind. He makes it the slave of rhetoric; a dictionary of rhymes is his poetical instrument. Weise, in short, was useful in so far as he protested against the artificiality of the school of Nuremberg, but he had no ideal; he was trivial, and the poets of his school have justly been called *Wasserpoeten*.

The revocation of the Edict of Nantes brought many distinguished Frenchmen to Dresden and to Berlin, and their influence was soon felt. They were men of the world and men of letters. One of the Germans who were mostly imbued with this French influence was Canitz. He had gone to France very young, and his admiration for this country was intense. He was enchanted with everything—the country, the climate, the manners, the language. He writes to a friend "not to wander longer in the night, but to come at once and live with him in the full light of freedom, and to compose with him songs in the beautiful country where rhyme and reason are found together." Canitz was a disciple of our Boileau; he criticises the German poets of his time. We find the same French influence felt in the works of Benjamin Neukirch, a professor of Berlin, who became an Aulic councillor, and the preceptor of the Princes of the Court of Ansbach in Bavaria. He was a court poet, and soon this court poetry became a sort of official employment. The court poet was an intellectual master of ceremonies or chamberlain. One of them, Ulrich von Koenig, at Dresden, the friend of Canitz, wrote a dissertation on taste ("Untersuchung von dem guten Geschmack in der Dicht- und Redekunst"), which is much superior to his poetry, and in which we see the influence of Addison's *Spectator* and of several French writings.

Hamburg had not suffered excessively during the Thirty Years' War; its material prosperity was very great, and all sorts of plays were the fashion there—the opera especially, with all its extravagances of style and of imagination. The opera writers found, however, an adversary in Wernike, a critic and satirist. Wernike was a Prussian, born of a Saxon father and an English mother. He was a diplomat, lived some time in London, and afterward in Paris; he made a collection of epigrams. He was an aristocrat and a man of taste; he did not believe that any but men of quality could write well; he admired Lord Buckingham, Lord Rochester; he conducted a campaign in favor of pure German, though he was well versed in French and English literature.

Literary criticism had begun its work timidly; it was tentative rather than general and rational. It only became a great power with Gottsched. This writer may well be called the German Boileau. He was intelligent, courageous, armed with science, and he soon became a centre. With Gottsched, imitation of the great writers of the age of Louis XIV. became the object, the rule of German literature. Imitation was confined to the most excellent works of art; whatever was inferior was proscribed. Gottsched rejected the Italian and Spanish models which had so long been copied; he rejected also the popular poems; his ideal was a correct and classical literature. He gave a new power to criticism, and made it more serious and more systematic; he connected its principles with general laws, and supported them not only by the examples of the masters, but also by reason. In short, criticism in Gottsched became essentially philosophical; and it has ever since remained so in Germany, and has felt the influence of all philosophical systems. The system which was dominant in his time was that of Wolf, a disciple of Leibnitz. Wolf was born in Breslau, in 1679, and, thanks to Leibnitz, was appointed Professor of Philosophy and of Mathematics at Halle. His enemies persuaded Frederic William I. that the theories of Wolf helped his grenadiers to desert from the army; Wolf was represented to him as a dangerous Liberal, and he was expelled. He found an asylum in the University of Marburg. The great Frederic recalled him to Halle, where he died in 1754. Wolf was not an original thinker, but he had the great merit of collecting and putting in order all the works of Leibnitz, and of making them accessible to all. He rendered in this way a great service. Though he perhaps did not understand the full depth of Leibnitz, he drew out of the latter whatever he could, and his method of exposition was exceedingly clear.

The philosophy of Wolf is much abused now. It seems a little too trivial, too much founded on utility, is too small, too *bourgeois;* it is really wonderful how he could make such a miniature of a great doctrine. Wolf will tell you that the sun was created in order to help us to set our watches and to reduce the expense of lighting. He carries the theory of final causes to a ridiculous extent: water was made to punish mankind by inundations or to amuse it with cascades; it was made also for fishes, as fishes could not live elsewhere. Such arguments seem to us very childish. Wolf, however, did much service in his time. His philosophy satisfied the need of intellectual liberty which was felt in Germany; it emancipated many minds. He did service even in dragging the doctrines of Leibnitz from too high a level to the common level of the Philistine mind. He became popular; his pedantic ways helped him as well as his superficiality, and the defects of the surface did not deprive the nucleus of his doctrines of their truth and their soundness. Philosophy became a fashion: Wolf made all the Germans feel the sort of satisfaction which *Monsieur Jourdain* feels when his master of grammar explains to him that he is talking in prose. All the finest ladies began to philosophize; Wolf was called the "professor of humankind," the "educator of the German nation." M. Grucker gives this instance of his great influence: The famous Jew philosopher, Mendelssohn, travelling in Germany, was obliged, after an accident to his carriage, to stop on the highroad, not far from a poor village where there was no inn. Knowing the intolerance of the Lutherans with regard to the Jews, he sent his servant to the house of the Lutheran minister. The servant was ordered to say that a Jewish savant asked for his hospitality. The minister soon arrived with a lantern, stepped before the carriage, and said: "Quid est ontologia?"—the question corresponding with the first paragraph of one of the principal treatises of Wolf. Mendelssohn knew his Wolf well, and immediately gave his answer. The minister at once approached, embraced him, and took him home.

All the critical work of Gottsched is, so to speak, condensed in his 'Versuch einer critischen Dichtkunst,' the first edition of which appeared in 1729 and the fourth in 1751. Gottsched places his work under the patronage of Horace, as he begins, by way of preface, with translating the Epistle to the Pisos; but his real master is Boileau, who represents for him the discipline of the mind in the seventeenth century. The French are already classics in his eyes: "What the Greeks," he says, "were for the Romans, the French are for us. They have given us the best models in all kinds of poetry; they have written many discourses and critical essays in which we can find our rules. I do not blush to give the preference on this point to our neighbors, though on other points I prefer my compatriots."

His poetical principle is a philosophical principle; it is the imitation of nature—a principle already laid down by Aristotle. But what does Gottsched understand by imitation? There are three kinds of imitation: first, an inferior kind of imitation—viz., the pure and simple imitation of things by their description; second, the imitation of the sentiments and passions of a fictitious personage—the imitation of the dramatic poet; third, the superior kind of imitation—viz., of events in a fable, since this imitation is not only applied to feelings, but to things, and supposes combinations: it is creative. True genius delights in inventing personages and types, and in making them act. The influence of Wolf is felt in the work of Gottsched, especially in this point; imagination seems to him an inferior quality—the superior quality is logic. Gottsched measures the poets by their qualities of correctness, of rectitude, of discipline; they may invent, but even when they invent they must imitate. Milton seems almost monstrous to him—he loses himself in so much sublimity, in such audacious and gigantic inventions. Gottsched gives recipes for each kind of poem, as a cook-book gives recipes for each kind of dish.

The reform of Gottsched was more especially felt on the stage. His theories of poetry were useful here, as common sense and decency are particularly necessary in dramatic representations. During the Thirty Years' War the German theatre had been extremely corrupted; it had become something like the Alhambra of London, or the new Eden Theatre of Paris—something like a circus or a promenade concert. The opera had not yet felt the ennobling influence of the great masters; it was a coarse spectacle for the eyes. The severity of Gottsched had become necessary: he found no better means of changing the dramatic taste of his

time than by giving translations of the foreign masterpieces. He also published some German plays. His "Deutsche Schaubühne" (1741–1745) were followed by an interesting account of all the dramatic works published in Germany from 1450 to the middle of the eighteenth century.

The second volume of M. Grucker, which is not yet published, will be chiefly devoted to Lessing. There will be a third volume on Goethe, who is a world in himself. The interest of the first volume is such that we can only hope that the author will soon give us the other two.

Correspondence.

MR. H. H. BANCROFT'S LITERARY METHODS.

To the Editor of The Nation:

Sir: In answer to certain statements in your columns regarding my method of writing history, I would say that my work as finally laid out proved sufficient to occupy one man for two hundred years, and to accomplish it I must employ assistants. It was work that in all civilized and half-civilized societies has been deemed important; and for this western coast, where so much knowledge was fast dropping into oblivion, if fully done it must be done at once. As there was no government or society at hand disposed to undertake it, I could not relinquish my purpose on account of the magnitude of the task. Nor would gathering alone satisfy me. It seemed evident that unless I went on and placed the large, unwieldy mass of information in a form available to the world, it would be long before any one would do so.

My assistants are for the most part occupied in abstracting and preparing material. After long experience some of them are able to furnish me manuscript in a more or less advanced state, and of their highest services I gladly avail myself. The burden of the work, however, falls upon me, where it rightly belongs. For the past fourteen years I have devoted on an average more than eight hours a day to my literary work, and am doing so still. At least one-half of the manuscript thus far completed has been written by my own hand, and much of it from material of my own extracting, and the remainder has been so thoroughly revised and rewritten by me, according to the demands of the case, as to make it my own. I do not rewrite what is perfectly satisfactory to me merely for the sake of rewriting; I can employ my time and strength to better advantage. Of course I should be much better satisfied if I could perform all the labor myself, including even the indexing and note-taking. It is what I do that I take pleasure in, and not what others do for me; but, owing to the magnitude of the work, and having but one short lifetime before me, such a course is not possible.

It is my greatest happiness to recognize the merits of my assistants. I regard them as in a measure my handiwork. Though they have not been my teacher, I have learned from them, and honor them. Some of them have been my almost daily associates during the entire term of my literary efforts. Among them are my most valued and devoted friends; and it is not true that I have ever assumed aught rightfully belonging to them. Often have they attempted to restrain me in my public acknowledgments of their merits. I glory in them, in what they are doing and can do; and it is with thankfulness that I can say that were I to die to-morrow they could and would fairly enough finish my work. There is no attempt at secrecy about my method, as has been implied. My library and its details are and always have been open to the public, and I am not conscious of pretending to be other than I am. Results are more to me than means, but the results are valueless if the means are questionable. Early in these efforts I submitted specimens of my work to Eastern literary men, explained my method fully, and received their approbation. The honor of having done this work is of small moment to me in comparison with its full and faithful accomplishment.

As to the silly charge of having attempted to buy admission into the columns of respectable journals, I will say that I have never paid, or offered to pay, or authorized any one to pay, any editor or proprietor of any newspaper or other journal one dollar for the publication of anything regarding me or my work. Had I possessed the power and inclination thus to influence them, the necessity has never existed. As a rule the press has been very kind to me and just toward my work, rating the execution of it much higher than ever I dared to do myself. Only when a luckless volume for review has fallen into the hands of some one of a school of science-fanatics, pretending to honesty and fair-mindedness, who attempts to defame my work because I cannot adopt what appears to me an absurd theory, have I felt myself unfairly treated.

Hubert H. Bancroft.

San Francisco, February 6, 1883.

COLLECTION OF JUDGMENTS AGAINST STATES.

To the Editor of The Nation:

Sir: In your recent comments upon Mr. Moore's plan for making States suable by their bondholders in the United States Supreme Court, you appear to regard the collection of judgments thus obtained as fraught with insuperable difficulties. I want to suggest what seems to me a simple method for this purpose. It consists in applying the device of garnishment to the collecting officers of the State for the benefit of the judgment creditor.

The problem is, not what is practicable under our present jurisprudence, simply modified by the restoration of State suability, but what is feasible under a new amendment, either itself providing for details or supplemented by authorized appropriate legislation.

All I aim to do is to indicate the path to the desired end. My plan would be something like this: After the rendition of the judgment against the State, let it be certified to the Federal Court within the State, and entered there. Then let that court appoint a Commissioner for the collection of the judgment, whose duty it shall be to deliver a certified copy thereof to the State Treasurer and to the collecting officers of the State, and make due return to the court. Let the judgment thenceforth constitute a paramount claim upon all collections of State revenue in the hands of the collecting officers, whose duty it shall be to make reports from time to time, as required, to the Federal Court, of the amounts in their hands, and to pay over to the Commissioner as ordered by the court; the Commissioner's receipts to constitute an acquittance to the officers against the State, and any proceedings by the State against them on account of their obedience to the Federal requirements to be removable to the Federal Court.

Let the compliance of the State officials be enforced, if necessary, by suits by the Commissioner upon their official bonds in the Federal Court. If the Treasurer receives any of the moneys ordered by the Federal Court to be paid to its Commissioner, let him also be liable therefor by suit in the Federal Court upon his official bond. Let the Federal Court have power, additionally, to punish disobedience of its orders by any State official as a contempt—by fine and imprisonment—one or both. Thus, the Federal authority would step in between the State and her collecting officers, and intercept, for the benefit of her creditor, the money collected by her officers, under her laws and by her methods.

If necessary, the garnishment could be applied to the individual taxpayers, the creditor's judgment being made a paramount lien upon their tax indebtedness to the State, payment of which to the Federal Court Commissioner might be enforced by process directed against them individually. This would be perfectly feasible, but the former method would be simpler.

Of course, there would be made a sufficient collection to cover all the expenses of the collection. Ample time might be given to the State to pay after the service of the certified copy of the judgment on the Treasurer—the lien of the judgment being, however, constituted by such service, so that thereafter valid payments could be made only to the Commissioner. The honesty of the Commissioner could be properly secured, and any losses from his dishonesty could be made to fall on the judgment creditor for whose benefit he was appointed. R. McP. Smith.

Nashville, Tenn., February 8, 1883.

[The laws of some of the New England States provide the creditor, in the case of debts owed by towns, with a remedy much more thorough even than garnishment. The creditor is allowed to collect his debt out of the individual property of the citizens. All he has to do is to select some land-owner, attach his real estate, and proceed to recover judgment. Town credit under this system is, we believe, very high. A constitutional amendment applying it to State debts, making the property of citizens liable jointly and severally to the extent of the obligation, would make the creditor as secure as he could be made in any way by law. There would probably be some difficulty in getting such an amendment passed, but probably no more than in making the constitutional changes proposed by our correspondent. The necessity of devising such schemes for enforcing judgments against States strongly illustrates the difficulty of engrafting suits against them by private creditors upon our system.—Ed. Nation.]

To the Editor of The Nation:

Sir: There is a mode of Federal execution which, so far as I know, has not been proposed by those who are endeavoring to constrain the repudiating States to fulfil their engagements. If we could suppose it to be embodied by amendment in the Constitution, it would, I think, be efficacious. It would certainly act as a most serious check on the further perpetration of State rascalities. This mode is disfranchisement.

Let the amendment read that any State disregarding, or resisting the execution of, any judgment of the Supreme Court in a suit between States, or between the State and a citizen, should forfeit its representation in Congress and its electoral vote for the period of its contumacy. This would virtually be suspending the State from the Union, but would merely recognize its voluntary withdrawal from its Federal obligations. Meantime, Federal statutes would still be executed in the usual way through United States marshals with the Army and Navy at

their back. Congress could be left to certify and proclaim the delinquency of the State and apply the penalty, and fix the necessary procedure for its remission.

Whether a like remedy would be found practicable and useful by the States for their own defaulting or bankrupt counties and municipalities, I will not undertake to decide. Nor will I speculate on the effect of such a provision in the Federal Constitution on the Congressional sense of honor, when tested hereafter by such elementary moral questions as the redemption of the greenback, the just weight of the silver dollar, and the equitable distribution of the Geneva Award. A LAYMAN.

NEW YORK, Feb. 8, 1883.

LIBRARY OF JOHN WINTHROP, JR.

TO THE EDITOR OF THE NATION:

SIR: In your review of the Winthrop Papers you say: "It is mentioned that in 1640" John Winthrop, jr., "was possessed of a library of more than a thousand volumes." It seems that it is not generally known among historical scholars that this library now reposes in one of the upper galleries of the Society Library in New York.

The books of a man like Winthrop throw much light on the intellectual life of the seventeenth century. He who examines these will see that Winthrop, like Evelyn and other cultivated men of the time, had much respect for astrology. You remark upon the liberality with which he distributed medicines. He who examines these old books on *aurum potabile* and other marvellous remedies will not think the objects of his generous medical attentions very fortunate. Without doubt, Winthrop was "one of the most accomplished scholars of the age," as you say—the character of his large library proves so much—but it also serves to keep within due limits our admiration for the age.

LAKE GEORGE, N. Y., February 5, 1883.

"*LAY* (AND *LIE*) OF THE LAND."

TO THE EDITOR OF THE NATION:

SIR:

"The merits of Worcester's Dictionary are universally appreciated; but the circumstance that it was edited exclusively by American scholars shows itself, I think, in the following definition: '*Lay of the land*, the features or the relative position of the parts of any land or place.' This use of the word 'lay' I believe to be purely American, and that it would never be heard in England."

Thus, somewhat incautiously, writes "H. W. H." in No. 915 of the *Nation*. The expression, "irregular *lay* of the ground," occurs in the Rev. Sydney Smith's 'Elementary Sketches of Moral Philosophy,' p. 196 (London ed. of 1850); and I have repeatedly seen "lay," as there used, in books written by Englishmen. Who, further, familiar with the colloquial language of England, has not often heard it? Dr. Worcester, if I may judge from what I knew of him, would never have given his "*lay* of the land"—which Dr. Webster's editors are hardly justified in calling "low"—without notifying that it was peculiar to the United States, had he supposed that such was the case. "*Lay* of the land," no doubt originally a rusticism, and still a very common one, is wholly objectionable, as misstating the verb which it converts into a substantive. "*Lie* of the land," evidently suggested by it, is, however, analogically defensible. For "lie," in similar phrases, "H. W. H." quotes Mr. J. R. Green and Mr. E. A. Freeman. I may add that Cardinal Newman, ordinarily a most excellent authority for words and senses of words, has this "lie" at least five times, followed by "of a field," "of the land," "of a matter," "of the fields," "of a country." See his 'Lectures on Certain Difficulties,' etc., p. 325 (1850); 'The Idea of a University,' etc. (1852), p. 84 (ed. 1873); 'Essay in Aid of a Grammar of Assent,' p. 73 (1870); 'Essays, Critical and Historical,' vol. i., p. 146 (1871); 'Discussions and Arguments,' etc., p. 294 (1872). The "lie" in question belongs to the class of modern substantives which includes the more or less reputable "bathe," "dive," "drive," "find," "fix," "go," "meet," "read," and so forth.—Your obedient servant,

FITZEDWARD HALL.

MARLESFORD, ENGLAND, Jan. 24, 1883.

HENRY CLAY IN THE 'ENCYCLOPÆDIA BRITANNICA.'

TO THE EDITOR OF THE NATION:

SIR: I should like to call your attention to some curious statements contained in the notice of Henry Clay in the new edition of the 'Encyclopædia Britannica.' It is said that the Missouri Compromise, "while abolishing slavery in all other States north of lat. 36° 30′, permitted it in Missouri." Among the States "north of lat. 36° 30′" are Delaware, Maryland, Virginia, and Kentucky. The same article informs us that Clay's "Omnibus Bill" of 1850 provided that "California should be received into the Union as a slave State, while, on the other hand, slavery should be prohibited in Columbia." The "Omnibus Bill," of course, provided for the admission of California with the constitution adopted by the Monterey Convention and ratified by the practically unanimous vote of the people. The Bill of Rights contained the clause: "Neither slavery nor involuntary servitude, unless for the punishment of crimes, shall ever be tolerated in this State." By "Columbia" it is supposed that the District of Columbia is meant. So far from advocating the abolition of slavery in the District of Columbia, Mr. Clay had repeatedly and solemnly declared that, in his judgment, Congress had no constitutional power to take such action. The compromise measures of 1850, indeed, prohibited the slave trade in the District of Columbia, and doubtless it was a vague recollection of this running through the mind of the author that caused the statement criticised.

Clay's political career is said to have begun "in 1799, by attempting to persuade the State of Virginia to abolish slavery." A reference to Colton's 'Life of Clay' will show that for "Virginia" we should substitute "Kentucky." It was in the latter State, of which he was in 1799 a resident, that he attempted to have introduced into the new Constitution of the State a provision for gradual emancipation.

There are other statements and forms of expression in the article that seem to show that it was written by some one whose knowledge of American history and American constitutional law was of the most superficial character. It is to be regretted that a work of so wide circulation and so great an authority should contain so serious misrepresentations concerning a man whose life and deeds form an important part of the history of American political movement during more than forty years.—Respectfully,

JOHN C. ROSE.

BALTIMORE, Feb. 2, 1883.

ANATOMY AND THE ARTIST.

TO THE EDITOR OF THE NATION:

SIR: The reviewer of the 'Art Life of William Rimmer,' in your issue of December 21, 1882, in speaking of the "modern misconception" as to the relation of scientific anatomy to artistic expression, says: "We do not know that this misconception is anywhere more clearly recognized, or more forcibly criticised, than it is by the late Dr. John Brown, the well-known author of 'Spare Hours'—himself both an anatomist and an intelligent student of art." The passage quoted from the second series of 'Spare Hours,' beginning, "One other heresy I must vent," was first published in 1861, it would seem. It certainly does not lack clearness or force. But Dr. Robert Knox, of Edinburgh, who, if he did not teach anatomy to Dr. Brown, was a much greater heretic and anatomist than he, as well as a more considerable writer upon art, gave utterance in 1849 and in 1852 to quite as vigorous protests "against the doctrine that scientific knowledge is of much avail to the artist" as are found in your reviewer's quotations from Brown and Müller.

It may be of interest, therefore, to such of your readers as agree with your reviewer and the authors quoted to have their attention directed to the fuller and earlier expression of similar views by Dr. Knox. Such are to be found in Farr's 'Anatomy of the External Forms of Man,' edited, with additions, by Robert Knox, M.D., with an Atlas of twenty-eight plates, quarto (London: Baillière, 1849); 'Great Artists and Great Anatomists,' by Robert Knox, M.D. (London: Van Voorst, 1852); and 'A Manual of Artistic Anatomy,' by Robert Knox, M.D. (London: Renshaw, 1852). Of the 313 pages of text in the first-named work, Knox's Appendix embraces 103 pages, divided into six chapters, upon such topics as "The Elgin Marbles," "The Remains of Coptic Sculpture now in the British Museum," "The Antique Statues of Greece Compared with the Living Model," "The History of Artistic Anatomy and its Utility to the Artist," etc. Chapter v., whose caption is the last of the above-mentioned topics, begins thus: "The misdirection of the studies of the artist dates at least from the time of Michael Angelo; it was then that the anatomy of the schools—I mean the medical schools—took the place of the living anatomy—the only instruction of real utility to the artist." After noticing and emphasizing the objections of Dr. Farr and of Camper to such misdirected study, Dr. Knox goes on to say:

"A deep knowledge of the interior cannot then benefit the artist as an artist: studied too nicely, it might even affect his love for external forms, and his ability correctly to portray them. . . . The exterior alone interests the artist and mankind; all beauty of form resides in that exterior. That the interior has a deep relation to the exterior, is true; to explain those relations is a part of the object of this work. The proportions and direction of the skeleton influence, of course, the exterior form; but this relation is deep, unseen by the world, and must never be coarsely exhibited on the surface. It is the same with the muscles, tendons, and aponeuroses. What the anatomist is most desirous to display, the artist, if his ideas be sound, does his best to conceal. . . . It is with me a firm belief that no artist should draw from the dissected muscles and tendons as seen in the dissecting-room and on the table of the anatomical teacher. Such lectures and such materials for design are sure to misdirect his views. Let him dissect the muscles, tendons, and aponeuroses by all means, but draw them, when fully dissected, by himself, and merely for his own information, with a view to the furnishing of his mind with the recollection of *facts*, not of *forms*."

Dr. Knox's most forcible strictures on those who had confounded the relations of art and anatomy are contained in his later works. The following, from his 'Manual of Artistic Anatomy' (pp. 9-11), may suffice as a specimen:

"Were human ingenuity taxed to discover a method of instruction the best adapted to mislead the artistic student, to misdirect his views, to destroy his taste, to prevent him viewing the external world as Nature intended it should be viewed, the result might probably be a recom-

mendation of the present mode or method of instruction. Commence with triangles, squares, and circles; next, copy unmeaning outlines from flat surfaces, whose shadows are represented by a substantial black coloring matter; next, attend a course of lectures on the anatomy of the mangled corse, imperfectly described by a person called an anatomical demonstrator, a person to whom, in all probability, the term art conveys no tangible idea; and finally and lastly, that the mal-education may be complete, send the unhappy artist into a charnel-house, called a dissecting-room, that his mind may become accustomed, by frequent contemplation, to all that is detestable. Thus, by degrees, by continually looking at the interior, he at last forgets that there ever was an exterior—he confounds them together; through the exterior he sees only an interior; that interior which Nature intended should never be presented to human sight—that which under all circumstances she has so carefully concealed.

"This perversion has been of slow growth; it were idle to trace it here. Suffice it to say, that in England, utilitarian England, the coping-stone of folly was placed by Sir Charles Bell and Mr. Haydon. Misunderstanding the object of Da Vinci's dissections (whose matchless sketch-book now in the Queen's private library I have lately examined, and shall hereafter shortly describe), forgetting that Michael Angelo had himself admitted the error of his early studies; affecting ignorance of the fact that Raphael and the great masters of Greece and Italy were wholly ignorant of anatomy, or nearly so, in the sense they viewed it, they persisted in a theory and mode of study of the dead for the living which, had it been followed to the letter, would have destroyed art for a time in Britain."

Dr. Knox's description of Da Vinci's sketch-book is given on pages 159-162 of his 'Great Artists and Great Anatomists.' It scarcely need be said that he finds Da Vinci to have had a perfectly clear comprehension of the relation of anatomy to art. H.

Johns Hopkins University, February 5, 1883.

FURTHER INVESTIGATIONS AT EPIDAURUS.

To the Editor of The Nation:

Sir: The excavations of 1882 by the Archæological Society of Athens have confirmed Mr. Kavvadias's conjecture that the great theatre of Epidauros was provided with means of access at the wings by stairs leading to the διάζωμα at either side, and by doors in the wall enclosing the whole theatre, opening upon the terrace above the κοῖλον. The stage was, without doubt, rebuilt in Roman times; but its ancient plan was not changed, as is shown by the evident Hellenic character of the foundations.

After the conclusion of the exploration of the theatre, a large trench was opened north of the stadium, and soon disclosed the supposed remains of the tholos of Polykleitos—the ruins of a circular building of marble, 32.65 metres in diameter. Pausanias says of it:

"Near [the temple of Asklepios] stands a remarkable circular building of white marble, called the tholos. In it is a painting, by Pausias, of 'Eros,' who has thrown down his bow and arrows, and taken in their place a lyre. Here, too, is painted, also by Pausias, 'Drunkenness Drinking from a Glass Cup'; one can see in the picture that the cup is of glass, and a woman's face is visible through it. . . . Polykleitos was the architect of this circular building. . . ."

The ruins of the tholos are now entirely excavated, after several months of labor. The plan of the building resembles that of a circular temple, such as the Philippeion at Olympia. It is surrounded by two rows of columns—the outer row of Doric order, the inner resembling Ionic columns in all but the capitals, which are of a curious and new archaic Corinthian design. Beneath the pavement is a remarkable labyrinth-like substructure comprising three concentric circles, the spaces between the walls being so narrow as barely to leave room for a man to pass. The use for which this substructure was designed has not, according to Mr. Kavvadias, been clearly made out. So far as it is possible to form an opinion without seeing a plan of the building, it seems probable that these three concentric walls were simply the foundations for the two rows of columns and for the wall of the enclosed space, or cella, within them. Remains of nearly all the architectural elements of the tholos have been recovered, and its whole design is very beautiful, and promises to be of much importance in the history of ancient art.

In the course of this excavation were found a number of inscribed pedestals, still in their original positions east of the tholos, and the following pieces of sculpture: an Athena of colossal size, resembling closely the Athena of Antiochos in the Villa Ludovisi at Rome; a Roman Emperor wearing a cuirass finely sculptured with figures in relief, representing a Gorgon's head, the head of a satyr, griffins, trophies, etc.; a similar statue, the ornaments on the cuirass of which were painted instead of being carved in relief; two male figures of natural size, wearing the toga; a woman clad in the peplos, resembling the celebrated "Roman Maiden" from Herculaneum; a similar statue, resembling the Empress Livia in the Museum of Naples; besides other sculptures of less importance. All these statues are headless, and all date from Roman times. A number of small fragments of Hellenic workmanship were found also.

A short distance to the eastward of the tholos, upon a slight elevation covered with a thicket, were found the ruins of a peripteral Doric temple, 24.70 metres long, and 13.20 metres wide. Near the eastern end of this temple were unearthed a number of inscriptions, a statue of a man above natural size, of fine Roman workmanship, and a large relief representing Asklepios seated upon a highly ornate throne, with Hygieia before him, and a Nike and a female attendant on either side. Mr. Kavvadias is of opinion that the temple is that of Asklepios, and that this figure of the god is a free copy of the chryselephantine statue which once stood in it, and of which Pausanias gives the following account:

"The statue of Asklepios, which is of gold and ivory, is of less than half the size of that of Olympian Zeus at Athens. An inscription informs us that it is the work of the Parian Thrasymedes, son of Arignotos. The figure, which is seated upon a throne, holds in one hand a staff, while the other hand rests upon the head of the serpent; and his dog is represented lying beside him. Upon the throne are sculptured deeds of Argive heroes—Bellerophon destroying the Chimaira, and Perseus beheading Medousa. . . ."

Strabo tells us that this statue of Asklepios was removed to Rome. As Pausanias describes it as if it were still at Epidauros in his time, this would go to support Hirschfeld's theory, set forth in the *Archäologische Zeitung* for 1882, that Pausanias did not in general write from personal experience, but compiled his 'Description' from accounts written long before his day.

Close to the same front of the temple were discovered numerous fragments of sculpture of Hellenic workmanship; among them male and female heads, draped figures of women and undraped figures of men, several of them in violent action. These sculptures probably adorned the eastern pediment of the temple, and may have represented a combat of Centaurs and Lapiths. Near the western end of the temple was found a series of similar sculptures, belonging doubtless to the western pediment, in much better preservation, however, than those first discovered. These last sculptures, which are described as very graceful, represent figures of Amazons, both mounted and on foot; Nereids riding on hippocamps or on dolphins, or floating on the sea-waves; and some male figures. The heads are all broken from the bodies, but several of them have been found. The workmanship is excellent, and is believed by the excavators to be early. It is difficult to see, however, what connection the subjects represented can have with the myth of Asklepios. Pausanias says:

". . . Within the sacred grove are temples [besides that of Asklepios] to Artemis, . . . to Aphrodite, and to Themis; . . . and various shrines, including one to the divinities called the Bountiful, dedicated in my own time by the Senator Antoninus."

The temple of Asklepios may well, therefore, be still undiscovered, as, so far as the excavations have yet been carried, nothing further appears to have been brought forward in favor of the proposed identification, except the neighborhood of the temple to the tholos, and the finding near it of the Asklepios relief.—I am, sir, very respectfully, Thomas W. Ludlow.

Cottage Lawn, Yonkers, N. Y., Jan. 17, 1883.

THE LATE MR. BUNNEY, OF VENICE.

To the Editor of The Nation:

Sir: Of the many readers of the *Nation* who know and care about Venice, most will, I think, have known, or known of, the late Mr. Bunney. He was a familiar figure in the place for some twelve years past, and a great many American and English travellers, especially such as came to see Venice as disciples of Mr. Ruskin, found their way to his house on the Fondamenta San Biagio (a quay midway between the Piazzetta and the Public Garden), whence one looked out on the view all painters love best, the lagoon in front, and, on the right, San Giorgio, the Salute, and the Ducal Palace. During late years he was constantly to be seen on the Piazza, working at a large picture of St. Mark's. His picture is just now being exhibited in London, and it has drawn attention to the career of a man who, little known as he was to the great world, has left behind him work of a value unique in its way. The Church of St. Mark's has been oftener painted, perhaps, than any building in the world, and yet it has never, at least in modern times, been completely and accurately represented on canvas. Some six years ago Mr. Ruskin determined to get it so represented, and the painter whom he commissioned to do the work was Mr. Bunney.

The result is a picture which, as a monumental record of one of the most precious buildings in the world—a building doomed, apparently, to be soon destroyed by the modern restorer—is beyond all price. It shows the whole breadth of the great façade exactly as it has looked to us of the nineteenth century, just as the great picture of Gentile Bellini in the Accademia shows it as it looked to the Venetian of four hundred years ago, when the old mosaics, with their solemn colors, were still untouched under the five arches. For some six years, off and on, Mr. Bunney worked at this picture. Morning after morning he might be seen in his place on the north side of the Piazza, just by the Quadri caffé, sitting in front of his big easel, with an entrenchment of chairs behind him, to keep off the too-pressing crowd of small Venetians. Some six hundred mornings in all he spent thus. The labor, as he told his friends, proved to be much greater than he expected, well as he knew the nature of such work; but he determined to make it an absolutely faithful record of what he saw before him; and such it is—every morsel of carving, every visible bit of veining on the marble columns, truthfully put down. Such a picture is of course, in a sense, hardly so much a picture as an architectural drawing; and in this sense it is spoken slightingly of by some

critics, who complain of its "hardness," its "literalness." That the general effect is "hard" is, I think, undeniable, but its literalness is its great virtue; its value is in the value of what it represents. When the modern Venetian has "restored" away the loveliness, as we see it, of the lovely building, this picture, if well taken care of, will remain to tell those who come after us how that wonderful vision of beauty looked to our eyes.

There is something pathetic in the fact that the painter should have died just at the moment when he was about to bring to his own country, whence he had been absent some twenty years, the fruit of his long labor. It was in September last that a sudden and short illness carried him off, at the age of fifty-four. He had been, twenty-five years before, a pupil of Mr. Ruskin. Mr. Ruskin was one of the founders of the Workingmen's College (Frederick Maurice's legacy to the workmen of London), and for some five years (about 1854–1859) gave up an evening once a week to teaching in the art school which he had there established. Bunney was then a clerk in a London bank; Mr. Ruskin's teaching filled him with enthusiasm for the art as well as for the teacher, and he presently made it the business of his life. Not long after he went to Italy, and it was in Florence, Verona, Ravenna, and, most of all, Venice, that the rest of his years were passed. It was a life of hard, but happy, work, much of it done for his old master. He put his whole soul into his art; he cared for nothing but to do what he did absolutely as well as he could; and he won the regard and affection of the people among whom he lived. Every one in Venice knew him. "He was their painter," says a friend in a little memoir now before me; "they called him 'our painter with the golden hand,' 'il pittore di San Marco'; and a great painter too: 'è grande pittore il signor, è grande come Tintoretto,' said a gondolier, as he rowed a visitor away from Mr. Bunney's house, only a few days before his death."

This true-hearted and worthy man did not make a fortune out of his brush; he thought perhaps too little of his gains; so he has left but a slender provision for the widow and children who are mourning his loss. Allow me to add, in case these lines should be read by any of his American friends, that some of those who valued him—Mr. Ruskin, Mr. Holman Hunt, and a few more—are putting together a sum of money which they will present to Mrs. Bunney, "as a gift prompted by regard for her husband and his work, and by sympathy for her under her great loss." Mr. Ruskin has contributed £50. To any who would wish to have them, I will gladly send further particulars and a copy of the memoir I have mentioned; and should any of those interested desire to join in the intended gift, contributions may be sent either to myself (by order on the London General Post-office), or to Mr. Ellis Yarnall, 105 South Front Street, Philadelphia.

Mr. Ruskin intends, I believe, to place the picture of St. Mark's in the museum he has founded at Sheffield, the "St. George's" Museum. Many will wish it could have found its way to the London National Gallery, but, in any case, it will be accessible to all who care for the wonderful building it represents.

I ought to add that the greater part of the drawings which Mr. Bunney has left behind him are now in London (at 148 New Bond Street), and to be sold for the benefit of his family.

R. B. Litchfield.

10 Whitehall Place, London, S.W.

Notes.

Harper & Bros. have nearly ready a new edition of Haydon's 'Dictionary of Dates,' which has been revised by Mr. George Cary Eggleston; and a 'History of Latin Literature, from Ennius to Boethius,' by George Augustus Simcox, in two volumes, with separate indexes and chronological tables.

An 'Autobiography of Thurlow Weed,' edited by his daughter, Miss Harriet A. Weed, and a 'Memoir of Thurlow Weed,' by his grandson, Mr. T. W. Barnes, will make two companion volumes, 8vo, of which Houghton, Mifflin & Co. will be the publishers. They can hardly fail to be interesting in a high degree. The same firm have in preparation a 'Lowell Birthday Book.'

Fords, Howard & Hulbert will shortly publish 'Dust,' an English novel by Julian Hawthorne: and 'Books, and How to Use Them,' by John C. Van Dyke.

T. Whittaker has arranged for an American edition of the Rev. Jos. A. Beet's 'Commentaries' on Romans and on Corinthians.

Last May we reviewed at some length the first two volumes of the new edition of the Messrs. Audsley's 'Popular Dictionary of Architecture and the Allied Arts' (London: Sampson Low; New York: Putnams). After a noticeably long interval we have now received the third volume of this excellent work (Bar to Buttery). The article Basilica fills more than sixty of its broad and beautifully clear pages; that on Baths nearly thirty; that on Base as many. These are the leading articles; but Monumental Brasses, Brickwork, and Bronze are somewhat fully treated. The illustrations are good and abundant.

Hoyt, Fogg & Donham, Portland, have become the publishers of the 'Richardson Memorial,' by Mr. John Adams Vinton, published in 1876. The founders of the American family in question settled in Woburn, Mass.

We have received from the Messrs. Harper volumes 64 and 65 of their *Magazine*, volume 26 of the *Weekly*, and volume 15 of the *Bazar*, all for the year just past. In turning over the pages of the *Magazine* one sees the germs of several books since published, and of others yet awaiting completion, leaving still a large amount of matter whose value is permanent even if not expressed in separate publication. The illustrations of course have an endless career before them, and one cannot but be struck by the treasures of portraiture which all these periodicals contain. The French leaders—including Plon-Plon, Jules Ferry, the Comte de Paris, Gambetta, etc.; the English leaders, from Parnell and Chamberlain to C. W. Dilke and the Marquis of Salisbury; the chief London journalists; the Bernadottes; the Mendelssohns; the Philadelphia notables; the old New York ship-builders; the organizing spirits of the Young Men's Christian Association—are some of the suites of likenesses here preserved. They are, however, unequally distributed, for while the *Weekly* gets about 240, the *Bazar* is allowed but 10—perhaps on the theory that subscribers to the latter will surely see the former. Some more occult reason must exist for the disproportion in the facetiæ on the last pages of the two weeklies: or is the gentler sex really the more humorous?

The sixth bound volume of the *Sanitary Engineer* is also before us. A glance at the index shows the very wide scope of this journal, and its permanent utility for reference in every department of domestic convenience and health, not to mention its present function as mouthpiece for the National Board of Health.

For the benefit of such of our readers as preserve their files of the *Nation*, and who can already avail themselves of the Q. P. Index and of the new Poole's Index, we call attention to still another reference aid. In the *Publishers' Weekly* for February 3 Mr. Thorvald Solberg's admirable "Catalogue of Books and Articles relating to Literary Property" reaches and includes the *Nation* (vols. 1-34). The subject Copyright, at least, can now be said to be exhaustively indexed for this journal.

The third and fourth issues of the Johns Hopkins University Studies in Historical and Political Science include "Local Government in Illinois," by Albert Shaw, with "Local Government in Pennsylvania," by E. R. L. Gould; and "Saxon Tithing-men in America," by the editor, Mr. Herbert B. Adams.

The January Bulletin of the Archæological Institute of America has news of the operations at Assos, and a highly interesting letter from Mr. Bandelier, reviewing his labors last year in New Mexico among the Pueblos. The editors say: "It seems probable that when the work is completed, the remains at Assos will not only present the most perfect idea of a Greek city that is anywhere to be obtained, but will afford a better insight into the life of an antique city than is to be gained even from the streets and houses of Pompeii." And Mr. J. T. Clarke himself writes: "The fortifications of Assos . . . are not only the finest remains of Greek military architecture, but the only ones known in which the development of the masonry can be traced in examples, side by side, dating from the walls which opposed the Lydian conquest to a late Roman period. . . . Seven distinct styles of wall represent as many centuries."

The fourth number of the *Library* of Cornell University concludes Prof. Fiske's list of the living authors of Iceland, and continues the classified list of works on mathematics.

Forestry Bulletin No. 24 of the U. S. Census contains a table, prepared by Mr. S. P. Sharples, showing the amount of tannin in the bark of some of the trees of the United States. The mangrove of the Gulf Coast is far in advance of the rest; the red and black spruce of the Interior Pacific standing next. But this does not afford a practical test of the value for tanning.

Professor Hall, of Washington, has recently published the first determination of the parallax of a fixed star ever made in this country. With the great telescope of the Naval Observatory he observed α Lyrae on seventy-seven nights, and 61^2 Cygni on sixty-six, the observations extending through nearly all of 1880 and 1881. As the result of his observations and reductions Professor Hall obtains for the annual parallax of the first star 0."1797, and for the second 0."4783. These values are not largely different from the best determinations previously made elsewhere; and, expressed in terms of the velocity of light, they mean that α Lyrae is eighteen years away, and 61^2 Cygni a little less than seven.

We learn from the *Academy* that a judge of the Court of Probate, Sir James Hannen, has arranged with the authorities of the British Museum to have Shakspere's will autotyped and sold at a low figure. This will popularize the discussion over the spelling of the poet's signature.

Mr. Leslie Stephen's tentative list of names in A for his new 'Dictionary of National Biography' fills twelve octavo pages in double columns, with some 800 names, as we roughly estimate. The Andersons take the lead in number, followed close by the Allans and Allens. Mr. Stephen (whose address is care of Messrs. Smith, Elder & Co., 15 Waterloo Place, London, S. W.) asks for corrections and additions. We will accordingly suggest Gen. William Alexander ("Lord Stirling," of Revolutionary fame), and the lamented Dr. F. E. Anstie, founder of the *Practitioner*, and author of numerous important

medical works. We must think, too, that the omission of John Quincy Adams is an oversight, the rule for the admission of any Americans being, we understand, that they should have been born British subjects. This explains, at least, both John Adams and Samuel Adams, and Ethan Allen (Mr. Stephen, following Thomas, adopts 1742 as his birth-year, but 1737 and 1739 are given by other authorities), and Fisher Ames, and Benedict Arnold. It does not explain, however, "Arthur, Thomas S. (*popular author*), b. 1809," if he be no other than our Timothy Shay Arthur, born in that year in New York State.

Mr. Stephen, by the way, has been succeeded in the conduct of the *Cornhill Magazine* by Mr. James Payn.

On Longfellow's birthday, February 27, a general subscription will be taken up throughout the country in behalf of the memorial fund. Contributions may be sent to the treasurers of the auxiliary associations in several cities, or to the Longfellow Memorial Association at Cambridge, Mass.

The sixth annual exhibition of the Society of American Artists will be opened at the gallery in the Kurtz Building, Madison Square, on March 26, closing April 28. Transferred to Boston, the collection will be there exhibited as the annual exhibition of the Museum of Fine Arts. March 17 is the day for receiving paintings and statuary (not heretofore exhibited in New York).

An international art exhibition will be held in the Glass Palace at Munich, from July 1 to October 15, 1883, which will enable American artists to compete for a first or second-class gold medal, and to find a market for their works. America, Austria, Belgium, Denmark, England, France, Germany, Greece, Holland, Italy, Russia, and other countries will be represented, either singly or in groups. In assigning prizes no special reference will be made to nationality, but simply to the artistic qualities of the works submitted for judgment. Many of the works will be disposed of by lottery, and the directors call attention to the fact that during the last Exposition almost half a million marks were received for pictures disposed of to visitors. Pictures must be sent so as to arrive in Munich during the month of May, except by special arrangement with the Committee (in reference to the Paris Salon of 1883). Recipients of a first prize at a previous exhibition cannot again compete. The class of works that will be accepted are paintings, sculpture, and objects pertaining to architecture and the reproductive arts, excepting copies of paintings, photographs, and all works of art shown at previous exhibitions in Munich.

In September the house of H. Böhlau, in Weimar, will begin publishing a critical collective edition of Luther's works in commemoration of the four hundredth anniversary of his birth.

Encouraged probably by the success of MM. Carré and Barbier's fantastic drama "Les Contes d'Hoffmann," both as a play and later as a libretto for Offenbach's music, two hitherto unknown French dramatists have produced a drama, "Les Contes d'Edgar Poë," which has been accepted by the Théâtre de l'Ambigu-Comique, in Paris. M. Sardou, it may be remembered, used the "Purloined Letter" as the basis of his charming comedy, "Les Pattes de Mouche," and it is rumored that Mr. Dion Boucicault has in his desk a play suggested by the "Murder in the Rue Morgue."

Mr. Christern sends us specimen pages of the *Club-Almanach*, newly devised and published in Paris by M. Hinrichsen. It is a square little book, in dainty attire, illustrated with portraits of the Prince of Wales, the Empress of Austria, and the Duc d'Aumale, and pictures of *Shotover*, *Bruce*, and *Rayon d'Or*. Its genealogical portion and its "annuaire diplomatique et consulaire" bring it into partial competition with the *Almanach de Gotha*. In other respects, this publication aims to be the indispensable guide of the clubman and sportsman.

—The *American Law Review* is now published at St. Louis, instead of Boston, and the *Southern Law Review* is merged in it, so far, at least, as to lose its identity of name. In editorial management the consolidated magazine shows no special local influence, there being a good collection of technical articles and a dissertation by Mr. Joel Prentiss Bishop, on the "elements distinguishing the successful from the ordinary legal practitioner," of the kind that most legal periodicals publish from time to time—why, we do not know; certainly not for the novelty of the ideas contained in them. There is one curious feature of legal periodical literature in this country, and that is the infrequency of articles on legal subjects possessing a general political or social interest. As compared with similar publications abroad, our legal periodicals are entirely devoted to the publication of articles which will furnish a lawyer with recent cases for briefs. There is little in them to show that the bar has any aims or standards or interests apart from money-getting. The *American Law Review* did something to correct this tendency by publishing articles on current topics possessing more than purely technical interest; and we trust that, under its new management, it will not altogether abandon the attempt.

—The February number of the *Popular Science Monthly* contains an article, by Prof. E. W. Gilliam, entitled "The African in the United States," which deserves notice as being an excellent illustration of how "figures can be made to lie." The author, who is an alarmist, by a little manipulation of the results of the last two censuses, finds that the colored race is gaining rapidly upon the whites, and that unless something is done, and that quickly, the former will ere long outnumber, and consequently rule the latter, either by force or the ballot. The methods by which the author arrives at his results are unique, and may, perhaps, be examined to advantage. He finds that during the decade in question the whites increased about 29 per cent., the blacks 34 per cent. From the former he subtracts 9 per cent. to allow for his guess at the immigration which we have received during the decade (which, by the way, is a very bad guess); and from the latter, 5 per cent. for his guess at the extent of omissions by the Census of 1870, leaving 30 (*sic*). Then he restores the 5 per cent., making the normal rate of increase of the blacks 35 per cent., "as an obvious consideration points to the conclusion that the blacks will for the future develop in the South under conditions more and more favorable." Then he reasons that, as 20 per cent. of increase in ten years implies a doubling in thirty-five years, and as 35 per cent. implies a doubling in twenty years, therefore, about a century hence, our population will stand as follows:

Northern whites	240,000,000
Southern whites	96,000,000
Total whites	336,000,000
Southern blacks	192,000,000

—The process by which this conclusion is reached resembles that known as "guessing at the half and multiplying it by two." He is a bold man who, knowing anything of the subject, ventures to predict what our population will be, even in the roundest of numbers, half-a-dozen decades hence; and it may be added that the more one knows regarding the laws of population, the less inclined is he to indulge in such guesses. One thing only is certain in regard to our future, which is that the present rate of increase of population, whether white or black, will not be maintained, but will constantly diminish. Again, the writer is not justified in throwing out the increase from immigration, as this can be relied upon as a large element of increase for many decades. On the other hand, if it was just to take off 5 per cent. from the black increase on account of omissions in the Census of 1870, the grounds upon which it was restored are not clear. In any case, the faulty Census of 1870 (for that it was very faulty is now universally acknowledged) totally invalidates all Prof. Gilliam's conclusions. We have no means of knowing with any certainty whether 2 or 20 per cent. of the negroes escaped the enumerators, and his 5 per cent. can be only the merest surmise. Still, it is an interesting question whether the colored element is relatively gaining or losing in this country. The answer cannot be got from a comparison with the Census of 1870, for the reason just given. The Census of 1860, although known to have been to a certain small extent faulty, was much more nearly complete than that of 1870. Whatever its omissions may have been, they would have tended toward *enlarging* the rate of increase of the colored population. The disturbing influences of the War of the Rebellion were unquestionably felt much more by the whites, both North and South, than by the negroes, inasmuch as the former were the principal actors in it. Hence, a comparison between the results of the Eighth and Tenth Censuses is of great value, and whatever error is involved is on the side of increase of the negroes. The rate of increase of the whites from 1860 to 1880 was 61 per cent., that of the blacks 48 per cent. Judging from these figures, it would seem that the Government would scarcely be justified in ordering a general "exodus" of the negroes, in order to insure a white man's government in the future.

—In part 6 of vol. i. of 'Astronomical Papers of the American Ephemeris and Nautical Almanac,' Professor Newcomb collects all observations of transits of Mercury, beginning with those of Halley at St. Helena in 1677, and ending with the transit of 1881, observed in Australia, the Sandwich Islands, and California. In the subsequent discussion there are two results which outweigh all others in importance—one, the possible variation of the sidereal day, and the other, the discordance between the theoretical and observed motions of the perihelion of Mercury's orbit, first indicated by the investigations of Leverrier thirty-five years ago, and which has been the chief argument for the existence of intra-Mercurial planets. Many years ago Professor Newcomb's researches on the motion of the moon pointed toward a variation from absolute uniformity in the earth's rotation on its axis, and, not long after, a preliminary investigation of the eclipses of Jupiter's satellites confirmed the same hypothesis. The transits of Mercury now verify this result in a remarkable degree, notwithstanding which it still seems to him premature to reach any positive conclusion in the matter. As for the second result from the discussion of the transits, the five available methods of determining the mass of Venus are first considered—giving finally for its value 1-405000 that of the sun—and subsequently it is concluded that the discordance in the motion of the perihelion of Mercury really exists, and is indeed larger than Leverrier originally supposed. Speculating on the possible causes of this unexplained discrepancy, Professor Newcomb remarks that, as the question now stands, all hypotheses that the observed phenomenon is produced by the attraction of unknown matter in the neighborhood of the sun or Mercury must

be dismissed as at least highly improbable. He shows that any deviation from or modification of the law of gravitation which would produce the observed effect is inadmissible. Weber's electrodynamic theory is also considered, and found to tally in no wise with the facts. And, lastly, the necessary steps are indicated toward an exact determination of the astronomical character of the phenomena involved. The investigation of the transits of Mercury is the concluding memoir of the first volume of the 'Astronomical Papers,' and the general introduction to the volume accompanies it. In this Professor Newcomb reviews the work of previous investigators who have devoted themselves to the theories and tables of the celestial motions, and indicates the leading features of the plan which he has adopted for constructing a new series of such tables on one consistent and fully-elaborated theory.

—It is not so very long ago that it was wonderful when a French novel was sold into a fifth or tenth edition—the "edition" of a Parisian publisher being a highly variable quantity. But times change, and the Frenchman is beginning to read more. Three of M. Zola's books have between them attained a circulation of more than a quarter of a million copies. M. Daudet's 'Numa Roumestan' passed its sixtieth edition, and M. Droz's 'Monsieur, Madame et Bébé' its hundred and sixteenth. M. Claretie's 'M. le Ministre' sold over 50,000 copies, and his later 'Le Million' has already sold about 45,000. M. About's 'Roman d'un Brave Homme' has sold about 30,000, while Henry Gréville's (Mme. Alice Durand's) 'Sonia' and 'Dosia' have been sold to the extent of 21,000 and 39,000 copies respectively. M. Ludovic Halévy's 'Abbé Constantin'—of which there are at least three rival American translations—has passed its thirty-fifth edition, while his collection of tales about 'Monsieur et Madame Cardinal' has reached its twenty-seventh. All, or nearly all, of these books have been translated in America, although, curiously enough, hardly one has been translated in England. Chief among the novelists less known in America is M. Georges Ohnet, whose 'Serge Panine,' aided by a dramatization, has been sold to the tune of 75,000 copies, while his later 'Maître de Forges' follows fast with 60,000. Even plays, if they are very successful, may have a sale simply astounding to an American. M. Pailleron's "Le Monde où l'on s'ennuie" is in its twenty-fifth edition; and the fine and strong "Fourchambault" of M. Émile Augier surpassed this, if we mistake not.

—It is an old sarcasm that "orthodoxy is my doxy, and heterodoxy is some other man's doxy." It might just as well be said that "freedom is letting you do what I approve of, tyranny is preventing me from doing what I want to." Thus, for a recent example, free thought appears to be liberty to think for one's self *within certain bounds*, in the opinion of the Protestant Faculty of Theology of Paris. When the Dean of that Faculty was installed he declared: "The faith which comes from authority has had its day. No one here thinks of resuscitating it. We practise free inquiry in its fullest extent; we apply it in every branch of our instruction." These are brave words, and no doubt the Faculty applauded them. They promised to every professor the largest liberty of investigation and of expression. Perhaps they were in discreet. It is so difficult, when one has arrived at a certain point himself, when he sees clearly that the ground which he has left behind is utterly untenable, and equally clearly that there is no reason whatever for proceeding a step further, because one is now upon an absolutely firm foundation—it is so hard to foresee that others will ever doubt this solidity and want to move further on. But the time is sure to come when the creed—for liberalism always has a creed even if unformulated—proves too narrow for some of its holders, and there is a split in the party, trouble in the church, or a dismissal from the university, as the case may be.

—To the Paris Faculty the evil day has come in a discourse pronounced at the opening of the new term on the 7th of November, before an assembly of pastors and laymen, by M. Maurice Vernes, who has been Professor of Philosophy ever since the Faculty was established. "Thought," said M. Vernes, "is certainly not a secretion of the brain, which would be an absurdity, since such an expression supposes a gross confusion between the physical and the intellectual act; but the writer who said that vice and virtue are 'products like sugar and vitriol,' set forth, though in a paradoxical and elliptical form, a proposition which we can adopt—on one condition, however, that we rigorously distinguish the act viewed in its physical and in its moral aspect. While sugar and vitriol are the product of relatively simple chemical reactions, the internal act or state called virtuous or vicious, considered on its material side, is the product of an action of the human cerebral organism which is infinitely complicated, though strictly subject to the laws of biology." And again: "From the study of the world, inorganic or living, arises the idea of order, of force, and of law. I do not see why we should not embrace these ideas of order, force, and law under the name of God. Can we go further on this plane, and affirm that the world is directed by an intelligent being analogous to ourselves, in a word by a Providence? I doubt, and I will give you the reasons for my hesitation." Such language as this was indeed fitted to try the nerves of a theological faculty, as it certainly astonished the audience. There have no doubt been protests and consultations, and the result of it all is that, when the discourse was published, it was with a note saying that the effect produced by the address had been such that M. Vernes, believing that his presence would hereafter be a cause of weakness to an institution whose success he ardently desired, had manifested his intention of quitting the Faculty, to serve the University in connection with some non-religious body. This is in pitiful contrast to the Dean's inaugural; but it is what will always happen when such bodies are dependent upon public opinion, as long as public opinion does not recognize that in philosophy nothing is to be expected in the way of doctrine but more or less plausible conjecture, and nothing ought to be demanded of teachers but ability and honesty.

—The official "Discours et Rapport" of M. Trasenster, Rector of the University of Liége, of which we made brief mention a few weeks ago, is of general interest. This university has made great progress during recent years, especially under the administration of M. Trasenster, who has just received the unusual honor of a reëlection for a term of three years. During the academic year 1881–1882 there were 1,203 students, of whom 379 were new entries. In law there were 273, in medicine 196 students; the whole university had only 98 foreigners enrolled, of whom more than one-fourth were from Holland and Luxembourg. It now offers, however, many attractions to foreign students, for it occupies a very high, almost the first place, among the universities of French-speaking countries. There are distinguished names in its list of instructors — De Laveleye, Van Beneden, and others. The Government, too, has made liberal appropriations for the construction and equipment of buildings. There are already new *instituts* for "astrophysique," botany, and pharmacy; those for anatomy, zoölogy, physiology, and pathological anatomy will all be completed before long. It is hoped to rebuild the hospital and add other buildings. The spacious edifices already provided for are modelled after the new German university buildings, and will offer fine opportunities for the prosecution of research. A visit to Liége leaves the impression that the city is fast becoming a leading centre of intellectual activity.

—In his Discourse M. Trasenster discusses the higher education of women and their admission to the university. He opens with a careful review of the status of women in different countries as regards their university or college education. In the three universities of Zürich, Bern, and Geneva there were over one hundred women in 1881. In Russia the movement has progressed rapidly, but most fitfully, owing to governmental interference, yet at present hundreds of women devote themselves to advanced study. The establishment of Girton College and of the London Medical School for Women, and the admission of women to various university examinations, show that a similar change is taking place in Great Britain. But it is in the United States that the higher education of women is most extended. In Sweden and in Italy the same revolution is occurring; in Germany alone it has made no progress. In Belgium the question of the admission of women to the universities for the study of medicine was officially presented to the State Universities by Minister Delcour in 1875. The answer favored their admission. Since then the University of Brussels, which does not belong to the state, has admitted a few women. Last year a woman for the first time applied at Liége, and was matriculated in the course of pharmacy. M. Trasenster concludes that the University must prepare to take up the problem of female education, and he favors trying it. He discusses the pros and cons, and while admitting that women are in certain ways restricted, expresses strongly his conviction that it is right to open careers for those who must earn their own support, and wise to cultivate the intelligence of those who are to be wives, companions, and mothers, for such will have enriched their own lives, will elevate the standard of young men, and better the education of children.

—By an odd coincidence, three of the four pieces played at Friday afternoon's rehearsal for the Fourth Philharmonic Concert were marked No. 1: Haydn's E flat symphony, Max Bruch's first violin concerto, and Schumann's first symphony in B flat. Add to this that the performance throughout was "number one," too, and we have left only one exception—a new concert overture by Hugo Reinhold—which can hardly be classed in this category. Only a week ago a Reinhold scherzo was produced as a novelty, which was as original as it was well scored. The new overture is only well scored; the ideas in it are insignificant. The Bruch concerto was played by Mr. John F. Rhodes, who won a success with it rarely accorded a new-comer. For some reason or other, the almost exclusively feminine audiences at afternoon rehearsals are usually very undemonstrative; but Mr. Rhodes made such a favorable impression that he was recalled three times, and as it seemed inadvisable to repeat a part of the concerto, and there was no piano on the stage, he finally played a movement from one of Bach's violin sonatas. What is particularly noticeable about this young violinist is his genuine musical taste and intelligence. There is

nothing of the hot-house juvenile prodigy about him, and there is hope, therefore, that he may develop into a first-class violinist. Already his tone is large, intense, pure, and rich, and his phrasing beyond reproach. His modest and natural bearing and apparent freedom from nervousness are other points in his favor. With the applause of a Philharmonic audience for a testimonial, he may now make his appearance anywhere, and it is only to be hoped that he may remain as free from the tricks of virtuosity and showy sentimentality as he now seems to be. The two symphonies which formed the beginning and end of the programme not only were interesting in themselves, but served as an eloquent lecture on the history of music. If in the Haydn symphony every phrase seems self-evident, as it were, and often trite, it must be remembered that in Haydn's day this was not the case. The minor composers who followed Haydn used his phrases and thoughts over and over again, until many of them became as meaningless as gossip about the weather. As an orchestral composer, Schumann cannot claim credit for so great an innovation as Haydn, who first individualized the different families of instruments, and made the speech of each accord with its natural emotional character; but how much more concise and pregnant are his ideas than Haydn's, and how much deeper he has penetrated into the mysterious depths of the world of harmony. In this respect, indeed, Haydn is much inferior to Bach, who preceded him by half a century. It would be interesting if we could hear at these concerts some of the orchestral works of Bach's son Philip Emanuel, who forms a sort of link between him and Haydn. Some of his quaint turns and phrases would have all the relish of novelty to a modern audience.

REBER'S HISTORY OF ANCIENT ART.

History of Ancient Art. By Dr. Franz von Reber. Revised by the author. Translated and augmented by Joseph Thacher Clarke. Harper & Bros. 1882.

To collect and set in order the characteristics of historical art, to analyze them and trace their origins from a remoter antiquity, to study the reciprocal influences of contemporary arts, to note the gradual changes wrought by nations in the forms and processes which they have inherited, and to indicate how, under the influences of a more advanced civilization, these forms and processes are gradually developed into harmonious systems or styles—is equivalent to pursuing the study of humanity by the observation of its most natural expressions. An orderly and scientific exposition, therefore, of the development of art must necessarily embrace the essential part of the history of races; and the archæologist who uses his erudition with this great function in view makes a contribution to the knowledge of mankind of a sort impossible to be obtained by any other processes of investigation. But the conventional method employed in histories of art, whether of architecture, sculpture, or painting, results either in dry catalogues of characteristics or, if their evolution is attempted, in fruitless speculations, too much warped by theories to be of essential value. The testimony of art has, therefore, been almost inaccessible to the writer of general history. It is a curious fact that the evidence of an architectural form, of a characteristic of decorative sculpture or painting, of a variation in fictile types, has not been recognized in any essay professing to trace and define the progress of any phase of civilization. Dr. Freeman, among English historians, has, it is true, pointed out in an intelligent manner how such testimony may be used in throwing light upon certain points of political history, where its usefulness seems so self-evident that the failure of Gibbon and Hume and Hallam to give it at least equal rank with the evidence of documents and archives can only be accounted for by the absence of convenient archæological authority. As for questions of ethnology, in which the contemporaneous evolution of types of art would seem to render the most direct assistance, we are not aware that the existence of such sources of illumination has ever been suspected in any exposition of the subject.

The application of a cool, scientific method to the history of art has become, therefore, a matter of great importance to general literature. We have had an abundance of speculative, sentimental, antiquarian, and transcendental views of art, and innumerable handbooks, more or less partial in statement and narrow in scope. We have had our Lübke, our Kugler, our Fergusson, who have given us monumental and invaluable personal critiques. There has still been wanting a work concise, judicial, impersonal, presenting the wide-extended field in just perspective—rather a general compend of modern scholarship than an essay of original research however profound, or of opinion however learned. This want was first met eleven years ago by Prof. Reber, of Munich, who may fairly claim to have then first presented to the world, in a popular treatise on the history of ancient art, a trustworthy digest of the best archæological information of his time, compact but lucid in statement, and arranged according to a logical method which commends the work alike to the specialist and to the general reader. The first American edition, now before us, has enjoyed the advantage of a special revision by the author, and a very material enlargement (based upon the vast accumulation of recent discoveries and investigations) by Mr. J. T. Clarke, his former pupil, who has brought to this work the same indomitable spirit and the same trained enthusiasm which, applied to the excavations at Assos, now conducted under his competent leadership, are destined, we trust, to bring a new honor to the American name. It is to be observed that these copious additions, which were necessary to bring the work up to the standard of to-day, have been made with the approval of Dr. Reber, whose prudence has tempered the zeal of his pupil with excellent results.

The scheme of the work is comprehensive and symmetrical. Successive chapters, treating, in due proportion, of the architecture, sculpture, and painting—first, of Egypt; second, of Chaldea, Babylonia, and Assyria; third, of Persia; fourth, of Phœnicia, Palestine, and Asia Minor—conduct the reader by regular steps to the supreme culmination of those arts in Greece. The sixth division treats of Etruria, and the final division describes the arts of Rome, which were the outgrowth of all precedent forms, colored in the process of transition to this final expression by the political, social, and geographical conditions of successive families of the human race. We are finally led to the period of the debasement of Roman arts and to the threshold of the Christian era. To one who is interested in tracing the progress of civilization through the arts, the chapter on Phœnicia—which until lately has been the least-known country of the ancient world—must have a peculiar interest. The investigations of De Vogüé in Syria, the still more recent explorations of the French expedition under Renan in Palestine and its neighborhood, the discoveries in Cyprus by Di Cesnola, and the precious relics of Phœnician art found by Dr. Schliemann in the tombs of Mycenæ, have rendered it possible to place this ancient civilization in its true relation with the historical series; and this volume has used the new evidence thus brought together in our time with prudence and discretion. Previous handbooks have given us theories concerning the blending of the arts of the Euphrates and the Tigris, on the one hand, and of the Nile, on the other, in this mysterious region. We have here the proof of the nature, character, and proportions of this peculiar union, of which the most important direct result was the archaic art of Ionia and its influence on the Hellenic styles.

Although this work is mainly concerned with the processes which led immediately to Greek and Roman art, not less interesting is the glimpse it affords of the eastward as well as the westward development of this ancient Mesopotamian civilization. We have thus two streams diverging from this traditional source—one westward, as we have seen, through Asia Minor, Syria, the islands of the sea, and the Hellenic peninsula; the other eastward, to have its influence on the arts of Persia and India, and thence, through the Arabs, to form the style of the Saracens—but both strangely destined to unite again, through Roman architecture on the one hand, and through Mohammedan architecture on the other, in the arts of mediæval Christendom.

Mr. Clarke, in speaking of the temple reliefs of Assos in his first report, published last year by the Archæological Institute of America, so admirably characterizes the function of his especial investigations in supplying an important link between the carvings of those Oriental civilizations and the sculptures of Greece, that we are tempted to cite from that report a passage which perhaps will best explain the spirit of the volume now before us:

> "It is only by defining the position of such works that the application of the historic method to the study of intellectual and artistic growth can be of value. Archæological investigations can in no wise give a more direct and practical assistance to the sculpture of to-day than by indicating the path followed by the early Greek artists in their progress toward supreme excellence."

Too much ground is covered by the 472 pages of this work to make possible a really exhaustive treatment of any branch of the subject; but the discipline and good judgment brought by both author and editor to the difficult task of epitomizing the abounding results of modern European scholarship and research in the great field of archæology, so as to produce, even within this comparatively narrow scope, what may justly be called a history of ancient art, are sufficiently evident. The very compactness of a book so composed, by bringing closer together the successive steps of progress in the evolution of form, has the advantage of illustrating to the popular mind, more clearly than would otherwise be possible, the important principle that a true history of art is a history of growths rather than of inventions, and must, therefore, include a study of the human mind through a series of its visible expressions, advancing, according to its opportunities, toward a perfect ideal. But this compactness of form does not necessarily imply any meagreness in the record. On the contrary, the book abounds with new facts justified by the latest discoveries. Among these, we may note the ingenious application to the flanks of the doorway of the Treasury of Athens at Mycenæ of the curious form of reversed shaft, tapering downward instead of upward, which occurs as a decoration between the famous ramping lions over the gateway of the fortress of the Atridæ—the most ancient known piece of sculpture in Europe. Thus, in Mr. Clarke's restoration, the well-known fragment of these shafts, hitherto set down in all the books as a base, here appears reversed at the top of the shaft as a capital, thus possibly presenting the Pelasgic step in the evolution of the

Doric echinus. Another argument in favor of the reversed shaft might be found in the fact that this adjustment brings the side of the shaft parallel with the battering jambs of the doorway, which may thus have suggested an experiment not recognized by the severer taste of the later Greeks as worthy of development, but reappearing, perhaps, in the termini of the Romans.

In view of the careful studies which the editor has made of the Greek Doric order, and of the somewhat polemic tone of his previous discussions of the subject, one naturally turns to the extended passages on this all-important theme with the expectation of finding some trace of dogmatism there. But if we except the hypæthral question, the treatment is in the main as temperate as it is clear and decisive. In fact, these passages constitute the most valuable, as they are the most interesting, feature of the volume; they are admirably detailed from both a technical and historical point of view, and the evidence in favor of the wooden prototype of construction is summed up with sufficient illustration and clearness of statement. The polychromy of the orders, however, is dismissed in a paragraph, which, although it justly epitomizes the soundest knowledge which we possess, and wisely refrains from entertaining the reader with any such speculations upon the subject as Viollet-le-Duc and others have indulged in, is all too brief for the importance of the theme. Nor does it recognize the fact that the Greeks, in staining their marbles and painting the stucco priming of some of their temples, simply followed the example of all the prototypes in Egypt and the East; it was a traditional custom, and probably no Greek could conceive of a work of architecture without its proper and usual completion by color. This omission is all the more remarkable, as the distinguishing characteristic of Dr. Reber's work is the insistance that growth, and not invention, is the principle of progress in the history of ancient art. We may note, for instance, the felicity with which the genesis and evolution of the distinguishing features of what we call classic architecture have been followed in due sequence, parallel with the development of successive civilizations, gaining new expressions of grace and fitness according to the varying conditions of environment, until Greece established the perfect type in her styles, and Rome formulated it in her orders. In like manner, in the chapters on Assyria, Persia, and Asia Minor the development of the helix is traced in the decorations of columns, furniture, vases, and metal-work, so that we are prepared for its fuller expression in the capitals of Lycia; and even the excessive magnificence of the Ionic capitals of the Erechtheum comes to us, not as a phenomenal creation, but as the natural fulfilment of a promise under exceptionally favorable conditions of growth.

The paragraph covering the important point of the method of lighting the Greek peripteral temple would have been abundantly sufficient if the proofs of the use of artificial illumination had been so cumulative in late years as to outlaw all previous theories of illumination by hypæthral openings in the roof. But the fact is, that, notwithstanding Mr. Clarke's spirited and ingenious brochure, lately published, in advocacy of the ever-burning lamps before the shrine or statue of the god as the only source of light in the temple interior, and notwithstanding Dr. Reber's reported acceptance of this attractive hypothesis, this question is still an open one among scholars; and it is not in harmony with the judicial spirit which elsewhere pervades this work not to recognize in the text the existence of opposing theories on this point among the most advanced scholars of the day. The dogmatic dismissal of these theories in the obscurity of a note is not in accord with the true spirit of history. On the other hand, in speaking of the uncertainty of the date of the temple at Assos (p. 217), the editor pursues quite a different course, and modestly refrains from giving, in a work of this sort, the weight of his own well-grounded but personal opinion on this subject, as set forth in his first report.

The capacity for condensed but lucid statement, which is the prevailing feature of this history, finds its most successful illustration in the fifty-eight pages devoted to Rome. In these the character and proportion of the influences from Greece and Etruria are clearly defined, and the growth of Roman characteristics in architecture, sculpture, and painting is analyzed and traced with singular perspicuity. The temples, the baths, the theatres, the amphitheatres, the aqueducts, the triumphal arches, the mausoleums and tombs, the basilicas, the palaces, and the smaller domestic establishments, though confined in the statement within the narrowest limits, are defined with sufficient fulness, always with excellent judgment, and often with an originality of deduction and a force of logic which throw new light even upon themes so familiar as these. The history of Roman sculpture and painting, in especial, is full of interest and novelty, and here, as always, the relation of these arts to the advancing and to the declining civilizations of the epoch is kept in view. We would call especial attention to the ingenious theory of the architectural derivation of the early Christian churches from the private basilicas of the Empire, and to that referring to the influence exercised upon the development of the vast palaces of the later Roman emperors by those of the luxurious successors of Alexander the Great in the East—always referred to in these pages, by the by, as *the Diadochi*, a convenient term, but one unfamiliar to our textbooks.

The book is abundantly illustrated, and, though some of the prints are poor in quality, many of them present fresh examples, and all have their proper relation to the text. The insistance upon the Greek spelling of proper names, and upon the use of Greek instead of the more familiar Vitruvian nomenclature of technical terms in architecture—though the editor offers a formal apology for this practice in his preface, and appends a convenient glossary for the information of the unlearned—will not meet with universal approval. In this glossary, by the by, we do not find either Parotides or Parastades or Baphe—words which occur in the text. The translation is admirably done, and the English is as straightforward and lucid as the ideas. The book, as we have said, is primarily a compend of information from various sources; but, save in a few scattered instances, the authorities are not given, so that we find it difficult at times to distinguish the original from the borrowed thought, and the reader is thus constrained to accept many facts of importance and interest purely on the authority of the author—a practice surely not conformable to scientific method.

RECENT NOVELS.

The House of a Merchant Prince. A Novel of New York. By William Henry Bishop. Boston: Houghton, Mifflin & Co.

Magnhild. By Björnstjerne Björnson. Translated from the Norse by Rasmus B. Anderson. Boston: Houghton, Mifflin & Co.

A Whimsical Wooing. By Anton Giulio Barrili. From the Italian, by Clara Bell. New York: William S. Gottsberger.

Mr. Isaacs. A Tale of Modern India. By F. Marion Crawford. London and New York: Macmillan & Co.

Heart of Steel. By Christian Reid. New York: D. Appleton & Co.

Barrington's Fate. [No Name Series.] Boston: Roberts Bros.

The Colonel's Daughter; or, Winning his Spurs. By Capt. Charles King, U. S. A. Philadelphia: J. B. Lippincott & Co.

Gabrielle de Bourdaine. By Mrs. John Kent Spender. [Franklin Square Library.]

A Cruise Under Six Flags. By O. A. E. Philadelphia: J. B. Lippincott & Co.

L'Évangéliste, Roman Parisien. Par Alphonse Daudet. Paris: E. Dentu; New York: F. W. Christern.

Mr. Bishop is a writer of great cleverness. His powers of description and narration are unusually good, and what he has seen he is capable of making others see. His picture of New York life is open to the criticism that while externally it is accurate enough, morally and intellectually it will not strike a New Yorker as showing a thorough knowledge of the city. Mr. Bishop's people display a great deal of human nature, but his types are not, to our feeling, particularly "New Yorky." They are not Bostonian; they are not Philadelphian; they are not Western. They belong to a community in which culture is at a discount, and humor at a premium; but then these are not distinctive features of New York. To this Mr. Bishop may perhaps reply that New York has no distinctive features except such as are purely external, and that the novelist who faithfully depicts these, does as much as can be expected of him; and we confess that there is, with the continually changing structure of society here, a good deal in this view. The Knickerbocker of yesterday is supplanted by the mining millionaire of to-day: a passion for mimicking French society by Anglomania; a taste for buhl and ormulu by æstheticism; the political cynic and pyrrhonist by the "gentleman in politics." Nothing remains unchanged in our institutions but Delmonico's and the Stock Exchange; and possibly, on a very searching analysis, these are the two props of our civilization. It is curious how little impression New York life, compared with that of the other great capitals of the world, has made on the literature of fiction. With regard to the life developed since the war, contemporary fiction seems to have avoided it. We can recall no novelist of reputation who has made the attempt seriously except Mr. Bishop, and we have said his types present rather broadly American than distinctly New York characteristics.

As an American novel, 'The House of a Merchant Prince' has one feature which we can commend to the attention of the English critic who has recently been looking up the subject of American fiction, with the assurance that the manner in which Mr. Bishop represents it is the correct one, no matter what any one else may tell him—we mean the fact that the love of money as displayed in America is not exactly the love of money as displayed in the Old World. Among American men the love of money is not usually associated with that closeness which in English novels it generally presupposes; while among unmarried women the cold-blooded and calculating habit of balancing pecuniary pros and cons with regard to marriage that we see so much of in English novels is not a national trait with us, but is confined to a small class. Whatever may be in store for us in the future, the American girl hitherto has married, as a rule, from inclination; a custom which, it should be observed, is encouraged by the docile character of the American parent.

'Magnhild' is the last volume of the edition of Björnson's collected works which Professor Anderson undertook to translate. The figures in the book are so strongly, so vividly presented to the eye that their motions, their actions are eagerly anticipated. But the story is only half told, or less than that: it is only fragments of a story. One may imagine that Björnson meant to portray the power of purity, however unconsciously exercised, to elevate and ennoble all with which it comes into relation. But the outlines are too broken, the lights too scattered. The reader can never give full sympathy, because never sure of his ground. The book leaves the impression that the author had an idea to express, but that he has failed to find such embodiment of it as should carry it fully and forcibly to the reader. The *ébauche* of a master, however hasty and rough, has the *idea* in it. The rest is only a matter of shading.

If 'The Eleventh Commandment,' the previous work of Barili, was a good three-act play, 'A Whimsical Wooing' is a sparkling comedietta. It is one situation, a single catastrophe, yet, like a bit of impressionist painting of the finer sort, it reveals in a flash all the possibilities of the scene. The hero, Roberto Fenoglio, a man of wealth, position, and accomplishments, finds himself at the end of his resources for entertainment or interest. Hopelessly bored, he abandons himself to the drift of chance, and finds himself, in no longer space of time than from midnight to daylight—where and how, the reader will thank us for not forestalling his pleasure in finding out for himself.

There is a kind of obvious cleverness about 'Mr. Isaacs' sufficient to excite remark, but upon a second look it disappears, and performance is found to lag sadly behind intention. A series of large phrases and many-syllabled words makes no more substantial statement of philosophy than the mists and incantations of the Eastern *yogi* who supplies the supernatural of the story. Mr. Isaacs, "Abdul Hafiz-ben-Isâk," is, it must be admitted, a very good figure for a romance of chivalry, a worthy contemporary of Saladin. He is found in a room where "the walls and the ceiling were lined with gold and precious stones, . . . in a land peopled with all the effulgent phantasies and the priceless realities of the magic East." Of two pages of personal description it is enough to quote the close: "His eyes blaze with the splendor of a godlike nature, needing neither meat nor strong drink to feed its power." To unwind the twisted thread of diplomatic cunning, to fathom Afghan plots, to rescue Shere Ali, are at best hardly adequate work for such a superlative creature; but in plain daylight he is only a dealer in precious stones, and at once the story breaks down from the absolute impossibility of reconciling pure romance with the realism of to-day. One can imagine that daring prowess in a tiger-hunt may replace the heroism of a crusader, be he Paladin or Paynim; but once within the circle of modern conventional society, ordinary views of the relations of men and women must be reckoned with in order to give probability to a plot. Mr. Crawford does not exactly shock his readers by dissent from or a protest against these views. He simply traverses them so completely as to make his book one long absurdity, and his rather hazy visions of the power of woman, or "womanhood," as the *yogi* puts it, ludicrous. The narrator, a not agreeable newspaper editor, who never travels without a volume of Kant in his portmanteau, says of Mr. Isaacs: "His religion was a very beautiful and real thing to him, ever present in his life, and I mused on the future of the man, with his great endowments, his exquisite sensitiveness, and his high view of his obligations to his fellows." Yet the first dialogue between the two has revealed the fact that Isaacs has three wives, who have been quarrelling. "I wonder whether a fourth would act as a fly-wheel." In two hours' time he meets a beautiful English girl, and before the men separate at midnight, he says, "I am in love." The picture of Miss Westonhaugh, as a specimen of one type of English beauty, is the best thing in the book:

"She was of the type of brilliant, healthy Northern girls who depend more on their animal spirits and enjoyment of living for their happiness than upon any natural or acquired mental powers. . . . She was a beautiful creature, certainly; one of those striking-looking women of whom something is always expected, until they drop quietly out of youth into middle age, and the world finds out that they are after all not heroines of romance, but merely plain, honest, good women; good wives and good mothers, who love their homes and husbands well, though it has pleased Nature in some strange freak to give them the form and feature of a Semiramis, a Cleopatra, or a Jeanne d'Arc."

Mr. Isaacs says, two days later:

"I do seriously think of proposing to marry, and of marrying Miss Westonhaugh. . . . Will you help me?"

And the editor, of American education and a Roman Catholic to boot, replies: "Yes, I will help you. I will be a friend to you." Such slight demur as he thought fit to make is answered by the assurance: "It is allowed me by my religion to marry a fourth. . . . She would henceforth be my only wife"; the speaker probably forgetting that he has already said—

"There are means provided us by the foresight of the apostle, by which we may ease ourselves of domestic burdens when they are too heavy for us to bear. It would be quite within the bounds of possibility for me to divorce them all three without making any special scandal."

It is needless to follow the incidents of the story to the end. Plainly, since the lady also falls in love, she and her friends must regard the earlier marriages as only so many *liaisons*, if she is to marry Isaacs. Why this should be more dreadful than to divorce the three is not clear, but Mr. Crawford seems afraid to try it, and cuts the knot by the sudden death of Miss Westonhaugh. The whole story is only not an outrage because it is so palpably absurd. To build upon it an argument for the perfection of character through the pursuit of philosophy, or for the attainment of the highest spiritual good through ever-ascending human affections, if it is not profanation, is all sheer nonsense; and no poetic flights, however fanciful, can make us forget the three poor souls abandoned to poverty when Mr. Isaacs wills all his fortune to Miss Westonhaugh's brother, and withdraws for mystic contemplation "into the ethereal range of the outer firmament." We notice some apparant lacunæ in the writer's mind of a curious sort. He must be a late comer into the circle of certain things who can write, "Edwin Arnold has set our American Transcendentalists and Unitarians and Free-thinkers speculating about it all, and wondering whether the East may not have had men as great as Emerson and Channing among its teachers."

The 'Heart of Steel' belongs to Irene Lescar, a maiden yet in her teens, of peerless beauty and divine voice. She has vowed never to forgive the man who has selfishly divorced himself from her mother. Neither he nor his should ever have aught but hate in word or look from her. Of course the inevitable sequence is, that the man's nephew, a most picturesque and commendable Count, falls in love with her, and, after many pages of incident which the author's mild manner prevents from being really thrilling, the "Heart of Steel" softens at last. There is in the book much agreeable life among pleasant-mannered people in Paris and Rome, though they are never quite interesting, in spite of a good deal of guide-book information that is parcelled out between them. It is fair to say that the information is of much the choicer kind, and it will please a good many people who have not already seen it in Mr. Hare's various books. Two scenes the author has chosen which have been rarely, if ever, described, and of both she has made a vivid and impressive picture. The first is the Chapelle Expiatoire, at Paris, on the anniversary of the death of Marie Antoinette; the other, St. John Lateran during the grand ceremonial upon Palm Sunday.

If 'Barrington's Fate' is a happy one, it is not because of his deserts. Shuffling, mean, and selfish he is from first to last. He might be left to oblivion, but it implies perversion of the moral sense quite as dangerous in the end as that found in confessedly bad books, that his conduct is really blamed by nobody in the book who is represented as either sensible or lovable. The heroine's father says some very plain things, but the author wishes us to believe him but a poor creature. "All for love" is the way of the world, but not of everybody in it, and it is quite a different type of woman from the pure, shy, conscientious English maiden whom the author makes out the heroine to be, that will go to meet an almost unknown man in an inn-parlor at midnight, after he has stooped to the vulgar disguise of a common waiter. The story is rather incongruously made up from London society, artistic and commercial, and from life in a remote country house, with an intermezzo of cooking-school and lady-helps.

We have had no better pictures of life at the military stations on the Pacific slopes than are given in 'The Colonel's Daughter.' This remark, however, we intend to apply only to the minor incidents, the setting of the story. It is possible that the writer has actual facts to justify his plot, but one would be sorry to believe that such a world of petty schemings and trivial jealousies is often to be found. Again, it is difficult to believe that a woman so repulsively coarse and mean as the Colonel's wife could be the mother of such a daughter. As between hero and heroine, we have another proof that, in novels at least, the idea of *wooing* a lady is going out of fashion. Over and over again we have a noble pair in fact madly in love, but giving no sign to the world or to each other. He turns deadly pale, or his lips quiver under his moustache, and next time she turns deep crimson or rushes off to bathe her pillow in tears. Suddenly he is wounded or she falls ill, and then it all comes out. One story that we have recently seen goes further than this, for the hero is quite drowned without any dénouement. Another fashion in plots that we notice is that the heroine may have several lovers, may even be affianced more than once, but in the end is won by some one who, to borrow a familiar phrase, has not been in the running at all. It may be the *ami d'enfance* or the kind paternal friend who is successful at last. But such books are likely to fail of a second reading, unless they have very decided merit apart from the plot, for the reader feels defrauded of his sympathy.

'Gabrielle de Bourdaine' has just such a plot, but it is a prettily-told story of life on one of the Channel Islands. A side episode of secret passages and mysterious chambers adds nothing to the real interest of it, which centres in Gabrielle and her father, a Frenchman of strangely fallen fortunes.

'A Cruise Under Six Flags' is a collection of chatty stories told by men of six different countries. They are not all quite new, but may give a brief hour of entertainment to readers not too exacting.

A change is coming over the spirit of French fiction. A reaction seems to have set in, under the lead of some of the foremost writers of France. While the ordinary *roman parisien* is

getting dirtier day by day, and sinking deeper and deeper in the mire, other stories are getting into print far purer in tone. Even Zola, quick to see a change in the temper of the times, announced that his new novel, 'Au Bonheur des Dames,' now appearing, oddly enough, in the very disreputable *Gil Blas*, was to be pure as a lily, and warranted to contain nothing which would bring the blush of shame to the cheek of innocence. M. Alphonse Daudet, too, joins the reformers, and in the new story which he has just reprinted from the worldly *Figaro* he has chosen an austere subject, as unlike those generally in favor with the readers of that light and lively sheet as can well be imagined. As this subject is fresher than any other yet treated by M. Daudet, and stronger also, we are inclined to call 'L'Évangéliste' his finest work, and the one which most nearly approaches artistic perfection. The influence of Dickens, which disfigured much of M. Daudet's earlier writing, is scarcely to be detected at all, even in the minor figures which lend a comedy relief. No story of Dickens's, not even the 'Tale of Two Cities,' marches forward so irresistibly to its inevitable end, with no waste of strength or time on episodes. 'L'Évangéliste' is a story of direct and pitiless power. It is like a Greek tragedy in its simplicity, and in the suggestion of an overriding and irrevocable fate against which all strife is vain. The Evangelist is a cold, proud, imperious, bigoted woman, controlling enormous wealth in the propagandism of a hard and narrow form of religion; going straight before her, though her own husband kills himself because of her frigidity, and though a mother may go mad because her daughter is taken from her by a pseudo-religious "camp-meeting-revival" ecstasy. This figure of Jeanne is drawn with extraordinary vigor and sobriety, and is worthy to stand side by side with the 'Religeuse' of Diderot; indeed, as excess of one kind is as bad as excess of another, 'L'Évangéliste' is in fact nearly as horrible as 'La Religeuse.' Like Diderot's tale, too, M. Daudet's novel is rather science than literature. In his dedication to the eloquent and learned Dr. Charcot, the physician of La Salpétrière, M. Daudet recognizes this fact, and calls his work an "observation"—as if he should say, "notes taken at a clinic." As such it deserves to be studied. Its subject is of especial interest here in America, where the same bigotry is much more frequent, although perhaps less pernicious than in France, as all readers of Edward Eggleston's excellent stories will remember.

MEMORY AND ITS DISEASES.

Diseases of Memory: An Essay in the Positive Psychology. By Th. Ribot. Translated by Wm. Huntington Smith. D. Appleton & Co. 1882.

During the metaphysical or speculative period of philosophy, which has now fortunately passed into history, it was customary, in building a house, to "begin with the roof." Schelling, for instance, at the age of nineteen, wrote "On the Possibility of any Form of Philosophy"; Hegel began his wild and reckless speculative career with an essay on "Common-Sense Judgment respecting Objectivity and Subjectivity"; and Fichte's maiden effort was modestly concerned with a "Criticism of all Revelation." Thanks to the influence of biological science, this philosophical spring poetry has shared the fate of other absurdities and gone out of fashion. At the present day an ambitious student of philosophy recognizes the necessity of beginning with the base of the edifice instead of the roof. He first of all studies the psycho-physiology of the senses, imagination, memory; and endeavors, by a special investigation of some definite problem, aided by experiment, to mould a few of the bricks which will have to be accumulated before there is any need of calling upon the roof-makers. M. Ribot, the editor of the *Revue Philosophique*, is one of those who have set a good example in this respect. His monograph on 'Heredity' and the present treatise on 'Memory' are good specimens of the kind of work which psychologists are now expected to do; and Mr. Grant Allen's little book on the 'Color-Sense' is another. M. Ribot, it is true, is not a writer of great originality. His treatise on 'Heredity' is little more than an amplification of the theories and *aperçus* of Darwin, Galton, and others; and the same must be said of his latest volume, which is not so original as he and some of his reviewers seem to consider it. It is, however, a rich repository of suggestive facts, culled from various sources; and the explanations given are in accord with the latest discoveries in physiological science. What is most noticeable about it is its subject, which indicates that psychologists are at last becoming fully alive to the importance of studying the morbid phenomena of mind as well as those that are normal. Dr. von Krafft-Ebing, in his admirable 'Lehrbuch der Psychiatrie,' compares the advantages which empiric psychology might gain from a study of mental pathology to the gain which has accrued to physiology from a study of the pathology of the body; and his assertion is sustained by his own book, which, to a student of psychology, is as much more instructive and suggestive than an ordinary text-book of psychology as laboratory work is of superior value, for a student of physics or chemistry, to book-reading. From a lack of such pathological knowledge even Schopenhauer, who is in many respects the most modern and advanced of all thinkers, could broach the ridiculous theory that insanity is simply the severing of the thread of memory—a process which, he thinks, nature resorts to when the burden of affliction becomes too great to bear otherwise.

As the first sixty-eight pages of the 'Diseases of Memory' are devoted to a psycho-physiological consideration of the general phenomena of memory, and only the other two-thirds of the treatise to the abnormal features, it would have been more appropriate to give the book the title of 'Memory and its Diseases,' which, we believe, it bears in the German edition. At the outset M. Ribot differs widely from the older psychologists, who mistook the species for the genus by considering conscious memory as the whole of that "faculty," whereas it is in the sphere of the *unconscious* that memory can best be studied, if we understand that word as synonymous with material nervous action, and not in the mystic, metaphysical sense, with a capital U. Memory consists of three elements: "the conservation of certain conditions, their reproduction, and their localization in the past." They are of unequal value, the first two being necessary, indispensable; suppress them, and memory is annihilated. The third, conscious recollection, is not necessary, but comes and goes, and is merely superadded to the others, which constitute organic or biological memory. The true type of organic memory is to be sought in the so-called secondary automatic actions—the endless acts of complicated muscular adjustment and coördination which take place when we walk, talk, eat, write, play on an instrument, etc. All these movements were at first attended by a feeling of conscious effort; but with repetition they become mechanical or automatic, and no longer enter the sphere of consciousness. This change can be easily explained when it is remembered that every psychic act requires an appreciable lapse of time which can be, and has been in many cases, accurately measured. An act, therefore, which at first is executed slowly and consciously, becomes with repetition easier and more rapid, until it gradually falls below the minimum time required for consciousness. Therefore, all "conscious memory tends, little by little, to become automatic."

"The brain is like a laboratory full of movement, where thousands of occupations are going on at once. Unconscious cerebration, not being subject to restrictions of time—operating, so to speak, only in space—may act in several directions at the same moment. Consciousness is the narrow gate through which a very small part of all this work is able to reach us."

M. Ribot does not devote much space to a consideration of conscious memory, which, as conditioned and improved by repetition, concentration of attention, emotional interest, etc., is fully described in text-books on psychology. In considering memory as a general function of organized matter, he follows the precedent of Dr. Hering, who, in his suggestive little pamphlet, 'Das Gedächtniss als eine allgemeine Function der organisirten Materie,' goes so far as to claim the first germs of individual life as instances of biologic memory, the most marvellous of all, on account of their inheritance of all the ancestral qualities of body and mind. This pamphlet, indeed, seems to have been the "first cause" and *raison d'être* of Ribot's book, as he follows its vein of thought throughout. Thus, in seeking for an analogy to organic memory, he rejects those derived from inorganic phenomena, as in the following experiment: "Lay a key upon a sheet of white paper exposed to the sunlight; place the paper in a dark drawer; and the spectral image of the key will still be visible after the lapse of years." The objection is, that here we have only conservation, the first condition of recollection, while reproduction is too passive and too much dependent on the intervention of a foreign agent to allow this to pass as a true analogy to the process of memory. He prefers Dr. Hering's analogy, who compares the mechanism of reproduction and the gradual formation of memory to a muscular fibre, which, responding feebly at first to the stimulus transmitted by the motor nerve, does so with more vigor the more frequently it is stimulated, allowing natural periods of repose. The "primal meaning of memory as a biological fact" is "an impregnation." An impression made on the cells of the brain is fixed and retained; the parts of the cell that are destroyed by nutritive changes are replaced by others exactly like them; and thus memory is seen to be merely a phase of heredity, the new cell having all the qualities of the old. The number of cerebral cells available for new impressions is about 600,000,000, according to Prof. Meynert's estimate, and is therefore not easily exhausted. But M. Ribot justly insists that, besides the impression produced on the individual cells, we must consider the establishment of stable associations between different groups of nerve elements as the result of experience, and which he styles dynamic, to distinguish them from natural or anatomical, associations. M. Ribot thinks that this point has not been sufficiently insisted upon by psychologists; but it is almost a commonplace of German and English neurological literature.

With the general principles thus set forth, M. Ribot proceeds to explain certain morbid phenomena of memory. An expert will close this part of his treatise with a sense of disappointment, as he will find but little that is new to him. For the student, however, and the omnivorous general reader, it possesses almost the interest of a novel; for, if truth is anywhere stranger than fiction, it is in the region of men

tal pathology, as there is no distinct dividing line between sanity and insanity, and all of us have idiosyncrasies which belong to this uncertain border region. M. Ribot classifies disorders of memory under the heads of General Amnesia, which affects the entire memory in all its forms, and Partial Amnesia, which is limited to a single class of recollections. General Amnesia, again, is subdivided into Temporary, Periodical, and Progressive Amnesia. The first is illustrated by the case of a shoemaker who, on his wedding-day, stabbed his father-in-law. Several days later he came to himself, but had not the slightest consciousness of what he had done. Periodical amnesia is typified by the case of a well-informed young woman who fell into a profound sleep, and on awaking had lost every trace of her knowledge, and was compelled to learn everything anew, including reading, spelling, and writing. After a few months, she again fell into a deep sleep, which restored her to her normal condition, leaving her no recollection of her abnormal state. The periodic transitions between these two states continued for four years. Under this head also comes the story of the Irish porter who "lost a package while drunk, got drunk again, and remembered where he had left it." Progressive amnesia finally, as a rule, results in gradual but complete destruction of memory, the cause being a progressive lesion of the brain.

"Lunatic asylums are full of patients of this class, who on the day after entry insist that they have been there for a year, five years, ten years. . . . But recollection of what was done and acquired prior to the disease is retained with great tenacity. . . . When the premonitory period just spoken of is passed, there is a gradual and extended decay of all the faculties, until the subject is reduced to a vegetative condition."

Under the head of partial amnesia, we have first to consider the fact that "memory may be resolved into memories, just as the life of an organism may be resolved into the lives of the organs, the tissues, the anatomical elements which compose it." One kind of memory may be weak while the other is very strong. Horace Vernet and Gustave Doré could paint a portrait from memory; Mozart wrote down the Miserere in the Sistine Chapel after hearing it twice; Lewes speaks of a man who walked half a mile through a crowded street, and then was able to name all the shops he had passed in proper order. "It is even probable that inequality of memories in the same person is the rule rather than the exception." The pathological side is illustrated by the man who received a blow on his head and lost all knowledge of Greek, although his memory was otherwise unimpaired; and by others who lost the memory of numbers, forms, proper names—including their own—the existence of their nearest relatives, etc. A special section is devoted to amnesia of signs, or language, which the author considers a disease of the motor memory. The general conclusions derived from all these cases, although not entirely new and simple corollaries of the law of evolution, are of importance. "In cases of general dissolution of the memory, loss of recollection follows an invariable path: recent events, ideas in general, feelings, and acts. In the best-known cases of partial dissolution (forgetfulness of signs), loss of recollection follows an invariable path: proper names, common nouns, adjectives and verbs, interjections and gestures." In both cases the regression is from the new to the old, from the complex to the simple, from the voluntary to the automatic, from the least organized to the best organized. "Degeneration first affects what has been most recently formed, and upon this psychological principle: the complex disappears before the simple, because it has not been repeated so often in experience."

A final chapter, devoted to Exaltations of Memory, or Hypermnesia, deals with facts with which most people are familiar. The causes of hypermnesia, which may be either a general or partial excitation of memory beyond its normal state, are opium and similar narcotics, alcohol, ecstasy, hypnotism, and especially acute fevers. The most remarkable case given is that of an Italian who, in the beginning of a fatal attack of yellow fever, spoke English only; in the middle of the disease, French only was used; and on the day of his death he spoke only in his native language. Another case given is very instructive. A physician who in early life had abandoned the Roman Catholic religion had an attack of delirium preceding his death, during which he prayed only in the forms of the Church of Rome, all recollection of the prescribed formulas of the Protestant faith having been obliterated. This perhaps throws light on the "conversion" of great infidels on their death-beds. All the experiences of later years gradually fade from their mind until only the early days of their youth, associated with religious teachings, are left to occupy their consciousness. Such a confession, therefore, is nothing more than a sign of weakening of brain-power—a form of mental pathology, analogous to a dream in which recollections of childhood occupy the field, because more powerful currents of thought or vivid images of later life do not for the moment crowd them out.

Emerson at Home and Abroad. By Moncure Daniel Conway. Boston: J. R. Osgood & Co. 1882.

Mr. Conway has hardly done himself or Mr. Emerson justice in this volume. He contributes very little that is new to our knowledge either of the character or mind of Emerson, and his book is written in an entirely uncritical vein. He does not sufficiently discriminate (as Hawthorne says somewhere) between mysticism and mistiness, and his attempt at analyzing the sources of Emerson's peculiar influence over his contemporaries is not very successful. He does, however, bring out one or two points with considerable distinctness, which, as time goes on, will perhaps be recognized as helping to explain the secret of Emerson. No one can read his account without seeing that Emerson did not derive his authority from any contribution which he made to human opinion. Had he done so, Mr. Conway, as his disciple, would be able to tell us what it was, or at any rate would endeavor to do so. But, although he constantly dwells upon the beauty of Emerson's mind, he does not even himself appear to think that the sum of human knowledge was in any way increased by his speculations. His keenness of insight, his great range of sympathy, his delicacy of thought and expression, his eloquence, are all dwelt upon; but we are not shown how our way of looking at life, or man and his destiny, is to be in the future different from what it has always been because of his exercise of these faculties. Yet he was a professed "thinker," and was at the head of what seemed for the time being a distinct school of philosophy.

The work which Emerson really accomplished was not philosophical, but practical; it was nothing more nor less than the throwing open the doors of New England to what it is now the fashion to call "culture," or, in other words, to the best intellectual influences of his time. The New England mind down to his day had been almost entirely devoted to theology, and to the explanation of life to be found within the covers of the Bible. It was narrow, provincial, prejudiced, and intensely logical. Had Emerson appeared in such a society with a real system of any kind, theological or anti-theological, his premises would have been assailed and denied, and his conclusions disproved to the satisfaction of his assailants by minds much keener at controversial argument than his own. But appearing without any system of any kind, he had a great advantage. He could teach without entering the lists with other teachers, could think and talk about the problems of life and duty — the most interesting of subjects to the community in which he lived—with an irresponsibility which was the despair of his critics and opponents. Once established as a Transcendentalist, he was enabled to draw upon any system of philosophy or thought he pleased, for the benefit of his large and increasing congregation; and this is exactly what he did. He opened the doors of intellectual life to New England, and pointed out to them the treasures of thought and experience that were within their reach. He was a moralist, he was a Platonist, he was an evolutionist, a Darwinian, a Pantheist, an Eastern seer, and a poet. He was a mystic with a gentle humor which enabled him to enjoy probably more than any of his critics the mystification which Transcendentalism, as a supposed school of thought, produced.

In saying this, we do not mean that with Emerson himself the Transcendental movement was consciously planned beforehand for the purpose of destroying the deep roots which dogma had struck into the New England soil. He had merely a desire to preach the Word as he understood it, just as his ancestors had preached it according to their understanding. The Word with them began and ended with dogma. With him it embraced whatever valuable or beautiful things in thought or fancy were suggested by his study of life and literature.

Such a career implied a community accustomed to sacerdotal leadership; and in this aspect Emerson derived assistance from the very system he did so much to break up. He had inherited an aptitude for the priestly office, and the habits of New England predisposed those who sympathized with him not simply to combine with him, but to form a congregation about him—the nucleus of a church, but a church without a creed. Disciples came to him, and undertook to help him in sowing the seed. But Transcendentalism was merely a protest against fixed belief of any kind, and, the protest once made, the attempt to formulate the protest in the guise of a new set of beliefs and formal propositions could only end, in the hands of Emerson's parodists, in a burlesque; and so it did end. If we are right in what we have said, Transcendentalism would be an insecure basis on which to rest Emerson's fame; for great as was the change effected by it in New England, the phenomenon was rather of local interest, and chiefly shows in what an extraordinarily provincial condition the New England mind must have been before his time. It is undoubtedly as a literary man—a class of which Emerson had not himself a very high opinion—that he is likely to possess a permanent interest for the world. Poetry was the soul of his philosophy.

Mr. Conway's book is a biographical eulogy rather than a criticism. To him Emerson was from the first not merely a great man, but the revealer of a new life. He declares that when a young man, fresh from college, he found every career in life bounded by "some indefinable impediment," and was so disheartened that "nature had no meaning, life no promise and no aim." In this condition—not an uncommon one in bright young men just out of college—he accidentally found a sentence of Emerson's quoted in a magazine, and this sentence "changed my world and

me." He does not tell us what it was, for he says "it might not bear to others what it bore to me; its searching, subtle revelation defies any analysis I can make of its words. All I know is that it was the touch of flame I needed." We have no desire to make light of the profound impression thus produced. Fifty years ago Emerson's writings affected young men in this way—a way in which it is no longer possible to imagine them affecting anybody; and for this very reason vague eulogy will not any longer tend to strengthen Emerson's hold upon fame, but rather to raise doubts and put the reader in a sceptical attitude.

The Hindî Manual: comprising a Grammar of the Hindî Language, both Literary and Provincial; a complete Syntax; Exercises in various Styles of Hindî Composition; Dialogues on several Subjects; and a complete Vocabulary. By Frederic Pincott, M.R.A.S. London: W. H. Allen & Co. 1882. Pp. 360.

To impress on the minds of Englishmen the importance of the Hindî language—the mother-tongue of a vast majority of the inhabitants of northern and central India—has been a tedious process. With an eye solely to their own interests, Indian Muhammadans early exerted themselves to make it appear that an acquaintance with Urdû, or Hindûstânî, their own vernacular, was an adequate linguistic equipment for the foreign officials who carried out the details of the local government; and during several generations, and till only the other day, their exertions continued to operate agreeably to their wishes. Down to last year, whereas the study of Urdû was made imperative on English civilians destined for the Northwestern Provinces, a knowledge on their part of Hindî was left optional. Under the new order of things, while it is a matter of election with those civilians to give their attention to Urdû, it is exacted of them to pass, in London, a series of examinations, extending over two years, in Hindî. In India, also, Hindî is now at last recognized where it ought to be recognized. As stands to reason, we shall consequently no more hear of a special and grievous kind of malpractice, once deplorably familiar in Indian courts of justice, sufficiently exemplified by the incident about to be related. The present writer, it should be mentioned, here speaks from his own personal observation. A simple rustic, withal wholly illiterate, dictated his evidence, as the leading witness in a case of violence, to a Muhammadan clerk; the two squatting on the floor of the court, within ten feet of the presiding magistrate. The rustic, a Hindu, told his tale in Hindî, which the clerk understood quite as well as he did himself. The wily scribe, however, who took down his deposition in Urdû—the appointed language of legal proceedings—purposely selected words and phrases of Arabic derivation, and those the most difficult that he could call to memory. The record, when finished, was read to the deponent, who, though he took in nothing material of its import, artlessly subscribed to its correctness. It expressed, to all intents and purposes, the reverse of what he had explicitly stated; and the ruffian against whom he had borne testimony was, naturally to his amazement, acquitted. In this transaction the speech of the great bulk of the people had been legally ignored, a virtual premium on bribery, active and passive, being thus offered; and, as the result, justice had scandalously miscarried. As a Hindu may now insist that his deposition be taken down in his own terms, things of this stamp have happily become impossible.

Owing to the discouragement which Hindî has encountered, no dictionary of it has to this day been compiled that deserves to be called respectable. With regard to a grammar, it has been more fortunate—that of Dr. Kellogg being a performance of merit, though, from its author's manifestly narrow range of reading, it falls considerably short of what is to be desired. A grammar of Hindî fully up to the mark ought to reckon distinctly with the various dialects of the language—if, indeed, one is authorized to speak of a language where there is hardly other than a collection of dialects, and as yet no acknowledged classical standard. Little, however, as the fact is known, Hindî, in spite of its present unfixed character, possesses signal capabilities, and time will, without doubt, develop from it an admirable organ of mental expression. Such, in its maturity, it must needs become, considering its enormous vocabulary, its ready adaptiveness, and its endless expedients for distinguishing delicate shades of meaning. The one thing, above all others, which it lacks is uniformity; and this will, it is presumable, be brought about, in the course of time, by the agency of books and newspapers, and by the facilities for intercommunication afforded by railways.

Looking to the fact that the fortunes of Hindî have suddenly come to be in the ascendant, the appearance of the 'Hindî Manual' is altogether opportune. And anything more helpful for the end which it is intended to serve, comprehended within the limited space to which it is confined, could not easily be devised. Almost every page of it makes good its author's claim to originality; and it is patent both that he has entertained a right conception of the sort of materials that he ought to amass, and that he has known very well where to go for them. Any one capable of judging will perceive that he has laid under contribution books and periodicals alike abundant in number and widely various in style, and, what is especially noticeable, faithfully representative of living Hindî. On the subject of idiomatic phraseology he is markedly strong. In comparison with the information which he gives about it, all that is to be found elsewhere is, in fact, miserably meagre. If, to the advanced student of Hindî, his excellent edition of the 'Çakuntalâ' has proved warmly welcome, no less so will prove his 'Hindî Manual'; while, from the skill and judgment with which it gradually leads its peruser from things of the simplest elementary character on to the most knotty and complex, it is precisely what is wanted to place in the hands of the beginner. The English Civil-Service Commissioners have already included it in their list of prescribed text-books.

Lessing's Nathan der Weise. Edited, with English Notes, etc., by C. A. Buchheim, Ph.D., etc., etc. Oxford. 1882.

THE appearance of another annotated German classic from the hand of Prof. Buchheim will be welcomed by all who have made the acquaintance of the excellent series prepared by the same writer. Prof. Buchheim's services in England, like Prof. Hart's in this country, have been displayed in the careful and thorough editing of standard German authors. In the edition of 'Nathan der Weise' which he now offers we find the same patience and precision which mark his earlier works, and which we are accustomed to see applied chiefly to Greek and Latin classics. Although intended for the use of advanced students, every one interested in German literature will find Prof. Buchheim's commentary a valuable guide to the better appreciation of Lessing's masterpiece. To an extensive general introduction dealing with the history, tendency, and language of the drama, and containing a discussion of its dramatic character, an outline of the Ring parable, and an analysis of the characters of the play, are added copious exegetical notes, which avoid none of the many difficulties with which the poem abounds.

In the midst of work generally so accurate an occasional slip may be noted. On p. xvi., "May, 1778," should be "May, 1779"; p. xxii., Dunlop is hardly quoted fairly when he is made to assert that most of the Ring stories "seem to contain a sneer against the Christian religion." P. 236, the middle high-German form of *gattern* is *gateren* or *gatern;* the relationship of *gattern* and "gather" is well established—compare *Gitter, Gatte, gut,* "together" and "good." P. 249, *stellt und verstellt* may be rendered, "simulate and dissimulate." P. 266, l. 2061, *affirmative* should rather be *negative;* the construction is that of a question of doubt in elliptical, indirect discourse. In the translation from Boccaccio, on p. 267, "three religions" would be a better rendering of *tre Leggi* than "three creeds." P. 274, *operate* seems to be the corresponding medical term for *nachwirken.* For the explanation of the technical chess terms occurring in the second act, which have often been erroneously interpreted, the editor is indebted to the well-known champion player, Dr. Zukertort.

The text of the drama, at the request of the delegates of the Clarendon Press, has been printed with Roman type—a reform which perhaps will be less welcome in verse than in prose.

Tasso. By E. J. Hasell. [Foreign Classics for English Readers.] Philadelphia: J. B. Lippincott & Co. 1 vol., 8vo.

THIS is a neat little book giving a life of Tasso, and notices of his poetical works, with extracts. The life is the most interesting part, as showing the difficult career of a true poet in that period of Italian Renaissance of Art, but decadence of letters, which was followed by 200 years of Arcadianism. And truly, how could Dantesque poetry thrive under the religious and political servitude of Italy in the sixteenth century? The poets of that period were only courtiers, bound to please, flatter, and deify their masters; and poor Tasso was no exception, only Nature made him a true poet, and one of a very high order. But, hampered by his surroundings, it is no wonder that his finely-strung, sensitive nature was so affected that he became almost, if not for a time quite, insane. Alfonso of Este and the ladies of his court, especially his two sisters, patronized the poet, whose renown pampered their princely vanity, but their kindness was that of superiors to an inferior. As to the tender sentiment supposed to have been inspired by Leonora, it may have been true as regards Tasso, but it was totally unreciprocated on the part of the Princess, who, though flattered by the praises of the poet, experienced no feeling but condescension for the man.

The translations from Tasso's poems are very poor, and inevitably so. To mention only his two greatest works, the "Aminta" and the "Jerusalem Delivered," the one a pastoral drama, the other an epic poem, both lose much of their charm in a translation. As works of art they are two of the most perfect poems extant; but for this very reason they can be fully appreciated only in the original, as art is all in all in them. This is mostly lost in a translation, even when exceptionally good, which cannot be said of the extracts in this book. These versions, including the "renowned version of Fairfax," are exceedingly weak, and suggest a bouquet of wax flowers as compared with a freshly gathered one, all vivid color and sweet perfume entirely gone. The reader will derive as inadequate a conception of the charms of the poet so imperfectly rendered, as in seeing a pastoral idyl represented

on the stage with actors clothed in our every-day garments, or heroic characters armed with tin cuirasses and wooden swords.

BOOKS OF THE WEEK.

Advanced Lessons in Kitchen-Garden, with Songs and Occupations. J. W. Schermerhorn. 35 cents.
Allen, G. The Colors of Flowers. With illustrations. Macmillan & Co. $1.
Aroni, J. Futures. New Orleans: J. E. Gresham.
Audsley, W. J. and G. E. Popular Dictionary of Architecture and the Allied Arts. Vol. iii. G. P. Putnam's Sons. $5.
Ballantine, S. Some Experiences of a Barrister's Life. Philadelphia: J. B. Lippincott & Co. $1 50.
Beard, G. M. Herbert Spencer on American Nervousness. G. P. Putnam's Sons. 50 cents.
Boetticher, A. Olympia: das Fest und seine Stätte. Berlin: Julius Springer; New York: B. Westermann & Co.
Breck, C. The Life of the Rev. James Lloyd Breck, D.D., chiefly from Letters Written by Himself. E. & J. B. Young. $2.
Brownson, H. F. The Works of Orestes A. Brownson. Vol. ii. Detroit: Thorndike Nourse. $3.
Chesneau, E. La Peinture Anglaise. Paris: A. Quantin; New York: J. W. Bouton.
Child, Prof. F. J. English and Scottish Popular Ballads. Part 1. Boston: Houghton, Mifflin & Co.
Comstock, Lieut.-Col. C. B. Report of the Primary Triangulation of the United States Lake Survey. Washington.
Crane, Lucy. Art and the Formation of Taste. Macmillan & Co. $2.
Cyclopedia of Religious Literature. Vol. iii. The Early Days of Christianity. John B. Alden. 65 cents.
Delaborde, H. La Gravure. Paris: A. Quantin; New York: J. W. Bouton.
Diltz, H. P. The Duchesse Undine. Philadelphia: T. B. Peterson & Brothers. $1 25.
Ebers, G. A Word, Only a Word: a Novel. Wm. S. Gottsberger.
Ferris, B. G. A New Theory of the Origin of Species. Fowler & Wells. $1 50.
Foster, R. The Taxation of the Elevated Railroads in the City of New York. G. P. Putnam's Sons. 25 cents.
Froude, J. A. Short Studies on Great Subjects. Fourth Series. Charles Scribner's Sons. $1 50.
Hale, P. M. The Woods and Timbers of North Carolina. E. J. Hale & Son. $1 25.
Haynes, J. E. Pseudonyms of Authors. New York: J. E. Haynes. $1 25.
Heffley, N. P. Biography of the Father of Stenography, Marcus Tullius Tiro. Brooklyn.
Helleberg, C. G. A Book Written by the Spirits of the So-called Dead, with their own Materialized Hands, through Mrs. Lizzie S. Green and others as Mediums. Cincinnati: C. G. Helleberg.
Holiway-Calthrop, H. C. Paladin and Saracen. Stories from Ariosto. Macmillan & Co. $1 75.
Hood, F. Oliver Cromwell: His Life, Times, Battlefields, and Contemporaries. Funk & Wagnalls. 25 cts.
Huish and Thomson. The Year's Art, 1883. London: Sampson Low, Marston, Searle & Rivington.
Indermaur, J. An Epitome of Common Law Cases, with Notes. American edition. Boston: Soule & Bugbee.
Janet, Paul. Final Causes. From the French. Preface by Robert Flint, D.D. Second edition. Charles Scribner's Sons. $2 50.
Journal of Social Science, No. xvi. Saratoga Papers of 1882. Part 1. G. P. Putnam's Sons. $1.
King, C. The Colonel's Daughter; or, Winning his Spurs. Philadelphia: J. B. Lippincott & Co. $1 50.
Koolman, J. ten D. Wörterbuch der Ostfriesichen Sprache. Part 17. Norden: H. Braams.
Lambert, L. A. Notes on Ingersoll. Buffalo: Catholic Publication Co. 50 cents.
Lang, Leaf, and Myers. The Iliad of Homer done into English Prose. Macmillan & Co. $1.
Lanman, C. Leading Men of Japan. Boston: D. Lothrop & Co. $2 50.
Lostalot, A. de. Les Procédés de la Gravure. Paris: A. Quantin; New York: J. W. Bouton.
Miller and Hedden. Bridal Days: a Book for the Bridal, and all the Weddings Celebrated. Ward & Drummond. $2 50.
Morrison, C. R. The Proofs of Christ's Resurrection, from a Lawyer's Standpoint. Andover: W. F. Draper.
My Connaught Cousins: a Novel. Harper's Franklin Square Library. 15 cents.
Nichols, J. R. Whence, What, Where? A View of the Origin, Nature, and Destiny of Man. Third edition, revised. Boston: A. Williams & Co.
Outlines of Sermons on the Old Testament. [The Clerical Library.] A. C. Armstrong & Son. $1 50.
Perrot and Chipiez. A History of Art in Ancient Egypt. In 2 vols. A. C. Armstrong & Son. $15 50.
Pond, G. E. The Shenandoah Valley in 1864. [Campaigns of the Civil War.] Charles Scribner's Sons. $1.
Portia; or, "By Passions Rocked." Philadelphia: J. B. Lippincott & Co. $1 25.
Pott, Mrs. Henry. Bacon's Promus, Illustrated by Passages from Shakespeare. Boston: Houghton, Mifflin & Co. $5.
Pritchard, H. B. George Vanbrugh's Mistake. Harper's Franklin Square Library. 20 cents.
Proctor, R. A. The Great Pyramid: Observatory, Tomb, and Temple. With illustrations. R. Worthington. $2 25.
Purves, J. Selections from the Dialogues of Plato, with Introductions and Notes. Oxford: Clarendon Press.
Quincy, J. Figures of the Past: From the Leaves of Old Journals. Boston: Roberts Bros. $1 50.
Rawlinson, G. The Religions of the Ancient World. Charles Scribner's Sons. $1.
Rhodes, M. Expository Lectures on Paul's Letter to the Philippians. Philadelphia: Lutheran Publication Society. $1 50.
Sharp, W. Dante Gabriel Rossetti: a Record and a Study. Macmillan & Co. $3.
Shepherd, S. Tragedy of Calvary: an Illustrated Sacred Poem. Ward & Drummond.
Sheppard, N. Character Readings from "George Eliot." Harper's Franklin Square Library. 25 cents.
Smith, Prof. H. B. Introduction to Christian Theology. A. C. Armstrong & Son. $1.
Southwick, A. P. Dime Question-Books. No. 5, General History; 7, Astronomy; 8, Mythology; 9, Rhetoric and Composition; 11, Botany. Syracuse: C. W. Bardeen.
Topelius, Z. Times of Gustaf Adolf. From the Swedish. Chicago: Jansen, McClurg & Co. $1 25.
Williams, G. W. History of the Negro Race in America, from 1689 to 1880. In 2 vols. 1800 to 1880. G. P. Putnam's Sons. $7.

Fine Arts.

THE WATER-COLOR EXHIBITION.

As compared with what was done in water color in this country ten years ago, the works which make up this, the sixteenth annual exhibition, show a marked advance as regards command of the means of expression. They do not, however, always show a wise and true use of those means; nor do they, in many cases, show a fine or sufficient artistic motive. As we have before intimated, our American artists have not yet, as a general rule, evinced even a fair degree of that primal artistic gift which impels a man to lay hold of the element of beauty, and to regard the expression of it as the chief end of his art. There are still very few beautiful, or well-chosen, subjects among the six hundred and odd pictures in the present display. But it is fair to say that there are, perhaps, more examples of quiet portrayal of familiar nature, and fewer of those which give expression to decidedly ungraceful or offensive themes, than has sometimes been the case in the immediate past. There is one tendency which, more or less distinctly, we have noticed of late with apprehension, and which is very marked in some portions of this exhibition, and that is a tendency to mannerism—to an artificial way of doing things—which is always characteristic of an unprogressive state. We feel, also, that there is in some degree lacking a just sense of the peculiar capabilities and limitations of the processes of water-color painting, whence it results that the essential beauties to which the medium naturally lends itself are in corresponding measure lost. Yet we would not push our remarks on this head too far; for it is certain that recent improved methods of preparing the materials, and the use of what is known as body-color—a perfectly legitimate use—have vastly extended the range and power of this medium, and have, perhaps, well-nigh revolutionized it.

Foremost among the exceptionally vital works in this exhibition are, we think, those of Mr. Winslow Homer. His most important picture is No. 157, "A Voice from the Cliff." It represents three figures of rough fisherwomen in a group, which comes grandly dark against a distant chalk-cliff in broad, though quiet, light. Although the group tells dark against the background, yet the local colors are nowhere extinguished in shade, but bear out everywhere, in subdued fulness, though in complete subordination, as in the works of Tintoret. Modern art rarely accomplishes this so well, and it is a great accomplishment. There is a slightly unpleasant tendency to purplish hues all through the group, and something of hardness and want of mystery in the execution—everything, flesh, drapery, chalk-cliff, sky, and water, being done in the same way. The same, substantially, may be said of the other contributions of Mr. Homer, namely, Nos. 32, 272, and 425. But there is a largeness and veracity of feeling in them all which goes far to redeem their defects. These works evince a power of design, too, which is very admirable, and, in modern art, uncommon. In No. 157 the sympathy of action in the three figures, and the way in which they are encompassed by the line of the chalk cliff, are noticeable in this regard. In No. 32, "Tynemouth," the largeness and vigor of conception and expression render the work powerful, in spite of the want of fulness and mystery just alluded to. Mr. Homer's habit of simplifying verges on a fault, and gives a finiteness to his work that detracts from its excellence. The boat outline in this example is too sharp everywhere. It does not lose itself enough in the weltering sea or in light catching on its wetted gunwale. The smoke of the distant steamer is heavy and ill-drawn; and the steamer itself and the distant city are not aerial enough in hue. Moreover, there is an inharmonious red, without sufficient light in it, in the upper sky to the right. Also, there is a want of local sea color in the near unreflecting faces of the waves. More detailed veracity without any more elaboration would have greatly enhanced the beauty and value of the work. In No. 272, purity is lost in the low tones by too great prevalence of brown and black. And in No. 425 we feel the artist's mannerism (and a tendency to mannerism shows itself strongly in Mr. Homer's work) perhaps more than in the preceding examples. The lack of the unity and variety of nature is here painful. The three horizontal bands into which the sky, water, and sands resolve themselves are unpleasantly and untruly marked off the one from the other; they are not enough interfused by harmonizing color. The foreground sand would naturally reflect something of the color of the sky, and the cloud reflections in the water instead of being lighter, as they are, would be at least as dark as the clouds themselves, since there is no veil of mist interposing to pale them. But, after all deductions, we regard Mr. Homer as perhaps our very strongest painter. He has a true painter's powers and true designer's instincts. He is not an imitator of any prevailing style; but he appears to have studied the best art understandingly and to good purpose, while he has retained an independent feeling for nature from which he mainly draws his inspiration. Even the mannerism which we have noticed is his own rather than an adopted one.

Mr. George H. Smillie exhibits five subjects, which show his fine artistic sense and feeling for graceful pastoral subjects. There is no crudeness in Mr. Smillie's work; but we fear he is confirming himself in conventional habits of composition and execution such as will, if continued, be incompatible with further progress. Mr. Smillie is gaining a mannerism not his own. It is one apparently adopted, consciously or unconsciously, from such artists of the English school as Harding and Birket Foster, though he is stronger and truer in the important quality of tone than either Harding or Foster. His "On the Egypt Road, East Hampton," No. 39, shows this unprogressive mannerism in a very marked degree. Very different is the work of Mr. James D. Smillie, as we see it in No. 532, "Causeway from Marblehead Neck to Mainland." While we have here a touch of the same mannerism, we have also a far fresher and stronger sentiment of nature. The wide, level reach of sunny distance is full of crowded suggestion, and the graceful perspective of curved beach, with the successive waves of a nearly calm sea advancing upon it, and the gently rising broken foreground, make up a picture of unusual beauty, in which we detect few, if any, false notes. In the work of Mr. E. H. Blashfield, "The Duo," No. 52, we observe the same faults upon which we commented in detail in our notice of his work in the last Black and White Exhibition. The design here again is too much cut up by sharp lights and emphatic touches. The drawing, too, is somewhat careless, and in the arms of the central figure it is very noticeably so. But Mr. Blashfield shows a right apprehension of the color-patch principle, which is the basis of all good painting; and we think he may in future produce much finer things than he has as yet done.

Mr. Henry P. Smith has a number of open sea views which convey a profound sense of nature.

Mr. Smith draws the rolling sea with great subtlety, while at the same time he has passages which are very feeble in drawing—as in the nearer breaking waves of No. 57, and, more especially, in the perspectives of the curves of the beach to the right. His strong points are chiaroscuro and tone, by means of which, together with his fine sea drawing, he produces effects of light and space which are remarkable. But he is singularly limited in range of subject. Indeed, it may almost be said that he has but one subject In all these examples we have the same rolling sea under lowering sky, with pale saffron light along the horizon, reflecting on the hither sides of the waves. We should like to see Mr. Smith try his powers on a passage of sea under bright sky, with white foaming breakers and clear green depths of water.

Mr. J. Wells Champney exhibits eleven pieces. His work is best when he is least ambitious. Some of his quiet portraits show much good painting; but in such examples as No. 65 he is crude and feeble, and shows little good taste. The principal features of the subject, which is "A Mountain Picnic," are not worth painting at all. A gentleman and lady and several children, in fine fashionable clothes, engaged in nothing more interesting than satisfying their hunger on a mountain excursion, constitute about as ungraceful and uninviting a group of objects for an artist as could easily be found. But Mr. Champney has taken the pains to portray them with the most detailed elaboration of all their commonplaceness. Nevertheless, the choice of subject might be pardoned if the artist had treated it with entire veracity and feeling. But he has failed to grasp the broad qualities of the general impression, while he has emphasized all that is most trivial in costume, viands, and accessory.

Mr. Harry Chase and Mr. Arthur Quartley exhibit works of their usual interest, in which much of the good derived from French teaching is shown; but we do not perceive anything in their works this time that calls for special comment. Mr. Alfred Kappes has three pictures, of which No. 76, "The Closing Hymn," is noticeable for its strong and true realism. The subject is commonplace enough, but it is not vulgar or trivial; and the work, though somewhat cold and slaty in color, contains some remarkably good painting, though this is shown more especially in accessory parts. No. 84, "Day Dreams," by Percy Moran, is mannered and untrue in tone and color, though it contains much cleverness. The same may be said of the two other contributions by this artist.

Mr. F. D. Millet has two small classical subjects which contain some exquisitely finished painting. These are No. 25, "A Roman Girl," and No. 171, "Lacing the Sandal." As we have before remarked concerning Mr. Millet's work, there is in these a deficiency as regards the rendering of color values. Could we look at the actual figures represented, with their backgrounds and surroundings, we feel that the relations of part to part in force of shade would not appear just as Mr. Millet has them. In No. 171, for instance, the white-robed figure does not appear to us to tell as a white enough mass in relation to its background. Both of these designs are artificial, having a made-up, studio look, and work of this kind always lacks vitality; but in their kind they possess a good deal of grace and beauty. We wish Mr. Millet would put the good technical qualities which these designs reveal into subjects of a more living character.

Mr. Edward Moran exhibits five works, of which No. 96, "The Devonshire Coast," has some fine though somewhat forced color. The execution is, however, rather too vague and equal, the nearest things being worked in precisely the same way as those most distant. No. 169, by the same artist, has some finely-moving dark sea under gray sky, with effective figures. Mr. J. Alden Weir's "Light Roses," No. 103, is a little piece of true painting. We have seen nothing so beautiful before by this painter. It gives perfect expression of the visual effect of roses, seen at a little distance, by the most facile and unaffected means. No. 550, "Dutch Sky," by the same, is also pleasant and true, so far as it goes. No. 110, "On the Trave, Lubeck, Germany," by R. Swain Gifford, is an effective though somewhat conventional and unprogressive piece of work.

Mr. Frederick Dielman, in No. 134, "Old Time Favorites," though showing his feeling for grace and considerable technical skill, shows also that need of downright study which we have before spoken of. The chiaroscuro in this picture is so confused that one cannot make out whether the artist meant to represent the figure in sunlight or under a cloudy sky. The shadow thrown upon the face by the broad-brimmed hat is too strong for the diffused light of a cloudy day; but it is too much softened off to express sunlight. Indeed, the chiaroscuro of the figure is more like that of a model under studio effect than of a figure standing out of doors. The painting of the accessory parts—the distant landscape, the fence, and the hollyhocks — is utterly feeble. In the same artist's "Head," No. 163, there is some beautiful color and good painting.

There are two works by Mrs. Marie Spartali Stillman which merit careful attention. They show the influence of English Pre-Raphaelitism in form and in sentiment, and also, and perhaps more strongly, that of early Florentine art. The first, "Among the Willows of Tuscany," No. 135, though beautiful in color and refined in technical treatment, is somewhat unintelligible in meaning and weak in drawing. The second, "Meeting of Dante and Beatrice on All Saints' Day," No. 482, possesses a great deal of beauty in design and expression in the principal group of figures, while the composition as a whole is harmonious in color and in tone. There is a very lovely passage of subordinate painting in the architectural background, where the gateway, with its fresco overhead, frames in a glimpse of far-reaching distance pervaded by soft warm light.

Mr. C. Y. Turner has a very large picture entitled "Sunny Days" (No. 258). It represents a summer bathing beach, with a lady seated on the sand under an umbrella, accompanied by a child attended by a colored nursery-maid. To the left is a line of bathing tents stretching away in perspective, and there are scattered groups of ladies and gentlemen in the middle ground and distance. The subject is commonplace enough, but Mr. Turner has treated it with a good deal of artistic feeling. It is well composed and pleasant in color and tone. It is faultful in chiaroscuro, however, in much the same way that we have found the work of Mr. Dielman to be. We should infer the sun to be shining, from the general brightness and the depth of the shadows, and yet all these shadows are so softened as to prevent any clear expression of sunlight. The shadow cast by the umbrella upon the lady's figure is indeterminate in its boundaries, and so also are very noticeably those cast by the tents upon the sands.

No. 393, "St. Ives, Cornwall," by W. T. Richards, is a fine, picturesque subject, composed with feeling, and realized with Mr. Richards's customary thoroughness. But it is somewhat hard, and wanting in fulness of suggestion. It is not so pure in color, either, as Mr. Richards's work usually is; and the group of boats on the left are comparatively without life in the drawing. Taken at his best—and he rarely falls far below his mark—Mr. Richards is, in our opinion, one of our most accomplished painters for combined truth and depth of poetic feeling, technical power, and thoroughness of workmanship.

No. 239, "At Purchase, N. Y.," by Alfred Parsons, is a thoroughly beautiful piece of strong, pure, and effective painting. It represents a very simple bit of familiar nature—some apple trees in autumn, with heaps of ripe fruit on the ground, a stone-wall, and an outlook into blue distance beyond. The design is good, though entirely unconventional, and the execution is at once tender and masterly. No. 326, "Along the Shoare of Silver Streaming Themmes," by the same artist, with figures introduced by Mr. E. A. Abbey, is also a beautiful picture, though to us it seems less fine than the preceding example.

There is an effective, quiet landscape by Mr. Walter Paris, "South Downs, Sussex, England," No. 178. This picture is especially fine in the middle distance, where cloud shadows are moving up the hillsides. It is a little forced in the darks, and mannered in the treatment of the foreground. Messrs. Henry Muhrman and J. Frank Currier contribute each a considerable number of works which we know not how to characterize rightly. They are plainly not the works of men of no capacity, as they at first might seem. They show powers of design and color of no mean kind, and yet, as regards what is actually accomplished, we cannot feel that they possess much value. If work done in this excessively loose and sloppy way is ever pardonable, it is, we think, only when the artist is working for himself, not for the public. And even then, unless he secures color and chiaroscuro, the sooner he destroys the thing the better; for whatever intention may have prompted to such performances, there is certainly little of true worth actually attained.

No. 372, by Mr. A. B. Frost, has some good realistic qualities. But the color is painfully wanting in the variety and purity of nature. No. 419, "Harvest Time," by R. M. Shurtleff, represents a quiet autumn landscape, the total effect of which, in spite of some ungrammatical passages, is, in a measure, fine. No. 420, "The Cliffs of Green River, Wyoming," by Thomas Moran, is forced in color, faultful (we think) in chiaroscuro, and artificial in treatment; but it is nevertheless a work of considerable artistic merit, especially as regards the general arrangement and relation of the masses. Mr. J. M. Falconer's "Old Farm House," No. 465, is an excellent little piece of true and quiet color. No. 478, "Twilight," by W. Hamilton Gibson, is noticeable, also, for true sentiment and clever execution. And there is a drawing of "Cherokee Roses," by Elizabeth T. King, which appears to us unusually excellent for truth and felicity of drawing and color. Mr. F. Hopkinson Smith has some good and effective work; especially so is No. 510, "A Summer Morning in Venice." This is a sketch only; but it is a good sketch.

We need hardly say more on this occasion. Our remarks have referred mainly to technical points, as they usually must, since our art, as yet, possesses little other than technical qualities—save, perhaps, in some cases, a certain sentiment for simple nature. It is not strange that this should be so. The conditions of life and surroundings are such at present that higher sentiment and imagination get little to feed upon. But there is need of art that shall express the beauty of the familiar aspects of things, and by tasteful selection and affectionate treatment such art may become very helpful and cheering.

We must defer till another number our remarks on the etchings exhibited in connection with the water colors by the New York Etching Club.

Henry Holt & Co.

PUBLISH

Evolution and Christianity.

By J. F. Yorke. 12mo, $1 50.

An attempt to point out the bearing of Evolution upon Religion, and especially upon Christianity.

"It is intensely interesting, brimful of suggestion and of food for thought. It is fearless and breezy, and no one can read it with indifference. It challenges either agreement or denial, and in any case is thoroughly worth reading."—REV. M. J. SAVAGE, IN BOSTON CHRISTIAN REGISTER.

GOSSE'S

On Viol and Flute.

Selected Poems. By Edmond W. Gosse. Square 12mo, $1 75.

Sibylline Leaves.

By A. E. M. K. 16mo, cloth, gilt, $2.

A tasteful and ingenious little work which does "fortune-telling" by giving extracts from the poets in response to questions regarding one's destiny.

PHILLIPS'S

Mechanics' Liens.

SECOND EDITION.

A TREATISE ON THE LAW OF MECHANICS' LIENS ON REAL AND PERSONAL PROPERTY. By Samuel L. Phillips, Washington City, D. C. Second edition, enlarged.

8vo, sheep, $6.

The present edition takes up the subject where the first edition left it, and incorporates the points of every reported case of all the States, down to the moment of publication. Whenever the decision is founded not on the general principles of law, but on the words of a particular statute, these are in addition always given, so as to make the text intelligible and useful. The profession may therefore feel reasonably assured that the whole law of the subject is presented in this treatise.

WILL PUBLISH SATURDAY, FEB. 17:

I.

ON THE DESERT. With a Brief Review of Recent Events in Egypt. By Rev. Henry M. Field, D.D., author of 'From the Lakes of Killarney to the Golden Horn,' and 'From Egypt to Japan.' 1 vol. crown 8vo, with a map, $2.

This volume is the account of a journey in the track of the Israelites. All of Dr. Field's powers of observation and description are brought into play, and his book will undoubtedly prove the most delightful popular narrative of travels in the desert of Mount Sinai that has ever been written.

Of Dr. Field's last volume of travels it was said by a high authority: "I have never, within anything like the same space, seen so much said of Egypt, or so wisely or so well. Much as I have read about Egypt—many volumes, indeed—I have found some of these descriptions more graphic, more realistic, than I have ever met or expect to meet elsewhere."

II.

Newman Smyth's Reply to Joseph Cook.

DORNER on the FUTURE STATE

—Being a Translation of the Section of his System of Christian Doctrine comprising the Doctrine of Last Things. With an Introduction and Notes. By Newman Smyth, D.D., author of 'Old Faiths in New Light,' 'The Orthodox Theology of To-Day,' etc. 1 vol. 12mo, $1.

This is a faithful translation of that part of Dr. Dorner's 'System of Christian Doctrine' which relates to the future state of the soul; with an Introduction and Notes by Dr. Newman Smyth. The object of the book is to set forth clearly and accurately the views of the great German theologian on a subject of the highest interest and importance, wherein he has been strangely misrepresented in this country, and particularly by the ... Cook, in his recent lectures on Future Pro-...

III.

An HONORA... SURRENDER.

By Mary Adams. 1 vol. 12mo, $1.

'An Honorable Surrender' is a love story of a very fresh and unconventional type. It presents some situations that have an unusual interest, from their originality and piquancy, as well as from the brightness and literary finish of the narrative; and the author exhibits a keenness of insight into character very unusual in a first novel.

CONSUMPTION.

I have a positive remedy for the above disease. By its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give express and P. O. address.

Dr. T. A. SLOCUM, 181 Pearl St., New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 22, 1883.

The Week.

It is evidently the purpose of the high protectionists in Congress to leave the tariff just as it is, unless they can secure the passage of a tariff bill which does not effectually reduce protective duties. At the same time they wish to reduce taxation in some other way, and thus get the credit for lightening the burdens of the people. One of their schemes to this end was to abolish a large portion of the internal revenue by a separate bill. If such a bill were passed, the tariff would, for this session of Congress at least, remain as it is, of course. This was tried in the House of Representatives on Monday, but the necessary two-thirds for a suspension of the rules could not be secured, and the scheme failed. There are Republicans in Congress who comfort themselves with the idea that if they could pass such a bill, leaving the tariff as it stands, the party would not suffer much in public opinion. They are mistaken. They themselves recognized the fact that a revision of the tariff in the sense of a reduction of duties was necessary. They attempted that revision, and if they give up the work in despair, they will have to admit that they were unable to do that which they themselves had recognized as necessary. They will have to admit at the same time that they failed because the special interests favored by the protective tariff at the expense of the rest of the community would not let them serve the public interest. It is difficult to imagine how a party can be in a more unenviable position. It has fostered and coddled certain interests until they grew strong—strong enough, it seems, to assume an attitude of command. In fact, these protected interests have jumped on the back of the party and will ride it to death.

At last the President has made his selection for the Civil-Service Commission, and he deserves commendation for it. The appointment of Mr. Dorman B. Eaton is a peculiarly proper—we might almost say an inevitable — one, and, we think, has been generally expected. Dr. Gregory is a man of uncommon attainments, and his experience as an educator, as well as his profound belief in civil-service reform, seems to fit him eminently for this work. Mr. Thoman is less known, but, by those who do know him, is described as a young man of more than ordinary ability, of high aspirations, and a firm friend to the cause he is called upon to serve. It is reported that with regard to the Democratic member of the Commission Mr. Pendleton's advice was heard, and it may be assumed that in favoring Mr. Thoman Mr. Pendleton kept well in view the practical success of the law with which his name is so honorably connected. Many friends of civil-service reform may regret not to find the name of Mr. E. O. Graves, of the Treasury Department, among the members of the Commission; but it is not impossible that the eminent abilities of that gentleman may be called in requisition for the office of Chief Examiner. One of our morning contemporaries reports that many persons "expect" to see Mr. Burt, the Naval Officer, put in that place. About the fitness of Mr. Burt for it there can be no question. But there can be still less question about the eminent desirability of keeping the man who, foremost of all, promoted the success of practical civil-service reform in the Custom-house of New York, in a place where he can do more good than anywhere else, and probably more than anybody else could do. There seem to be some persons who are fiercely determined that "Burt must go." They want to get him out of the Naval Office for the purpose of putting some working politician in, at any cost; and on every possible occasion their "hopes" and "expectations" are coming to the surface.

The report of a conference committee on the Japanese Indemnity Fund, providing for the return to Japan, without interest, of the sum of $785,000, which had been wrongfully exacted from and paid by that Government, was adopted on Thursday in the House of Representatives by a vote of 132 to 27. If there ever was a case in which a sense of justice to a weaker nation should have induced Congress to provide for every farthing, not only of the principal, but also of interest, that might with any fairness be claimed by that weaker power, it was this case. We are sorry to say that the Japanese Government, by abstaining from any urgency in behalf of its rightful demands, appears to far greater advantage in this affair than does the American Congress, which refuses to pay interest on a sum admitted to have been wrongfully withheld for many years. By its very silence on the subject the Japanese Government seems to have appealed to a sentiment which, in a deplorable degree, is found wanting.

Further failures in the iron trade in the past week—notably that of John V. Ayer's Sons at Chicago—have again helped to unsettle confidence to some extent. One of the first effects of the failure above mentioned was to cause a decided reaction in the prices of grain at the West, which had been advancing in consequence of the continued reports of damage to the winter-wheat crop by bad weather. The damage and loss of property by the floods at the West have also excited fears of important failures in other branches of industry besides the iron trade, and in mercantile circles generally. The depressing effect of these features of the situation has also been felt in the stock market. Prices declined last week from 2 to 4 per cent. on the most active speculative stocks, and the decline was continued on Monday of the present week, making the total from 3 to 5 per cent. in the ten days up to that time. On Tuesday, however, there was a partial restoration of confidence in all the markets, and the decline in prices of both grain and stocks was checked. There has been a large movement of money, notably currency, to the West within the last few days, and as at least $1,500,000 of currency was sent to Chicago, it is believed that the banks there were fortifying themselves against any contingencies that might arise in connection with the iron failures. There has been a firmer feeling in the money market in the past week, and while rates of interest have not quotably advanced, there is good reason for believing that many large financial institutions are preferring to let their money lie idle for a little while, to letting it out at low rates on time loans. Foreign exchange is a fraction lower than a week ago, but it does not decline in proportion to what might be expected as the result of the steadily increasing trade balance in our favor. It is estimated that this balance for January will be from $14,000,000 to $15,000,000, thus making a total of, say, $85,000,000 since the 1st of October, and there is no clear explanation of what has become of it, or at least why exchange has not declined more in consequence.

The production of Rerdell as a witness in the Star-route trial last week shows that the Government has not suffered through the singular verdict rendered in the first trial. When Rerdell was found guilty, and Brady and Dorsey allowed to escape, the result was generally felt to be farcical, for if Rerdell was guilty at all, it could only have been as an employee and agent of Dorsey in the conspiracy. The best use the Government could make of the verdict seemed to be as a means of inducing Rerdell to come forward as State's evidence, and yet this chance appeared to have been lost through the fact that the verdict was hopelessly bad. The Government wisely determined to throw it up, and they have now secured the full benefit of Rerdell's testimony. His voluntary appearance as a witness is evidently a severe blow to the defendants, notwithstanding the fact that in another way his story has already gone into the case, and notwithstanding also that, as a witness, he has a badly smirched reputation. Rerdell confessed long ago to Mr. MacVeagh and Mr. James, and then withdrew his confession, and now has reconsidered this withdrawal, and made a clean breast of it once more.

The value of his testimony consists very much in its minuteness and detail. He gives a complete history of the conspiracy from beginning to end—tells how he became acquainted with Dorsey; how he was employed by him as secretary; how Dorsey taught him the manner of committing the Star-route frauds, how to "fix up proposals" with Miner, and "fill in bids"; how he was sent West by Dorsey, and furnished with money by him; how he got up petitions and had them signed—all these transactions covering a long period of time, and involving correspondence, checks, drafts, interviews, etc., etc. Such testimony, of course, might be manufactured; but if it were, it would be almost sure to break down, and

help rather than hurt the defendants. It involves so many people and so many circumstances and so many documents, that if Rerdell were perjuring himself, the lawyers for the defence would have little difficulty in tripping him up and putting the case of the Government in a very bad light. Rerdell has therefore given Dorsey the very opportunity he has long wanted to vindicate himself. If he cannot break down Rerdell, he is guilty, for there never was a witness who managed before going on the stand to make any testimony he might give more assailable. What a grand opportunity for an innocent man to tear down the elaborate fabric of perjury reared by his enemies! And yet it is said that Dorsey and Brady are very gloomy.

There were two bits of news from the South on Friday which will illustrate the difficulty to which we have of late been calling attention, that any one settling in the South must have, under the prevailing homicidal customs, in forecasting the manner in which any controversy with his neighbors will end. In Young County, Texas, on Wednesday last, there was a meeting of a School Board, or at all events of persons interested in the management of a school. There were differences of opinion about this management, as there almost always are on such occasions, and in due course revolvers were drawn, and there was a general mêlée, in the course of which the wretched teacher was killed and three other persons wounded. The meeting was probably in the schoolhouse, and we can imagine the lesson taught the children, when they came the next morning, by finding the floor smeared with the blood of their teacher and of the school trustees. Of course, Young County is very "gloomy" this week over this sad occurrence, but we fear it is the impotent gloom people feel about floods, and earthquakes, and tornadoes, and not the wrathful gloom of the civilized man who is on the track of a murderer.

The other little affair occurred at a wedding in Tracy City, Tenn. The bride's father objected to the match—not an uncommon thing anywhere; but the bride determined to marry the man of her choice in spite of him—also not uncommon elsewhere. Under the circumstances the wedding had to take place at the bridegroom's house, which was not pleasant, but was doubtless the best place available. In other countries, the angry father would have marked his disapproval by staying away from the ceremony, which is considered in these parts a sufficiently cruel and painful proceeding. But Mr. William Elder, the Tennesseean angry father, did go to the wedding, not, however, to give his daughter away, but to open fire on the groom with his revolver. The groom was all ready for him, a pistol being apparently a part of his wedding suit, and the ceremony was suspended while he and the enraged parent exchanged four shots. This over, and nobody being hurt, the service was resumed and completed. The father "fled," we are told, immediately afterward, but what he fled from it is difficult to see. The jury, if he is tried, will doubtless feel that the spectacle of a daughter's marrying without his consent was more than the old man could be expected to stand.

In Texas, at least, the revolt against unpunished homicide is beginning to take shape. A brutal murder was committed in De Witt County, in that State, six years ago. Dr. Bruzell, a Georgian physician, and a highly respectable man, was taken from his home one night by a party of young men, with his two sons, and he and one son brutally murdered. The other son, a boy, escaped, hid himself, and watched the slaughter of his father and brother from a tree near by. The affair was, in some of its aspects, more atrocious than the Joyce murder in Ireland. The boy recognized some of the party. They were arrested and indicted; but, on one pretence or another, their trial was actually postponed six years. It is only very recently that they were convicted of murder in the first degree. When the trial was over it was discovered that a mistake of a word had been made in copying the indictment. The conviction was quashed and a new trial ordered. In the meantime, the accused are out on bail. The *Texas Siftings* comments indignantly on this failure of justice in the case of "assassins of influence and social status," but declares that if the

> "press cannot break down this infamous travesty on justice, it can, at least, demonstrate that, instead of the Goddess of Justice wearing the white robes of purity, she should be clothed in the scarlet garments of the shameless harlot that she is, fit protectress of the thieves and assassins who have the means to purchase her smiles and favors."

This is not all, however. At Austin, not long ago, "Ben." Thompson, the Marshal of Austin, murdered a man in cold blood. He was arrested, indicted, and tried, and acquitted in the teeth of the evidence, one of the local papers justifying the acquittal, on the ground that he had suffered enough, having been six months in jail, and having lost his marshalship. The German citizens of San Antonio have accordingly held an indignation meeting, at which the conduct of the jury was strongly denounced, and the approving article in the *Evening Light* reprobated as "an unheard-of travesty, unworthy of civilized society."

Jay Hubbell confessed to a newspaper interviewer, a day or two ago, that he had bribed a Michigan newspaper editor with $2,000 or thereabouts, to "work" in his paper against Senator Ferry. There is a legislative investigation going on in that State into other corruptions, in the course of which one Beal, the Chairman of Ferry's campaign committee, confessed that Ferry had promised to execute any promises he might make on his (Ferry's) behalf, and, among others, a promise to get one member of the Legislature appointed Secretary of one of the Western Territories if he would vote for him, and to give another a post-office and to get his son a $1,200 clerkship in Washington. It is easy to see from all these things, both why politicians have believed so firmly in assessments, and why they are so much afraid of the "schoolmarm test" and "an officeholding aristocracy," and why the Civil-Service Reform Act has been such a bitter pill to them. It is alleged, too, that corrupt as this Senatorial contest in Michigan has been, it is not a whit more corrupt than several that have gone before it. But the corruption will obviously be greatly diminished when the candidates are no longer able to bribe with places in the public service.

The failure of J. B. Ayer's Sons, a large iron firm in Chicago, and the consequent troubles of the rolling mills at Youngstown, Ohio, in which Ayer's Sons are the largest stockholders, and the failures of two more iron establishments in other parts of the country at the same time, have started once more the protectionist cry that the prospect of unfavorable legislation in the way of lower duties on iron and steel is ruining that industry, and that therefore the duties ought to be rather increased than diminished. Assuming it to be true that the mere prospect of a reduction of protective tariff duties has so disastrous an effect upon those industries, what condition of things would this circumstance reveal? A great branch of industrial enterprise, an important factor in the business of the country, upon which the prosperity of many investors and the bread and butter of thousands of working people are to depend, resting on the mere accident of political action, and possessing so little solidity that a mere threat of unfavorable legislation can ruin it and reduce those dependent on it to misery. It is just like a tall tower in a crowded town, so shaky that it would not require a real hurricane, but only Wiggins's prediction of a gale, to topple it over. That would be considered a dangerous neighborhood to live in, and the authorities would feel called upon to abate the nuisance. The protectionists themselves are thus putting their case in the worst possible light. The fact is that the iron and steel industry is breaking down from the effects of over-stimulation at a time when not merely the existing duties, but the reduced duties as proposed in Congress, are almost, and as to steel rails quite, prohibitory.

The Queen's speech at the opening of Parliament contains nothing of importance except the announcement that Irish affairs are not to be allowed to occupy as much time as they did last session, and that a Court of Criminal Appeal for election cases will be established. It is pretty well known, however, that the first Ministerial measure will be a bill consolidating the whole of what is now popularly known as "London," but is in reality in the main simply a number of thickly-settled suburban parishes, lying around London, and governed partly by parish vestries, partly by the Metropolitan Board of Works, and partly by the Commissioners of Metropolitan Police. The real London, as all travellers know, is a little district filled with offices lying around the Exchange, in which very few people sleep at night. This is the London known in history as the "City of London." It is now proposed to bring the vast district known popularly as London under one elected municipal corporation, voted for by the ratepayers as the School Board is. There is work enough here to occupy a good deal of the session, and we venture to predict that keeping the Irish from occupying the rest will occupy it.

The excitement in London over Carey's testimony still continues, and promises to be nearly as great as in Dublin, the revelations being likely to be made somewhat embarrassing to the Ministry as well as to the Parnellites. Carey's assertion that the assassination organization was started in 1881 by P. J. Sheridan, who first met him disguised as a priest, is particularly awkward for both parties, because Sheridan was the go-between who brought about the understanding between Parnell and the Government which led to the liberation of the former from Kilmainham Jail, and obtained a sort of half promise that the Land League would do something to put a stop to crime and outrage. If Carey's story be true, this raises the suspicion that some leading men of the League at least knew something of the assassination conspiracy, or were aware that some of the funds were being used for unlawful purposes, or, at all events, knew Sheridan's real character. The truth is, we presume, that the League, like most other organizations of the kind, had a revolutionary or criminal tail. The peaceable O'Connell had the bloodthirsty Young Irelanders. Italian patriots in their best days had hangers-on who were ready to use, and did use, the knife. The Republican party had its John Browns, who were for prompter measures than excluding slavery from the Territories. This does not excuse the Leaguers, but it makes the evidence of Carey less surprising. The parliamentary Leaguers never have taken sufficient care to repudiate the criminals among their supporters, and have themselves to thank in a large measure if they are seriously damaged by the Dublin conspirators. There is indeed some reason to fear that they were not sorry to have English nerves shaken by any means however terrible, knowing how much more Ireland has owed to crime than to remonstrance in procuring a redress of grievances.

The news from England as to the name of "Number One" increases in variety. At first it was Oliver; then it was Milne; then "McAdaras"; and now Macdonald. What makes this all the more surprising is, that we are told he was well known in the lobby of the House of Commons last winter, and is now in London, and his mother was a Frenchwoman and his father an Irishman in the service of the East India Company. There is still no evidence that his name is O'Donovan Rossa. But there are several reasons for thinking that it is Robinson—Mr. W. E. Robinson, of Brooklyn—if it be not O'Donovan Rossa. As an Irish enemy of the British Empire, Mr. Robinson is not simply "Number One," but "A 1." What his views are about "removing" British officers we do not know, but we do know that if necessary to ruin that hated Power, he would burn cities and wade in blood. As regards England, he is a regular Irish Cromwell, and his motto is "Thorough."

The principles upon which the Pope regulates the relations between the Church and secular powers are by no means always the same. While in Prussia he reluctantly recognizes the authority of the State over the servants of the Church in respect to the requirement that the Government be notified of new ecclesiastical appointments, he is reported to go very much further than that in his concessions to the Government in Russia. The latest rumors are that, according to an arrangement concluded between the Pope and the Russian Government, the vacant bishoprics in Russia are soon to be filled with persons agreed upon by the Church and the State authorities; that the Church is to control the management of the ecclesiastical seminaries, subject to the "rights of the State"; that the banished bishops are not to return to their former dioceses, and that the intercourse between the Roman bishops and the Vatican is to be through the organs of the State, namely, the Russian Ministry of Worship, and the diplomatic agent of Russia in Rome. It seems incredible that the Pope should have gone so far in complying with the demands of the State in one country, while refusing in another to concede a practice which in most cases would be little more than a mere formality. It is a notorious fact, however, that the same practice from which the Pope withholds his approval in Prussia has long prevailed, and does now prevail, with his assent in Würtemberg. The opinion is rapidly gaining ground that the peace between Church and State in Prussia, which the Emperor desires, and which the Pope, too, is said personally to desire, is prevented only by the intrigues of the clerical party, whose political heads would lose their political capital and importance by a cessation of hostilities.

The Freycinet Cabinet scheme has vanished from the scene, and the news comes that there is a Jules Ferry Cabinet. Any elaborate discussion of the Ferry Cabinet would be, in the strict sense of the term, premature. There is no reason for supposing that it will have any more weight with the Assembly than the Duclerc Cabinet. But Jules Ferry is better known to the public than Duclerc, and, therefore, if he fails, the President will be in a better position to ask for a dissolution, to which, according to an interview published in the London *Times*, he feels that he undoubtedly must come before long.

The efficiency of the new rules of procedure in the House of Commons is likely to be put to an immediate test in Bradlaugh's case, on the passage of a bill to enable members of Parliament to affirm instead of swearing on being admitted. Bradlaugh, it will be remembered, first demanded permission to affirm, on the ground that an oath would not be binding on his conscience. The House refused to give it, partly because the majority held that, not being a Quaker, he had no right to affirm, but mainly because they disliked him as a Radical and publisher of an indecent book. Bradlaugh was then sued in the courts for voting in the House without having the right to do so, which is a statutable offence, and the courts decided also that he was not entitled to affirm. Thereupon he offered to take the oath, and went to the House for that purpose, but the House refused to permit him, on the ground that in offering to take an oath which he acknowledged would not be binding on his conscience, he proved himself a wicked man, unfit to sit in the House with so many good men. To which he made answer that, in so far as the oath contained a promise or assertion, it would be binding on his conscience, but in so far as it called God to witness to the truth of what he said, it was to him an idle but harmless form, which he was willing to go through in order to please the majority and get admitted to the seat which his constituents had sent him to occupy. The majority were, however, not satisfied with this, and directed him to withdraw, which he refused to do, and was finally dragged out by main force, his clothes being torn in the process.

His troubles, however, were now by no means over, for in professing his willingness to take the oath he offended the more serious wing of the Radicals, to whom refusing to take an oath is just as solemn and sacred a business as taking it is to the Christians. To them the duty of protesting is the first of duties, and Bradlaugh's readiness to shirk it was disgusting. His constituents, however, stood by him, on the broad ground that he was being persecuted and defrauded by prigs, "swells," and hypocrites, and sent him back triumphantly at the head of the poll. The Ministry from the first determined not to make the case a party question, and the members of the Cabinet followed each his own fancy in voting on it; but Mr. Gladstone made no secret of his belief that the House ought to have provided Bradlaugh with a pledge or affirmation that he could take, the object of these tests not being to ascertain what religious tenets a man holds, but what his state of mind is toward the Hanoverian dynasty and the British Constitution. The Attorney-General is now introducing an affirmation bill, which is simply extending to sceptics the privilege, which is already extended to Quakers, of binding their conscience in their own way; but the extreme wing of the Tories are so besotted that they are apparently going to oppose this by every means in their power, not because they object to affirmation as a substitute for the oath, but because it would let in a man whom they dislike. This, of course, is likely to prove very exasperating to the voters in the boroughs, who naturally hold that they elect members to please themselves, and not to please the young sporting men who fight under Lord Randolph Churchill and Sir Henry Wolff. What is most curious in the affair is that the Irish are apparently going to act with the Tories, either because they think the best thing they can do is to work confusion and embarrass the Ministry, or because they abhor Bradlaugh's infidelity. One of the oddest features in the position of the Irish Nationalists is that while politically the Radicals of the rest of Europe seem to be their natural allies, the infidelity of the English Radicals is a barrier to any real union or coöperation between them. There is probably no Fenian assassin who does not secretly abhor a sceptic, and Bradlaugh's scepticism makes him more or less odious to the Home Rulers in Parliament. The prospect of a confused session is therefore very good.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 14, to TUESDAY, February 20, 1883, inclusive.]

DOMESTIC.

ON Tuesday the President sent to the Senate the names of Dorman B. Eaton, of New York, John M. Gregory, of Illinois, and Leroy D. Thoman, of Ohio, to be the Civil-Service Commissioners under the Civil-Service Reform Bill.

On Monday the Senate voted by 32 to 31 to take books from the free list and impose a duty upon them. The paragraph in the Tariff Bill as now amended reads as follows: "Books, pamphlets, bound or unbound, and all printed matter wholly or partly in the English language, not specially enumerated or provided for in this act, engravings, bound or unbound, etchings, illustrated books, maps, and charts, 15 per cent. *ad valorem*."

On Thursday the Senate continued the consideration of the Tariff Bill, and several amendments were adopted. On Friday Senator Brown was defeated on a proposition to abolish the internal-revenue system by a vote of 50 to 3. On Saturday the time was consumed in talk, none of the amendments being voted on. On Monday the Sherman amendment to the metal schedule was amended and adopted. On Tuesday the Senate passed the bill, with the accompanying provision for a reduction of internal-revenue taxes, by a vote of 42 to 19.

A remonstrance against any reduction of the tariff on books below twenty-five per cent., signed by Oliver Wendell Holmes, T. B. Aldrich, and John G. Whittier, was presented in the Senate on Thursday.

In the House on Wednesday an attempt to put lumber on the free list was defeated by a large majority. On Thursday the sugar schedule was discussed, and the conference report on the Japanese Indemnity Bill was presented. The bill as agreed upon returns to Japan $785,000, the original sum received from that Government, without interest; cancels all the bonds comprising the Japanese Indemnity Fund, and pays to the officers and crews of the *Wyoming* and *Ta Kiang* $140,000. On Friday the House passed the Legislative Appropriation Bill, with the amendments increasing the hours of clerical labor in the departments, by a vote of 170 to 59. On Monday the Republicans were defeated in an attempt to suspend the rules and pass the bill providing for a reduction of the internal revenue. A two-thirds vote was needed in order to suspend the rules, and the motion only received 167 votes to 97 against it.

In the executive session of the Senate on Thursday, Mr. Edmunds called attention to the alleged abuse of the privileges of the floor by lobbyists and others, who, through the indulgence of Senators, have been in the habit of obtaining cards of admission, ostensibly as secretaries. With a view to correcting this evil, Mr. Edmunds introduced the following: "Ordered, that no person shall be admitted to the floor as private secretary by a Senator until the Senator appointing him shall certify in writing to the Sergeant-at-Arms that he is actually employed for the performance of the duties of such secretary, and is engaged in the performance of the same." The resolution was referred to the Committee on Rules.

General Hazen wrote a letter to Secretary Lincoln requesting that an investigation of his administration of the Signal Office be made by a committee of the Senate, such committee to be empowered to send for persons and papers, and to make the investigation comprehensive and complete in every particular. Mr. Lincoln refused the request, on the ground that there was no precedent for granting it; that it would involve a violation of a general rule of parliamentary practice; and that the investigation should be undertaken by one of the administrative departments of the Government, or else, since General Hazen is an officer of the Army, by a tribunal provided in the Articles of War.

Secretary Frelinghuysen has sent copies of the memorial of the New York Chamber of Commerce, in regard to the prohibition of American pork in Germany, to the United States Minister at Berlin, with instructions to bring the matter to the attention of the Imperial Government, and ask that it shall take such measures to investigate the subject as shall remove all doubts touching the proposed prohibitory action.

The report of the Department of Agriculture on the cotton crop states that the returns of product in bales make an aggregate of over 6,000,000. The returns are nearly unanimous in declaring the staple to be larger and whiter than usual, and comparatively free from trash. It is probable that about 17 per cent. of the crop still remains in farmers' hands.

An important event in the Star-route trials took place on Thursday. Montfort C. Rerdell withdrew his first plea, pleaded guilty, threw himself on the mercy of the Court, and offered to testify to all facts within his knowledge touching the conspiracy. He was a clerk of Dorsey's, and was regarded by the Government as the least guilty of all the conspirators, notwithstanding which he was the only one found guilty in the first trial. The defendants have been much afraid of him, and while he was in jail last September stole some of his papers. His testimony on Thursday went to prove Dorsey's connection with the manufacture of bogus petitions, and Brady's understanding with Dorsey. On Friday he began to tell the whole story of the conspiracy, and fortified his testimony by documents which he had in his possession as Dorsey's secretary. His testimony on Monday was very important, being a minute account of his interview with Dorsey in Washington, when he told the latter that he would do anything to help him but commit perjury, to which Dorsey replied, "What does that amount to when a friend's fate is at stake? Rerdell, for God's sake, don't ruin me and my family; particularly just now, to be torn down from the height I occupy would be death to my wife." Rerdell said he allowed himself to be overcome, and, under Dorsey's directions, drew up an affidavit denying everything he had said to Messrs. James and MacVeagh, which he signed and swore to, and which was afterward carried to President Garfield by Dorsey and Ingersoll. Rerdell was greatly affected while recounting his interview with Dorsey. Shortly before the court adjourned Rerdell identified a number of papers, consisting of petitions, affidavits, sub-contracts, etc., which he pronounced to be forgeries by the two Dorseys and Miner.

The Court of Inquiry appointed to investigate the circumstances of the loss of the arctic exploring steamer *Jeannette* has made a report which says that the loss of the vessel was inevitable under the circumstances, and commends the subsequent course of the officers in command of the boats. Touching the general conduct and merits of all of the officers and men, the report says that it finds no reason to impute censure to any member of the party, and that, considering the circumstances, "the general conduct of the personnel of the expedition seems to have been a marvel of cheerfulness, good-fellowship, and mutual forbearance; while the constancy and endurance with which they met the hardships and dangers that beset them entitle them to great praise." In regard to the vessel herself, the report says that while it is admitted that she was not especially adapted for this service, her condition was "good and satisfactory to her officers and crew."

After an exciting debate the Minnesota House, on Wednesday, by a vote of 38 to 49, decided to postpone indefinitely the bill providing for the submission to a vote of the people of an amendment to the Constitution prohibiting the manufacture or sale in the State of spirituous or malt liquors.

The State Democratic Committee of Virginia, after a long session on Wednesday, adopted a resolution that a general convention be held in Lynchburg on the 25th of July next, to take such action as may be deemed conducive to the future harmony of the party, and that all conservative Democrats opposed to radicalism and bossism are equally entitled to participate in the election of delegates to the said convention.

While depositions were being taken in Richmond, Va., on Monday, in the contested Congressional election case of John E. Massey against John S. Wise, a quarrel between the two resulted in Wise slapping Massey's face. The men were both arrested.

The Ohio River continued to rise on Wednesday, and at 9 o'clock in the evening it had reached, at Cincinnati, sixty-six feet and three-quarter inches. Four lives were lost in the disaster at the Southern Railway station. The distress and damage were widespread, and the police and relief boats entirely inadequate to supply the demands upon them. Thousands of people were homeless, and many suffering from want of food. Railroad communication with the outside world was almost entirely cut off. At Louisville the situation was almost as bad, and from other towns in Ohio, Kentucky, and Indiana came stories of heavy losses and suffering caused by the flood. On Thursday the water began to recede at Cincinnati, and the worst was over, and relief measures were vigorously carried out. It was estimated on Thursday that at least 50,000 people in the Ohio Valley were either homeless or imprisoned by the water. At Louisville the waterworks were closed, and the river continued to rise. At Lawrenceburg, Ind., 200 buildings were swept away on Friday, and 3,000 people driven from their homes, while at New Albany, Ind., 1,200 houses were washed away and 5,000 people homeless. In Lawrenceburg on Saturday the water was seven feet deep in the highest streets of the town. By Sunday the river had fallen considerably, and the authorities in Cincinnati began to clean the streets. On Monday the Executive Committee of the Relief Committee of Cincinnati announced that they had sufficient funds on hand to afford all necessary relief. In New York, as well as in other cities, large sums of money have been raised for the relief of the sufferers. The United States Express Company has offered to transport, free of expense, to any point on its lines, contributions of goods or money. No estimate can be made of the damage done in the Ohio Valley.

Ex-Governor Edwin D. Morgan died in New York on Wednesday. He was born in Washington, Berkshire County, Mass., in 1811; was elected Governor of New York in 1858, and reëlected in 1860; was U. S. Senator from New York from 1863 to 1869; and Chairman of the National Republican Committee during the campaign of 1872, which resulted in the second election of General Grant to the Presidency. He was the Republican candidate for Governor of New York in 1876, but was defeated by Lucius Robinson. President Arthur nominated him for Secretary of the Treasury, and the nomination was confirmed by a unanimous vote of the Senate, but he declined the office.

FOREIGN.

On Thursday the examination of the prisoners charged with conspiracy to murder Government officers was resumed in Dublin. A number of witnesses were examined, who corroborated the details of Kavanagh's testimony. On Saturday a great sensation was caused in the court by James Carey, the accused town councillor, stepping into the witness-box as witness for the Crown. He was hissed by the other prisoners. His testimony was continued on Monday, and was of the greatest importance, as it corroborated Kavanagh's story of the Phœnix Park tragedy, and proved Brady to have been the man who did the actual killing of Mr. Burke and Lord Frederick Cavendish. After giving an ac

count of the Fenian Brotherhood, of which he was Treasurer, he told of the formation of an organization of "picked Fenians," in Dublin, called the Invincibles, whose object was to "remove all tyrants," and of which Walsh, McCaffrey, and James Mullett were to form the Board of Directors A number of men were selected to do the work of the organization, Mullett's principal selection being Brady. Mr. Forster and Earl Cowper were among those to be "removed." The witness gave an account of a number of attempts which were made to murder Mr. Forster. He then gave a detailed account of the murder of Mr. Burke and Lord Cavendish, which was listened to amidst intense excitement. He described minutely the movements of the conspirators on the morning of the murder. He himself went to the Park in a cab accompanied by his two little children, together with Joseph Hanlon and Smith. He described how he saw seven men meet the two victims. The men were, first, Curley, Joseph Hanlon, and Fagan, Brady and Kelly next, and then McCaffrey and Patrick Delaney. Lord Frederick Cavendish and Mr. Burke were allowed to pass through by the first three, and the last four then faced right about. When Carey again looked the two men had closed in on the two gentlemen. The witness continued: "I saw Joseph Brady raising his left hand and striking a man dressed in a gray suit. That was all I saw." Carey then repeated a conversation he had after the murder with Brady, who said he stabbed Mr. Burke in the left shoulder. The other gentleman came up and called him a ruffian. He ran after him into the road and stabbed him. He then looked around and saw Kelly coming away from Burke's body, and he and Brady went and cut Burke's throat. Lord Cavendish, when he spoke, struck Brady with an umbrella. Brady continued: "I then made at him. He held up his arm and I struck it. He ran into the road." The witness detailed his conversation with Curley in the evening, in which the latter said he had at first feared there was going to be another failure when he saw the men face about. Three of them were armed. Brady had two knives. After the murder Curley saw Brady wiping a bloody knife on the grass. Curley waited until the murderers were on the car, and then got into a cab and came to Dublin. He put a card into the box of the Dublin *Express* office stating what had been done. The next day he gave similar notices to the *Times* and the *Freeman's Journal*. The cards read: "Executed by order of the Irish Invincibles."

On Monday Carey concluded his evidence. He said he had no idea that Lord Frederick Cavendish was to be murdered when Mr. Burke was attacked, and that he was stupefied when he heard of the murder of the former. He said the head man of the conspiracy was a man whose name he did not know, but who was known to the rest of the conspirators as "Number One," and who always had an unlimited supply of money. The authorities are endeavoring to identify "Number One." At the conclusion of Carey's testimony all the prisoners under examination, except Whelan, were remanded for trial. They will be returned for trial before a special commission of three judges, and the trial will probably take place in March.

The *Pall Mall Gazette* says it is stated that the Government will open at Dublin Castle on Friday an inquiry into a conspiracy of much wider range and more destructive aims than the Murder Society.

At the preliminary meeting of the Irish Parliamentary party in London on Wednesday to consider the action of the Irish members of the House of Commons during the session, more than twenty persons were present. Mr. Parnell was reëlected Chairman. It was decided that an amendment should be made to the address in reply to the speech from the throne dealing with the operation of the Crimes Act. Regret was expressed at Mr. Healy's arrest. A further amendment to the address was resolved upon, dealing with the failure of the Government to propose adequate remedial legislation for Ireland. It was decided to hold weekly meetings of the party, and not to reëlect the Parliamentary Committee.

Parliament reassembled on Thursday. The Queen's speech said that the policy of the Government in Egypt would be to "insure the stability of the Khedive's Government, the prosperity and happiness of the Egyptians, the security of the canals and the peace of Eastern Europe"; that the improvement in the social condition of Ireland continued, and that agrarian crime had sensibly diminished and law been everywhere upheld; that measures would be submitted to Parliament for the establishment of a Court of Criminal Appeal, for preventing corrupt practices, and for perpetuating and amending the Ballot Act, and a bill would also be introduced to secure more effectually to tenants in England and Scotland compensation for agricultural improvements. In conclusion, the speech says that Parliament has provided for the most urgent needs of Ireland, and that the claims of general legislation and other parts of the kingdom now demand its attention. The Speaker read a letter from Mr. Bradlaugh, in which he said that the House having refused to hear him or his constituents, he should present himself and do all that the law required in an endeavor to sit and vote. The Marquis of Hartington said that the Government would introduce at once a bill authorizing members to make affirmation. After some debate a motion by Mr. Parnell for the appointment of a committee of inquiry into Mr. Healy's arrest was rejected by a vote of 353 to 47. In the debate on the address in reply to the Queen's speech, Sir Stafford Northcote said the Government should have made some announcement in regard to the Affirmation Bill in the speech from the throne, and that Englishmen had as much right to know the Government's intentions in regard to Egypt as in regard to other countries. The Marquis of Hartington replied. On Friday two amendments to the address, attacking the Government policy toward Egypt, were defeated, and the House went into committee to allow the introduction of the Affirmation Bill. Mr. Newdegate, Conservative, opposed the introduction of the bill, and charged that the Government brought it forward in terror of Mr. Bradlaugh's mob. A number of motions to obstruct the bill were introduced, but were all defeated by considerable majorities. It is stated that the Tories and Parnellites will obstruct the passage of the bill, but that Sir Stafford Northcote and other leading Conservatives discountenance such tactics. On Monday Mr. Parnell announced that he would offer an amendment, in reply to the speech from the throne, and gave notice that he would severely criticise the administration of the Crimes Act, jury packing, iniquitous sentences, etc.

The London *Times* on Thursday published an authoritative statement regarding the interview on Tuesday, the 13th instant, at Farnborough, between ex-Empress Eugénie and Prince Jerome Napoleon, which, it says, has cleared up some private misunderstandings existing between the ex-Empress and the Prince, and has led to the formal resignation of the latter as the head of the Bonaparte family. The ex-Empress was not called upon to express any opinion of her kinsman's general policy, and could not, consistently with the line of policy adopted by her while sojourning in Great Britain, do more than assure her cousin of her best wishes for any constitutional action he may take toward bringing about a plébiscite.

The Committee of the French Chamber of Deputies met on Wednesday to consider the different bills relating to pretenders. M. Floquet's motion prohibiting the presence in France or Algeria of any members of former French dynasties, was adopted. The bill was reported on Thursday, and it was amended so as to render the Princes liable to expulsion by the decree of the President of the Republic, and placing them under half pay instead of depriving them of their military rank. In this form it was passed by a vote of 342 to 182. On Friday the bill was sent to the Senate and referred to a committee, which reported that the concessions offered by the Chamber of Deputies were more apparent than real, and recommended the rejection of the bill. On Saturday, MM. Say and Waddington opposed the bill, and the first two clauses were rejected.

On Sunday President Grévy accepted the resignation of the Ministers, and intrusted M. Ferry with the formation of a new Cabinet. M. Ferry will assume the post of Minister of Foreign Affairs, with the following associates: M. Martin-Feuillée, Minister of the Interior; M. Waldeck-Rousseau, Minister of Justice; M. Tirard, Minister of Finance; General Thibaudin, Minister of War; M. Raynal, Minister of Public Works; M. Cochery, Minister of Posts and Telegraphs; M. Pierre Legrand, Minister of Commerce; M. de Mahy, Minister of Agriculture.

The Pope, in his letter replying to Emperor William, announces that he has permitted the bishops, without waiting for a complete revision of the May laws, to inform the Government of the selection of new curates. The Pope asks that, in addition to the revision, measures be taken to mitigate the impediments to the exercise of clerical duties and the training of the clergy. This, he says, is indispensable to the very life of the Church. If an agreement be established thereon, a real, durable peace will be easy. Herr von Schloezer has been instructed to report the Emperor's dissatisfaction with the proposed *modus vivendi*.

The President of the Reichstag gave an account on Friday of the fund for the relief of sufferers by the inundations in Germany, mentioning the amount received from America and elsewhere. Herr Bernuth asked that the House express its thanks for these large donations, amid loud applause, which the President said he regarded as an expression of the thanks of the House. The sum received from the United States was 588,100 marks.

In the Reichstag on Friday the Budget and Loan bills were approved. The receipts and payments balance, the total of each being 590,556,634 marks. The session was prorogued until May 3.

The election of members of the Committee of the Spanish Chamber on the Oath Bill has resulted entirely in favor of the Government.

The death of Wagner called forth universal expressions of regret in Europe, and his family have received telegrams of condolence from all parts of the world. A permanent committee has been formed in Vienna to carry out a proposal of the municipality, to place a tablet on the façade of the Vendremini Palace, to mark the house in which he died. On Sunday the funeral took place at Bayreuth. The town was draped in mourning, and wreaths were sent from most of the theatres and musical societies of Germany and Austria. The coffin was laid in the tomb, at the request of the widow, with only a simple religious blessing. Passages from Wagner's operas were sung at the grave by musical societies. The King of Bavaria has undertaken the education of the dead composer's son.

The municipality of Rome has placed a memorial tablet in the house which Samuel F. B. Morse inhabited there in 1830. The Syndic has informed the American Minister that the unveiling of the tablet will be deferred until the wishes of the American colony in regard to the ceremony are made known.

CONGRESSIONAL PARALYSIS.

THE news from Washington of the virtual abandonment of the tariff by the House, and of the consequent likelihood that no revision of it whatever will be made by either house, has really an importance which the popular interest in the tariff does not give it. If it meant simply that Congress had come to the conclusion, after deliberation, that it was not advisable to reduce the tariff this year, and if the debates which had led to this conclusion had been made public, or if there had been manifest public opposition to its reduction on the part of great bodies of the taxpayers, nothing would be more natural and comprehensible than that Congress should, even after having expended so much labor on it, let it alone. What is startling and serious in the action of Congress is, that no doubt whatever has been thrown on the genuineness of the popular demand, as expressed in the elections last fall, for a reduction of taxation. It is not alleged in any quarter that the voters did not call for a reduction of taxes; or that the Commission appointed some months ago to examine the field of taxation was not intended to provide a plan for reducing them with justice and safety; or that the country has changed its mind since the election; or that there is any danger to the national credit or to the public service in reducing them; or, in short, that anything has happened since November last to make the reduction of them any less the duty of Congress now than it was then, or to throw doubt on the wisdom of the President's suggestions with regard to the taxes as expressed in his message.

There is, moreover, every reason to believe that both parties in Congress would like to reduce the tariff, and that both of them are afraid to go before the people again without having reduced it. Each of them at this moment is resorting to all sorts of devices to produce the impression that it would have reduced the tariff if the other had not hindered it. So that we are really driven back on the conclusion that the reason why Congress has not reduced the tariff and does not propose to do so is that it has not the power; or, in other words, that the revenue of the nation is no longer under its control. A more serious state of things in a great commercial nation could hardly occur in a season of profound peace. Nothing is more serious than a paralysis of any branch of the Government, and especially of the legislative branch, because it is very difficult to provide a remedy for it. The Legislature is the fountain of governmental vigor. From it the Executive derives its force, activity, and efficiency. If the Legislature cannot command, the readiness of the Administration to obey, so valuable under ordinary circumstances, is of no value at all.

Mr. James Bryce, who visited this country last year, wrote an article in the *Fortnightly Review* on his return, in which he explained a great deal of the corruption of our politics, and what may be called the second-rateness of our politicians, and the feebleness of the popular interest in their doings and sayings, by the unimportance of the Government and the smallness of the part it played in the national activity. Politics is, in other words, according to him, a comparatively insignificant feature of American life, and therefore the best talent of the country does not go into it. This is, no doubt, in part the explanation of a good deal that is defective and clumsy in the working of our governmental machinery, but it by no means accounts for such a state of things as we now witness in Washington. It was supposed by unfriendly critics during the war that the Legislature was so feeble that it dared not impose taxes on the people to carry on the war, and this was certainly an easy deduction from Mr. Bryce's theory. It was, however, speedily refuted. There is nothing now more certain than that in the matter of imposing taxes for plainly needful purposes Congress is one of the most powerful legislative bodies in the world. What is novel and startling in the present situation is that Congress cannot take taxes off and cannot explain why. It is, apparently, somewhat in the position of Louis XVI. when Turgot came into power. Turgot framed admirable plans of financial reform, for restoring the public credit, and at the same time lightening the popular burdens. So did Necker, who came after him. The King approved of what they proposed, but found he could not carry out their plans. The reason was that the persons who were interested in the perpetuation of the abuses, and who stood silent and invisible behind the throne, would not let him. They were too powerful, both for him and for the Ministers. Consequently, nothing was done, and the Revolution came.

Our Congress is apparently in somewhat the same helpless condition as the French King. Congressmen are controlled by persons who are more powerful than the public, whom the public does not see, or only gets momentary glimpses of as they flit to and fro in the lobbies of the Capitol, and who desire that taxes may be kept high so that their private incomes may not be reduced. This is the long and short of the whole matter, and is the inevitable result of the protective system. A protective tariff under a Government like ours is almost certain not to be framed on a general principle of any kind, because no principle is strong enough in the popular mind to be paramount. Our tariff is, therefore, framed to meet the demands of a great number of individuals, who are most skilful in making themselves heard above the general din; and once framed, they make it their business to see that the right men are returned to Congress to look after it, or, in other words, that the Congressmen become the agents of particular persons or firms, and not of the voters. When this arrangement is once thoroughly made, the taxation of the country has really passed out of the taxpayer's control. He may write as many pamphlets and articles as he pleases, and thunder as much as he pleases in platforms. It will not produce the smallest effect, as long as he allows Congress to make tariffs for any purpose but revenue.

CONGRESS AND BOOKS.

ONE of the most interesting of the tariff debates occurred on the 14th inst., on an amendment, made in the Committee of the Whole in the Senate, putting books on the free list. This amendment was adopted in the Committee of the Whole under the influence, doubtless, of the idea under which the revision of the tariff generally was first called for—viz., that the tariff was too high, and that it was much too high on books. Books are supposed to be among the chief agents of civilization. As a general rule, the more books a country consumes, and the more booksellers it has, the more civilized it is. That a country cannot have too many books or too many readers has long been one of the axioms of progress, and is recognized in the collection of libraries, and in the immense stimulus given to reading by endowed schools and colleges. There is no article manufactured by man in which the real value is so much out of proportion to the commercial value as a book. Newton's 'Principia,' for instance, has a real value to civilization which cannot be estimated in money. Its commercial value may be only a dollar. Books, too, record the experience of mankind in every art, and thus save countless millions of money, and countless hours of valuable time, in enabling each generation to start at the point where the previous generation had left off, instead of beginning at the beginning.

One would think, therefore, that in our time and country there would be an overwhelming desire to get books anywhere and by any honest means, and that a man who proposed to throw obstacles in the way of getting them would be laughed at as much as if he insisted that there was too much sunlight or water. In Congress, however, there are actually men who maintain that the printing and binding of books are of more importance than their contents, and that if 100,000 men want to read a book, it is best to withhold it from them altogether if it cannot be printed by 100 men in a certain place. Mr. Morrill, of Vermont, opposed putting books on the free list, because, he said, if books were allowed to come in duty free, our "printers would have nothing to do except print newspapers and job work." So that, apparently, in his mind the chief use of books is to give work to printers and binders, while the supply of knowledge and entertainment to a whole nation is only a secondary one. But printers and binders can be employed on any kind of work. The two classes combined, according to the Tenth Census, amounted to but 70,000, and it would not cost many millions a year, besides the proceeds of sales, to maintain them in great comfort, while printing and binding such works as Congressmen might select. Congress might, at the commencement of each session, decide how many printers and binders it would keep going during the current fiscal year, and what kind of literature they should be employed upon. The printers and binders being thus provided for, the 50,000,000 of American readers might be left free to ransack the world for their supplies of mental food.

At first sight it seems an enormous exaggeration to set down every American man, woman, and child as a reader, whose demand for books can be affected by the tariff. But in reality it is no exaggeration at all. A very large proportion of the reading of every country is done vicariously. Every man and

woman who read, read not for themselves only, but for all who are in any way dependent on them or under their influence—for children, for servants, for neighbors, for friends, for the whole country. There are but very few indeed who can keep to themselves the benefit of a book. It passes out to the rest of the community through knowledge, through character, through new hopes, new fears, new aims and ambitions. It has been well said that the rude fisherman of the northern seas labors for the highest interests of his race, because he helps to feed the scholar's lamp. It may also be said that the scholar over his lamp labors to lift the rude fisherman's children to a higher plane of comfort and culture, by preparing the day when they will not need to follow their father's hard life, and when they, as well as the scholar, will sit by better lights than whale oil can supply. In fact, it is not possible in our world to-day to give any man a book for himself alone. The reader reads for the race, as the discoverer discovers and the inventor invents; and the smart Congressman who is so careful of the printers and binders that he will not give the people cheap books, strikes as hard a blow as he can at the very agencies which have brought printers and binders into existence.

The petition signed by Dr. Holmes and the poet Whittier for a duty on books would have been more surprising if they had not given their reasons. These reasons were two in number. One was that if books were not taxed, this country would be flooded with cheap books. This, we need hardly say, is very odd, because the great argument used by American publishers hitherto against admitting foreign publishers to our market has been that it would make books dear. The other was that if we opened our book market to foreigners, they would pervert the minds of Americans, and especially American children, with foreign ideas. This has been for years a favorite notion with the eminent firm of publishers who lay Dr. Holmes's and Mr. Whittier's books before the world, and it is not unreasonable to suppose that it is on their urging that these two men of letters have been led to adopt it. It is perhaps, all things considered, the queerest idea yet produced on the American continent, outside the field of religious fanaticism, and so extreme a product of protection that we almost think it would make John Roach laugh.

We shall not, therefore, attempt to refute it, but must point out that if the American mind is to be protected at all by the Government, we ought not to stop with the protection afforded by the tariff. We are bound to see also that native authors do not publish unsound books, likely to be injurious to our politics, morals, or philosophy. In other words, we ought to have a censorship of all books, including children's books. The same rule ought, as we said some time ago, to be applied to pictures. If, as some artists maintain, we ought to keep out bad foreign pictures by the tariff, we ought also to see to it that native painters do not sell bad pictures to their fellow-citizens. The truth is, that whenever the protective system is in full working order in the shape in which some of its friends would like to see it, the American man will be a very singular phenomenon. He will be so much looked after that it will be but decent to put him into petticoats, and have a discreet publisher or a wise and good ironmaster take him by the hand whenever he goes out, and see that he does not waste his money on naughty books or bad tools.

WAGNER'S WORK AND INFLUENCE.

MUSICIANS claim that their art, although but three centuries old, in its modern sense, has already outstripped all other arts, and become the greatest æsthetic force of the time. However this may be, it cannot be denied that no other art could have furnished a representative capable of successfully organizing anything analogous to the "Nibelung" and "Parsifal" festivals at Bayreuth, at which the greatest living dramatic vocalists assembled to sing to the most select and cosmopolitan audiences probably ever brought together under one roof. Some of the finest architectural works in existence have been erected in Vienna during the last ten years; but few are the tourists who go there expressly to see them. A modern Shakspere, recognized as such, would hardly be able to accomplish what Wagner has done; nor would an art exhibition arranged in such a small and remote town as Bayreuth meet with much favor, even if it included the best works of more than one popular artist of the past or present. This shows that music in general, and Wagner's in particular, must possess a power to inspire enthusiasm unequalled by any other art, at least in this age. This enthusiasm is not one of those phenomena which, like a comet, appear one day and disappear the next; in Wagner's case it has grown in force steadily during the last thirty years, until it has now carried away almost the last strongholds of the enemy. His best friends, from the beginning, were contemporary men of genius on the one side, and the people on the other. The opposition came from the middle men, the Philistines, professional musicians, and critics. These had a code of traditional laws which no one was allowed to transgress. An opera, they reasoned, consists of a potpourri-overture, several arias, duets, choruses, and a simple orchestral accompaniment. In Wagner's operas we do not find these things; therefore, he is an iconoclast, an enemy of music, a vandal.

It never occurred to them that it might be possible to compose good music in these new forms, too, and that the best things in the works of Gluck, Mozart, and Weber pointed in the direction of Wagner's reforms. The people, however, in spite of these misrepresentations and tirades, gradually and successively made the acquaintance of his operas, and, to their great surprise, found them palatable. Wagner himself tells of cases that came to his knowledge, where a single hearing of "Lohengrin" effected a complete revolution in a person's musical taste. These cases were by no means isolated, and they would have been more frequent still had not the vicious "lyric" habits prevalent at most opera-houses twenty years ago prevented the singers from doing justice to these new dramatic operas. At that time "Lohengrin" was almost as badly given in German cities as it is to-day in New York, and it seemed therefore quite unintelligible and dreary to most hearers. But it is only when imperfectly reproduced that Wagner's operas are difficult to understand; otherwise, his music, in its harmonious union with poetry, action, and scenery, possesses a peculiar fascination for people to whom a classical symphony is "Hebrew"; and this fascination does not lie in the theatric accessories, but in the music itself. In proof of this statement we may cite a few lines from Mr. Charles Dudley Warner's interesting article on "Parsifal" in a recent number of the *Atlantic*:

"This music," he says, "had a supernatural note—an unworldly, not to say a spiritual, suggestion. It rose and fell, more importunate than strident, in pleading, in warning, in entreaty. Whether it was good music or utterly impossible music I cannot say, owing to a constitutional and cultivated ignorance of musical composition; but it affected me now and again like the wind in a vast forest of pines on a summer day. It appealed to the imagination, it excited expectation, it begat an indefinable longing; and now and then a minor strain, full of sadness or of passion, suggested a theme like the opening of a window into another world—a theme which was to be renewed again and again in the drama, when it came to us like a reminiscence of some former life."

Mr. Warner reminds the reader repeatedly that he has no knowledge of music as an art or science, and his testimony is therefore of the greatest interest as proof of the assertion that Wagner's music appeals even to a semi-musical mind in a direct and forcible way. Such a mind, of course, only feels this influence without being able to analyze or explain it. It is, however, easy to explain it, and we purpose to do so in a few lines.

The first point to be considered is, that Wagner was the first to abandon consistently in his operas the simple rhythmic structure which forms the skeleton of all dance music, as well as of our sonatas and symphonies. In these, roughly speaking, the melody is divided, as it were, into lines or verses of eight bars each, and at the end of every four, eight, or sixteen bars there is a cadence analogous to an end rhyme. These systematic cadences appear very tiresome and superfluous to a modern listener; they remind him sometimes of a grasshopper which flies eight feet, alights, flies again, and so on. Now, Wagner scorns this eight-bar arrangement, and seldom uses a cadence (*i. e.*, touches ground) except at the end of an act. His music, therefore, has a grander sweep—it is like the lofty flight of an eagle, and in its most sublime moments affects the imagination like the irresistible movement of a planet. It is this elementary force that imposes on the unmusical alike with the musical. But in introducing such an innovation Wagner seemed indeed a bold, bad man. The babies cried for their toys; he gave them no eight-bar tunes which they might whistle in the street and have the barrel-organs grind out for them. If all dramatic poetry had up to the present date been written in the form of rhymed verse, and a powerful author suddenly appeared who used only prose, the case would be analogous to Wagner's. It is needless to add that this does not affect the poetic *character* of Wagner's music; much of our best poetic literature has the form of prose. The two principal reasons why Wagner abandoned the tune-form were that it had been worn threadbare, and that it did not permit a thorough union of drama and music to be effected without constantly sacrificing the musician's means of expressing emotion to the rigid rhythmic form. For the same reason he abandoned all the old operatic forms—the aria, duo, ensemble, chorus—except in cases where they were demanded by a lyric situation.

Of still greater importance in explaining the elemental power of Wagner's music is the fact that he has so greatly enlarged the means of expressing definite emotions by means of new and varied orchestral combinations and harmonic progressions. Music can express an emotion as a phase of happiness or sadness very definitely, but not the pictorial object or cause of the emotion. Wagner refers somewhere to the curious circumstance that he has been frequently classed with the composers of programme music. Nothing could be more erroneous. If he had believed that music should embody or suggest pic-

torial objects, he would not have written music-dramas, but symphonic poems. The very essence of his theory is that music should be combined with poetry and scenery, because it cannot suggest images; whereas, in connection with them, on the stage, it intensifies and specializes the emotions in a most potent manner. All the orchestral innovations introduced by Wagner tend to make emotional expression more intense and definite. His principal means of accomplishing this end were four in number. (1) He introduced an infinite variety of new tone-colors; and such colors are not only sensuous but emotional factors, as everybody can see when he compares the cold, serene beauty of a flute with a majestic trombone, or a warm, passionate, melancholy 'cello with a humorous bassoon or impertinent oboe. Where the existing means of coloring did not suffice for his purposes, he enlarged the spectrum by adding new or obsolete instruments. (2) He made a more impressive use of discords than any composer before him. Discord is passion; it begets that "excited expectation" and "indefinable longing" of which Mr. Warner speaks. (3) His modulations ("that great engine of emotion," to use Dr. Grove's words) have finally emancipated music from the fetters of tonality and slavish sequence of keys. The incessant modulations in his music have been one of the chief causes of professional animosity toward him, because they are epoch-making. Wagner's preference for the minor mode is partly due to the tragic character of his dramas, partly to the fact that the minor mode is more favorable for modulation than the major. (4) He gave music a *secondary* definiteness by means of the leading motives, which, having once been heard in connection with a certain character or important idea of the drama, are subsequently always associated with this person or idea, thus adding the power of *remembered* emotion to that of the present moment. On account of the leading motives, Wagner's music to each drama constitutes a drama in itself. When once the events and persons they are associated with are known, the listener can close his eyes, and, while listening to the music alone, see the whole play unroll itself before his mind's eye.

The poetic gifts of Wagner are not yet so generally recognized as his musical genius; and yet, if perfect adaptation of means to end is the highest criterion of judgment, his dramatic verse deserves no less praise than his music. Wagner's own brother, Albert, did not think much of his music, but considered him a great poet—an opinion which is held by many in Germany. It is useless to look for figures of speech and other poetic ornaments in his dramas. These elements are supplied by the music. It is the astonishing ingenuity of dramatic construction and the powerful directness of the language that strike the attention of the unprejudiced reader. Oddities of expression and archaisms are not nearly so frequent as people have been led to believe by hostile critics, who picked out a dozen eccentric lines in each drama and published them as "specimens" of the whole. His principle of alliteration does not seem to be generally understood. It is simply this, that some consonants are by nature harsh and dissonant, others soft and gentle. In harsh passages, therefore, Wagner uses the former, in quiet scenes the latter, just as he uses discords or concords: it adds color and emotional intensity to the scene. In writing his vocal parts, Wagner took especial pains to assign to each vowel in a word a note in that part of the scale in which it can most easily be sung. This enables the singers to articulate the words with unprecedented distinctness. To his influence also is due the fact that singers at the present day are obliged to conform in their actions and gestures to the dramatic sense of the phrase they sing, and to pay attention to the scenic background. The stage machinists and scene painters, for their part, have learned much from Wagner, who gave them habitually very hard nuts to crack. Before his day, the notion prevailed that classical works could take care of themselves and needed no luxurious scenic outfit. This notion has been abandoned since he first by his music dramas, and after him the Meiningen Company in Germany and Mr. Irving in England, showed how much the classical drama gains in impressiveness and popular attractiveness by being presented in a proper framework. There is no reason why the trashy melodramas should have the exclusive benefit of the stage-carpenter's and scene-painter's art.

In considering the personal character of Wagner, we meet with the negative traits of self-assertion, stubbornness, and occasional rash violence, which are apt to belong to a reformer who has to conquer every inch of ground "by main force." Among his friends, however, he was most amiable, jolly, and often childlike. He has been often harshly treated for having criticised Mendelssohn, Schumann, Berlioz, and Meyerbeer in severe terms. But on examination it will be found that in most of these cases it was not Wagner who struck the first blow. In regard to Meyerbeer, whom he treated most severely of all, there were especial reasons for personal gratitude, as Meyerbeer lent him a helping hand early in his career. But Wagner felt, as he says, that in such a case personal feelings must be sacrificed to truth and the interests of art. His libellous comedy on the French, "A Capitulation," was *malàpropos*, as coming directly after their defeat by the German Army; but if ever a man had cause to exult over an enemy's defeat, that man was Richard Wagner. His attack on the Jews in music was partly due to his aversion to certain "commercial" (or what we should call "political") features in the music of the day, and to the fact that he saw himself and his admired classical masters unduly neglected in favor of Meyerbeer and Mendelssohn. Many of his criticisms on these and other composers have been verified by the verdict of contemporary critics and audiences. Not the least of his merits, moreover, is the fact that he frankly exposed the faults even of those composers whom he otherwise so greatly admired—Haydn, Mozart, Weber, Beethoven, etc. He thus abolished the old superstition that a great composer must be above all criticism; but it was these isolated criticisms which his enemies quoted in proof of their assertion that he was "down on" all the classical composers. In general, it must be said of his critical and other prose writings that they are characterized by a complicated and turgid style. There are, however, numerous exceptions—pages in which he becomes clear, concise, and forcible. His historical sketch of Italian and German opera ranks with the best critical literature in style as well as in thought. His most eccentric performances are two pamphlets *à la* Schopenhauer, one against vivisection, the other in favor of vegetarianism. During the last Bayreuth festival, a vegetarian club was established at one of the local restaurants; but Wagner, who was always known as a great gastronome, did not frequent it.

Wagner's influence will not be affected seriously by his death. His art has taken such deep root in his own and foreign countries that it can be safely left to take care of itself. If the Bayreuth theatre should never be used again, it would not have been built in vain; for it afforded an opportunity to show just how he wished his art to be interpreted, and the lessons there given to his singers will be handed down to future generations as valuable traditions. It is well known that all the younger German composers, as well as Gounod and Saint-Saëns in France, Boïto and Verdi in Italy, etc., have been strongly influenced by his music, and Dr. Hanslick himself admits that "he is lost who does not at the present day compose in Wagner's style." The original features of this style we have endeavored to indicate in the preceding paragraphs. In summing up, we have no hesitation in saying that for absolute originality—formal and material—Bach is Wagner's only compeer in the history of music. Beethoven, Schubert, Mozart, and Schumann have perhaps left us each a greater number of individual musical ideas than Wagner; but as originators of new rhythmic, harmonic, and instrumental combinations they must yield the palm to the Bayreuth master. Bach's tremendous genius not only enabled him to master the difficult polyphonic forms of his time, but in many cases he boldly advanced beyond even the later "classical" forms in a way which distinctly suggests the "music of the future." The last chorus in the St. Matthew's Passion would hardly seem out of place in "Die Meistersinger." Only in regard to one of Wagner's innovations may just doubts be entertained as to whether it will be fully adopted by all operatic composers—the system of leading motives. This can only be successfully employed by one who can originate motives as pregnant and protean as Wagner's. That all operatic work should be Wagnerian is not to be desired. By the side of his music-dramas the operas of Mozart, Weber, Gluck, and Rubinstein, Verdi and Gounod afford a grateful change and variety; nor is there any reason why a Wagnerite should refuse to admire the operettas of Strauss, Sullivan, and Audran. "It is only," as Dr. Riemann observes, "the false pathos of the modern Italian and French grand opera, against which the point of Wagner's attack was avowedly directed, that has received a deadly blow."

THE RESETTLEMENT OF EGYPT.

LONDON, January 30, 1883.

SINCE the successful close of the campaign in Egypt last autumn, the plans of the English Government for the future of that country and the defining of our relations toward it have been gradually, though very slowly, maturing, and are now not only settled, but in substance made known to the world. The diplomatic documents, or abstracts of them, in which these plans have been announced, have doubtless been already published in America, so that all that it is necessary to do in this letter is to indicate how the English public feels on the matter, and what, so far as yet ascertained and declared, are the criticisms likely to be made on the scheme in which Mr. Gladstone's Ministers place their faith.

England has taken the whole matter very quietly. When the first jubilation over the victory of Tel-el-Kebir was ended—a jubilation which, though made much of in the newspapers, was really confined to the military class and those who are connected with it—the question seemed to recede into the background. This was partly because the bulk of the nation never much liked the war in Egypt, accepting it as a disagreeable necessity, and partly because they not only knew very little about Egypt and the measures required there, but (a much rarer phenomenon) felt that they did know very little, and that they must leave the thing in the hands of the Ministry, who might be supposed to know more. There has, therefore, been less discussion of the Egyptian problem, either in the speeches

of public men or in the newspapers, than one might have expected from its real importance, and from the amount of attention it has received on the Continent of Europe.

Among those who have spoken out, three types of view may be distinguished. The first is that of the party which, for want of a better name, may be called the Imperialist—the party which desires to extend English influence and the limits of English dominion all over the world. It embraces most Conservatives and a fair proportion of Liberals. It welcomed the expedition, and saw in its success the means of making Egypt practically a British province—not directly, by open annexation, but practically, by the establishment of an authority which would keep the nominal sovereign of the country in a complete dependence upon us, and enable us to do what we liked there. He would thus come, if not into the position which the Bey now holds under the French in Tunis, yet at least into that of the protected native princes in India, who administer their territories under the inspection and with the advice of a British Resident, and who are not permitted to have more than a certain military force. The recommendations of this scheme are not only the gratification it supplies to our own national pride, but also its comparative simplicity and ease. If we are to retain any control over Egypt, we shall become, in the eyes of the world, in the eyes of the Egyptians—even, perhaps, in our own eyes—responsible for its good government; and how can we insure that except by either ourselves grasping the reins, or making those who hold them understand that they have got to obey our directions? We should in this way be able to make the most of the country by developing its natural resources, creating security for life and property by impartial tribunals and an effective police, and encouraging European capital to flow in; and we should escape the risks of future revolts, to be followed by fresh expeditions and reconquests, by keeping a garrison which would overawe the natives, and by organizing a native army officered by our own people. Nor would such a scheme be merely selfish. It would be, in a certain sense, the best for the natives themselves, for it would secure them a just and firm administration, and it would involve the speedy abolition of the slave trade from inner Africa—a result which it seems hopeless to expect as long as the control of the Nile Valley remains in Mohammedan hands. Arguments of the latter class are constantly used in our discussions: it is characteristic of the annexationist policy that it always has philanthropy as well as ambition to appeal to. Sir Bartle Frere, who began the war against the Zulus, and who had a good deal to do with bringing about the Afghan War of 1878, typifies happily the union in one person of the Christian philanthropic tendency and the military imperialist tendency, which are more commonly found in different persons, even when they move toward the same goal.

The objections to this scheme are as obvious as its advantages. It would greatly increase that weight of empire which already presses heavily on a people so small as that of the United Kingdom. It might lead to further annexation along the Upper Nile; it would provoke the enmity of France, the jealousy of Italy and Russia; it would furnish a precedent or an excuse for the advance of Austria to the Ægean, and of Russia across the Armenian highlands to the confines of Syria. Above all—and this is the real difficulty in the way—it would be substantially inconsistent with the professions of disinterestedness which we have repeatedly made as regards Egypt, and to the express declarations of Mr. Gladstone when the expedition of last July was despatched. On the whole, therefore, although many people insist that this is the safest course, and the one into which we shall ultimately drift, whether we like it or not, there is a pretty general sense that England cannot take over Egypt—cannot treat it as a conquered country, to be disposed of at our pleasure, but must look for some other solution.

Even more simple and easy would be the exactly opposite course of leaving Egypt forthwith and washing our hands of it altogether. Two strong sets of argument are advanced in favor of this policy of abstention or renunciation. One is, that we have nothing to gain by remaining in or undertaking any responsibility for Egypt; the other, that we have much to lose, or at least serious risks to face. What is there to gain by administering Egypt, either directly by British officials, or indirectly through natives? Not money, for it is sure to cost at least as much as can be made out of it—our experience in India proves that: and even if we did make a profit, we should not feel at liberty to bring that profit home to England, but should expend it all upon Egypt. Not power or influence, for we have already the command of the Mediterranean by our fleet, and should not be substantially stronger there if Alexandria and Port Saïd were in our hands. Some will say that we should secure the control of the Suez Canal—valuable in peace for our great Eastern trade, and in war-time for the passage of ships and troops to Indian ports. This argument has had much currency in England—has perhaps done more than anything else to convince the commercial world that we cannot disclaim a concern for the future of Egypt. But it is answered that the Suez Canal does not really signify to England, either as regards war or as regards trade. So long as our naval superiority remains unquestioned, we can prevent any other Power from sending its vessels through the Canal, since we could not only catch and destroy them in the Mediterranean, where we hold Malta, but could threaten them in the Red Sea and Straits of Bab-el-Mandeb, where we possess another stronghold at Aden. With the sea at both ends of the Canal in our power, the possession of the Canal itself has little value. As for commerce, it is true that the Canal is at present chiefly used by British steamers, just because the carrying-trade of the ocean, and particularly of the East, is chiefly in British hands. But if the Canal were to be stopped, so that trade had again, as in former days, to go round the Cape of Good Hope, goods would still be carried in British bottoms, and British shipowners would really earn more in the way of freight than they can now. The Canal is, moreover, so much more important to the Mediterranean countries—France, Italy, Austria, even Russia—than it is to England, that the duty of seeing it kept open for trade may, it is said, be safely left to these states. A thing so valuable to the world, which it is nobody's interest to destroy, will take care of itself.

Thus it is concluded that our supposed interests in Egypt really do not exist; that we have been mistaken in troubling ourselves about its condition; that under no circumstances have we any substantial gain to expect, other than the gratification of the passion for power and influence. Besides, the future may bring dangers. Mohammedan fanaticism may raise insurrections. The Sultan may—indeed, almost certainly will—intrigue against us; for he is irritated at the supersession of his own influence by ours. France will never forgive us for having turned her out of a country which she claims, on however inadequate grounds, to have rights over as well as interests in. A time may come when to have to defend Egypt might be a serious addition to the other responsibilities which our scattered possessions all over the world impose upon us. And, of course, the more we govern the Egyptians, the less likely are they to become able at some future day to govern themselves and develop a truly national civilization. These are some of the reasonings which the anti-imperialists have advanced against any further interference in Egypt, holding as they do that interference will almost certainly involve a protectorate, and a protectorate lead to annexation. Such reasonings can hardly be followed by the mass of the people; but among the people, and particularly among the working and middle classes, there is a strong and growing disinclination to the extension of the empire, and particularly to the acquisition of power over non-Christian races. This instinct—for such one may call it—strengthens the philosophical Radicals, and gives their doctrine (in itself somewhat theoretical) a large measure of popular support.

Between these two opposite views lies that of the moderate men, who profess to take their stand on accomplished facts, and urge that as we are in Egypt we cannot leave it. They admit that direct annexation is impossible after the language held by the Government when the expedition was despatched; but they think that we should stultify ourselves if, having undertaken that expedition, spent a good deal of money on it, and succeeded so completely, we were now to depart and let the country relapse into its former disorders. Why ever go, if you were not to stay? If England had interest enough to make it worth her while to suppress Arabi, she has surely interest enough to prevent another Arabi from springing up, or some European Power like France or Italy from stepping in to acquire the influence which England would have renounced. There is an air of common sense about this way of putting the matter which tells upon our people, and which has so much affected even the anti-imperialists that they protest not so much with the hope of success as for the sake of liberating their own souls. And in this way it has come about that most politicians acquiesce in the line which the Government are taking—a line which endeavors to preserve the results of the war and retain a certain influence for England, while avoiding as far as possible the appearance even of a protectorate, much more of annexation. The Government scheme has three main features. It gets rid of the joint Financial Control of England and France, substituting a single Financial Adviser. Secondly, it calls this person an adviser only, and does not, so far as we are yet informed, give him any complete legal right to veto any measures taken by the Khedive. And, thirdly, it attempts to create a species of constitutional self-government, or at least an approach to constitutional government in Egypt, by constituting, in addition to the council of twelve Ministers who are to surround and advise the Khedive, a council of twenty-four persons, one-half of whom are to be elected, and who are to have the right of discussing and making representations—who are to serve, in fact, as organs of popular opinion. Thus, while a concession is made to Egyptian national feeling, the interference of England is minimized, for it appears only in the presence of the Financial Adviser. It is true that the Army and the gendarmerie are both for the present to be commanded by Englishmen, but this arrangement may be temporary only; and though some English regiments are to stay in Egypt for the present, it is announced that they will withdraw when a native force sufficient to maintain order has been constituted.

As I have already said, this scheme will in all

probability excite little hostility in England, because the Ministry is strong, because people don't understand the subject, and because it respects both the belief that we cannot leave Egypt to herself and throw away all that our swords have won, and also the belief that the less Christian interference there is the better chance will there be of the development of some kind of national life. But, like most middle courses, it is open to objections from each side. The imperialist view, which will doubtless be pressed by the Tory party, will find the securities taken for our control of affairs far too slender. They will urge that we shall be exposed to constant intrigues from the Sultan, from the French, perhaps from the Italians and Russians; that if the Khedive should be induced by these intrigues to dismiss or disregard our Financial Adviser, we should be in a very disagreeable position; that it would be simpler and safer to declare at once that we mean to be supreme. The Radicals—or rather the anti-imperialist section of the Radicals—will see in the presence of the Financial Adviser the germ of a protectorate—a germ which is sure to spring up and bear fruit. Egypt, they will point out, cannot reform itself. Either we must reform it—in which case we shall practically supersede the native Government and become the rulers of the country—or else, if we leave the natives to their own devices, we shall appear responsible for the very evils which we have hoped to remove, since they will go on under our Adviser's eyes. The hope on which the present scheme of Mr. Gladstone's Government rests—the hope that English moral influence and advice will, without the exercise of force, bring about a steady amelioration, and be able to vanquish the intrigues of Turks and Frenchmen, and the interested hostility of those Egyptians who thrive on the present misgovernment—is a slender hope; too slender to be made the basis of a policy. But though these and similar objections may be raised, the Government scheme will probably pass unchallenged when Parliament meets. Y.

Correspondence.

PROHIBITION IN IOWA.

To the Editor of The Nation:

Sir: We in Iowa read with great interest the articles in the *Nation* upon the unsolved problem of prohibition, as well as the editorial comments made by you, surrounded as you are by perhaps the most radical anti-prohibition atmosphere in America. You very properly check those who insist upon a parallelism between anti-slavery and prohibitory agitations. After all the comparisons that may be drawn, there is still this radical difference: the abolitionist fought against slavery in every form, public and private; the auction-block, the slave-breeder, the importer, all fell beneath the axe of that agitation. The prohibitionist fights only against the commercial principle, and denies the right of any one "to manufacture for sale, sell, or keep for sale as a beverage." The Iowa prohibitory amendment (which has just been declared invalid upon a mere technicality, and not upon principle) aimed at no "compulsory change in the private personal habits" of any one. It sought to "impose self-denial" on no man "in the regulation of his own life in his own home." On the contrary, under the proposed Iowa prohibitory amendment, every citizen was at liberty to import, manufacture, keep, use in his family, give to his friends any kind of intoxicating liquor as a beverage, and as much, for that matter, as he could before or can now. He could carry as much with him for his personal consumption if the amendment had stood legally adopted as he could before the prohibitionists undertook "to regulate his private actions." What, then, does prohibition seek for, if the individual is left in possession of all this personal liberty? Prohibition simply seeks to prevent any one from manufacturing, for sale as a beverage, or selling, or keeping for sale as a beverage, all intoxicants. In short, it forbids running a distillery or brewery to supply saloons, or running a saloon. By keeping in mind the exact text and meaning of prohibitory measures, we can better understand the subject. By describing a clear circle around the object to be examined, we can arrive at more exact conclusions. Ernst Hofer.

McGregor, Iowa.

[Our objection to this defence of prohibition is, that it is a quibble of which, in a controversy on any other subject, a disputant would be ashamed. If, for instance, we were talking about potatoes, who would venture to say that no interference with any man's personal liberty in the matter of using potatoes was meant by a law which forbid any one to grow them for sale, or to expose them for sale, anywhere within the State, and simply compelled any one who wished to use them either to grow them himself or import them from some other State? Of course, the effect of prohibiting the sale of a commodity within the State is practically to prevent the use of it by everybody who cannot afford to purchase it at a distance in large quantities. This may be a good thing to do, but those who do it should not pretend that it is not an interference with any man's life in his own home This tendency to be uncandid and sophistical has always been, for some inscrutable reason, a feature of the temperance agitation. The pretence that moderate drinkers will in all likelihood become drunkards was one illustration of it; but the most conspicuous was the story that the wine used at the wedding in Cana of Galilee was unfermented. There was not a particle of foundation for this in reason or tradition; it was a disgrace to the scholarship and ingenuity of the persons who invented it; yet it did duty for many years as a temperance argument. Our advice to the friends of the cause is—in discussion, at all events—to take the bull by the horns boldly, and not go about pretending that they did not see him, or did see him but thought he was a cow, or had no occasion to go through the field where he was grazing.—Ed. Nation.]

MORAL SUASION.

To the Editor of The Nation:

Sir: I notice, in a recent issue of your excellent weekly, a criticism from President Bascom, of the University of Wisconsin, on some views expressed by you in regard to the question of prohibition. In descanting upon the subject, the writer states your position thus:

"Notwithstanding the variety of opinion and practice on the subject of temperance, you believe, if we understand you, in a law that shall repress intemperance, and look to its ultimate extinction in prohibition, and that this end is to be reached as rapidly as law supported by public opinion can be made to perform its function of repression. Prohibitionists might wish to alter somewhat the emphasis of your response, but would hardly desire to modify its fundamental principle."

There is one aspect of the temperance question which, it seems to me, is too much ignored. I refer to the value and effect of moral suasion, as it is commonly called. I know the influence is one which is rejected and decried as visionary, useless, and effete; but is it actually entitled to no consideration? Is prohibition, even in a modified and conservative form, the best remedy applicable to the evil of intemperance? Permit me to review the subject for a moment.

It must be universally conceded that if men were of their own volition to abstain entirely from the use of intoxicating liquor as a beverage, intemperance, with all the wretchedness, poverty, and crime it entails, would be completely eradicated. Now, is this solution of the subject a practicable one? The radical friends of prohibition aver not. They instance the experience of the world since the dawn of history to confirm their opinion, and declare that mere moral restraint has been found totally inadequate to govern and subdue the passions and appetites of men. This answer, however, involves an admission which, if directly affirmed, the authors themselves would be the first to repudiate and deny—namely, the inefficacy and futility of moral influence. It is tantamount to an assertion that the precepts and truths which are constantly inculcated, in every civilized nation, by the pulpit, the press, and the school, are utterly destitute of practical effect. In other words, it implies that we may inveigh, for example, against the evil of revenge from now until the crack of doom, but our utterances will be barren of result unless they are enforced by proper legislation. Such is the only conclusion from the premises laid down. Does it conform with fact?

Now, the truth, I apprehend, is nearly the reverse. Prohibitory laws, under certain conditions, may be advisable and effective to a limited extent, but there can be no rational doubt that, were intemperance suppressed by means of moral influences, the evil would be entirely extinguished. The reason is plain. Thoroughly imbue men with the idea that the excessive use of intoxicating drink is deleterious to both mind and body; deeply impress upon them the fact that an inordinate use of liquor means poverty, disease, and shame, and you have created the strongest motives for men to lead lives of sobriety, rectitude, and industry. This plan is not so visionary as many may conceive. The particular virtue of prohibition is the apprehension of punishment it is expected to inspire. This, to a certain extent, is a powerful motive. In comparison, however, with the effect of moral suasion, it is insignificant. Most of mankind, especially that portion possessed of ordinary intelligence and judgment, have an innate desire to be respected by the world, to live in ease and comfort, to escape sickness and disease, and to provide for children and old age. I say this desire, latent though it be in many cases, resides in nearly every human breast. Why should it seem so difficult to awaken and enlist this powerful quality of the heart in the cause of temperance? Can we imagine a stronger incentive to sobriety than is furnished by a desire for riches, honor, comfort, and peace? It seems to me not. Teach men that temperance means a cheerful home instead of a dismal jail, an honored and useful life instead of one stained with disgrace and crime, and the one aim of prohibition agitators will be most effectually attained.

An economic principle is at the base of the moral-suasion plan, and one, too, that should receive earnest consideration. So long as there is a demand for intoxicating beverages, there will be a supply of them. The one chief defect of the prohibition plan is that it is directed against only the supply. The demand for liquor still

exists; and, although law may diminish it, in a small measure, by limiting the supply, we may rest assured that it will not and cannot entirely extirpate it. This fact is fully confirmed by the operations of the Maine law. The State of Maine contains only a small foreign population, and its legislation against the liquor-traffic has been of the severest character. Circumstances, therefore, strongly favor the success of the prohibitory policy in that State. As a matter of fact, however, large quantities of liquor are still sold and consumed in Maine, and the most watchful vigilance of the authorities is unable to completely suppress the illicit traffic. This instance, as I said, confirms the truth of the principle for which I contend. Remove the demand for intoxicating drink, and you destroy the supply of it. This is moral suasion. Attempt simply to remove the supply and you still leave untouched the cause of it—namely, the demand. This is prohibition.

E. H. FINLAYSON.

AMSTERDAM, N. Y.

MR. H. H. BANCROFT'S LITERARY METHOD.

TO THE EDITOR OF THE NATION:

SIR: Mr. Bancroft's answer sets up what we call at the bar a plea by way of confession and avoidance. The charge that whole pages which were not written by him go into his book, Mr. Bancroft admits in his statement that "at least one-half the manuscript thus far completed has been written by his own hand," the rest being revised by him, and that he "does not rewrite what is perfectly satisfactory," being able to employ his time and strength to "better advantage." Just how he employs his time and strength to better advantage than in writing what he prints over his own signature he does not explain.

But his justification for his methods rests entirely, in the last analysis, upon the magnitude of the work, which, "as finally laid out, proved sufficient to occupy one man for two hundred years." This is the veriest outcry of weakness from one who has undertaken more than he can accomplish, and on that ground justifies his appropriation of the acknowledged work of others. It is also a complete admission that Mr. Bancroft does not, and could not from the nature of the case, write the books which, nevertheless, he prints over his name. Would Mr. Stedman be heard to say that he had undertaken to write essays on all the poets, but, on account of the "magnitude of the undertaking," had been printing the work of others? Could any one imagine Mr. Whittier claiming that he had set his heart on producing thirty-nine volumes, but that, finding the task would occupy him two hundred years, he had organized a bureau of poetry, carefully suppressing, however, all evidence as to which poems were his and which were his assistants'? Does the "magnitude of the work" prevent Mr. Bancroft from saying, "This chapter was written by Mr. Oak, who is in every way qualified for the work"? When he does not choose to rewrite what "is perfectly satisfactory," is there anything to excuse his not saying honestly, "I did not write the ensuing ten pages; they are the work of Mrs. F. F. Victor, a lady of ability and discriminating judgment"? Other historians than Mr. Bancroft have found their work, when "finally laid out," too great for their powers. Buckle, touched with the fire of a noble enthusiasm, left only what has been so aptly termed "a splendid fragment" of his lofty endeavor. The brilliant Macaulay, purposing to write his history down to "a time within the memory of men still living," put down his pen almost at the beginning of his task. The very name of Bancroft suggests that illustrious historian, now full of years and honors, whose history, a monument to his learning and his genius, hardly passes the threshold of our national existence. I venture to say that not one of these ever harbored the thought of padding out his uncompleted work with the writings of other people.

Such a course violates the fundamental contract between the historian and his readers. One who buys Hume or Froude rests secure in the assurance that the facts stated have been weighed, the arrangement carefully decided upon, and the form of expression chosen by the historian himself. It is the ever-present judgment of Hume or Froude that makes their works of value. But who can tell, in looking at Mr. Bancroft's pages, which are his and which are those of some unnamed and perhaps irresponsible subordinate? Who can tell which facts he has verified and which he has not? If a given chapter or page is the work of some competent person other than Mr. Bancroft, it is fair to that person, it is only honest to the reader, that this should be stated.

As to the charge of attempting improperly to influence newspaper criticism, my way of looking at this whole matter is so different from Mr. Bancroft's that I am not surprised to see that he considers it "silly," while to me it appears very serious. Mr. Bancroft takes refuge behind the merest quibble on the word "offer," and says that he never paid or "offered" to pay for reviews. But he does not deny my charge, which I here reaffirm, that he told me personally that he was *willing* to pay for favorable reviews in respectable papers. He does not deny that the San Francisco newspaper offices have been besieged by his agents with articles about himself and his books. Since writing my first letter it has come to my knowledge that the New York papers have suffered from a like crusade. And I have also been informed by the gentlemen approached that Mr. Bancroft personally attempted to present books to one of the editors of a leading San Francisco paper, and suggested that a review would be considered as an equivalent. Names and dates can be given if desired.

CHAS. H. PHELPS.

NEW YORK, February 14, 1883.

THE ARCHÆOLOGICAL SOCIETY OF ATHENS.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, "A Member of the Archæological Society of Athens," is evidently not conversant with the state of things at Athens, and risks a fall in trying conclusions with any one who has been acquainted with it for years past. The houses now being built on the northern slope of the hill of the Acropolis are not "squatter" affairs at all, but substantial legal stone domiciles, to move which a heavy compensation must be paid. Nor are representations and remonstrances on the state of archæological interests to the Greek Government wanting from any side. I have personally had many conversations with eminent Greeks, official and non-official, on the subject, especially with Mr. Tricoupis, who frankly admits that the archæological law is utterly inoperative, and that anything which can be transported can be got out of the country in spite of the law—in other words, that the smugglers can do what the honest men cannot. Public opinion in Greece is only sensitive to what is said of the country abroad and in foreign papers, especially; and if any effect is to be produced, it must be by the united action of foreigners who do care for Greece somewhat. As to the French Government protecting its interests, a single case which occurred last summer will show how far it felt free to put on political pressure for archæological purposes. A French engineer, engaged on some works being carried on by a French company, unearthed a relief which he sent to the French School at Athens, whence nothing is or can be exported contrary to law, and where the collection is always available for students. It was seized in transit, under a provision of the law which forbids transportation of antiquities without a permit; and though the School protested, and showed that the finder had no intention of exporting or concealing the relief, and had never heard of the law, it was confiscated.

The archæological law was not made as your correspondent supposes, but by the Bavarian regency, and I have heard Tricoupis say that he was himself opposed to it. As to any sympathy with its provisions, no one can have it who has any with the interests of archæology, to which its restrictions and spirit are most disastrous. Egypt is the only civilized or uncivilized country which has such a law, and the Athens Museum has a fine collection of Egyptian antiquities which the Greek officials smuggled out of Alexandria in defiance of it. Suppose Italy, Holland, and other countries which have had a part in art were to imitate the illiberality of Greece in this respect, what public galleries would now be existing? Such a thing as a great art museum would be impossible in any part of the world. Nobody can find fault with the desire of the Greeks to keep on their soil the finest examples of their ancient art by any honorable means, but we can blame energetically the way of making their collections by confiscation and barbaric procedure unworthy civilization, to say nothing of the fact that the laws are so absurd that they defeat their own purpose, and sacrifice the highest archæological interests. If even the Greek laws brought into the Greek museums the remains now lying hidden all over Greece, not much could be said; but the fact is that they do not. On the contrary, they do all that is possible to hinder scientific excavation, except with their own feeble means, and destroy in many ways more archæological data probably than they recover. The proceedings of the archæological authorities have excited in me so profound a disgust (though I have personally never found difficulty in getting out of the country anything I had bought) that I am heartily glad to hear of any valuable object of archæological interest being carried out of Greece.

If Greece would adopt the Italian law on excavations, etc., her museums would fill with rapidity, and what was not needed would go to help the study of art and archæology in other parts of the world. This is an object of much greater importance than the pseudo-patriotic pride of the Greeks, which can never understand that the presence of the Elgin marbles in London has done, and is doing, more for the honor of ancient Greece than they would have done in their place on the Acropolis of Athens. Any other civilized man would be glad to see his country's art in the places of honor all over the world; only the Greek is so narrow-minded as to prefer that the honor should not be paid, to its not being paid at Athens and to the pecuniary profit of the country. It is mainly the showman's feeling.—Yours truly, W. J. S.

FLORENCE, Jan. 28, 1883.

SOUTHERN HOMICIDE.

TO THE EDITOR OF THE NATION:

SIR: I feel the truth of much that the *Nation* has said on "Southern Homicide"; there is everything to be said against it and nothing to excuse it. But there is, I think, in the case a consideration which may be given in explanation, and perhaps in palliation, of this abuse,

which we deprecate and are doing what we can to reform. Whoever knows the Southern character need not be told that the Southern man has always regarded the appeal to the law in the settlement of personal difficulties as a confession of cowardice. He takes such matters into his own hands, and formerly to a greater extent than now adopted the "Code" as the best method of adjusting them.

So long as duelling was upheld by public opinion, and almost legalized by the invariable failure of juries to convict for it, there was much less random street-shooting, and a measure of decency, at least, in the method. But things are changed. Public opinion is more and more against duelling; the stringency of the laws and the outcry of humanity are fast putting it down, even in the South. It is no longer an honorable way of killing. The old spirit of so-called chivalry has not declined with the "Code"; there is the same unwillingness—in a lessening degree—to go to the law; and in this transition stage from the "Code" to the courts we have fallen into the present lawless and cruel habit of street-fighting. Give the South a little more time, and it will slowly do away with both street-fighting and duelling—I say slowly, because it can only be done thus.

F. C. WOODWARD.

WOFFORD COLLEGE, S. C., Feb. 12, 1883.

TO THE EDITOR OF THE NATION:

SIR: I have followed, in the columns of the *Nation*, the discussion of "Homicide in the South" with that keen interest which I feel in all matters affecting this section of our common country.

Truth should be followed for her sake alone; it matters not whether the pursuit leads to the exaltation of friends or the abasement of enemies. It is, therefore, quite beside the question for Southern men to meet the arraignment of a Northern journal with the *tu-quoque* argument. Especially is this the case when the arraignment is presented dispassionately, by a journal whose past course should satisfy every true Southern heart that its honest purpose is to promote justice and the general welfare of the entire country. Let us pretermit, then, all consideration of Northern crime, and examine the condition of our own criminal statistics; for no rational man whose person or property is menaced by imminent danger would neglect the warning thereof, even if given gleefully by a malicious enemy.

The *Nation* avers that homicide is common in the South among the higher classes of society, and that it frequently results from trivial disagreements which in a more civilized community would never lead to violence; that this deadly arbitrament has the tacit approval of the mass of Southern society, both men and women so giving it their sanction that the survivor of such impromptu duels is rarely brought to trial and never punished. The inference is drawn from these allegations that Southern men, individually, are responsible for this condition of affairs, and that the mere existence of such a state of things is conclusive evidence of general individual depravity. Every fair-minded man who reads the papers, or who resides in any Southern community outside of the largest cities and towns, will admit the truth of the *Nation's allegations;* but every man, Northern or Southern, whose experience justifies the expression of an opinion, will as promptly deny the *inference.*

The truth is, that the readiness to invite and accept conclusions of force is not the result of individual depravity, but is the logical sequence of circumstances and social relations which for generations have been active factors, and of which the present generation feels the effect. Why this readiness to resort to deadly weapons? Because, firstly, no man can live respected in a Southern community and be a coward, in the ordinary, physical acceptance of the term; and, secondly, because, by inheritance and association, Southern men are naturally and physically brave. I am not holding this condition of affairs up as the highest type of intellectual civilization; I am endeavoring to show that it is something stronger than isolated individual action, and that, under the influence of its moral coercion, good men, peaceable men, gentle men will rather philosophically "die in their boots" than try conclusions with it. Public opinion says a man must fight or, in its tribunal, be disgraced; and most wise men—here, at least—while they smile at the folly of an opinion without any rational basis, prefer fighting one man to an entire community.

Who, then, is at fault? What has brought about such a condition of public opinion that a man who will not fight is condemned even in the eyes and hearts of women? Are we, the present generation, responsible for it? No. There are many causes, most of which were and are beyond our control. They are:

1. *A large and frequently wild territory, with a sparse population.* In such a country men have insufficient or no police protection. The carrying of arms is a wise and just precaution. Familiarity with the use of arms leads to a too facile employment of them; but the wearing of weapons itself indicates no depravity in the bearer under the circumstances stated.

2. *Slavery*, making for generations the safety of white men's families dependent, or liable at any moment to be dependent, on their individual courage. It may readily be perceived how, in this condition of society, even gently-nurtured women would despise a man who lacked courage.

3. *Reconstruction*, by making what before was only a menace a reality; by exposing white men's lives, liberty, and property, and, above all, the safety of their families, to every possible danger that an ignorant black population, constantly irritated by unscrupulous leaders, could devise or suggest.

Here, above all others, is the cause which has made Southern men familiar with the use of deadly weapons. During the dark period of Reconstruction the white men of the South had absolutely no protection against a tyranny unparalleled in the history of modern civilization, except that of their own arms. Their governments and courts were filled with, and controlled by, such a rabble as God in his mercy never cursed any people with since the days of Moses. Those men of the South who did not have weapons then procured them. It was well for them and for civilization that they did, for nothing but brute force and brute bravery awed that dark crew. It was natural, when a community was *forced* to arm itself with knives and pistols in veritable self-protection, that it should become too familiar with their use; but does not the fault rather lie with that civilization which permitted the legislation of Reconstruction, than with those who suffer because they did what every brave man should have done for family and self?

But it matters not whose the fault. The past concerns us less nearly than the future. We are correcting our abuses, and your noticing them will aid our efforts. Homicides among the social class to which you refer have become rare in this city; none has occurred here in seven or eight years. Each year they are becoming less frequent in the larger *commercial* towns. Commerce is a great civilizer. Even now there is no danger to deter Northern emigration. Northern men *who do not fight* are not compelled to face the exigencies of the moral code which confronts the Southern man "to the manner born." Southern communities that do fight are as fair and just as men usually are when their lives are often made to hang upon fairness and justice in others. I saw in the thronged streets of this city, in the bitterest days of revival against reconstruction and radicalism, an ex-Governor of Louisiana, himself heartily detested, kill a man as popular, probably, as any in the city. The streets were thronged with excited people, most of them probably armed. Any one of a thousand men could have killed the homicide with impunity, and yet not a hand was raised against him, because the man whom he had killed had insulted him, and *custom made that insult equivalent to a challenge to immediate fight.*

This *custom* is a recognized fact. *You* see in the insult the physical act—a trifling blow, a taunting word—which might possibly be best treated with contempt. In fighting communities custom interprets that blow or taunt into a declaration that the striker or taunter is about to shoot; and if the recipient appreciates the earnestness of his position, he stops not to moralize, but defends his life, albeit in so doing he outrages civilization. H.

NEW ORLEANS, Feb. 15, 1883.

COLLECTION OF JUDGMENTS AGAINST STATES.

TO THE EDITOR OF THE NATION:

SIR: A strong reprobation of the repudiation of State debts is not inconsistent with a strong conviction of the impracticability of any scheme for their collection through the intervention of the Federal Government; and calm, intelligent discussion seems only to render clearer this impracticability.

Your issue of February 15 contains two suggestions for the collection of such debts which abundantly warrant your own comment upon "the difficulty of engrafting suits against the States by private creditors upon our system." The vice of both these suggestions, as of all which have come under my observation, is that they subordinate the due and regular performance of the functions of government—indeed, its very existence—to the pecuniary demands of an individual. The "device of garnishment" suggested by your Nashville correspondent may be safely assumed to be the offspring of a lawyer whose zeal for the collection of just debts has rendered him somewhat indifferent as to methods. That his "device" is "simple" cannot be denied, nor that it would be effective—to the extent of the taxes "intercepted" (as so euphemistically put by your correspondent); but that it is therefore Constitutional and practicable does not follow. It is in its spirit a resort to the old rule "that he shall take who has the power, and he shall keep who can."

The Constitution provides that the United States shall guarantee to every State a Republican form of government; and the Tenth Amendment reserves to the States, or the people thereof, the powers not delegated to the United States by the Constitution, nor prohibited by it to the States. The adoption of a Constitutional amendment authorizing the confiscation (or interception) by the courts of the United States, of all the taxes levied by the State for the support of its Government, would be destructive of the form of government guaranteed under the Constitution, and could not be upheld by the Supreme Court without the repeal of this guarantee, as well as of the Tenth Amendment, which must be construed as reserving to the States the *application*, as well as the *levying*, of all taxes for State purposes.

Nor does the proposed device, apart from Constitutional objections, meet the practical difficulties in the way of its execution. If it were possible for the judicial authority to sustain such an amendment, how would it be possible for the organization of society to be maintained if the taxes levied for the support of a State Government are to be thus diverted to the payment of private debts? How are violators of the law to be punished? What is to become of public schools, public roads, charitable institutions for the insane, and the manifold necessities of civilized communities? If it is answered, the taxing power of the State must again be invoked, why may not this second levy be diverted in like manner, and so *ad infinitum*? The adoption of such a plan could only be paralleled by the expedient of cutting off the fool's head to cure him of his folly.

The other mode, suggested by "A Layman," of adopting an amendment depriving a repudiating State of its representation in Congress and its electoral vote, is equally heroic, and, under the Constitution, equally impracticable. "United States Marshals, with the Army and Navy at their back," could doubtless enforce any method which the wit or the folly of man could devise for the collection of such debts; but this scheme would require the evisceration from the Constitution of all the provisions for the organization of the Senate and House of Representatives, and of the Electoral College, and would strike out the vital principle of Federal Union.

The only real safeguard against the spirit of repudiation will be found in a high sense of public honor, and this can be best assured by sending to the Legislatures of the States only men of personal integrity and sound financial views—men who will hesitate before they pledge the credit of their State, and, having pledged it, will uphold it unhesitatingly. Judge Curtis said forty years ago, in his essay on the "Debts of the States," "that it was often dangerous to run too close a parallel between public and private duties," and that "the rules for the conduct of States and of individuals are not always identical, though it is not easy to see just where they differ." Whether we look to the harmony of the States and of the Federal Government, and the consequent peace and happiness of the people, or to the practical value of State obligations and the ultimate security of their holders, we shall be constrained to leave their enforcement to the sense of honor and justice prevailing in the States. The remedying of evils is the great business of life, but it is folly to attempt by legislation the remedying of all evils, and the remedies thus far proposed for the cure of repudiation are worse than the disease.

JAMES A. PEARCE.

CHESTERTOWN, MD., February 17, 1883.

Notes.

G. P. PUTNAM'S SONS have in press or in preparation 'Authors and Publishers,' a manual of suggestions for beginners in literature; an illustrated 'Tourist's Guide-book to the United States and Canada'; 'The History of the Northern Pacific Railroad,' by Eugene V. Smalley; 'Italian Rambles,' by James Jackson Jarves; Gindely's 'History of the Thirty Years' War,' translated by Prof. Andrew Ten Broeck; the following compilations—'Sacred Scriptures,' extracts from the Old and New Testaments and from other sacred books, and 'Prose Masterpieces from Modern Essayists'; the following books of verse—'Destiny, and Other Poems,' by M. J. Serrano, 'Songs of Toil and Triumph,' by J. L. McCreery, and 'The White Nun,' and Other Poems,' by Agnes L. Carter; the following sketches—'Our Choir,' by C. G. Bush, and 'A Mingled Yarn,' by Henry Edwards; also, 'Insanity; its Causes and Prevention,' by Dr. H. P. Stearns; and 'A Perpetual Almanac,' by President Barnard, of Columbia College. The Messrs. Putnam, in addition to the other organizations for which they publish, will, on behalf of the Charity Organization Society, issue a 'Classified and Descriptive Directory to the Charitable and Beneficent Societies and Institutions of the City of New York'; and they will hereafter act as publishing agents for the Johns Hopkins University Studies in Historical and Political Science.

A life of the late General John A. Dix, by his son, the Rev. Morgan Dix, is in the press of Harper & Bros., as are also the 'Autobiography of James Nesmyth, Engineer,' edited by Samuel Smiles, and William Black's 'Shandon Bells.' A book will doubtless grow out of Prof. W. G. Sumner's series of articles on industrial and social topics just begun in *Harper's Weekly*: "What our Social Classes Owe to Each Other." The same firm have brought out "Pericles, Prince of Tyre," and "The Two Noble Kinsmen," in Rolfe's edition of Shakspere.

As complementary to their "Campaign Series," Charles Scribner's Sons will shortly begin publication of three volumes, entitled "The Navy in the Civil War." The first, 'The Blockade and the Cruisers,' is by Prof. J. Russell Soley, of the Naval Academy, at Annapolis, and will appear in March. Rear-Admiral Daniel Amman will treat of the Atlantic Coast operations; Commander A. T. Mahan, of those in the Gulf and Inland Waters.

A. Williams & Co. will publish shortly a translation, by Louise T. Jackson, of Judith Gautier's celebrated monograph concerning the great musician, recently deceased, under the title of "Richard Wagner and His Poetical Works—From 'Rienzi' to 'Parsifal.'"

The fourth volume of the Parchment Shakspere, of which D. Appleton & Co. are the American publishers, contains "Twelfth Night," "The Winter's Tale," and "King John." In uniform style is the Parchment edition of the 'Imitation of Christ.' Both these elegant and most handy volumes are sold at a price so low that it seems a pity they cannot (or do not) furnish a standard for other good books, even copyrighted, for which we are accustomed to pay as much while getting a very inferior grade of type, paper, binding, and general tastefulness.

The new Riverside Hawthorne (Houghton, Mifflin & Co.) offers in Vol. 3, "The House of the Seven Gables," "The Snow Image, and Other Twice-Told Tales," and in Vol. 4, "A Wonder Book," "Tanglewood Tales," and "Grandfather's Chair"—the latter becoming at once the child's gift *par excellence*. The MS. of the "Wonder Book," says Mr. Lathrop in his preface, is the only one which, in its original form, is owned by any member of Hawthorne's family. "Scarcely a correction or an erasure occurs, from the beginning to the end," and this is indicative of the author's habit of composition. He "meditated long over what he intended to do, and came rather slowly to the point of publication; yet when the actual task of writing was begun it proceeded rapidly and with very little correction" or redrafting. Mr. Lathrop once more dispels the illusion that the real model of the House of the Seven Gables can be pointed out in Salem, or, in fact, ever existed outside the novelist's brain.

Mr. Baring-Gould's 'Vicar of Morwenstow' is having a new lease of life, having already reached a fourth American edition, in cloth and in paper (T. Whittaker).

A useful little catechism in domestic duties is the 'Advanced Lessons in Kitchen Garden, with Songs and Occupations,' published under the auspices of the Kitchen-Garden Association (New York: J. W. Schermerhorn & Co.). Lesson IX., on the duties of a child's nurse, is a good example of the method; but whether it is maid or mistress, complete ignorance is assumed, and categorical answers are required.

Ginn, Heath & Co. send us 'Yale Examination Papers,' collected and arranged by F. B. Stevens. These date from 1876, and will be added to hereafter, from year to year. The requirements for admission to the college are prefixed. Bearing the same imprint is a beautifully printed little square volume of "Anacreontics," edited by Isaac Flagg. It contains thirty-five of the odes which usually pass under the name of Anacreon, though generally admitted to be the productions of several unknown authors. The Greek text is accompanied by short notes, entirely confined to the brief explanation of such difficulties as might perplex the tyro.

From the Government Printing Office we have the 'Report of the Chief Signal Officer' for the years ending June 30, 1880, and June 30, 1881, and Lieut.-Col. C. B. Comstock's 'Report upon the Primary Triangulation of the United States Lake Survey.' This last work is purely technical. It contains the usual maps, views of the instruments employed, graphic tables, etc. Students of our late war will be interested to know that the official 'Findings of the Court of Inquiry, and Reviews of the Judge-Advocate-General and of the General of the Army, in the case of Maj.-Gen. G. K. Warren,' has also appeared at Washington.

We have received a copy of the 'Memorial Addresses on the Life and Character of the Hon. C. C. Washburn, LL.D., late Governor of Wisconsin,' delivered before the State Historical Society, July 25, 1882, with a portrait (Madison); and a memorial notice of the late Lewis H. Morgan, by Charles Henry Hart, read before the Numismatic and Antiquarian Society of Philadelphia, May 4, 1882.

In the rather supercilious notice, in the *Academy* of January 20, of Professor Garnett's translation of 'Beowulf,' it is curtly remarked that the book contains "a fair bibliography of the subject." Lest the reviewer's ignorance should impose on some of his American readers, we repeat that this bibliography is "the fullest that has ever yet been prepared"—much fuller, for example, than Wülcker's in the *Anglia*.

Professor Hübner's 'Grundriss zu Vorlesungen über die Griechische Syntax' (Berlin: W. Hertz) will be eagerly welcomed by classical scholars who have learned to appreciate the value of the similar manuals which the author has given to the world on Latin grammar and on Roman literature, both of which have had great success. In conformity with the plan of the two volumes mentioned, this book gives simply the headings of the various departments of Greek syntax, according to the author's development of the subject, with a complete bibliography under each heading. To those who have to spend weary hours in dictating or taking down the titles of books, such manuals are an unspeakable comfort, and Professor Hübner's experience, sagacity, and industry are a sure warrant that the completeness at which he aims has been attained. Not less is the service rendered in another direction. While much has been done in the department of Greek syntax, infinitely more remains to be done, and the gaps in our practical knowledge are clearly manifest to any one who will look through this manual with even a modicum of care. American students of Greek, who are apt to complain that German scholars have left them nothing to do, may well thank this German

scholar for his silent but eloquent indication of profitable lines of work.

The Commission des Archives Diplomatiques has lately presented to M. Grévy a satisfactory report. The Commission regard the numbering and stamping of the leaves of all collections of manuscripts as a very important precaution against that habit of abstraction which every large sale of autographs shows to have been common in times past. A special department has accordingly been organized for this purpose. Proper precautions taken, the Commission are desirous of making their treasures as useful as possible. All documents down to 1792 may now be freely consulted and copied. Copies of documents relating to the Revolution and First Empire must be submitted to the Minister. Later documents can only be copied in special cases. In 1882, 2,324 volumes were consulted by 98 persons. As the result of recent researches made in the archives, the Commission can point with some pride to such works as Faugère's 'Écrits inédits de Saint-Simon,' and Boislisle's 'Œuvres complètes de Saint-Simon,' Boulay de la Meurthe's 'Concordat,' Cosnac's 'Louis XIV.,' Vatel's 'Madame Du Barry,' Chéruel's 'Mazarin,' Rott's 'Henri IV.,' Jung's 'Lucien Bonaparte,' Tratchewski's 'Politique de Vergennes,' Hanotaux's 'Administration des Intendants,' Michaud's 'Innocent XI. et Louis XIV.,' Broglie's 'Frédéric II. et Marie-Thérèse,' and many others whose title-pages boast of "documents inédits.

—The new Cambridge weekly, *Science*, is smaller in size of page, by almost exactly one-fourth, than its English prototype, *Nature*. Its press-work is superior, but on the whole, its typography is less inviting. The absence of head and column rules, and the use of "solid" large rather than "leaded" smaller type, seem to us mistakes which will be recognized by the conductors themselves after a short experience. The scheme of the contents is a tolerably close copy of that of *Nature*, and indeed there was no reason for departing from it. The most original feature is the "Weekly Summary of the Progress of Science," in place of which *Nature* has "Our Astronomical Column," "Chemical Notes," "Biological Notes," "Geographical Notes," etc., appearing not regularly, but by turns. Systematic arrangement is secured by the American plan, and this is a gain; so is the freshness of intelligence it insures. On the other hand, the necessity of condensation works against the readability of the summary, particularly in really popular divisions like that of geographical discovery and travels. We apprehend that the "general reader" will make haste to skip pages whose resemblance to a scientific year-book is enhanced by the reference number appended to each. It is too early to judge how strong *Science* will be in the department of reviews. Dr. Asa Gray opens it, in the first number, with some interesting comments on De Candolle's 'Origin of Civilized Plants.' We hope to see displayed here an unshrinking courage, unsparing alike of shams and of prejudices; a plain speaking after the model of a recent leading article in *Nature* (Jan. 12) on the "Thirst for Scientific Renown." It is evident that *Science* starts off with a very strong support from the class which is to make and to profit by its success. Every American scientist should do his utmost to strengthen and sustain it. The editors, on their part, will, we have no doubt, welcome friendly criticism such as we have endeavored to apply. The publisher of *Science* is Moses King, Cambridge, Mass., and the subscription price is five dollars per annum.

—Mr. George Parsons Lathrop, in an article on the "Hawthorne Manuscripts" in the *Atlantic* for March, declares that it is "not easy to see why the printing of unfinished work is an injustice to an author who has won for himself an historic importance, so long as his completed works are available for ascertaining what he could accomplish at his best"; and reminds the critics of the Hawthorne manuscripts of the old story that it was by a violation of Virgil's last injunction to burn the manuscript of the 'Æneid,' that the great epic of Latin literature has been preserved to the world. Assuming the truth of the tradition, it is hardly safe to infer from it that all death-bed injunctions with regard to manuscripts ought to be violated, or that if the 'Æneid' had been left in the extraordinary condition in which 'Dr. Grimshawe's Secret' appears, even without any injunction at all, Varius and Plotius Tucca would have done well to publish it. Mr. Lathrop's view of the subject is that the Hawthorne manuscripts throw an interesting light upon the operations of Hawthorne's mind, and his analysis of the relations which the various fragments bear to each other is ingenious and perhaps correct. On the other hand, the popular critical view seems to be that much of 'Dr. Grimshawe's Secret' is in such a condition that it lets us into the secret of Hawthorne's method of composition very little more than reports of his dreams or what he may have said in his sleep would. Mr. Henry James has an article on Salvini, in the course of which he denounces the "extraordinary system" of bi-lingual Shaksperian representation which permits the "support" to do their work in English, while the star plays in Italian; the support, too, being very bad of its kind. With a resolute determination not to speak ill of the Republic, Mr. James suggests that the willingness of audiences to submit to the bi-lingual nuisance may be a proof of their "self-control"; while, in a spirit of candor, he at the same time suggests that it may, on the other hand, be a proof of their density. The motive which leads managers to lend themselves to the system is undoubtedly that they save the heavy expense of importing a foreign troupe; and it may possibly be that the audience, nine out of ten of whom do not understand a word of Italian, are helped a little by the support in their own tongue, to which they have been accustomed from childhood. There is, after all, a good deal in understanding what the rest of the company are saying to each other and the star, when the star's performance has much the effect of pantomime. Salvini's *Othello* is such a great piece of acting that it would probably draw if there were no support at all, and the cues were simply read by the prompter. When Salvini first came to this country he had a very good Italian troupe with him, but, apparently, he has now got the full measure of the "self-control" of American audiences. Mr. Horace D. Warner gives an entertaining account of the "City of Earthquakes" (Caracas), his knowledge of the subject being derived from a long residence in Northern Venezuela.

—The illustrated article on "Parsifal" at Bayreuth, by M. G. Van Rensselaer, in *Harper's* for March, is, unfortunately, more timely than the editor probably imagined it would be. The account here given of Bayreuth, of Wagner's house, of his personal appearance, of the theatre on the hill, of the characteristics of his dramas and his music, together with the well-told story of "Parsifal," will make this number of the magazine very acceptable to the large number of admirers of the late composer in this country. The article is a good illustration of the difference between real enthusiasm and that offensive "gush" to which so many other feminine writers on music are addicted. A few columns are devoted to the principal vocalists, who differ so widely from those generally heard in this country in being as great actors as they are singers, and therefore able to merge their individuality in a work of art. "Some of the finest pieces of acting I have ever seen have been in Wagner's dramas," is the statement of an experience shared by many who have heard Materna, Brandt, Niemann, Vogel, and Scaria. Frl. Malten, who was one of the *Kundrys*, is unduly lauded here in comparison with Frau Materna and Frl. Brandt, whom she did not equal in any way, although she looked more beautiful. Wagner himself and his antipode Hanslick agreed that to Materna belonged the first prize, both vocally and dramatically. The illustrations include views of Bayreuth, the theatre, several scenes of the drama, and portraits of Wagner, Malten, Reichmann, and Winkelmann. Scaria (in speaking of whom as "perhaps the greatest basso of our time," the *perhaps* is quite superfluous) would have been a welcome addition.

—Miss Titcomb writes us:

"In the notice of 'Early New England People,' in No. 919 of the *Nation*, the lack of conventional form in the arrangement of the pedigrees is attributed to the author's inexperience in book-making. That very fact would have been the strongest motive for adopting the conventional form had the author not thought that by avoiding it, and making the genealogy subordinate to the biography, the book could be made more readable. As to the assertion that the general pedigrees inspire distrust, the author would say that the families alluded to are too well known to admit of the possibility of misrepresentation."

—Columbia College is justly lamenting the death of Prof. Clifford R. Bateman, of the Faculty of Political Science, which took place in this city on February 6. Professor Bateman was the only son of President Bateman, of Knox College, Illinois. He was graduated from Amherst College in 1876, and from the Columbia College Law School in 1878. During his collegiate and professional studies he had devoted his attention mainly to political history and public law. Having become especially interested in the newest and as yet least developed branch of political science—administration—he sailed for Europe in 1878 to study this subject. After spending a year at the universities of Heidelberg and Berlin, he became dissatisfied with the German treatment of administrative law, which seemed to him too dogmatic for so young a science. In the autumn of 1879 he went to Paris and entered the École libre des Sciences Politiques. Here he found what he was in search of—a purely inductive investigation of the political sciences. During his stay in Paris he became intimately acquainted with that small circle of professors and Government officials who for a number of years past have been engaged in the collection and comparison of foreign legislation. This acquaintance determined the direction of his own work. He made it his task first of all to familiarize himself with the administrative systems of the leading European States. He hoped thus to gain a basis for the intelligent investigation of the methods and problems of State and municipal government in the United States. In the autumn of 1881 Mr. Bateman returned to this city, and took the chair of Administrative Law which had in the meantime been created for him by the Trustees of Columbia College. The interest which his lectures aroused among the students amply justified the establishment of this chair—the first of the kind in the United States—and the choice of its occupant. His style of lecturing was simple and lucid and his method singularly objective. "Professor Bateman," one of his students writes, "never stated his own view on any matter of opinion. He gave the facts and the arguments advanced on either side of the question, and left us to draw our own conclusions." Professor Bateman's work in the School of Political

Science, short as was its duration, will not be without tangible results. He has shown how the department of instruction with which he was intrusted ought to be conducted.

—In a recent (anonymous) 'History of Maryland,' used in the public schools of Baltimore, occurs (p. 42) the following paragraph, which deserves to be snatched from oblivion as a genuine curiosity of blundering. The historian, describing and explaining the Maryland coat-of-arms, says:

"Above the cap is the figure of a helmet with the crest of his lordship's paternal coat of arms on the top of it, which crest is a ducal crown with two half bannerets set upright upon it. The name banneret was once used to mark a partially created baron. By these small flags or bannerets Lord Baltimore symbolized his promotion from a lower order of hereditary nobility to that of a baron or bearer of the square flag."

The historian therefore thinks (1) that Calvert was a knight banneret, which he never was; (2) that a banneret is "a partially created baron" (!) instead of a knight created on a stricken field, like Sir John Chandos at Navarrette; (3) that a banneret is a "lower order of nobility"; (4) that this rank of banneret is, or was, hereditary; (5) that the small flags on the Calvert crest indicate this imaginary rank, whereas the banner of a knight banneret was square, and the flags on the Calvert crest are not at all square; (6) that a square flag was the distinctive symbol of a baron, but whether entirely or only partially created, we are not told. Of the former, we suppose; for Lord Baltimore would scarcely wish to commemorate his singular transition period of "partial creation," like a tadpole that has acquired his aristocratic legs, but not yet cast off his plebeian tail. Part of these extraordinary blunders are probably due to a confusion of baronets and bannerets; though Calvert was never either the one or the other.

—The long-expected 'Compendium of the Tenth Census' has at last appeared in a plump octavo volume, containing, with the introduction, more than 1,800 pages, or double the number in the 'Compendium of the Ninth Census.' It also embraces a much greater amount of information, both in range of subjects and in the degree of detail with which these subjects are treated. It is possible here only to indicate in a general way the character of the contents. Following the introduction, the first 648 pages are devoted to the statistics of population, treating of (1) the aggregate population by States, counties, and minor civil divisions; (2) race; and (3) general nativity, in similar tables. Then come tables giving the native, native white, and native colored population, by State or Territory of birth; a county table of the native and the foreign population, by State or Territory of birth in the case of the former, and by foreign country in the case of the latter; the native and the foreign population of fifty principal cities, classified by State or county of birth; sex of the population, with race and general nativity; the natural militia; the males of voting age; school, military, and citizenship ages; all ages, classified by sex, race, and general nativity. Other tables regarding population, which would apparently be more properly grouped in the first part of the work, are found toward the end. These relate to occupations, areas, families, and dwellings, foreign parentage, the population of Alaska; illiteracy; the defective, dependent, and delinquent classes; and mortality. The main body of the population statistics are succeeded by those of agriculture, which comprise tables giving the general statistics of agriculture by States, number and size of farms, etc., and the principal vegetable and live-stock productions. The statistics of manufactures are next in order, and are exceptionally full. They comprise comparative tables, by States, of certain general statistics; the general statistics of 332 different industries; general statistics by counties; statistics for twenty principal cities; and, finally, statistics by States of twenty-seven of the leading articles of manufacture. The accompanying statistics regarding power used in manufactures open up a subject heretofore untouched by the Census. The statistics of mining and mineral production, petroleum, and quarries follow; then those of transportation, including railroads, steam craft, canals, telegraphs, and telephones. Statistics of occupations of the population, with age, sex, and nativity, are placed between the foregoing and the statistics of fisheries; these last, greatly summarized, occupying only two pages. Likewise, on the subjects of foreign parentage and areas, families and dwellings, only summary tables are given. The statistics of the population of Alaska are taken from the more extended report upon this topic. The statistics of life, fire, and marine insurance are given at considerable length, as are also those upon assessed valuation, taxation, and public debt. The statistics of illiteracy are given in connection with those of public schools. Finally, we have tables, by States, of the defective, dependent, and delinquent classes, and of mortality. An excellent index concludes the volume.

—An idea of the relative importance assigned to different subjects may be gathered from the following facts: To Population, including occupations, illiteracy, the dependent, etc., classes, and mortality, are allowed about 800 pages, of which 58 pages are devoted to occupations, 12 to illiteracy, 44 to the dependent, etc., classes, and 30 pages to mortality. To Agriculture are devoted 275 pages; to Manufactures 285 pages; Transportation, telegraphs, and telephones, 86 pages; and Wealth, debt, and taxation 126 pages. This apportionment of space appears to be very closely in accord with the relative importance of the subjects, and the minuteness with which it is desirable to treat them. A noticeable and valuable feature of the present compendium is a set of tables showing, by States, and by race, sex, and nativity, the number of population of each year of age from one to eighty years. Other additions, which contribute greatly to the increased bulk of the work, are a number of county tables, in addition to the State tables as found in the 'Compendium of the Ninth Census.' The statistics of mining, quarrying, petroleum, lumber, ship-building, and many other subjects, which have been in the hands of expert agents, are presented much more fully than heretofore. Many of the subjects just enumerated have already been discussed in the pages of the *Nation;* but, in addition to these, the work contains a great amount of suggestive material, which will yield rich rewards to the statistician and political economist. It may not be amiss to state that the edition of the 'Compendium' is 100,000, 90,000 copies of which are at the disposal of members of the two houses of Congress, and 10,000 of the Secretary of the Interior.

—Each branch of modern science may be likened to a benevolent octopus, whose arms continually grope after new objects, and whose suckers fasten exhaustively upon all matters that fall within their range. Sometimes very curious material is thus appropriated. One of the latest of these eccentric contributions is in volume v. of 'North American Ethnology,' in the Interior Department's survey of the Rocky Mountain region. Dr. Robert Fletcher presents an illustrated paper on "Prehistoric Trephining," evidence of which, singularly for the nominal scope of the survey, is thus far limited to Continental Europe. One of the objects of this study, however, is to stimulate research in that direction in America. Dr. Fletcher, who is best known as a co-editor of the 'Index Medicus,' presents here no new facts, but he makes an attractive résumé of what is known, and adds one or two acute comments. The literature of this curious subject only covers the past ten years, and there has been no review of the whole since Broca's papers in 1877. The skulls thus operated upon belong to the neolithic age, and very plausible reasoning makes it probable, first, that they were opened for the relief of disease—presumably for the escape of confined dæmons in the "possession" of epilepsy; and, secondly, that the survivors were regarded with veneration, and that sections removed from their crania after death were prized for amulets. The compiler, quoting Velpeau's remark "that French flesh and English are different" in their capacity to endure surgery, suggests that the relation of race to traumatism at large is a point for pathologists to study, and that it may be a possible factor in the results of trephining. It is certain that the field surgery of the Rebellion showed a difference between whites and blacks in their recovery from general operations. This paper, which appears exhaustive not only as to Europe, but as to the world in the present state of knowledge, is illustrated in not exactly the highest style of wood-engraving, but intelligibly, and is copiously indexed.

—The Republican Société Historique lately opened its *cercle* with a *salon de lecture*. The Catholic Société Bibliographique has in turn established a *salon bibliographique*, with a reading-room and a library attached. It is intended to serve as a place of meeting for "all men of intelligence and heart who, without distinction of origin, of philosophic preference, or of political leaning, do not separate the interests of religious orthodoxy and of sound social doctrines from the progress and the diffusion of scientific method and of high intellectual culture"—which is a sufficiently flattering way of describing the clerical and reactionary parties. Lectures—*conférences*—are to be established, and particular attention will undoubtedly be given to historical investigation and to Christian and French antiquities. A Committee has lately been founded (*Comité Historique Franco-Russe*) for the study of the documents that relate to the French emigration into Russia during the French Revolution. The annual subscription to the Salon is 100 francs for Parisians and 50 francs for provincials. No doubt we shall see some of the literary products of the Salon from time to time in the *Revue des Questions Historiques* and in the *Bulletin Critique*.

—In the *Nation* for Sept. 14, 1882, we spoke of an article by Hubert Hall, in the *Antiquary* for August, upon "The Great Case of the Impositions" (1606). This article is continued in the October and November numbers, and will be found very important in the study of the history of English taxation. If in the first article a serious error was pointed out in Stubbs, the October number contains a still more damaging charge against Hallam, in reference to the manuscript authority cited by him (vol. i., p. 313, of the American "Library" edition). Mr. Hall gives entire the document of which Hallam gives "a very inaccurate and misleading paraphrase. It is a painful fact that he could not read the manuscript." The most important omission is of the words "denizens and aliens"—proving that the grievance was "not so much that aliens should be arbitrarily taxed for the public good, but that denizens should be included with them." But, what is still more important, he has found "a duplicate and

more authentic transcript" of the report in Chief-Justice Hyde's own hand, and this declares at the end that "the patent was confirmed and assured [not *affirmed*, as Hallam has it], against aliens, *but not against natives*." So that Hallam's conclusion that the assessment upon aliens was "absolutely against the law" was directly the reverse of the truth. In regard to the right of the Crown, Mr. Hall asserts that "the right of the Crown to restrain, license, or even entirely exclude foreign merchandise was ever, notwithstanding Magna Carta, an essential of its prerogative." This we suppose to have been the case; and it is the ground of the distinction made by the American leaders at the time of the Revolution between external and internal taxation. His derivation of the right to prisage, etc., "from the prerogative of purveyance or preëmption" we should hesitate to accept; and he himself admits that he may "easily be in error." As to the question of expediency or necessity, he says: "During the Middle-Tudor period, I unhesitatingly maintain that both the interest and feeling of the bulk of the nation were on the side of the prerogative, and that, moreover, the Crown did little more than seek to recover its undoubted revenue, which natural causes had diverted." The first of these propositions is no doubt correct; to establish the second is the work of the third paper, in the November number, which ends: "It is at least rash to speak of the Impositions of James I. as an unprecedented violation of the Constitution."

—The fourth concert of the Symphony Society, on Saturday evening, began with Beethoven's Second Symphony, which is less frequently heard than most of the others, probably because the first and third movements are hardly worthy of their author, although the fourth, and especially the second, are among the most beautiful things he has written. At the other end of the programme was Liszt's symphonic poem "Tasso," in which the striking contrast between the joyous, triumphant second part and the melancholy first part produces a most admirable effect. Original in melody, rhythm, harmony, and instrumentation, this composition alone would establish the rank of Liszt among the foremost modern composers. It was remarkably well played. The *Charfreitagszauber* from "Parsifal," which was produced several months ago by the Brooklyn Philharmonic Society, was here for the first time presented to a New York audience, but without the vocal parts. Although a concert performance of such a realistic fragment from a music-drama is as unsatisfactory as a collection of Shaksperian "beauties," and for the same reason, the piece was warmly received by the audience. The principal fault of the performance was that the wood-wind and brass were out of tune and played too timidly. Nor were the transitions from one instrumental color to another, which should be as imperceptible as the changes of tint in a flower, sufficiently delicate and gradual. The same faults were noticeable in the funeral march from "Die Götterdämmerung," which, however, was played with considerable feeling. The march was given in honor of the late composer, yet a part of the audience committed the *bêtise* of applauding after it. The only solo piece was Chopin's F minor Concerto, which was played by Mme. Schiller. Her execution was as light, graceful, and brilliant as usual, but it was almost entirely deficient in artistic interest. This, however, it should be distinctly understood, was not the fault of the pianist, but of the wretched instrument placed at her disposal. Its tone was hard and dry, devoid of all sustaining power and richness, and without a shade of expression. It is to be hoped that Mr. Damrosch will recognize the necessity of looking into this matter. A good oboe or horn-player is not to be had every day, but first-class pianos are abundant in New York.

MORISON'S MACAULAY.—I.

Macaulay. By J. Cotter Morison. [English Men of Letters Series.] London: Macmillan & Co.; New York: Harper & Bros.

AMONG the scores of critics, some of them persons, like Mr. Bagehot, of no mean capacity, who during the last thirty years have attempted to analyze the nature and to define the limits of Macaulay's genius, no writer we can name has produced a work half so instructive, or half so full of weighty and original thought, as is the short essay in which Mr. Cotter Morison has given us at once a charming biography and a masterpiece of literary criticism. When, indeed, we say, as we may with perfect truth, that Mr. Morison's 'Macaulay' satisfies the expectations of all who have read and admired his 'Gibbon,' it is hardly necessary to add anything in the way of praise. The two essays, however, though both admirable in their way, are at least in one respect curiously contrasted with each other. Mr. Morison's estimate of Gibbon may well claim to be considered a final judgment on the position of the author of the 'Decline and Fall'; or, if we remember, as we ought, that the court of literary criticism never pronounces absolutely conclusive decrees, we may at least say that Mr. Morison has, with regard to Gibbon, delivered a summing up which fairly represents the conclusions at which all competent and discriminating judges have at present arrived. No one, on the other hand, can suppose that Mr. Morison has uttered, or can have uttered, the last word about Macaulay. He himself is as fully aware of this as his readers. He acts, if we may pursue a convenient legal metaphor, simply as a judge of first instance. His decision will doubtless carry weight, but it is subject to revision by that court of appeal which is constituted by the opinion, not of twenty or thirty years, but of two, or it may be of three or four, generations.

Nor is it at all certain that posterity will ever come to a unanimous decision on Macaulay's claim to eminence. Mr. Morison very happily places Macaulay among the class of men of whom Cicero is by far the most eminent representative; and the name of the Roman orator is enough to warn any one against counting with confidence on the final decisions supposed to be pronounced by history. The reputation of Cicero has ebbed and flowed, and will ebb and flow for ever, with the fluctuations of human sentiment and opinion. There is no man among the heroes of the ancient world of whom we know so much; there is no man whose character is, in one sense, easier to read. His merits and his faults are patent; they can be ascertained as easily by readers of ordinary education as by profound scholars. For all practical purposes, Cicero's sayings and doings were as well known to Arnold as to Merivale. Mr. Froude, Prof. Mommsen, Mr. Trollope, and Mr. Freeman have all of them had the same materials for judgment before their eyes; yet we all know that these eminent writers have formed diametrically opposite judgments as to the feelings with which we ought to regard the man who saved Rome from falling into the hands of Catiline. When we ask for the cause of this difference of opinion, we find that it is as obvious as it is irremovable. Men of common sense are agreed as to the qualities of Cicero's intellect and heart; no detractor denies his splendid talents or his pleasing humanity; no admirer can overlook his vanity and his weakness. But while one class of critics feel that Cicero's virtues more than atoned for far greater vices than can be laid to his charge, another class hold that weakness, especially when it leads to failure, is the unpardonable sin which cannot be compensated for either by oratorical and literary talents which have never been surpassed, or by moral graces which, if unsuited for the times in which Cicero lived, anticipated the virtues of later and Christian ages. As it has been with Cicero, so in a measure it is with Macaulay. His qualities of head and heart are patent. No one doubts his great literary and rhetorical powers; no one can fail to perceive that even in the domain of history he was deficient in some of the qualities which are to be found in the two or three historians who, like Thucydides, stand high above all who have devoted themselves to the study of the past. There is no question as to Macaulay's qualities; the real question is, What is the standard by which these qualities are to be measured? and there is no more reason to suppose that the world will ever be entirely at one about the standard of historical than about the standard of moral merit.

If, however, Mr. Morison cannot, from the nature of things, have spoken the last word on his subject, he certainly has done more than probably can be achieved by any other living critic to clear the way for arriving at a determination of the position to be taken by Macaulay in the ranks of English literature. It would be idle to pretend entire agreement with his criticisms; it would be a poor compliment to a most suggestive writer to intimate that he suggested nothing to us but monotonous assent. We may, however, assert with confidence that no competent critic will henceforth dream of pronouncing an opinion upon Macaulay without weighing Mr. Morison's remarks with the most respectful attention; and, further, that Mr. Morison has, in two respects at least, thrown something like new light both on the literary genius and (what can hardly be separated from it) the moral tone and character of Macaulay. His great and first achievement is precisely to define Macaulay's preëminent merit as an historian:

"Macaulay's great quality is that of being one of the best story-tellers that ever lived; and if we limit the competition to his only proper rivals, the historians, he may be pronounced *the* best story-teller. If any one thinks these superlatives misplaced, let him mention the historical writers whom he would put on a level with or above Macaulay—always remembering that the comparison is limited to this particular point: the art of telling a story with such interest and vivacity that readers have no wish but to read on. If the area of comparison be enlarged so as to include questions of intellectual depth, moral insight, and sundry other valuable qualities, the competition turns against Macaulay, who at once sinks many degrees in the scale; but in his own line he has no rival. . . .

"Macaulay was a master of the great art of *mise-en-scène* such as we never had before. It is rather a French than an English quality, and has been duly appreciated in France. Michelet praises Macaulay in warm terms—speaks of him as 'illustre et regretté,' and of his 'très-beau récit.' If he must be considered as an historical artist who on the whole has no equal, the fact is not entirely owing to the superiority of his genius, unmistakable as that was. No historian before him ever regarded his task from the same point of view, or aimed with such calm patience and labor at the same result; no one, in short, had ever so resolved to treat real events on the lines of the novel or romance. Many writers before Macaulay had done their best to be graphic and picturesque, but none ever saw that the scattered fragments of truth could, by incessant toil directed by an artistic eye, be worked into a mosaic which, for color, freedom, and finish, might rival the creations of fancy. The poets who have written history—Voltaire, Southey, Schiller, Lamartine—are not comparable to Macaulay as historical artists. They

did not see that facts recorded in old books, if collected and sorted with unwearied pains, might be made to produce effects nearly as striking and brilliant as the facts they invented for the works of their imagination. Macaulay saw that the repertory of truth was hardly less extensive than the repertory of fiction."

These passages lose a great deal by being torn from their context, but they are worth quotation because they exactly hit off the essential characteristic of Macaulay's work. He was above all things a narrator: his object was to tell the tale of the past. Could his grand scheme have been carried into execution, he would have given Englishmen a literary picture-gallery of English history. You may say, if you like—though, as we think, very mistakenly—that the attainment of this end was not worth the labor of a lifetime. You may say that Macaulay's narrative has, even as narrative, peculiarities which may fairly be considered flaws. But you cannot even estimate his shortcomings unless you perceive his aim. It is impossible to tell whether a marksman falls short of the mark unless you know what is the point at which he is aiming. Macaulay will certainly be quite misunderstood if you confuse the object of a narrator with the aims of an historical critic. You must not judge Herodotus by the same standard as Thucydides. It is vain to fancy that because (say) men such as Gneist and in a measure De Tocqueville may, no less than Macaulay, be called historians, these writers, and others whom one could name, were really pursuing the same object as the most famous of English historians. To an historical critic, past events are a series of problems to be solved; to an historical narrator, past events are a picture to be painted. Here and there a man of transcendent genius combines the gifts of a literary painter with the powers of a social philosopher; but the combination is rare, and a doubt may be entertained whether the search into the causes of past events has not done at least as much harm by vitiating the truth of narrative as it has done good by throwing light on social or historical problems. The philosophy of Thucydides has been of much less permanent value to the world than the facts chronicled by Herodotus.

However this may be, when once it has been recognized that Macaulay or any other writer treats history as what, after all, it primarily is—the narration of bygone events—it is idle (and we doubt whether Mr. Morison has always borne this in mind) to quarrel with our historian for not being an historical critic. The real question is how far the historical story-teller has carried out his own idea of historical narrative in a worthy and striking manner. Tried, as he ought to be, by this standard, Macaulay occupies—on the showing of a critic who, like Mr. Morison, is, if just, certainly severe—a very high rank among the authors with whom he is fairly compared. The passages we have cited from Mr. Morison's essay, and others which should be read with them, put Macaulay's astounding literary merit absolutely above question. One singularly profound remark deserves special attention:

"In criticising Macaulay's 'History,' we should ever bear in mind it is, after all, only a fragment, though a colossal fragment. We have only a small portion of the edifice that he had planned in his mind. History, which has so many points of contact with architecture, resembles it also in this—that in both impressiveness largely depends on size. A few arches can give no adequate notion of the long colonnade. Of Macaulay's work we have, so to speak, only a few arches. It is true that he built on such a scale that the full completion of his design was beyond the limited span of one man's life and power. But had he lived ten or fifteen years longer, . . . and carried on his work to double or treble its present length, it is difficult to exaggerate the increased grandeur which would have resulted. Such a structure, so spacious and lofty, required length for harmonious proportion. As it is, the 'History of England' reminds one of the unfinished cathedral at Beauvais. The ornate and soaring choir wants the balance of a majestic nave, and the masterpiece of French Gothic is deprived of its proper rank from mere incompleteness."

Nor is it only the literary power of Macaulay which Mr. Morison vindicates. He gives as fair an answer as can be given to the grossly exaggerated charges of unfairness and inaccuracy:

"He had a share of ordinary human infirmity, but not a large share. He can be prejudiced and incorrect, but these failings are most assuredly the exception, not the rule. Above all, he impresses all impartial judges with a conviction of his honesty. . . . His inaccuracy arose from hearty dislike for men of whom he honestly thought ill. Of conscious duplicity and untruth, no one who knows him can conceive him guilty."

The charges on which Mr. Morison pronounces a verdict of guilty are want of generalized and synthetic views, excessive diffuseness, and deficient historical spirit. For the grounds on which these accusations are supported we must refer our readers to Mr. Morison's pages. One brief remark is, however, worth making. His strictures are all, in a sense, true. It is not equally clear that they are any of them relevant, for they are based to a great extent on the neglect of the principle which Mr. Morison had himself laid down, that Macaulay must be judged of as a narrator. The wants pointed out are little else than illustrations of the admitted fact of Macaulay's neglect of the critical side of history. What, to give one example of our meaning, is the point of objecting to Macaulay's habit of constantly illustrating the past by reference to the present, as where he tells us of Manchester it "then [in the time of Charles II.] had not a single press; it now supports a hundred printing establishments. It then had not a single coach; it now supports twenty coach-makers"? The defect of this kind of writing is the failure "to examine the growth of society in bygone times with a single eye for the stages of the process." Macaulay, in other words, does not look upon history as a science. So be it. But it is admitted throughout that his object was narration, and it is very difficult to see what better mode is open to a teacher who wants to show modern readers the changes which have taken place in the course of centuries than by contrasting the known with the unknown, the present with the past. For Macaulay's object his comparisons are excellent. His object is, it must be admitted, not the same as that of writers who look upon history as a branch of social science.

If Mr. Morison's great achievement is to have defined with precision Macaulay's literary merit, he has also done a great deal to bring into a clear light a side of his character which has been a good deal overlooked by much more ardent admirers than is Mr. Morison. There was an heroic fibre in him which the peaceful times and peaceful occupations in which he passed his days never adequately revealed. Of his high public spirit the world has been long aware. He was one of those men who intensely enjoyed the pleasures of a prosperous life; but there never lived a politician more absolutely free from even the thought of sacrificing any public cause whatever to his private interest. What Mr. Morison brings out is, that this public spirit was part of the man's whole nature. He had in him a touch of heroism; he at no time complained of fortune or of mankind. There is not a trace in a word he ever wrote or spoke of the disastrous delusion that our own calamities or miseries affect the course of the universe. He did not fancy that England was lost because he had to throw up a brilliant career and spend the most critical years of his life in India. His journal—which one may hope will be known to those who live fifty years hence in a way in which it cannot be known to the present generation—reveals or suggests some bitter wounds of private feeling; but a proud and manly reserve kept Macaulay from any complaint. He inherited a good deal more of manliness and heroism from Zachary Macaulay than was perhaps perceived either by father or son; and this latent heroism was, it should be noted, in part the result of the quality or defect which has done more to divert sympathetic admiration from Macaulay than his inaccuracies or his occasional unfairness. He is felt not to be "sympathetic." By this it is not meant that he was not a man of warm feelings. His attachment to his friends was firm, his attachment to near relatives amounted to a passion; and his indignation at dishonesty and meanness was so strong as occasionally to pervert the calmness of his historical judgment. When he is said not to be sympathetic, what is meant is that he did not brood over his own feelings or care to analyze the feelings of others. This may have been a defect. It was a defect (if so it is to be called) characteristic of that eighteenth century to which Macaulay in character belonged. We should, however, remember that this fault is allied to some virtues. Modern thinkers who have passed their lives in at once analyzing their own feelings and denouncing self-consciousness, have been occasionally found utterly deficient in fairness to friends or in gratitude to benefactors. If Macaulay was not sympathetic, he had some homely but respectable virtues which flourished best in an atmosphere of genial stoicism. He was through life true to himself and just to others. If truth and manliness and justice fail to conciliate admiration and affection, the question may arise whether the defect lies in the man who possesses these qualities, or in the generation which is imbued with a passion for sympathy and self-analysis.

BOOKS ABOUT THE STAGE.

Notes upon Some of Shakespeare's Plays. By Frances Anne Kemble. London: Bentley; New York: Scribner & Welford. 1882. 8vo, pp. 169.

English Dramatists of To-Day. By William Archer. London: Sampson Low; New York: Scribner & Welford. 1882. 8vo, pp. 387.

Balfe: His Life and Work. By Wm. Alexander Barrett. London: Remington & Co.; New York: Scribner & Welford. 1882. 8vo, pp. 313.

Les Premières Illustrées. Saison théâtrale 1881-1882. Par Raoul Toché. Paris: Monnier; York: J. W. Bouton. Quarto, pp. 102.

Les Comédiens Italiens à la Cour de France sous Charles IX., Henri III., Henri IV., et Louis XIII. Par Armand Baschet. Paris: Plon; New York: Christern. 1882. 8vo, pp. xv.-367.

FOR the first time in her long literary career Mrs. Kemble now appears as the author of a book of prose not taken wholly or in part from her journals or letters. She has published plays and poems, and has put forth nearly a dozen volumes of travels made from her diaries, but the present is her first venture in literary criticism for its own sake; for the criticism which lent so much savor to the 'Records of a Girlhood' and 'Records of Later Life,' was incidental. The present volume, however, is not a sustained effort, being almost as desultory as its

predecessors, and quite as delightful. The first of its eight essays is a paper "On the Stage," originally prepared as a lecture, if we mistake not, and afterward printed in *Harper's Magazine* almost twenty years ago (vol. 28, p. 364). The second and third are notes on "Macbeth"; the fourth contains notes on "Henry VIII."; the fifth, sixth, and seventh are notes on the "Tempest"; and some of these have seen the light before, although no preface or note gives us any hint of a previous appearance, even of the paper "On the Stage." The eighth and slightest of all is a little matter of four pages, called "Notes on Romeo and Juliet," and really consisting of suggestions to an actor who was studying *Romeo*—mere hints for acting, as Mrs. Kemble aptly terms them. As a matter of fact, also, the notes on "Henry VIII." are confined to analyses of the characters of *Queen Katharine* and *Cardinal Wolsey*. Slight as are some of these essays, they are all pregnant; they are the result of long and loving study of Shakspere by a highly-gifted woman, born of a family to which Shakspere was bread and meat. The least important of the Shaksperian essays are the three on the "Tempest," which are chiefly taken up with a discussion of the alleged emendations of Mr. Payne Collier's folio of 1630. The most important of the Shaksperian essays are the two dealing with "Macbeth," and containing a subtle analysis of the character of *Lady Macbeth*. But more important than any of the Shaksperian papers is the essay "On the Stage," which should be read and pondered by every one who takes an intelligent interest in the drama and in the theatre—two very different things, though often confounded, as Mrs. Kemble properly points out and proves.

Space fails us to consider adequately Mrs. Kemble's admirable discussion of the dramatic faculty; but we cannot refrain from quoting one lucid paragraph: "The combination of the power of representing passion and emotion with that of imagining or conceiving it—that is, of the theatrical talent with the dramatic temperament—is essential to make a good actor; their combination in the highest possible degree alone makes a great one" (p. 5). Bearing this dictum in mind, it shows in Mrs. Kemble no small freedom from prejudice to declare (p. 8) that "Garrick was, I suppose, the most perfect actor that our stage has ever produced, equalling in tragedy and comedy the greatest performers of both." We apprehend that the Roman Roscius and Molière's pupil, Baron, are the only two actors worthy to be placed side by side with Garrick; and we are inclined to think that he was the superior of both. It should be remarked that the reference (p. 7) to recent revivals of Shakspere is to Fechter's and not to Mr. Henry Irving's; and that it was Macready who said (p. 11) that Mrs. Kemble was "ignorant of the first rudiments of her profession."

To those pessimistic persons who are frequent and shrill in bewailing the fact that there are no English dramatists to-day, the mere bulk of Mr. Archer's book must be rather surprising; and still more surprising is it to find that before considering in alphabetical order and with abundant critical apparatus the playmakers of our day, the author devotes thirty pages to the playwrights of yesterday, among whom he classes not only the late lamented Lord Lytton and Mr. T. W. Robertson, but also the very much alive Mr. Charles Reade and the equally stirring Mr. Dion Boucicault. Yet among the sixteen living victims whom Mr. Archer calls "Dramatists of To-day" he chooses to include Mr. Tennyson, to whom the word dramatist is at best only a courtesy title. But these are minor cavils, and we must confess that Mr. Archer has written a useful book, and done much to show that the English drama of our time is not as unworthy of serious consideration as it is often assumed and asserted to be. Mr. James Alberry, Mr. W. S. Gilbert, Mr. Sydney Grundy, Mr. Herman Merivale, Mr. A. Pinero, and Mr. W. G. Wills are men whose plays are as good as the most of the novels which appear in three volumes and are praised in the papers. Mr. Alberry's "Two Roses," Mr. Gilbert's "Sweethearts," and Mr. Merivale's "Forget-Me-Not" are comedies with a decided literary quality and of a distinct literary value. The scene from the "Two Roses," which Mr. Archer reprints in full, is remarkably clever; and the opening dialogue of Mr. Sydney Grundy's "In Honor Bound" (also quoted in full) is an admirable bit of construction, worthy of Scribe. In fact, the best work of the best English dramatists of to-day will bear comparison with the best work of the English dramatists of seventy and eighty years ago. Surely Colman's "Poor Gentleman" and Mrs. Cowley's "Belle's Stratagem" are not plays of a higher order, morally or intellectually, than the comedies of Mr. Alberry, Mr. Gilbert, and Mr. Merivale, mentioned above. The apparent decadence of the drama is owing partly to the fact that there are in proportion quite as many bad plays as of old, and partly and indeed chiefly to the fact that the novel has taken the place of the play. It may be that the newspaper will take it away from the novel. In any case, there is no denying that the decline of intelligent interest in the drama, if not the decline of the drama itself, dates from the day when the "Author of 'Waverley'" began to pour forth his rich and varied stream of prose fiction. A single American, Mr. Bronson Howard, figures among the "English" dramatists whom Mr. Archer delights most to honor, notwithstanding the fact that Mr. Howard's best play, "Old Love Letters," has not yet been acted in England. The book contains an index of plays mentioned, but none of proper names.

It may perhaps be doubted whether Balfe's life and works were of sufficient importance to justify two elaborate biographies. Mr. Barrett nowhere makes any allusion to the fact, but a life of Balfe, by Mr. Charles Lamb Kinney, was published in 1875. There is very little to choose between the two biographies, neither being a model of biographical writing or free from carelessness, while both are lively and readable. Mr. Barrett's book has no lack of amusing anecdotes; but what is perhaps most noteworthy in it is the information it affords about the librettos which Balfe set to music. It will be news to most people that Balfe began in 1848 an opera on the subject of Hugo's "Le Roi s'amuse," used by Verdi in his "Rigoletto," produced in 1851. His "Armorer of Nantes" was based on Hugo's "Marie Tudor." Balfe also began, or at least considered, the setting to music of the "Lady of Lyons," a play well-fitted to serve as the libretto of an Italian opera, and which, having been so treated by Oxenford, has since been set by another English composer. The "Rose of Castille" was an English adaptation of the "Muletier de Tolède," as "Blanche de Nevers" was an operatic version of the play known in English as the "Duke's Motto," and taken by Mr. John Brougham from the play made by M. Victorien Sardou out of the novel of M. Paul Féval. The libretto of the "Bohemian Girl" had an even more remote origin. The motive of the story is found first in one of the "Novelas Exemplares" of Cervantes, whence it was borrowed by at least one of the Elizabethan dramatists; it served Von Weber as the basis of his "Preciosa," and to Longfellow it suggested the "Spanish Student"; M. de St. Georges used it as the foundation of his three-act ballet, with the queer title, 'La Gipsy," performed at the Paris Opéra, in 1839, set by three different composers, one to an act, the second being by M. Ambroise Thomas; it was the libretto of M. de St. Georges's French ballet which the poet Bunn took as the groundwork of his libretto for Balfe's English opera, M. de St. Georges readapting Bunn's into French as "La Bohémienne" for the Théâtre Lyrique. It is somewhat amusing to see the melodramatist Fitzball styled by Mr. Barrett "a dramatic writer of great power and fancy, and, above all, one who was by no means deficient in the qualities looked for in a true poet." When some uncritical person had spoken of Fitzball as the Victor Hugo of England, Douglas Jerrold promptly interposed with, "The Victor Nogo, I suppose you mean!" Yet it was Fitzball's drama of the "Flying Dutchman" which suggested to Heine first, and afterward to Wagner, the fine dramatic legend as we now have it. Mr. Barrett's volume has a fuller index than we are wont to find in English books.

The two French books on our list may be dismissed briefly. We announced the first number of "Les Premières Illustrées," when it appeared originally, a little more than a year ago. M. Toché has gathered into a volume his lively descriptions of the first performances in Paris of thirteen new plays, whereof one was of English origin (an adaptation of "Othello"), another of German birth (an adaptation of "Boccaccio"), and the eleven others were French. Of these eleven, five have already been declaimed or sung in New York. The illustrations of the work are abundant, and at least one of them has a special interest—a portrait of M. Sardou, by Mlle. Blanche Pierson, the original of *Odette*. M. Henri Meilhac has prefixed a very clever imitation of the metrical *Gazette* of Loret.

M. Baschet's volume is the result of laborious researches in the archives of Mantua. In it he tells for the first time with exactness the story of the visits of the Italian actors of *commedie dell' arte* to the court of France; and his is, therefore, the historical complement of the more purely critical books of M. Maurice Sand, M. Louis Moland, and M. Édouard Fournier.

The Development of Constitutional Liberty in the English Colonies of America. By Eben Greenough Scott. G. P. Putnam's Sons. 1882. 8vo, pp. 334.

Mr. Scott has made a really useful and interesting book, but it would be much better if he were not so fond of theoretical and abstract statement. The work professes to be "not a history, but a philosophical contemplation of what is known to be history"; and we do not quarrel with this, although this kind of treatment is liable to exactly the fault that we have pointed out. Mr. Scott has treated his subject thoroughly and with insight; there is hardly a page that does not contain some striking fact or truth well stated; but this is intermingled with so much dry and abstract remark that the effect as a whole is heavy and deficient in point. "No one will dispute," we read (p. 97), "that the force which expands the Victoria Regia on the Senegambia is the same as that which covers the rocks of Greenland with lichens." Of course not; the remark is true enough, but so general and obvious as not to be worth while stating, unless the connection with the argument or line of thought were more essential than appears to be the case.

The same fondness for generalizations is seen in the division of the book (after the preliminary chapter) into "The Era of State Development in America" and "The Era of Constitutional Development in America"; and, particularly, we

do not like the statement of the "motives" of these two eras, as being respectively "The Development of Tribal Institutions" and "The Longing for Popular Sovereignty." Can we fairly call those fifteen years an *era* which began with the Writs of Assistance and ended with the Declaration of Independence? Further, can we call it an era of *constitutional development*, when it did not give birth to a single constitution or governmental form? Further still, is there not a lack of correspondence between a bare *longing for popular sovereignty* and a *constitutional development?* So with the earlier period. One is startled to find our Colonial period—really a period of constitutional development—described as characterized by the development of *tribal* institutions. This word "tribal" has come to be used in our day as almost a technical term, to describe that outgrowth of the family institution which we find, for example, among the North American Indians. On page 25 we find this era defined more precisely as consisting "in the undisturbed, free, and natural growth of tribal institutions" through "certain qualities which were inherent in the colonists as members of a Teutonic tribe." Here we have the key to the author's use of the term; but it seems to us incorrect, for all that.

When, however, we get below what we may call a mannerism, we find a useful and interesting discussion of the forces which led to the American Revolution; and two subjects in particular are treated with a fulness and intelligence which make these chapters a real contribution to our history—the subject of Toleration in the Colonies, and their Commercial Relations. We do not quite understand the claim in the preface, in relation to these last, that "this is the first time they have appeared in our literature as a cause of revolution," for certainly every recent historian has dwelt upon them with more or less fulness. We will admit that nowhere else, within our knowledge, are they treated with such fulness and completeness as in this work. But there is one unaccountable mistake. The Navigation Act is called (p. 188) "an Act of Parliament, which, passed during the Commonwealth, was reënacted and continuously enforced after the Restoration. It provided, simply, that thenceforward no goods, the produce of Asia, Africa, or America, should be imported into England or exported out of it but in vessels belonging to the people of England, etc." But the Act itself, given in full on page 314, says: "Such ships or vessels as do truly and without fraud belong only to the people of England and Ireland, dominion of Wales, or town of Berwick-upon-Tweed, or are of the build of, and belonging to, any of the said lands, islands, plantations, or territories, as the proprietors and right owners thereof, and whereof the master, and three-fourths of the mariners, at least, are English." That is to say, the Act specifically favors the ships of the Colonies as much as those of England; for we suppose that the requirement that master and seamen should be English did not exclude English subjects residing in Boston or Newport. This provision of the Act of 1660, copied from that of 1651, was designed to encourage English navigation—the Colonies being reckoned as English: Cromwell's policy was directed against the Dutch, not against the English Colonies. But the Act of 1660 added a provision (section eighteenth) directly designed to favor England at the expense of the Colonies, in requiring the "enumerated articles" of Colonial production to be shipped direct to England. This was the commencement of the series of legislative acts, designed to use the Colonies for the profit of English merchants, which led at last to the American Revolution. It was the policy of the Restoration, not of the Commonwealth—Oliver Cromwell had nothing to do with it.

There are also some errors in the account of the Roman and Grecian Colonies (p. 31). The Latin Colonies were not so called because the colonists were "selected from the Latins"; on the contrary, they were regularly, or at least frequently, Roman citizens who surrendered their citizenship in exchange for political autonomy—they *became* Latins. Neither did "Italian Colonies" form a distinct class: the Colonies "planted outside the boundaries of the peninsula" (like Narbo) were Latin colonies, and the *jus Italicum* of the Empire, of which perhaps the author was thinking, is a totally different thing. Nor was his fourth class, the Military Colonies, called so because "made up of garrisons and discharged soldiers." The earlier colonies were often composed of this class. The distinction was, that the military colonies, first established by Sulla, were created by the authority of the commander, not by that of the people; they were an accompaniment of the decay of the Constitution of the Republic—a foreshadowing of the Empire. The contrast drawn (p. 33) between the Roman and Greek colonies—that the former were kept *in statu pupillari*, while the latter were designed for an independent growth—is interesting, and has a certain amount of truth in it. It does express the relation of such colonies as Miletus, Syracuse, and Massilia, as compared with Luceria and Cremona. Nevertheless, Athens, too, under Pericles, sought to found its empire upon a class of colonies, the *cleruchiæ*, essentially identical with *coloniæ Romanæ:* that is to say, as much a part of the body politic of the mother city as a ship carrying the flag of a nation is a part of that nation, wherever she may float.

The Appendix contains some valuable documents, particularly the series of acts, beginning with the Navigation Act of 1660, designed to trammel the commerce of the Colonies, which ended in exciting them to revolution. Unfortunately, the original Navigation Act of 1651 is not given, under the impression, it would seem, that that of 1660 is a mere reënactment of it.

BOOKS OF THE WEEK.

Public Papers of Alonzo B. Cornell, Governor of the State of New York. 1880. Albany.
Rolfe, W. J. Shakespeare's History of Pericles, Prince of Tyre. With engravings. Harper & Bros.
Sand, George. The Countess of Rudolstadt. Philadelphia: T. B. Peterson & Bros.
Simcox, G. A. A History of Latin Literature from Ennius to Boethius. In 2 vols. Harper & Bros.
Smith, E. H. Latin Selections: Being Specimens of the Latin Language and Literature. Boston: John Allyn. $1 50.
Socrates: a Translation of the Apology, Crito, and Parts of the Phædo of Plato. New ed. Chas. Scribner's Sons. 50 cents.
Ten Brink, B. Early English Literature. (To Wiclif.) Translation Revised by the author. Henry Holt & Co. $2 25.
Walker, F. A. Political Economy. Henry Holt & Co.
Wilmot-Buxton, H. J. English Painters. With a Chapter on American Painters, by S. R. Koehler. Scribner & Welford.

Yorke, J. F. Notes on Evolution and Christianity. Henry Holt & Co. $1 50.
Zola, E. La Belle Lisa; or, The Paris Market-Girls. Philadelphia: T. B. Peterson & Bros. $1 25.

Fine Arts.

THE NEW YORK ETCHING CLUB EXHIBITION.

Of the etchings which fill the west and northwest galleries at the Academy of Design, it may be said in general, as was said of the water-color paintings, that they show progress in command of some of the technical means of expression, but they do not show an entirely right use of those means. There is marked gain in what relates to the mechanical operations of the process, rather than in the more artistic qualities of etching as a mode of delineation. As regards the more essential qualities—power of accurate and significant drawing, clear perception of the just conventions of delineation pure and simple, and just how much more than delineation may be suggested without overstepping the normal limitations of the process—there is marked evidence of weakness, of misconception, and of reckless transgression on almost every side. In fact, our etchers, with very few if any exceptions, show a very decided lack of elementary training and cultivated understanding. There is a certain conventional mannerism with which they seem to be captivated with surprising unanimity, and which is greatly impeding their progress. To acquire this mannerism they appear to strive more zealously than they do to attain creditable proficiency in the more essential qualities just mentioned.

To how great an extent this is true, we presume few artists or others are consciously aware; but a tolerable estimate may, perhaps, be arrived at if one will imagine all the accidental imperfections of biting, all affected rudeness of execution, and all *retroussage* removed from the larger part of these plates, and then consider how much would remain. In other words, coming down to the naked qualities of these drawings on copper, how much life and merit have they as such? We do not say that they have none, but we think it will appear plainly, on a little critical examination, that they have far too little. Nor do we mean to say that there is no proper agreeableness in the accidental accompaniments of the etching process—minor slips or unsteadiness of the needle, foul biting, etc.—or even in some employment of the *retroussage* method of printing. In an entirely subordinate way these may all be well and pleasant enough, but they do not at all constitute what is essential, are not to be directly sought, and should never be permitted to cover or excuse weak or bad work. By the good and significant drawing which we desire to see in etchings, we do not mean necessarily slow or elaborate drawing. Etching may be very rapid and free; but right rapidity and freedom in etching, no less than in other modes of drawing, are based upon perfect discipline of eye and hand; and the results of this freedom have a very different look, to a cultivated eye, from those of superficial attempts to imitate it. And we must say frankly that the freedom now so widely indulged in by our etchers is not sufficiently expressive of disciplined power. It is, to a great extent, simply loose and meaningless.

But there are exceptions; and among the plates in this collection which come nearest to what we should regard as good etching, is one, No. 61, "Sawley Abbey," by Francis Seymour Haden, in which we find nothing to criticise. It is a truly magnificent sketch, and we have seen no other original work by Mr. Haden at all equal to it. In the life of its grand lines, the proportions of its main masses, the suggestion of infinity by the simplest means, and the exquisite placing of the groups of sheep or cattle, it is comparable to nothing that we know of but the finer plates of the "Liber Studiorum." Mr. Haden contributes eight of his larger, though not largest, plates to this exhibition, and all of them are stronger and more meritorious than those which we had occasion to notice in the last Black-and-White Exhibition. But none of the others approach No. 61 for mastery, harmony, and economy of line. These others are rendered inharmonious by having many lines in some parts and few in others, producing an unequal effect. Nor do these others show the same power of drawing or design.

Strong in many ways, also, is the work of Mr. Stephen Parrish. It exhibits some good qualities of drawing and good choice of subject. It shows, also, sometimes, but not always, a right appreciа-

tion of the proper limitations of etching. His smaller plates here—No 16, "Old Acadian Inn Yard," and No. 17, "A Spring Day in an Old Suburb"—are, we think, the truest in obedience to right principles. His large plate, No. 144, "Coast of New Brunswick," is strong in some ways; but it is not so exemplary, considered as etching, as the preceding. It is too redundant in line, and is here and there ungrammatical in its suggestion of chiaroscuro—as where the roofs of houses in the background are made as dark, or very nearly so, as the darkest things in the foreground. There is, moreover, a uniform and unpleasant sharpness of edges in the buildings. It is quite possible that they may actually have been so in the scene which the artist has depicted, but in such a case he would be justified in breaking and rounding them more or less; for such breaking and rounding is just what Nature herself does with such objects in process of time, thus softening the harsh rigidity of man's mechanical work and allying it to the character of her own objects. In No. 115, Mr. Parrish departs more widely from what we conceive to be the proper ends of etching. Indeed, this is essentially painting rather than etching. The soft gradations, giving the effect of light and space, bring it within the province of brush work or something of kindred nature. The design is well composed, and were it finely wrought in mezzotint it might be very beautiful.

Mr. Thomas Moran's "Pass of Glencoe," No. 102, is a grand subject, rendered with considerable strength, though in a somewhat conventional manner, and with the fault, in chiaroscuro, that the darker shades on the distant mountain contend too strongly with the dark of the foreground. Mr. Henry Farrar's "Now Comes Still Evening On," No. 50, has a pleasantly solemn sentiment of twilight, and is up to the artist's usual mark of technical excellence, which is a comparatively high one. The several plates by J. H. Twachtman and Mrs. Twachtman, respectively—especially No. 159 by the former and 161 by the latter—have some clever, free qualities; but they are too indeterminate and spotty for true effect. No. 34, "In the Fields," by L. C. Earle, is a comparatively delicate and true bit; and Mr. C. A. Platt's "Provincial Fishing Village," No. 138, contains some expressive work; but, like so many others, this plate shows that apparently affected rudeness of execution to which we have alluded. Two plates by Aug. Laucon, No. 76, "Lion," and No. 77, "Lioness," are comparatively fine; but since John Lewis etched and engraved in mezzotint his consummately grand, masterly, and exquisitely subtle lion subjects (works which are far too little known, and in comparison with which Landseer's delineations of lions are like child's play), we have a standard of attainment which makes us require a great deal of any other artist who may attempt to portray wild beasts. There is in this collection also a "Lion's Head," by Heywood Hardy, No. 69, which, again, is comparatively fine.

No. 175, "Home from the Fold," by Charles Volkmar, is well composed, and good, free work, relatively speaking. Mr. A. F. Bellows's "On the River Mole, Surrey, Eng.," No. 10, is true in sentiment, as Mr. Bellows's work usually is. It wants strength and significance, however, in line and touch, and it is far too complex in elaboration. No. 72, "Study of Trees," by J. Henry Hill, is a thoroughly true and tender little bit of nature; and it is clean, honest etching, though rather too redundant in line. No. 9, "Fisher Boats of Venice," by Albert Ballin, is a conspicuous example of some of the worst tendencies of modern etching. It is utterly incoherent, spotty, and characterless. "Mont St. Michel," No. 67, a large plate by A. H. Haig, is a highly elaborate and very skilful piece of work, though somewhat mechanical, and rather like engraving than etching. It deserves honorable mention, however, for the quality, now so rare in etching, of sound and faithful drawing. There are, perhaps, other plates here of equal merits, and many which show the like defects, with those we have noticed (with exception of Mr. Seymour Haden's "Sawley Abbey"), but we have observed none which call for any new or different remark.

The catalogue is a handsome quarto of fifteen pages, with nine etched illustrations by Wm. M. Chase, F. S. Church, R. Swain Gifford, Thomas Moran, J. C. Nicoll, Joseph Pennell, C. A. Platt, Walter Shirlaw, and T. W. Wood respectively. It contains, also, a brief preface by Mr. Haden, in which, after some judiciously guarded remarks, of a complimentary nature, upon the character of American etching, he takes occasion to reiterate his views respecting the nature of modern engraving as compared with etching—speaking disparagingly of engravers, and characterizing their art as a purely mechanical one. He complains, too, of the injustice (in his view) of admitting engravers to academic honors while etchers are "left out in the cold." We do not concur with Mr. Haden's sweeping views on this point. There has been, and still is, certainly, a vast deal of purely mechanical engraving. It may even be admitted—indeed, it is undoubtedly the fact—that modern engravers are, as a class, in comparison with the engravers of earlier times, rather masters of their tools alone than men of artistic character and capacity. But to class all engravers who make it their business to reproduce other men's designs in this category is altogether unjustifiable. The art of rightly translating a painting into the terms of engraving is in no sense a mechanical art. It is a thoroughly fine art, and a very honorable one. Such work, though it may not require those gifts which enable a man to excel in higher forms of original design, nevertheless does require that sympathy with and understanding of original work which only a man who is essentially an artist can possess. And to a certain extent a first-rate engraver is compelled to exercise original gifts, even in translating a picture—gifts of precisely the same nature as those which Mr. Haden has himself so admirably exercised in translating Turner's "Calais Pier" into etching. Such an engraver may, with undoubted justice, be made a "Royal Academician," and in becoming one he will reflect as much credit upon the Academy as the Academy confers upon him. Indeed, such a man's claims to academic honors are superior to those of the average modern etcher. The fact is that the burin and the etching-point are equally and simply instruments of linear expression. If either of them is used by an artist, the result is a work of art, while if either is used by a mere mechanic or by a charlatan, the result is not a work of art. And we must add that in our judgment even the mechanical engraver deserves more respect than the average etcher, for the one is a faithful laborer, while the other is not so.

Respecting these etchings in the catalogue, very little in praise can be said. They call, rather, for pretty sharp condemnation. Not one of them shows any considerable skill in truthful, tranquil, and harmonious drawing; and without expressing these qualities it is presumptuous for a man to etch. Nor do they indicate powers of original design, or even of artistic selection or treatment of subject. They consist, with little exception, of commonplace, conventional, or weakly fanciful themes, upon which few persons of good sense will care to dwell very long. Mr. Chase's "Spanish Peasant" is a scratchy and spotty performance, with no qualities beyond such as any clever academic student could readily achieve. Mr. Church's "Market Day" is beneath criticism in point either of sentiment or of drawing. Mr. Gifford's "Miller's Home" has a sentiment of picturesqueness, but it is wanting in graphic character of line and touch. Mr. Moran's "Glencoe" (a reduced copy of the larger plate already noticed) has some merit of frank simplicity and composition, but it is not more than clever. Only clever, too, is Mr. Nicoll's "In the Harbor," and without the *retroussage* printing we doubt whether it would appear even clever. The naked lines, when searched out, have little living expressiveness. We may say about the same of Mr. Pennell's "At Lynchburg, Va.," save that it is a much less interesting subject. Mr. Platt's "A Provincial Fishing Village" (also a copy from a larger plate) is pleasantly composed, and shows some feeling, but little subtlety of draughtmanship. Mr. Shirlaw's "Italia" is a sentimental and ungraceful thing, with some delicate elaboration of the head and hair, like engravers' work, but without a single vital line in it. And Mr. Wood's "Fresh Eggs," though neither affected nor conventional, is weak and commonplace.

Henry Holt & Co.
PUBLISH
A New Leisure Hour Novel.
Geraldine Hawthorne.
By B. M. Butt, author of 'Miss Molly.'
16mo, $1.

GOSSE'S
On Viol and Flute.
Selected Poems. By Edmond W. Gosse. Sq. 12mo, $1 75.

Evolution and Christianity.
By J. F. Yorke. 12mo, $1 50.
An attempt to point out the bearing of Evolution upon Religion, and especially upon Christianity.

Sibylline Leaves.
By A. E. M. K. 16mo, cloth, gilt, $2.
A tasteful and ingenious little work which does "fortune-telling" by giving extracts from the poets in response to questions regarding one's destiny.

The Nation.

NEW YORK, THURSDAY, MARCH 1, 1883.

The Week.

THE rule by which the House of Representatives is to be kept from adopting the Senate Tariff Bill as it stands, and the adoption of which was, on Monday, prevented by the breaking of the quorum, but which was carried on Tuesday, is a great curiosity. It provides "that during the remainder of this session it shall be in order at any time to move to suspend the rules, which motion shall be decided by a majority vote, to take from the Speaker's table House bill 5,538, with Senate amendments thereto (being the so-called Senate Tariff Bill), and to declare a disagreement with the Senate's amendments to the same, and to ask for a committee of conference thereon, to be composed of five members on the part of the House." In other words, the Senate Tariff Bill may be taken up for the purpose of disagreeing with it and of sending it to a conference committee, but not for the purpose of adopting it. This is probably the first time in parliamentary history that a rule was made for a legislative body, permitting the latter to take up a certain subject for action, but providing at the same time that this action shall be in one way and not in another. The "protected interests" are evidently at their wits' ends. But the race of those who have to resort to such tricks is usually not a long one.

In the Senate on Monday Mr. Van Wyck called up his resolution requesting the President to communicate any information in his possession touching the alleged agreement of the Ministers of the United States, Great Britain, France, and Italy at Lima to make a joint effort to bring about peace between Chili and Peru, and to inform the Senate whether the Minister of the United States had been instructed to accept the mediation of the Ministers of European Powers in settling the troubles. The resolution was adopted without dissent, but Mr. Van Wyck made some remarks in support of it, relating to Mr. Trescot's mission, which are important if true. He declared that Mr. Trescot was prevented from making peace between Chili and Peru by the Administration. "Just as Mr. Trescot was about to make the proper representations to the Government of Chili," he says, "he was stopped by a cable despatch from Secretary Frelinghuysen," and "was informed that any intervention in the affairs of other nations was against the policy of the United States; substantially, that murder, massacre, and destruction of trade might go unchecked between two independent republics so far as the United States were concerned." We do not remember seeing this despatch. If the Administration was so bloody-minded then, why has it become so pacific all of a sudden? Our impression always was that Mr. Trescot failed to make peace because Chili and Peru could not come to terms.

The appointment of Mr. John W. Foster to the Spanish mission is reported to have been entirely unsolicited by him as well as by his Indiana friends. This is very creditable to the Administration. Mr. Foster has served as Minister of the United States to Mexico and to Russia, and has on all occasions shown not only that fidelity to duty which must be expected of every officer of the Government, but peculiar aptness for diplomatic business. As Mr. Foster also speaks the language of the country to which he is sent, his appointment may be called emphatically one made "in the interest of the public service."

There is little probability that the new and somewhat disguised form of steamship subsidy engrafted upon the Shipping Bill in the Senate will become a law, and there is some probability that it may operate to kill the whole bill. The House has shown such decided hostility to any kind of subsidy that its concurrence in a bill to give a bonus of one dollar per mile (or $3,000 for each trip across the Atlantic) to pay shipbuilders, not for carrying the mails, but for carrying the American flag, is not to be expected. The legislation to be saved or lost this week is so vast in amount, embracing several appropriation bills, the Tax and Tariff Bill, the Court of Appeals Bill, the Bonded Whiskey Bill, etc., that any bill of secondary importance which requires much circulation back and forth between the two houses is very likely to fail.

There has been a series of rather important failures in the West, in the last ten days, beginning with that of John V. Ayer's Sons in the iron trade at Chicago, and including that of W. T. Allen & Co., grocers, and the large paper-manufacturing firm of Lucius Fairchild & Co., at South Bend, Indiana, besides a good many smaller ones. The effect of these was to give a downward turn to all the speculative markets in grain and provisions, which has continued throughout the time mentioned. General trade in the West has also been interrupted to a very considerable extent by the floods in the rivers in the central region, and by heavy snows in northwestern Iowa and southwestern Minnesota. There are even apprehensions of still greater damage along the Lower Mississippi, when the accumulated floods of the Ohio and other Northern rivers shall reach there. To these add fears of disturbances in prices by the passage of the Tariff and Revenue Bill by Congress. All these circumstances have combined to depress business generally. Money has continued abundant, but with a hardening tendency, during the last week. The movements of capital between the United States and Europe are less marked than a few weeks ago. The total weekly value of our exports of domestic products has diminished in the past ten days, and yet foreign exchange has declined. It is believed that foreign capital is now taking more of our railway securities than a couple of weeks ago; prices of stocks having declined to a point where many conservative capitalists both in Europe and this country believe they are safe to buy if a fair degree of discrimination is exercised in the purchases. As the earnings of the railroads are unusually large, and the present range of prices is from 15 to 20 per cent. below those of a year or eighteen months ago, there seems much ground for this opinion. Of course a great deal depends upon the prospects of the next grain crop, about which, of course, nothing positive can be said for at least six weeks yet.

The *Christian Advocate* has published a defence and explanation of its share in puffing the swindle which has become known to the public during the last week or two as "the Methodist Mine." It says, in substance, that the swindling owner of the mine, a man named Bixby, hit on the device of getting Dr. Spencer, the President of a struggling "Wesleyan University" in East Tennessee, to believe that he was going to endow the University with 15,000 shares of his stock, and persuaded him that it was very valuable. The President sent out a professor to examine it, but whether the professor had ever seen a mine before does not appear. The professor reported that it was a very fine mine indeed. Thereupon the unhappy President started for the North to puff the stock, in order to enable the owner to get some money to "develop the property." He saw the editors of the *Advocate*, who knew no more about mines than he did, and told them a wonderful tale. "The gleam of confidence in his eye," they say, "the smile of serene anticipation on his lips," deceived them, and they wrote a gorgeous puff of the mine, enabling the swindling owner to "unload" on a considerable number of simple-minded Methodists. They are now very sorry, and confess they did wrong; probably all the sorrier because, if we understand their statement rightly, they went in themselves on "the ground floor."

This would be, perhaps, a sufficient excuse but for two things. One is that although it may be proper to invest your own money on the strength of a "gleam of confidence in the eye," or a "smile of anticipation on the lips" of somebody else, it is not right to persuade other people to do so for any purpose, not even to endow a "University." This is a lesson of which everybody has had plenty of experience during the last twenty years. The other is that it is well known that religious newspapers are a favorite medium for swindlers and charlatans desirous of getting rid of worthless stocks. For some years after the war they were the chief agents in promoting the sale of good-for-nothing railroad securities, to the great scandal and loss of the religious world. The editors of the *Advocate* ought not, therefore, to have been taken unawares when Dr. Spence came gleaming and smiling into their office. They ought to have met him with the unalterable rule that no journal, and above all no religious journal,

ought to recommend an investment under any circumstances or for any purpose. It is not the business of a newspaper, or one for which any editor is fit. If there be no canon of the Methodist discipline forbidding stock-puffing by newspapers, one ought to be promptly adopted, and it ought to operate whether the stock turns out well or ill.

The demand which is now said to have been made on our Government for the extradition of P. J. Sheridan, who is accused by Carey, the informer, of having been actively engaged in organizing the Assassination Society in Dublin, is likely to lead to some troublesome controversy; but it seems hardly probable that the British Government will press it vigorously. Whether an offence is political depends on the motives of the offender, to be inferred from the surrounding circumstances. If it is obviously an expression of political hatred or discontent, and is committed on a political officer or agent, either in revenge for political wrongs or with the view of bringing about a political change, it is a political offence, however atrocious or repulsive or futile. And the reasons why free governments are unwilling to surrender persons to take their trial at home for such offences are obvious enough. The first is, that political offences almost always—like that greatest of them all, armed rebellion—arise out of domestic discontents or dissensions, on the reasonableness or justice of which a foreign government is not competent to pass. The second is, that while as regards ordinary crimes the supreme government of every country stands aside as an almost impartial spectator, indifferent to the decisions of the tribunals, as regards political crimes it is an eager and interested, and often fiercely interested, party to the prosecution, and is likely to use all its influence and all its power to bring about a conviction. Consequently, the chances of a fair trial for political offences are in every country smaller than for any other offence, and no government which is asked to surrender a refugee likes to be very nice in drawing the line between them and ordinary offences. In fact, the rule which governs most such cases was very neatly laid down by Lord Palmerston when he said that "the British Government had never undertaken to provide for the internal security of other countries. It is sufficient to them to have the power to provide for the internal security of their own." There is nothing in all this, however, to lessen the joy with which all civilized men will hear that everybody connected, nearly or remotely, with the Phœnix Park murders has been strung up.

Dr. Dix, of Trinity Church, is delivering a course of lectures on the "Calling of the Christian Woman," in one of which he recently fell foul of what is called the "higher education," which Columbia College is now being asked to provide for in this city. We are a little reluctant to comment on the newspaper reports of what he said, knowing how often sermons and lectures are travestied or perverted in the newspaper summaries of them; and in his behalf we must express a doubt whether he really said that the term—

> "Higher education of women suggests the question, Higher than what? higher than whose? higher than that of men or higher than women receive at present? The term clearly masks a sinister purpose and covers a theory of woman's education against which I enter a solemn and permanent protest. These advocates demand an education for women on the same line with that of men; training them to think men's thoughts, to do men's work. This is plainly intended, for it is coupled with another demand for co-education. That means that the youth of both sexes should be taught the same things, in the same places, and out of the same books, and by the same teachers, and in company of each other. It is well known that pressure has been brought to bear upon the trustees of Columbia College to coax or tease or frighten them into an adoption of this policy. It appears, then, that these advocates of a higher education are driving at co-education, and under this term aim at treating girls as if they were boys, as essentially the same thing, and training them all together, and that the woman shall have the same training as the man."

We express a doubt whether he said all this, because it is both sophistical and obscure. There is no such want of clearness in the term higher education as he seems to discover; in fact, no more than in the term "higher mathematics," or "high school," or "higher classes." When any one talks to Dr. Dix of the "higher mathematics" he does not answer, "Higher than what? higher than whose? Why are mathematics high? Why not low? What are your real designs in using this strange phrase?" When one speaks to him of a "high school," he does not say, "Ha, ha! I see what you are up to. Why should a school be high? Why not low or medium? Do you mean as high as Trinity Church steeple, or as high as the Capitol dome at Washington? If so, why should a school be so high? Answer me that, or for ever hold your peace." The higher education of women is really, we assure Dr. Dix, a perfectly harmless and well-known term, in long use both in England and this country. It masks no nefarious design against the female character, or the true dignity of womanhood, or the peace of homes. It means simply what is known among men as more advanced education than is given at primary schools to children. It means what a young woman would do who, at sixteen or seventeen, instead of giving herself up to dancing, flirting, or even wholly to church work, should continue the studies which she has been carrying on at school or under a home governess. It means, in fact—we blush to write it—more history, more geography, more French and German, and more philosophy than she has had while her skirts only came to her ankles; to be acquired in a room with benches, from teachers called "professors." The theory on which it is asked for is not that woman ought to do man's work, as Dr. Dix supposes, but that a little more knowledge than she now gets will fit her better to do her own work. We will even be so cruel as to add that we think Dr. Dix's reasoning processes, if correctly reported, would inevitably be improved if his female audiences had had a little training in elementary logic.

The convicts in the Penitentiary at Jefferson City, Missouri, mutinied on Friday, under the lead of a Mr. John B. Johnson, a "safe-blower" by profession, who was serving out a twelve years' sentence for highway robbery. He set fire to the buildings, and though the revolt was put down, the losses by fire are very heavy. The ringleaders embraced also Mr. J. S. Johnson, a murderer, Mr. Perry Martin, a stage robber, and Mr. "Arkansas" Williams, a convict of experience, who got up a revolt in the Kansas City Jail last spring. The despatches mention that they are all "desperate men," and there is nothing in the account given of their proceedings on this occasion, or in what we know of their previous lives, to throw any doubt upon the statement. No explanation is given of the revolt, except the mutineers' simple, honest dislike of prison life. Strange to say, no public sympathy is expressed for any of the gallant fellows, and no enthusiasm displayed over their heroism, which, in view of the hold that Jesse James has taken upon the public heart, and the respect and consideration with which he has been treated, must seem rather hard to them. Mr. Martin, for instance, who last summer carried things with as high a hand in southwestern Missouri as James himself ever did, and "held up" several stageloads of passengers between Seligman and Eureka Springs, must feel that, if James was a hero, he was on the way to become one.

The correspondence between the Secretary of the Navy and Commander Gorringe is probably unique. The naval archives either of this or any other country certainly cannot show its match. Something of the kind, however, was sure to happen when Mr. Chandler took possession of the Navy Department. To politicians of his type, officers of Mr. Gorringe's kind, who have scientific and literary or economical interests, are simply incomprehensible. In the world in which Mr. Chandler has passed his life as plain "Bill Chandler" there were no such persons, and he does not see how they can exist in the new and strange world in which he now lives in the extremely grotesque character of an admiral in command of a small fleet. In old times, whenever any of Mr. Chandler's companions advocated anything, or discussed anything of a public nature, he always understood that they were doing it because they had "an axe to grind," or had their eye on an office, or wished to "knife" or "slaughter" somebody, or get even with somebody. In those circles the notion that a man's public talk is simply the expression of his private sentiments, would afford food for much mirth. When Mr. Chandler, therefore, saw that Commander Gorringe had been reported, in an interview in the *Evening Post*, as advocating "free ships," it seemed to him so natural that he should have been paid for doing it, that he at once set to work to find out who had paid him, and wrote to him for the purpose in the simple, artless way to which he had been used in his old set. He was probably extremely surprised to find that Commander Gorringe was annoyed by the inquiry. Among "the boys" it would doubtless have been received with perfect good-humor. Mr. Chandler probably to this hour does not see why Commander Gorringe should have got "mad" on being asked whether he, an American naval officer, was not in receipt of British pay, particularly as there was no hint of a "divvy" or assessment; or why it

should be considered offensive to suppose that an American gentleman would not talk "free ships" unless he expected a check for it. The most laughable part of the affair is the closing interview with the Secretary, reported by some of the papers, in which he declares that Gorringe is angry, and is "vituperating" him, and that all he had done was to object to the Commander's giving his views on free trade and free ships "in British employ." This is the old Bill Chandler of the stump and the caucus all over. The poet has said, you may break, you may ruin the vase if you will, but the scent of the roses will hang round it still. So, also, you may take a wire-pulling politician, and make him a sailor, or an astronomer, or an anything-you-please, he will always retain his old tricks, and especially that most useful one of putting a new dress on an old lie.

We called attention some time since to a decision of the United States Commissioner at Boston with regard to medical diplomas in that State. The subject having attracted the attention of Dr. H. P. Walcott, of the State Board of Health, he requested an opinion upon it from the Attorney-General. This has now been published, and it is to the effect that corporations organized under the general law of Massachusetts have not, as such, power to confer degrees at all. He founds this conclusion chiefly upon the fact that power to confer degrees has been expressly given by the Legislature to some colleges; in others it has not been given, and it is not a power which an educational institution must possess by its very existence. This opinion, if sustained by the courts, will save Massachusetts from the reproach of encouraging the fraudulent multiplication of degrees. It gives degrees the position they ought to have, of valuable franchises, which nobody can obtain without proving himself fit by his previous study and attainments to employ them properly. It does not, however, meet the whole difficulty of the general cheapening and degradation of degrees. A college degree is of little value in the United States, not merely or chiefly because of the dread of bogus diplomas, but because of the multiplication of institutions with the power of conferring real degrees. It would be a great mistake, no doubt, if any seven persons possessed, in Massachusetts or elsewhere, the power of vesting themselves with the right to give degrees; but as a general rule the right can be obtained from most of our legislatures if there is any pretence of founding a college or professional school, on however flimsy a basis. The degrees issued by these institutions generally help a young man to the practice of medicine or law, and how many hundreds of them there are in the United States we have no means of knowing. There are in this State four or five law schools which stand on the same footing before the law with Columbia and Harvard, and the same thing is true all over the country.

The Buffalo *Express*, in its waggish way, undertakes to make fun of our exposure of the abuses connected with bouquets, and couples us in its ridicule with the Boston *Advertiser*, and the dastardly attack made in the columns of that paper on the crush hat. If the *Express* had followed the matter with the care it merits, it would know that we have completely demolished the position taken by the *Advertiser* on the crush hat, and proved that in attacking the hat it has shown its complete incompetence for the task of social reform. The *Express* satirically reminds us that the Constitution of the United States makes no provision for the settlement of social questions of the sort that we have been discussing. It thinks that in "the earlier and simpler days of the Republic" the fathers supposed that "all social questions could be safely left to custom," but adds that with the frivolity of the present day the conflicts between fashion and economy require something more than custom for their settlement, and therefore suggests the creation of a "court" in which such matters may be judicially decided. This flippancy may do very well for Buffalo, but we can assure the *Express* that society in New York is no laughing matter. We shall not be deterred by ridicule from going on with our work, in which we are daily receiving assurances of the support and esteem of our best society.

The collapse of another clerical savings bank in the Roman Catholic Church, this time in Massachusetts, for a large amount, it is to be hoped will at last put poor depositors on their guard against this most dangerous and unbusinesslike way of disposing of their money. Considering the success of Mrs. Howe's bank of deposit among the native American women in Boston, we ought not to speak severely of the financial ignorance and credulity of the poor Irish who expect priests to do one of the most difficult things in this age and country—invest other people's money with safety and profit. The most experienced and honest financiers find it very hard to do it; it is folly to expect clergymen to do it. As a matter of fact, however, neither the Augustinian Fathers in Massachusetts, nor Archbishop Purcell in Ohio, made any pretence of investing the money of the depositors in a business way. They seem to have used it without stint or restraint in church-building and other ecclesiastical uses, and trusted to luck and the usual annual voluntary contributions for church purposes to enable them to pay interest or principal when called upon; and now that the system has broken down, all they can say to the depositors is that with time they will pay "dollar for dollar." The extraordinary performance among the Methodists known as "the Methodist Mine," in which some of the clergy and the denominational organ got a large number of the faithful into the stock of a worthless mine, with which the knavish and waggish owner declared he was going to endow a theological seminary, must, however, prevent Protestants from criticising the financial troubles of the Roman Catholics with asperity. We think, on the whole, there is not much to choose between the position of an Augustinian Father with a broken bank on his hands, and that of the clerical occupant of the "ground floor" of a "busted" religious mine.

The savage attack of Mr. Forster on Mr. Parnell in the House of Commons, has a very unpleasant resemblance to the mode in which Sir William Harcourt used to "draw" the Irishmen in the House during the passage of the Coercion Bill, by lashing them into fury by jibes and insults, and then getting them suspended, or reprobated for disorder. One member, O'Kelly, who pocketed so much of the "Skirmishing Fund" in this city, fell into the trap, and, giving Mr. Forster the "lie," has been suspended for his pains. Parnell, though ferociously denounced as an instigator of the assassins, kept cool, and took no notice, evidently to the great irritation of the majority in the House, who wanted him to get up that they might bait him. Mr. Forster's main argument would be reprehensibly absurd if it had not been produced by a very angry man. It was, in effect that he was justified in putting Parnell in jail because it is now proved that some of the Land Leaguers were concerned in the assassinations, and because they used some of the funds of the League in preparing the assassination, and because Parnell probably knew or suspected all this. Unfortunately, Mr. Forster made no pretence when he locked Parnell up of suspecting anything of the kind. What he said was that Parnell's language, even if innocent in itself, instigated others to violence, and that his influence was generally pernicious. Ex-post-facto justification is no more allowable than ex-post-facto legislation.

The Parnell reply has been received with much dissatisfaction by the English press, not apparently because anybody really believes he had any connection with or knowledge of the Dublin assassinations, but because he was not sufficiently repentant and submissive under Forster's attack, which seems hardly to have been of the kind, however, to make a man amiable and conciliatory. In fact, it was highly disorderly, and probably would not have been permitted toward an English member. It is against the rules of the House to accuse a man in debate of a disgraceful offence. Why O'Kelly should have been suspended for telling Forster that he lied, when Forster was allowed to tell Parnell that he had had a hand in a murder, it is hard to see. Of the performance on both sides, however, it may be said that it was magnificent, but not war. The impolicy of Mr. Forster's denunciations need hardly be pointed out. They may make Mr. Forster feel easier, but they do not help to solve the Irish problem. Abuse of Parnell from that quarter does not damage him with any one who does not hate him already. It unquestionably endears him to the Irish voters, and the Irish problem consists almost wholly in conciliating the Irish voters, and in getting them not to mind Parnell. Since this speech they will probably mind him more than ever. In fact, it may be considered fuel for the flame of agitation. The best way to undermine Parnell's influence is to go to work to redress the Irish grievances—whatever they be—of which Mr. Forster, Mr. Chamberlain, Mr. Courtney, and the Marquis of Hartington have all within the last month acknowledged the existence. In the game of vituperation the Irish are fully Mr. Forster's match, and nothing can come of it but bitterness

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 21, to TUESDAY, February 28, 1883, inclusive.]

DOMESTIC.

ON Wednesday the Senate passed the Army and Fortification Appropriation Bills, and the joint resolution to provide for the termination of the articles of the Treaty of Washington relating to the fisheries, and took up the Rebate Bill. On Thursday the Naval Appropriation Bill was under consideration. The amendment of the Committee making the appropriation "for engines and machinery for the double-turreted iron-clads, in accordance with the recommendation of the Naval Advisory Board," was agreed to. On Friday the bill was passed and the Rebate Bill taken up. On Saturday the Legislative, Executive, and Judicial Appropriation Bill was passed. On Monday the House Bill to prevent the importation of adulterated and spurious teas was called up and passed, as was also a resolution requesting the President to communicate any information in his possession touching the alleged agreement of the Ministers of Great Britain, France, and Italy at Lima to make a joint effort to bring about peace between Chili and Peru, and to inform the Senate whether the Minister of the United States had been instructed to accept the mediation of the Ministers of European Powers in settling a purely American question. On Tuesday, Secretary Frelinghuysen reported that Minister Partridge had been censured for his unauthorized action in the premises, and that foreign Governments had been notified accordingly.

The Republican Representatives held a caucus on Thursday on the Tariff Bill. The whole situation was freely discussed, the result being the adoption of a resolution declaring it to be the opinion of the caucus that the Republican members of the House should vote to non-concur in the Senate amendments to the House Revenue Bill, alias the Senate Tariff Bill.

In the House, on Wednesday, the Sundry Civil Appropriation Bill being under discussion, Mr. Beltzhoover made an attack upon the administration of the Signal Service under General Hazen. On Thursday an amendment was passed repealing the preëmption laws, together with all laws authorizing the filing of declaratory statements for the entry of public lands by agent or attorney. On Friday an amendment relating to the Yellowstone National Park, prohibiting the Secretary of the Interior from leasing any portion of the Park to any person or corporation for any purposes whatever, declaring of no force or effect any lease, agreement, exclusive privilege, or monopoly already granted, and authorizing the Secretary of War to detail troops to prevent trespassing upon the Park, was adopted. On Saturday the bill was passed. On Monday an attempt was made to send the Senate Tariff Bill to a conference committee, but it was defeated, and the joint resolution providing for the termination of the fisheries treaties under the Treaty of Washington was passed. On Tuesday the House voted to take the Tariff Bill from the table and send it to a committee of conference. The Senate agreed to a conference, and both houses appointed conferees. At the opening of the Senate on Tuesday, Senator Davis gave notice of his intention to resign the office of President of that body on the 3d of March.

Petitions bearing the signatures of Albert Bierstadt, Frederick E. Church, A. F. Tait, Wyatt Eaton, President of the Society of American Artists, and hundreds of other artists and sculptors were presented by Representative Belmont, of New York, on Monday, urging the passage of his bill, now pending before the Committee on Ways and Means, which provides for the free importation of works of art.

On Saturday the President nominated Mr. John W. Foster, of Indiana, as Minister to Madrid. The nomination is said to have been made with special reference to the naturalization and other questions pending between Spain and the United States, and the mission is therefore regarded as of a temporary character.

On Monday the President sent the following nominations to the Senate: S. G. W. Benjamin to be Minister Resident and Consul-General of the United States at Teheran, Persia; Wickham Hoffman to be Minister Resident and Consul-General of the United States to Denmark; Lucius H. Foote to be Envoy Extraordinary and Minister Plenipotentiary of the United States to Corea; Dwight T. Reed to be Secretary of Legation and Consul-General of the United States at Madrid.

Secretary Frelinghuysen has, upon the application of the British Government, issued a warrant for the arrest of P. J. Sheridan, accused of complicity in the Phœnix Park murders, and it has been placed in the hands of Mr. West, the British Minister. Mr. Sheridan is in New York. In case he is arrested he will be taken before a United States Commissioner, who will decide whether he is subject to extradition under the warrant. Should he decide in the affirmative, the Department of State will issue the necessary papers.

A correspondence between Secretary Chandler and Commander Gorringe, which culminated in the resignation of the latter, was published on Saturday. Last May Mr. Gorringe published in the *North American Review* an article on the Navy, in which some of the recommendations of the Naval Advisory Board, of which Commodore Shufeldt was President, were opposed. Not long after, Mr. Gorringe gave in public his opinion on the proposed abandonment of the Brooklyn Navy-yard, and the Secretary wrote him: "When particular questions of administration are actually pending in the Department, or before Congress, no public expression of opinion thereon by any officer should be made without he first communicates his views to the Department, and receives authority to make them public. You will please hereafter be governed by this rule." Recently, Mr. Gorringe having published his views on free ships in the *Evening Post*, the Secretary wrote to him to inquire whether he was in the employ of interests not American, which inquiry Mr. Gorringe considered an insult, and so resigned, after writing a sharp letter to Mr. Chandler.

A statue of Robert Fulton was placed in the old Hall of Representatives at Washington on Monday, as one of the two statues to be contributed by Pennsylvania. The sculptor is Mr. Howard Roberts.

The Washington Grand Jury on Friday indicted William Knox Brown, one of the jurors in the first Star-Route trial, for having received money to influence his vote. He is said to have sold himself for $8.

As a result of the investigation begun by the Citizens' Committee of Washington into the operations of the detective corps of that city, the Grand Jury on Monday returned indictments against a number of detectives and ex-detectives and others for receiving stolen goods. One of the men indicted is Arthur B. Williams, counsel for Brady and Dorsey in the pending Star-route trial.

Governor Butler, of Massachusetts, has issued a proclamation appointing Thursday, April 5, a fast day. In conclusion he says: "I do specially exhort the ministers of the Gospel on that day to feed their flocks with the Divine Word, and not to discourse upon political and other secular topics which may divert the serious thoughts of the people from the humble worship of the Father."

The friends of Polk, the Tennessee defaulter, made an offer to the Tennessee Legislature on Wednesday to the following effect: Upon condition that Polk be released, they agree to pay to the State $175,000 in the currency of the Bank of Tennessee, and $75,000 in Tennessee bonds upon which are accumulated coupons to the amount of $33,700, the balance of the deficit to be paid by the note of Colonel Polk, due in one year from date, secured by a mortgage upon Polk's interest in Mexican mining property.

By Wednesday night the Ohio River at Cincinnati was practically within its banks, having receded eleven and one-half feet from its highest point. There is still a part of the city overflowed, but business has been renewed, and all danger is over. At Louisville also order has been restored in the flooded districts.

The Grand Jury at Milwaukee, on Monday, found an indictment against George Scheller, the barkeeper, who is charged with setting the Newhall House on fire.

In the Missouri State Prison at Jefferson City on Friday the convicts broke out into a revolt. They seized two of their foremen, and Johnson, the ringleader, set the building containing the prison shops on fire. The guards ran in with the hose, which the convicts cut. The fire was not under control until five shops had been completely destroyed. The total loss will reach $80,000. Four convicts were seriously burned. Johnson, who attempted to kill a convict who refused to assist him in the revolt, was finally captured after he had made several desperate attempts to escape. About 600 convicts will be idle until the shops are rebuilt, which will cause a material reduction in the revenues of the prison.

The savings bank connected with the Augustinian Society of the city of Lawrence, Mass., which controls the leading Roman Catholic churches and parochial schools there, has failed. The actual debt of the society is about $540,000, of which $429,900 is due depositors, the majority of whom are mill operatives and working people, many of them unmarried women.

Ex-Secretary Windom, John M. Candler, of Massachusetts, and Harvey Farrington, of New York, as trustees of a projected new Stock Exchange in New York, have sent out circulars inviting subscriptions for seats at $5,000 each. When 500 seats are sold, a board room will be opened.

On Saturday the White Star steamship *Republic* arrived at New York with the crew of the freight steamer *Glamorgan*, of the Warren Line. She was sighted by the *Republic* on the 16th inst. in a desperate condition, and all of her passengers and crew except seven, who had been lost, were rescued.

FOREIGN.

In the French Chamber of Deputies, on Thursday, Prime Minister Ferry explained the programme of the Ministry, and solicited the confidence of the country. He said the Government's first care would be to satisfy the wish of the Chamber by applying the law of 1834, under which the Princes would be deprived of their military posts. Without infringing upon the essential liberties of the people, the Government demanded that measures be taken against the utterance of seditious cries and against the authors of seditious placards. Reforms were required in the magistracy. A military bill and an habitual-criminals bill were to be introduced. The budget for 1884 would soon be presented. M. Ferry said the Government proposes to facilitate the execution of public works, and to introduce measures looking to the organization of a protectorate in Tunis and the reduction of the expenses of the occupation of that country. The foreign policy of the Government will be peaceful, but not necessarily one of inaction.

On Saturday M. Jolibois, in making an interpellation, denied that the Republic emanated from national sovereignty, as it lacked a plébiscite, and moved that the Chamber desires that the individual liberty of all citizens, without distinction, be respected. The motion was rejected by a vote of 368 to 93. After a prolonged debate a resolution approv-

ing the measures which the Government contemplates against pretenders, was adopted.

Decrees enforcing the law of 1834, depriving Princes of their military posts, have been gazetted in France. They will affect, it is said, neither the Duc de Penthièvre, who is already exempted from service, nor Prince Roland Bonaparte, who is not regarded as a pretender.

The report of General Thibaudin, Minister of War, in justification of the retirement of the Duc d'Aumale, the Duc de Chartres, and the Duc d'Alençon, says public opinion demanded the adoption of a measure placing these Princes on the retired list. The public had become alive to the inconvenience of the presence in the Army of officers belonging to former reigning families. The great principles of subordination and discipline might be weakened thereby.

It is stated that the French Admiral on the Madagascar station has been ordered to suppress vigorously any attempts to resist the rights of France on the island.

Mr. Gladstone arrived in Paris on his way from Cannes to London on Tuesday. He paid a visit to President Grévy and M. Challemel-Lacour.

In the debate on Mr. Gorst's amendment to the address in reply to the Queen's speech—declaring that, in view of the confession of the Irish assassins, no further concessions should be made to lawless agitation—on Thursday, the Right Hon. William Forster made a violent attack upon Mr. Parnell. He said the recent disclosures had increased the suspicion that the Land League was connected with the outrages. The public expected that Mr. Parnell would have elucidated this point. No mere disclaimer would be sufficient. He charged Mr. Parnell with heading an organization which had started an agitation that promoted outrages and incited to murder. At this point, Mr. O'Kelly having shouted, "It's a lie!" several times, was named for suspension, and his suspension was ordered by a vote of 305 to 20. Mr. Forster then resumed and reiterated his charges against Mr. Parnell, quoting from that gentleman's speeches, in which he had said that murder was unnecessary. He said the wretches who committed the Phœnix Park assassinations had not acted on the letter, but according to the spirit of these speeches. Until Mr. Parnell expressed regret and repentance he could not communicate with him. There were loud cries for Mr. Parnell, but he did not move. The Marquis of Hartington then rose and expressed surprise at Mr. Parnell's silence, which he said was an admission that a prima-facie case had been established against the Irish leaders. The Government, he declared, had no intention of introducing any measures for an extensive change of policy with regard to Ireland that would be likely to arouse strong party feeling and absorb a large portion of the time of the House.

On Friday Mr. Parnell replied to Mr. Forster. He charged him with unfairness, and said he ought to be ashamed of himself for traducing him; that he had been challenged to defend himself, but he had nothing to defend himself from. He occupied a better position in the eyes of the Irish than Mr. Forster did in England. Mr. Parnell analyzed the evidence of Carey at the hearing of the Irish prisoners in Dublin, which he said was not a statement of fact, but of belief or hearsay. The evidence in reference to the source of the "murder fund," he said, rested upon the fact that some men while in prison had received checks from the sustentation fund of the Land League. Such aid had been given to thousands of prisoners. As proof that the prisoners charged with the Phœnix Park murders were not members of the Land League, Mr. Parnell pointed out that one of them had returned a check which had been sent to him from the sustentation fund, saying that he had nothing to do with the League. Mr. Forster's animus was due to the fact that he had attempted to obtain a promise from him (Mr. Parnell), but had failed to do so and had lost his office. In concluding his remarks, Mr. Parnell declared that the present officials in Ireland were manifestly unfit to administer the Crimes Act. Mr. Forster ought to return to his congenial work. Mr. Parnell said he was hopeful that Ireland would weather this, as she had weathered other formidable oppressions. Mr. Trevelyan then proceeded to vindicate the policy of the Government in Ireland. He said that since the present Government had been commissioned to suppress crime, the number of murders had been reduced from three a month to one in the last four and a-half months. After some further debate Mr. Gorst's amendment was defeated by a vote of 259 to 176. The Parnellites abstained from voting.

On Monday Mr. Parnell moved an amendment to the address in reply to the speech from the throne, attacking the executive in Ireland for the administration of the Crimes Act. Its language is said to have been violent. In moving it, Mr. Parnell said that if there had been any reduction in the number of outrages in Ireland, it was only because the people were being kept down by the brutal, terrible Coercion Act, administered in a brutal, terrible way. He complained of the conduct of the Irish judges, who were appointed for political reasons, and were therefore unfit to try political causes. He said that if the Government, after the Phœnix Park murders were committed, had relied on the sympathy of the people instead of upon a tyrannical act, Ireland would have been pacified. He protested against the proclamation of meetings and the prosecution of the press. Freedom of speech did not exist in Ireland. In the Hynes and other murder cases the juries were composed almost exclusively of Protestants, Castle tradesmen, and acquaintances of Earl Spencer, the Lord Lieutenant. The administration of the law was detested by everybody. He defied the Government to continue to govern Ireland without the sympathy of the people. The amendment of the Land Act was urgent, though even that would not quench the spirit of Irish nationality. He believed that Mr. Chamberlain was one of the few English members who correctly appreciated the Irish question. This remark was greeted with ironical cheers. Mr. Parnell said the Government now had a great opportunity to restore peace and order in Ireland. He was confident of victory, having one million of Irish in America behind him. The Right Hon. Andrew Porter, Attorney-General for Ireland, replied to Mr. Parnell, and rebutted the charge of jury-packing. Mr. Parnell's amendment was finally rejected by a vote of 133 to 15.

In a debate in the House of Commons on Tuesday, Mr. Trevelyan said that although the Government had no large measures concerning the government of Ireland to introduce this year, they intended to bring forward several careful measures with regard to the distress existing there. He said the truth was that the holdings in the west of Ireland were too small; the people could not live on them without getting into debt. The question was whether by giving extraordinary relief the Government should stay emigration and merely postpone the evil day.

Since the disclosure made by Carey, a number of Irish-Americans and farmers' sons in Counties Armagh, Monaghan, and Louth have been secretly leaving for America. Mrs. Carey has been completely "boycotted" since she turned informer. Not one of her tenants has paid rent, and notices have been posted on the doorsteps of her houses, warning persons not to pay rent to a "cursed informer."

General MacAdaras, who was suspected of being the "Number One" spoken of by Carey, the informer, indignantly denies the accusation, and has written to Mr. Trevelyan that he is willing to submit to the most rigid scrutiny of his actions.

Mr. Harrington, Secretary of the Organizing Committee of the Land League, who is now in jail for using intimidating language, has been elected without opposition to the seat in the House of Commons for Westmeath made vacant by the retirement of Mr. Gill.

The Prussian Landtag, on Thursday, discussed the estimates of the Ministry of Worship. Herr Windthorst, the leader of the Clerical party, said that the Government was blamable for the conflict with the Vatican, as it had not been in earnest in its negotiations. The Government is not desirous of peace with the Vatican, though the Emperor is in favor of it. Herr Gossler, Minister of Public Instruction, said he would place no difficulty in the way of religious schools, but only desired to prevent the exercise of certain special influence over the schools. He refused to answer Herr Windthorst's question as to whether the negotiations with the Curia had been broken off. The Government, he stated, had almost entirely removed the sequestration of the incomes of the clergy and pardoned Bishop Melchers. This statement caused general surprise.

A despatch from Rome on Thursday said that Cardinal Jacobini's last note pointed out that there was only one alternative: either Prussia must consent to a thorough revision of the May laws or she will deprive the Catholic Church in Germany of the very conditions of existence. A despatch to the London *Times* from Berlin on Saturday said the statement of Cardinal Jacobini, the Papal Secretary of State, that the Bishops had been authorized to give notice to the Government of clerical appointments as soon as the Reichstag and Landtag assented to measures insuring the free exercise of ecclesiastical jurisdiction and the free instruction of the clergy, is regarded as putting the end of the *Kulturkampf* as far off as ever.

The German Bundesrath has approved unanimously the bill prohibiting the importation of American pigs, pork, and sausages.

The Spanish Senate has agreed to prolong all existing treaties of commerce between Spain and foreign countries until March 15. The *Imparcial* newspaper of Madrid on Sunday published a detailed account of the discovery in Andalusia of societies whose aim is to destroy the rights of property and exterminate the bourgeois landowners. The Socialistic societies in Andalusia are said to number 1,000 members, including persons of high social standing. The Government has resolved to take energetic measures for their suppression.

While some members of an Anarchist committee were experimenting with dynamite at the village of Gansharten, in Belgium, on Sunday, an explosion took place in which several men were wounded. It is reported that Anarchist documents were seized at the explosion which show that a plot has been organized to murder the Czar at his coronation in May. It is also rumored that the seizure of Anarchist papers at Brussels will lead to the arrest of Louise Michel and several of her colleagues.

A despatch from St. Petersburg says: "It is stated that letters have been received by the authorities conveying threats to blow up the Kremlin at Moscow, where the Czar is to be crowned. A search was made, but nothing indicating preparations for the destruction of the palace was revealed. A close watch is kept, and the public are not allowed to enter the building."

The St. Petersburg *Golos* has been suppressed because of its mischievous tone in discussing state institutions and in describing the intentions of the Government regarding the reforms which have taken place during the last quarter of a century. An imperial ukase has been published appointing a committee to examine and amend the laws relating to Jews. Forty students at St. Petersburg were imprisoned on Monday for expressing doubts of the administrative ability of Count Tolstoi, Minister of Public Instruction.

THE TAX ON BOOKS.

Mr. Morrill presented a petition in the Senate on Wednesday, from Mr. E. C. Stedman, the poet, of this city, against the abolition of the duty on books, on the ground that it ought not to be abolished till the duty on the raw materials of book manufacture is abolished. Mr. Stedman is the third or fourth American author of note who has petitioned Congress in this sense. He does not, however, go as far as Dr. Holmes and Mr. Whittier, who avowed that they shared the apprehension by which their publisher has long been tormented, that the American mind, if not protected by the tariff, would be injured by foreign literature. He has in his eye, we presume, the interest of American publishers simply, who would, he thinks, be undersold in the American market by foreign publishers, so long as the material of which books are made is heavily taxed here.

We have more than once pointed out that the argument that putting books on the free list would make books too cheap, is, if sound, absolutely destructive of the argument by which the giving of unconditional copyright to foreign authors has all along been resisted—that it would make books too dear. In the various discussions which have raged during the last twenty years between the American and English publishers about copyright, the need of cheap books for a society like ours, in which political security is so largely dependent on popular intelligence, has been always put in the forefront of the American battle. English publishers should not be allowed to enter the American market with copyrighted books, we were told, because they would follow the English custom of making them dear, whereas the highest interests of the American nation required that books—foreign as well as others—should be cheap. Are we to understand Mr. Stedman that the American publishers have abandoned this ground, and hold that the highest interests of the American people require that foreign books should be dear, and that what America needs is not so much numerous readers as thriving publishers? Has Mr. Munro, the eminent Pirate, really destroyed the old passion of American publishers for cheap popular literature?

In the second place, we would ask what advantage can it be to American authors or publishers to tax books which they would never reprint here, or think of reprinting, and which probably are out of print in the country of their birth? Why must the American student or scholar pay twenty-five per cent. duty on any English book, however old, of which he may stand in need—mathematical, geographical, historical, metaphysical—which no American publisher ever dreams of republishing? What has the duty on paper, type, or printers' ink to do with the importation of such books, composing, we venture to say, nine-tenths of all the books imported by private order? How is Mr. Stedman, a poet and critic, injured in mind, body, or estate by such books being cheapened to his countrymen? How do his publishers suffer by books being cheapened which they never think of reprinting? Are they not, on the contrary, served by it? Is not all literature served by everything which diffuses knowledge and fosters the habit of reading?

A very amusing incident occurred in England, the other day, which suggests a possible explanation of some of the opposition on this side of the water to the free admission of foreign books, even the old and rare ones. There is an Act of Parliament which permits villages to set up free public libraries by a vote, we believe, of the ratepayers. The question came before the voters of Brentford, a bucolic town in Middlesex, and it was decided in the negative, under the influence of the argument, "What's the use of books?" and that if any one "wanted to read a book," he could "go out and get one for sixpence." Now, the idea which underlay this argument was clearly that one book, like one apple or banana, was as good as another, and that to a man who wanted a book it made no difference what book he got. Put into terms of political economy, this means that each book competes with every other, just as each potato competes with all other potatoes. We will not assert that Dr. Holmes and Mr. Stedman labor under this droll Brentford hallucination, but their petitions to Congress would certainly give an unscrupulous opponent an excuse for charging them with it. It is only on the theory that the sale of any book in particular prevents the sale of all other books, that a poet can be interested in making all books dear, even those which his own publisher does not and never would produce. No theory of the place of books in civilized society has ever placed them quite so low as this, or given the relation of an author to his work a character so purely mercantile.

It must not be supposed that in saying all this we are ignorant of or indifferent to the arguments in favor of compelling foreign authors to appear in the United States through American publishers as the condition of an American copyright. We think they are in the main strong. But they do not touch the question of taxing non-copyrighted or non-pirated books. Nor do they account for the fact that though no power on earth can prevent the American Congress from giving foreign authors publishing through an American house an American copyright, and thus both obeying the first law of morality and giving the people cheap books, it has never done so, and has never been severely pressed to do so; so that the position in which the American reader is now placed is such that he must either wait indefinitely to see whether a foreign book will be reprinted in this country, or be taxed one-fourth of its price if he presumes to import it.

SILVER DOLLARS.

There is no probability that Congress will reach a vote on any of the bills or resolutions pending in reference to the continued coinage of silver dollars. The coinage must, therefore, continue at the rate of at least two millions per month for ten months to come. The amount in the Treasury at the present time is about $98,000,000, and the amount on the 1st of January next will probably be $120,000,000. The issue of gold certificates has taken the place of that of silver certificates since the law of last year went into effect, so that we cannot expect any considerable purchase of silver dollars by the people to offset the Treasury's purchases of bullion. The two millions per month are therefore a dead investment and sheer waste of the national resources.

If there were any fixed time or amount at which to stop this insane proceeding, it would be possible to deal with the existing stock of dollars by abolishing small notes and leaving the vacuum thus created to be filled by silver. But while there is a limit to the demand for notes of denominations less than five dollars (somewhat less than $50,000,000 are in circulation), there is no limit to the production of silver dollars under the present Coinage Act. The law is an anomaly, unlike anything seen or heard of in tale or history. It runs counter to all experience and all principle. It violates the fundamental ideas of coinage and of money—not in the fact of making silver dollars legal tender, but in making more of them than are wanted. We do not, nor does any other nation, coin gold, or copper, or nickel, except when it is called for by the demands of trade. Nor do we issue greenbacks or banknotes upon the principles applied to silver. This metal, which, its friends tell us, has been so much persecuted and maltreated, is really the only thing going by the name of money which is singled out for special nursing. We have turned the Treasury into a hospital for its treatment, and levied taxes to the amount of $24,000,000 per annum for its comfortable support. Not even our sick harbors and rivers, our Cheesequakes creeks and Muskegon inlets, get so much of our tender care and hard-earned money.

Among all the clouds hanging over the national prosperity at the present time, crippling industry and deterring the investment of capital, nothing is so alarming to business men as the anomalous silver coinage. As nobody can see the end of it, and as nearly every investor thinks that it means mischief, without knowing exactly how or when, its possible evils are an ever-present terror to the commercial classes. Everybody who thinks at all perceives that we are dealing with silver upon utterly false principles. The silvermen themselves admit this when they demand that the coinage be put upon the same basis as that of gold. They acknowledge that it is no part of the Government's function to buy bullion, either silver or gold, and to coin it beyond the wants of the community. They are as ready as other people to see that we are violating an economic law which lies at the root of trade and industry. It is no wonder if those who differ from them in policy conclude that there must be some adequate punishment for the continued violation of that as of other laws.

It is known, also, that the gold reserve of the Treasury is falling while the stock of useless silver is rising. According to a carefully-prepared statement in the *Public* of February 8, the Treasury's reserve of gold has fallen $41,500,000 in the space of seventeen months. The silver coinage has been augmented $34,000,000 in the same time, or nearly as much as the gold reserve has decreased. The gold reserve being under the

control of the Secretary so long as he has a large surplus revenue—it being optional with him to redeem a greater or less amount of the public debt in a given time—there is no necessary connection between the two items of gold and silver. It would be possible for the stock of both metals to be increasing at the same time, instead of the one increasing and the other diminishing. But the fact remains that whatever silver we buy we pay for with gold, and that when we buy our monthly quota of bullion we have $2,000,000 less to be applied to the redemption of bonds and the stoppage of interest on the public debt. The operation of the Silver Coinage Act, therefore, in addition to its other mischiefs, prolongs the public debt unnecessarily. Moreover, it is not impossible that the reduction of taxes by the present Congress may leave the Government with a deficiency of revenue, in which case silver would accumulate at the expense of the gold reserve in spite of the Secretary.

This question is of more immediate importance than the tariff question, yet it has not received one hour's discussion in either branch of Congress during the present session. We say that it is of more immediate importance, because every day's delay brings us nearer the possible catastrophe of a change of monetary standards, or a conflict of standards, or some other tripping stone, which will probably suffice, when it is reached, to plunge all business into confusion and the industrial classes into dire distress. As every note of warning is drowned at Washington by the din and clangor of iron and steel, tin plates and broken crockery, we suggest to the commercial classes everywhere that they put their business, as far as possible, on the gold basis, by stamping, printing, or writing the word "gold" on every piece of paper they receive or execute. The banks of New York and Boston have done this already by resolution, and the banks elsewhere, National, State, and Savings, will do so in due time; they too will come in out of the rain before there is any great shower. Nearly all corporations and large money-lenders exercise this prudence, which cannot be too highly commended or too generally imitated.

THE STATE OF AFFAIRS IN RUSSIA.

A FORTNIGHT more, and Czar Alexander III. will have reigned two years. This is longer, perhaps, than friend or foe deemed probable on the evening of the terrible day when his father was torn to pieces by the bombs of Ryssakoff and his associates. His own hope seems to be reviving and a feeling of security growing up at the Court. The Imperial family are no longer hiding at Gatchina or Peterhof. The Czar rides, and occasionally walks, through the streets of St. Petersburg without a heavy escort or a hedge of extra police. He dares to visit a school, to appear at a theatre, and to spend a few hours at a state ball in the Winter Palace. The spectre of Nihilism has lost much of its terrors. The year now closing has witnessed but few murders by the hand of conspirators—the assassination of General Strelnikoff on the promenade in Odessa being the most striking case—and each act of revolutionary violence has been followed by the removal to Siberia of hundreds of convicted or suspected revolutionists. The Army and the peasantry, though not free from infection, can still be relied upon, and the Church is an instrument in the hands of the rulers. The nobility surrounding the Court is apparently full of ardent loyalty, the public press preaches fidelity, and the circulation of clandestine sheets has almost been suppressed. The most important sign of revived courage and confidence is the announcement, by the Imperial Manifesto of February 5, of the Czar's intention to be publicly crowned in his ancient capital, Moscow, "in May next."

It is true, a tone of almost lugubrious sadness pervades this very manifesto, in which the Czar tells how he ascended the throne in the midst of grief and horror; how, bowing before the judgment of God, he determined in his heart not to perform the sacred rite of coronation until the feelings excited by the great crime had had time to calm down; and that he is now ready to execute the will of God, receive, with the crown, the Holy Sacrament, and join with his people in fervent and humble prayer. More than that, there is an expression of uncertainty or fear in the words "in May next," unaccompanied as they are by a statement of the day chosen for the great national solemnity. Nor is there a word of cheer in the whole document. It contains no allusion to any achievement of the first two years of the reign, to the recovery of internal peace or prosperity, to happy auguries of the future. The fact is, there is absolutely nothing to boast of or to be thankful for in these two years, unless it is the mere survival of the monarch and the Empire. Nihilism has been partly disarmed, but not stifled. Discontent and alarm are still general. No liberal reform of any importance has been ventured upon. Not the least response has been made to the general demand of the enlightened classes for a constitutional régime. Reactionaries of the most pronounced type, such as Tolstoi and Pobiedonostzeff, hold the reins of power, and even such moderate liberals as Loris-Melikoff or Peter Shuvaloff are kept aloof. The press is muzzled as it never was under Alexander II. The peasantry are left a prey to extortion, want, and intemperance; the Treasury is depleted, the prisons are gorged. No conquest, no victory has been achieved abroad. Skobeleff, the popular hero, had to be rebuked, shortly before his death, for bold patriotic utterances which were distasteful to the suspicious German neighbor. The arrogance of England, in her settlement of Egyptian affairs, had to be borne without a loud protest.

While everything is stagnant or supine in the inner spheres, a change is perceptible in the doings and tendencies of Russian diplomacy abroad. Internally distracted and financially weakened; isolated by the girdle which the Austro-German alliance has drawn around her; provoked by the insolence of Great Britain; distressed by the impotence of the French Republic, her constantly-dreamed-of future ally (an impotence sealed for a time by the death of Gambetta)—Russia now openly manifests a determination to cultivate anew friendly relations with her neighbors, Austria and Germany, as she did in the time of Nicholas; to observe a peaceable *modus vivendi* between herself and the Curia of the Vatican, and indefinitely to postpone all further schemes of aggression in the Balkan Peninsula. The late journey of her Minister of Foreign Affairs, Giers, in the course of which he visited Rome and Vienna, was evidently undertaken for the sake of negotiations in this direction, and these could not have failed to be successful, as the Russian diplomatist was empowered to make concessions everywhere. The Curia has obtained concessions in regard to the treatment of the Catholic Church in the Polish provinces of the Czar, and Austria-Hungary—such are the indications at least—has been promised a neutral forbearance in respect of her doings in Bosnia-Herzegovina, and her dealings with Montenegro, Servia, and Rumania, including the vexed question of Danubian navigation superintendence. In return the Curia has undoubtedly promised to abstain from fomenting agitation in favor of the Polish nationality, and Austria-Hungary is said to have waived all objections to a union, at some future day, of Bulgaria and Eastern Rumelia. Possibly Russia has also been assured by the allied Courts of Vienna and Berlin of a friendly attitude in case complications in Turkistan and the Kulja territories should make her inclined to draw the sword there where England is most anxious to see her keep the peace. What tends to give color to such a supposition is the repeated announcement made of late in Russian papers that hostile outbreaks against the Russians were feared in Central Asia, and still more the strange accord with which the organs of Katkoff and Aksakoff, the leading Panslavic publicists and confidential friends of the present Government, have been recently engaged in demonstrating that German and Slav are not, and ought not to be, foes, after all. A new programme has been forced upon the Russian Government and its supporters by altered conditions within and abroad, and with it the Czar may go to the coronation at Moscow. It may read—Peace in Europe, advance in Asia; and Russian patriotism may interpret it as meaning defiance to England.

THE NOVEL OF TO-DAY.

A CURIOUS international literary discussion has been recently started by a very innocent remark of Mr. Howells, in the course of a magazine article, intended to convey the idea that the art of novel-making had made considerable progress since the days of Dickens and Thackeray. The discussion has branched out in all sorts of directions, and has furnished an opportunity for every kind of moral, including, of course, the perennial one of international sensitiveness; but one of the points brought up—the decline of the novel of "purpose," *i. e.*, the novel which aims at effecting the reformation of some social abuse, or redressing some wrong or injustice—deserves more attention than it has received. There is no doubt about the fact. Neither in England nor in America does any novelist of the first rank attempt to use the novel as a means of reform in public opinion, of stirring up enthusiasm or indignation on social subjects. There is one

living novelist, Mr. Charles Reade, who made a great reputation only a generation ago by novels in which such subjects as prison reform and private-asylum abuses played a great part, but even he has abandoned this sort of writing. In this country, what we may call the French view of literary art—*i. e.*, the view that a story is told for its own sake, and not for any ulterior purpose, or in order to teach any lesson—is steadily acted upon by Mr. James; and Mr. Howells, as we understand him, thinks Mr. James is right, and has consciously adopted it himself.

Changes of literary fashion are generally produced by a variety of causes, slowly affecting the structure of society from year to year, and he would be a very bold man who should undertake to explain in a few words why epic poems are no longer attempted, or why romantic writing is a thing of the past. But with regard to purpose in fiction, there are one or two points which suggest themselves as explanatory of the change that has taken place. One is, that the subjects in this generation which interest persons of a reforming turn of mind are subjects which hardly lend themselves to fiction. A novelist, to effect a reform, must fire the heart and imagination of his readers. Fifty years ago, when the world felt down-trodden and oppressed; when the heel of the tyrant was on the neck of man; when superstition and ignorance and bigotry made the lot of the lowly hard, and suffering and injustice common, the novelist had a fine field for enlisting the sympathies of his readers. The feeling against abuses of all kind was closely allied to the democratic movement which was sweeping over the world. In Dickens it is always the poor and ignorant who are wronged by the wealthy and powerful having the control of the laws in their hands, and a strong picture of this sort of tyranny will always fire the heart of the novel reader. In America the great novel of this sort, a generation ago, was 'Uncle Tom's Cabin.'

Since that time, however, the emancipation of the down-trodden and lowly has been, in most countries, pretty complete; they have been given all that they asked; and in England to a great extent, and in this country altogether, they have the Government itself in their hands. There is no tyrannical social system to which the novel reader can attribute abuses. The questions which have arisen in this country, while of equal importance, are not of the same value for purposes of fiction with those of an earlier day. You can fill a reader's mind with indignation at slavery, but it is difficult to imagine a novelist basing a successful story on the evils of a protective system as illustrated by the duty on steel blooms. Civil-service reform, biennial legislatures, the fee and salary question, codification, copyright, seats in the House for cabinet ministers—all these are important matters, but they are troublesome to use in fiction. Even the old subjects, like prison abuses, which involved the idea of wrong and tyranny, have assumed a new aspect, for all the abuses have been remedied in theory, and if they still go on in fact, it is not because of any tyranny or oppression anywhere in our social system, but because of other causes which do not lay a foundation for that sympathetic interest which was the capital on which novelists like Dickens, Reade, and Mrs. Stowe worked. The following newspaper explanation of the termination of the revolt at Sing Sing illustrates what we mean:

"Mr. Paddy Wynn, the ringleader in the serious revolt at Sing Sing, yesterday resigned that position, and the revolt came to an end, at least for the time being. We regret to add that Wynn quitted the bad eminence of ringleader not because a spasm of virtue had laid hold of him, but owing to the fact that his Ulster County friends and admirers had united in telegraphing him their confidence that he was shortly to be the recipient of a pardon."

No rising novelist, with these facts before him, would see his way clear to stirring up the community on the subject of Paddy's sufferings.

Besides all this, the ventilation the press now gives all abuses, as a matter of business, helps to take the wind out of the sails of the novelist with a "purpose." Fifty years ago the press was itself much more closely connected with the class which was interested in the perpetuation of abuses than it is now. It kept silent or threw cold water upon reform schemes. Now it is the reformers' regular means of agitation, and he must be a very feeble agitator who cannot get a hearing through it. It furnishes to reformers a more immediate and certain vehicle than the novel.

These causes help to draw off the reform fervor from the novel, and turn it into other channels. The novelist has, however, still left him just what he always had for his main materials, and it is apparently his idea that he can get along well enough with these.

SYMPTOMS OF IRISH FEELING TOWARD ENGLAND.

LONDON, February 5.

ENGLISH politicians have had too long an experience of Irish troubles to feel sanguine that a diminution of disorders in Ireland indicates any deep or permanent change in the sentiments of the people. Still, after the acute crisis of 1881 and the first half of 1882, the comparative tranquillity of the last six months has been welcomed as a cheering sign by all Ministerialists, and by moderate and sensible men of both parties. There has been a sensible decline in the returns of agrarian crimes over all the south and west of the island. There has been a general disposition to take advantage both of the Land Act and of the Arrears Act of last session. It is true that both measures are complained of as inadequate; still, under both, a good deal has been done and is being done which, by alleviating the distress of the peasantry, must tend to quiet their minds and remove some of the provocations to outrage. Finally, the impunity which crime had so largely and so long enjoyed has been broken down by the conviction of a number of murderers, and by the supposed discovery—one must say supposed, because the investigation is not yet complete—of the secret societies for assassination which have inspired so much terror in Ireland itself. If it should turn out, as is probable, that these societies are really very small, and not widely ramified among the people, there will be a further sense of relief.

All these features of the present situation, taken together, render it more encouraging than any we have seen since the formation of the Land League made agitation formidable; and it is satisfactory to note that such improvement as exists is not due to the exceptionally severe provisions of the Prevention of Crime Act of last session, for these provisions—such as that permitting the Lord Lieutenant to order a trial by judges instead of by a jury—have mostly been left unused. If things look more peaceful, it is partly because the administration of Ireland, and especially its police system, is being improved; because Lord Spencer has been more skilful in his dealings with the people than Mr. Forster, having had the benefit of Mr. Forster's experience; and most of all because the Land Act has really opened up to the peasantry a prospect of mending their condition, and given them a different idea of what may be expected from the English than they had heretofore entertained. More than half of the 88,000 applications made to the Land Courts have been disposed of, and nearly half of these by agreements out of court made by the parties when they saw the principles on which the Court was proceeding. More than 86,000 applications, involving 185,385 holdings, have been made under the Arrears Act, although it was at first represented as quite inadequate to the needs of the case.

These are cheering signs, on which Mr. Gladstone and his supporters have naturally laid much stress; but they are by no means the only facts to be regarded. Events are every now and then happening, or coming to light, which show how far we still are from anything like a reconciliation between the Irish Nationalists and the English nation. The sympathy which the populace of Dublin have repeatedly shown for persons charged with murders, or attempts to murder, is an almost graver sign than the existence of the secret societies which plot these murders, for they may consist of a mere handful of men. The language of the Nationalist leaders, such as Mr. Davitt and Mr. Healy, in their denunciations of England, is as vehement as ever before. And when an election occurs, the voters seize with avidity the opportunity of returning as members persons whose chief claim seems to lie in the bitterness of their hostility to the very Government which has been trying to conciliate Ireland by the Land Act. We have just had an instance of this at Mallow. Mallow is an insignificant place in the south of Ireland, with less than three hundred electors. It is ridiculous that such a place should have a member at all, and in any redistribution of seats it will of course disappear. But its three hundred voters are probably types of the voters in the Irish towns generally, and fairly represent the sentiments of their class. They have just rejected the new Solicitor-General for Ireland, and chosen against him, by a majority of nearly two to one, the editor of an extreme Nationalist paper, whom the Government have been prosecuting on the charge of sedition. This prosecution was his recommendation to the electors, and he made it such himself. With symptoms like this, it can hardly be doubted that if a general election were to take place now, the Nationalist party would come back to the House of Commons with twice its present strength, claiming far more effectually than it can do now to represent the Irish people. That is to say, the desire to be separated from England, to have as little as possible to do with her, is as strong as ever in Ireland, and is the expression, not so much of any serious plan for having an independent Irish Government, and thereby promoting the welfare of the people, as of a deep, fierce, almost unreasoning dislike of the English Government and England herself.

The English are only now beginning to realize the strength of this dislike. They have been kept so long from understanding it by a fact which makes its existence the stranger—the fact that the dislike is not reciprocal. This is not one of those cases of race hatred of which Europe had so many to show, such as the hatred of Pole and

Russian, of German and Slav. The English in England (who must be carefully distinguished from the Anglo-Irish or English Protestants settled in Ireland) have never really hated the Irish. Formerly, they didn't know enough about them to hate them; and of late years, since communication has become easier and vast numbers of Irish have settled in the English and Scotch cities, though there has been some bitterness against the new comers on the part of those humbler laborers with whom they competed for work, and whose wages they lowered, nothing like a general hostility has displayed itself. It is plain, however, that the Irish could not feel bitter toward England if England did not give them some cause. History alone will not quite account for the phenomenon. Even the behavior of the Anglo-Irish, their arrogance and tyranny, from the time of William the Third down to that of William the Fourth, when Protestant ascendancy began to be shaken, will not solve the problem, because these Anglo-Irish themselves—this very dominant caste which so long ruled Ireland by the aid of English power—is itself also full of bitterness against the English, and only sticks to them because it dislikes and fears the aboriginal Irishman, the Catholic Celt, even more. It is worth while, therefore, to ask what it is in the attitude of the ordinary Englishman, as well as of the English Government as a whole, which produces that peculiar irritation and resentment which so many Irishmen, of different ranks and creeds, feel toward England.

The first fact to recognize is that an Irishman —that is, a person born in Ireland, or of Irish parentage—has no substantial disadvantage to contend with in England. He is just as well received in society, is just as likely to make a good marriage, or get a good place, rise in the Army, or Navy, or civil service, succeed at the bar, or in medicine, or in the Church, or in trade, as if he were an Englishman. Not only is every career equally open to him, but success in it is just as easy for him. A vast number of Irishmen have attained eminence as men of letters, or men of science, or lawyers, or journalists, or soldiers, or scholars, or ecclesiastics; and I doubt if one of these could say that his nationality has stood in his way. Lord Cairns is an Irishman, and so are Generals Wolseley and Roberts, and the Bishop of Peterborough, and Mr. Charles Russell (one of the foremost leaders of our bar), and Mr. Stopford Brooke, perhaps the most eminent of London preachers; and no one thinks of their Hibernian origin as making, or having ever made, any difference to them. Only the other day a brilliant young Irishman was chosen Professor of Greek in the University of Edinburgh, against distinguished Scotchmen. It may have counted against him that he was not a Scotchman, but it would never have occurred to any elector to notice that he was an Irishman. Nor has an Irishman any social slights or mortifications to put up with. Sometimes one who wants to sneer at him may throw in a reference to his nationality by way of pointing the sneer, as Dr. Johnson used to do, and as some people in England still do, with Scotchmen; but that is all. Even among the poor, though the Irish element forms the lowest part of the population in most of the great towns, and competes with the native Englishman for the less skilled forms of labor, there is little animosity between the two races. An Irish laborer is never prevented from getting work, nor an Irish girl from finding a place, by the fact of his or her origin. People are accustomed to quote the phrase, "No Irish need apply," but it counts for very little in the humbler kinds of employment, and in the higher ones it does not count at all. So far, then, as the substance of things is concerned, the individual Irishman has full justice, and nothing to complain of.

When groups of Irishmen, or the Irish as a whole, are concerned, the case is somewhat different. The English have no sympathy, hardly any tolerance even, for any association of persons wishing to keep up what they think a foolish and worthless distinction from themselves. A person or a society or an institution which puts forward its Hibernian character is at once met by coolness or contempt. Why do they want to be Irish, the Englishman thinks, when they can be English? We are willing enough to take them and give them every chance, asking no questions, but recognizing them as members of our nation; and instead of that, they keep putting forward a nationality which has nothing to recommend it and much to discredit it. This attitude toward Irishmen (if the expression may be permitted) lets the Irish know what Englishmen really think of their country and their national type, and they resent it keenly, especially because they contrast it with the way in which Scotch nationality seems to them to be treated. Scotch nationality is, no doubt, a much more purely historical and sentimental matter. It has no political significance; it never causes any trouble between the two countries or even leads to Scotchmen forming organizations of their own for any political purposes. Still, it exists and even makes some noise. Scotchmen are fond of posing as Scotchmen and celebrating their national glories. The English, while sometimes a little amused, are not unsympathetic, and whenever they go to Scotland are profuse in their compliments to the Scotch nature and Scotch traditions. No doubt those traditions are a far pleasanter subject of contemplation than Irish history, which is a record of strife, misery, and injustice such as few other parts of Europe can present. But this does not make the contemptuous air of the English toward Irish nationality any less wounding. In this respect, therefore, the Irish may be said to have some ground for complaint. The grievance is largely sentimental; yet that does not prevent it from being a grievance. And it has the practical consequence of making the English less disposed to believe that self-government is feasible in Ireland: that the Irish, as Irish, could get on and manage local affairs in a reasonable way.

Perhaps the simplest way of putting the case is to say that the English habitually assume their type of civilization, character, manners, government, to be the best and highest type, and therefore that the Irish ought naturally to be glad to accept it and sink their own type in it. Hence, while the individual Irishman is welcomed to England, and allowed to gain all that an Englishman can, the idea of cultivating and maintaining something which is lower, and not in itself laudable, appears absurd and pernicious. It is not so much the manners of the English that are at fault (for they do not, now at any rate, behave with rudeness or insolence in Ireland), as their incapacity for understanding the Irish character, and that waywardness or chivalry (whichever it is to be called) which makes them cling to their nationality just because it is unfortunate. In fact, they take the Irish too seriously, and would perhaps succeed better if they were less anxious to succeed.

The Mallow election may be important, not only as a symptom of the undiminished irritation of the Nationalist party, but as an encouragement to its leaders to play up to these feelings by attacks on the Government in Parliament. There are, of course, always administrative mistakes and blunders, at least among subordinate officials, which may be made the ground of an attack. No one would be surprised if the first nights of the coming session were occupied by Irish debates. Y.

PROSPECTS OF THE PARLIAMENTARY SESSION.

LONDON, February 15, 1883.

THE session of Parliament begins to-day under unusual circumstances. A new code of procedure is going to be tried, and both the Tory and the Irish Oppositions have strong motives to make it fail, because they have opposed its most important provisions. The chief measures to be introduced by the Government are not, as has been usually the case, of a party character, and will not affect the distribution of political power or the interests of any particular classes in the community. They ought not, therefore, to excite party hostility and be met by any party opposition. But, in point of fact, such is the heat and bitterness which prevail, they will doubtless encounter much resistance—a resistance really directed rather at their authors than at themselves. Finally, the head of the Government—the omnipotent head of the dominant party as well as of the Government—will be absent.

A few days ago, it began to be rumored that Mr. Gladstone might not appear during the first few days, and now we are told that he may possibly remain in the milder air of the south of France till Easter, which this year falls earlier than usual. This is taken by some as a sign that he will soon retire from the Ministry altogether, his strength, it is said, having more seriously declined than was supposed, and the need for repose and quiet having become more imperious. But probably this is not the true interpretation. No doubt he has for some time past expressed a wish to abandon political strife and devote his last years to those studies and pursuits, literary and theological, in which his interest has never slackened. But his temporary absence, while still retaining the highest office, is rather a sign that this retirement will not take place immediately, but that he feels the importance to his party of his continuing to hold the leadership, even while he commits the work for a time to his lieutenants. In this he is certainly doing the best thing he can for that party's interests. There are elements of discord in the Liberal majority which might easily put it in peril but for the ardent loyalty which both the Centre and the Left of that majority feel for the Prime Minister, and the unlimited confidence which Liberals throughout the country place in him. Although Lord Hartington is greatly respected as an upright, straightforward, courageous man, who is decided, if not advanced, in his Liberalism, still neither his followers in Parliament nor the masses of Great Britain have learned to know him intimately, to realize and value and obey his personality in the way which gives a leader ascendancy, and makes a policy adopted because it is his. Hence it is clear gain that he should have the opportunity which Mr. Gladstone's absence will give him of directing his party in the House of Commons for some weeks, while it is even more a gain that Mr. Gladstone, by retaining the office of Prime Minister, should hold his party together and maintain the confidence of the nation—or rather of the majority which supports the present Ministry—in the Cabinet and its measures. If he finds that he can continue to reign without the necessity of trying his health by the severe toil of the House of Commons, he is all the more likely to consent to prolong his reign; and his colleagues have every motive of interest for desiring that he should do so, for he is the principal source of the unity and hopefulness of the party which supports them in the country.

Little of consequence has happened since the

close of last session, and nothing which alters the relative position of parties. Of the Liberals I have just spoken. Without being in a state of excitement or enthusiasm—for there has been no fighting lately to excite them, and no measures are announced calculated to raise enthusiasm—they are in as good a position as they have held any time since the general election of 1880, the causes of division still seeming to slumber, and the general sentiment being one of satisfaction with their leaders and themselves. The condition of the Tory party is just the reverse. They are dissatisfied with their leaders, querulous as regards the past, apprehensive of the future. They don't know whether to follow the recognized heads of the party—those members of Lord Beaconsfield's Government on whom after his death his authority naturally devolved—or the younger and more restless spirits who have distinguished themselves as active skirmishers during the last three sessions. Neither set of politicians has given to the world anything but criticisms; neither has produced any sensible effect upon opponents or upon the country at large. The Tories have a feeling not only that valuable opportunities of damaging the Liberal Government have been neglected or misused by the official leaders, but that these eminent persons, from Lord Salisbury and Sir Stafford Northcote downward, have nothing positive, nothing constructive, to offer; nothing which has any attraction for the bulk of the people. For a time they thought that as the Liberals had come into power in 1880 after a series of unsparing invectives directed against Lord Beaconsfield's foreign policy, so a similar series of attacks on Mr. Gladstone and the more radical of his colleagues would be followed by a similar effect in discrediting him. However, after the invectives had been tried, Mr. Gladstone was as strong as before. Next, they fancied that the Liberal victory had been due to local organization, and especially to what is called the "Birmingham Caucus System." Efforts were accordingly made to establish local Conservative associations everywhere, and by them to work a Conservative propaganda in the towns. Apparently, this experiment has had no better success, for the Conservative organization languishes, and the townspeople are apathetic. One or two bold men have tried to persuade the working classes that it is to Conservatism, not to Liberalism, that they must look for social reforms, and have started the cry of Tory Democracy. But this also has fallen flat, for the inventors have omitted to explain in what respect the working classes are specially interested in resisting the programme of the Radicals, and particularly in upholding the power of the House of Lords, the Established Church, the landed aristocracy, the county magistrates, and the Corporation of the City of London. Thus there is much despondency among Tories of the upper class, who feel their position all the stranger because the society in which they move is almost wholly Tory either in name or in fact. Three-fourths of the nobility are Tories, and the rest very moderate Liberals. The proportion is the same among the landowners generally; it is almost the same among professional men and capitalists; while it is very rare to find any Liberals at all among members of the military and naval service. Since all the people they meet and talk to are of their own way of thinking, and join in their lamentations over the approaching ruin of the country, while at the same time the Government continues to be in the hands of those whom they regard as firebrands, they get a painful sense of their own helplessness, and imagine the people—those electors who support this wicked Liberal Government—to be either more destructively minded, or more hopelessly deluded, than they had fancied in the golden days of Lord Beaconsfield. There never was a greater opening for another Lord Beaconsfield than at this moment. If some able and eloquent man were to appear in the Tory party, with a gift for exciting popular enthusiasm, and with a positive programme of policy to unfold, he might rapidly climb to the highest place in English politics and society. But none such appears.

It would be a mistake to argue from the present despondency of the Tories, or even from their want of first-rate men, that they are powerless as a party. Their despondency is due not so much to weakness as to impatience. If they will be content to wait, time will do more for them than they seem likely to do for themselves, and will bring them into office again, perhaps before three or four years have passed. Many forces are in their favor, and not the least of these is that disunion among the Liberals which may possibly follow Mr. Gladstone's retirement. There is, however, no sign that this session will do any more for them than the last, nor that their tactics will be in any respect different. They will probably devote themselves to minute criticisms of the Ministerial measures, seeking not so much to defeat them directly as to break them down in detail by striking out all the stronger provisions and by spending so much time on discussion that it will become impossible to get all of them carried. As has been already observed, these measures are not to be of a strictly party character. Every one who is not a member of the Corporation of the City of London admits that a new municipal government for London is wanted. The bill which the Ministry promises is clearly called for; but it will be a long and complex one, raising many questions on which opinion may well be divided, and it will therefore give many openings for hostile or obstructive criticism, while, as it affects London only, the rest of the country will not be keenly interested in its fate. Whether a bill for remodelling local government in the counties will be brought in, is not yet known—possibly the Cabinet has not yet decided. Such a bill is also greatly needed, but it will afford even ampler opportunities for criticism, and could hardly be passed in this session. Bankruptcy, and patents, and a criminal code, and compensation to agricultural tenants for unexhausted improvements, and the prevention of corrupt practices at elections, are all important matters, which deserve the mention they are to obtain in the Queen's Speech this afternoon. They ought to be dealt with quite apart from party prepossessions. But they are complicated questions, and it will require a rare and unusual degree of virtue in an Opposition to induce it to abstain from endeavoring to defeat some at least of these measures. The prospect before us is therefore one rather of a succession of skirmishes and petty engagements than of any pitched battles; and if this prospect is realized, the session will be unexciting, and may even be fruitful.
